Letter, December 21, 1934, from PWA to TVA and reply.

Letter, August 13, 1937, from TVA to Dempster.

Letter, August 27, 1937, from TVA to Tennessee PWA Administrator.

Letter, September 4, 1937, from TVA to City Manager of Knoxville.

All letters, etc., between TVA and PWA relating to the applications of several named cities.

All letters, etc., between TVA and PWA relating to negotiations to purchase facilities to complainant companies.

All of these letters are communications between TVA and PWA, or TVA and the officials or representatives of cities that had applied for loans and grants from PWA for municipal distribution systems. They will show the efforts of TVA to obtain such loans and grants for such cities in order that such cities might purchase electric energy from TVA and in order that TVA might force the private utilities serving such cities to sell their property therein to the city or to

TVA at an arbitrary price to avoid duplication of distribution facilities of such companies.

These documents will tend to prove the allegations of the Bill that the primary activity of Defendant is to engage in, operate and carry on a proprietary electric utility business; that the other purposes of Defendant are subordinate and secondary and are in fact non-existent or merely pretexts. (XVIII, p. 60 et-seq., XXII, p. 70); that the Defendants have been and are now conspiring and confederating with Harold W. Ickes to carry on a campaign to coerce Complainants to sell their distribution systems and other property to TVA (XIX, p. 62, 63); that TVA, PWA and other Federal [fol. 2199] Agencies are cooperating in carrying out a National Power Policy (XII, p. 32); that Defendants have unlawfully conspired with PWA, its officers and agents to take unlawfully Complainants' business (XI, p. 31); and that the PWA loans and grants are among the factors which cause the TVA yardstick for measuring distribution costs to be unfair and confiscatory. (XX, (3) and (5) on p. 68.)

(e) Letter or letters, March 27, 1934, from TVA to the President or Federal Trade Commission.

In this letter Defendants requested an investigation of the Tennessee Public Service Company to be made by the Federal Trade Commission so as to assist TVA in its negotiations with that company in which TVA was seeking to compel the Tennessee Public Service Company to sell its properties in Knoxville, Tennessee, to the City of Knoxville or to TVA at a price arbitrarily fixed by Defendants in order that Defendants might engage in the business of supplying electric energy for distribution in the City of Knoxville.

These documents will tend to prove the allegations of the Bill that the primary activity of Defendants is to engage in, operate and carry on a proprietary electric utility business; that the other purposes of Defendants are subordinate and are in fact non-existent or merely pretexts (XVIII, p. 60 et seq., XXII, p. 70); and that Defendants have purchased and attempted to purchase retail distribution systems in various cities (XVII (22), p. 54).

COMPLAINANTS' EXHIBIT No. 111

(f) Letter, May 20, 1934, from Lilienthal to Ramsey.
Circular letter, September 21, 1936, from TVA.
Letter, April 7, 1937, from TVA to Wingo.
Letter, November 21, 1935, from TVA to Lenoir City.
Letter, February 21, 1936, from TVA to dealers.
Letter, July 20, 1936, from TVA to Hutchinson.
Copy of all forms of letters, etc., prepared by TVA and sent to county agents.

These letters will show some of the efforts of Defendants to promote and build up a great public interest in Defendants' program of selling electricity and stimulating the demand therefor in the area within transmission distance from the TVA dams, and thus to build up Defendants' business as a public utility.

These documents will tend to prove the allegations of the Bill that the primary activity of Defendants is to engage in, operate and carry on a proprietary electric utility business; that the other purposes of Defendants are subordinate and secondary and are in fact non-existent or merely pretexts (XVIII, p. 60 et seq., XXII, p. 70); that Defendants are conducting a campaign of propaganda to disrupt Complainants' systems and are attempting to coerce Complainants to sell their properties (XVII (24) (25), pp. 55-57); that Defendants are constructing rural lines or contemplating construction of rural lines in the States of Mississippi, Tennessee and Alabama (XVII (19), p. 54); and that Defendants are [fol. 2200] inducing and inciting the residents of this area to cooperate with Defendants in their scheme to develop a great Federally-owned and operated electric power utility. (XVII (24), p. 56.)

(g) Letter dated on or before October 15, 1934, from TVA to Mayor Overton of Memphis.

In this letter TVA indicated its willingness to purchase the steam plant of Memphis Power & Light Company at Memphis, Tennessee, so as to use the same for stand-by purposes in the event Memphis executed a contract to purchase its electricity from TVA.

COMPLAINANTS' EXHIBIT No. 111

This document tends to prove the allegations of the Bill that the primary activity of Defendants is to engage in, operate and carry on a proprietary electric utility business; that the other purposes of Defendants are subordinate and secondary and are in fact non-existent or merely pretexts (XVIII, p. 60 et seq., XXII, p. 70); and that Defendants have attempted to promote the purchase of the retail distribution system in Memphis (XVII (22), p. 54.)

(h) Telegram from TVA, January 1-15, 1935, to the Governor of Alabama.

This telegram will show that TVA advised the Governor of Alabama of the terms and provisions of the statute which the TVA desired the Alabama Legislature to pass relieving TVA from the regulation of the State Utilities Commission or providing for the organization of cooperative associations.

This document tends to prove that the primary activity of Defendants is to engage in, operate and carry on a proprietary electric utility business; that the other purposes of Defendants are subordinate and secondary and are in fact non-existent or merely pretexts. (XVIII, p. 60 et seq., XXII, p. 70); that Defendants have caused bills to forward their power program to be submitted to state legislatures and have lobbied for such bills. (XVII, 26.)

(i) Letter, June 30, 1937, from TVA to John N. Garner, President of the United States Senate.

This letter will show that TVA advised Vice President Garner that the TVA did not submit to Congress (within the time provided by Statute) the allocations of the value of Wilson Dam between power, navigation, flood control or national defense.

This action constitutes a specific instance where Defendants are violating the statute under which they claim to be acting, and the figures withheld would tend to prove the allegations of the Bill that the TVA yardstick for wholesale rates is unfair and confiscatory. (XX, p. 66, Section (1).)

(j) Letters, etc., between TVA or David Lilienthal and National Power Policy Committee.

These documents will show that Mr. Lilienthal served as a member of the National Power Policy Committee, begin-

ning in July 1934, and as such has participated in its activities and actions.

[fol. 2201] These documents tend to prove the allegations of the Bill that the primary activity of Defendants is to engage in, operate and carry on a proprietary electric utility business; that the other purposes of Defendants are subordinate and secondary and are in fact non-existent or merely pretexts (XVIII, p. 60 et seq., XXII, p. 70); that TVA is one of several agencies furthering a National Power Policy of the Federal Government (XII, p. 32); and that TVA has been engaged in carrying out a power policy of its own, which is in furtherance of the National Power Policy in the TVA area (XIII, p. 34, et seq.) and has cooperated with Harold L. Ickes to accomplish a campaign to coerce and intimidate the Complainants to sell their distribution and transmission systems. (XIX, P. 62 et seq.)

(k) Letters, etc., between TVA and Rural Electrification Administration

These documents will show that Rural Electrification Administration is cooperating with the Defendants for the construction of rural lines by loaning money to cooperatives to repay TVA for lines which it builds for the purpose of distributing TVA power.

These documents will tend to prove the allegations of the Bill that the primary activity of Defendants is to engage in, operate and carry on a proprietary electric utility business; that the other purposes of Defendants are subordinate and secondary, and are in fact non-existent or merely pretexts (XVIII, p. 60, et seq., XXII, p. 70); that Defendants are constructing rural lines or contemplating the construction of rural lines in the territory of Complainants in the States of Mississippi, Tennessee and Alabama (XVII (19), p. 54); and that TVA and REA are cooperating to accomplish the National Power Policy (XII, p. 32.)

s and 9.

With respect to these items we have been furnished within the last day or two certain maps and tabulations

should be a matter for the serious consideration of the Board in framing and executing its power program. But it is not the determining factor. The most important considerations are the furthering of the public interest in making power available at the lowest rate consistent with sound financial policy, and the accomplishment of the social objectives which low-cost power makes possible. The Authority cannot decline to take action solely upon the ground that to do so would injure a privately owned utility.

7. To provide a workable and economic basis of operations, the Authority plans initially to serve certain definite regions and to develop its program in those areas before going outside.

8. The initial areas selected by the Authority may be roughly described as (a) the region immediately proximate to the route of the transmission line soon to be constructed by the Authority between Muscle Shoals and the site of Norris Dam; (b) the region in proximity to Muscle Shoals, including northern Alabama and northeastern Mississippi; and (c) the region in the proximity of Norris Dam (the new source of power to be constructed by the Authority on the Clinch River in northeast Tennessee).

At a later stage in the development it is contemplated to include, roughly, the drainage area of the Tennessee River in Kentucky, Alabama, Georgia, and North Carolina, and [fol. 2213] that part of Tennessee which lies east of the west margin of the Tennessee drainage area.

To make the area a workable one and a fair measure of public ownership, it should include several cities of substantial size (such as Chattanooga and Knoxville) and, ultimately, at least one city of more than a quarter million, within transmission distance, such as Birmingham, Memphis, Atlanta, or Louisville.

While it is the Authority's present intention to develop its power program in the above-described territory before considering going outside, the Authority may go outside the area if there are substantial changes in general conditions, facts, or governmental policy, which would necessarily require a change in this policy of regional development, or if the privately owned utilities in the area do not cooperate in the working out of the program.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 113 FOR IDENTIFICATION (Excluded)

Nothing in the procedure here adopted is to be construed in any sense a commitment against extending the Authority's power operations outside the area selected, if the above conditions or the public interest require. Where special considerations exist, justifying the Authority's going outside this initial area, the Authority will receive and consider applications based on such special considerations. Among such special considerations would be unreasonably high rates for service and a failure or absence of public regulation to protect the public interest.

9. Every effort will be made by the Authority to avoid the construction of duplicate physical facilities, or wasteful competitive practices. Accordingly, where existing lines of privately owned utilities are required to accomplish the Authority's objectives, as outlined above, a genuine effort will be made to purchase such facilities from the private utilities on an equitable basis.

10. Accounting should show detail of costs, and permit a comparison of operations with privately owned plants, to supply a "yardstick" and an incentive to both private and public managers.

11. The accounts and records of the Authority as they pertain to power will always be open to inspection by the public.

Page 34

• • • Wholesale power rates were announced in September 1933, after careful careful study of the available market and the probable costs of generating and transmitting electric power. Approved retail rates were announced at the same time after a similar careful study of the cost of distributing power.

[fol. 2214] Page 56

Requests for information were being received in large numbers even before the formal organization of the Authority on June 16, 1933. Numerous press releases were prepared to meet these urgent demands, and this service has been continued in connection with announcements by the Authority. Regular news organizations are given such ac-

with respect to such maps which have not yet been checked but which may possibly supply the information requested by these two paragraphs of the subpoena. At the present time Complainants are not urging these two paragraphs, but expect that a satisfactory stipulation will be entered into.

10. Surveys made by TVA of Complainants' Customers.

These documents will show that surveys of Complainants' customers have been conducted at the instance of TVA to ascertain the customer power consumption of these customers of Complainants in areas where the TVA lines are now constructed or may readily be constructed.

These documents will tend to prove the allegations of the Bill that the primary activity of Defendants is to engage in, operate and carry on a proprietary electric utility business; that the other purposes of Defendants are subordinate and secondary and are in fact non-existent or merely pretexts (XVIII, p. 60 et seq., XXII, p. 70); that large industrial customers of some of the Complainants have been solicited to purchase TVA electric energy (XVII (30), p. 59); and that pursuant to the Act, Defendants have promulgated a plan unlawfully to disrupt the good relations existing between Complainants and their respective [fol. 2202] customers. (XI, p. 31.)

11. Records showing number of employees in Department of Electricity and headquarters of each.

These records will show that Defendants have a widespread organization of employees in their Department of Electricity of more than 1045 people, located in areas where Defendants now maintain lines, where Defendants propose to construct lines and in areas served by Complainants where Defendants at this time have no lines.

These documents will tend to prove the allegations of the Bill that the primary activity of Defendants is to engage in, operate and carry on a proprietary electric utility business; that the other purposes of Defendants are subordinate and secondary and are in fact non-existent or merely pretexts. (XVIII, p. 60 et seq., XXII, p. 70); and that Defendants have established offices and installed per-

sonnel throughout the area to disseminate propaganda even where TVA is not yet doing business. (XVII, 27.)

12. Records showing payments to States of Alabama and Tennessee.

These records will show the only payments that TVA makes to any State, Federal or local subdivision of government under the TVA Act. (16 U. S. C. Sec. 831-1.)

These documents will tend to prove the allegations of the Bill that Defendants are relieved of all Federal income and excise taxes and all State property, income and other taxes. (XX (4) p. 67, (2) P. 68), and that the TVA wholesale yardstick is thus unfair and confiscatory.

13. Books and records of TVA showing amounts expended in promotional and advertising expenses.

These records will show the sums Defendants have expended to advertise and promote their electricity program.

These documents will tend to prove the allegations of the Bill that the primary activity of Defendants is to engage in, operate and carry on a proprietary electric utility business; that the other purposes of Defendants are subordinate and secondary and are in fact non-existent or merely pretexts. (XVIII, p. 60 et seq., XXII, p. 70); and that Defendants have conducted and are still conducting a studied, systematic campaign of propaganda for the purpose of disrupting the relations between Complainants and their customers. (XVII (24), p. 56.)

14. News dispatch about September 7, 1937, containing summary of generation and gross revenue for last fiscal year.

This news item contained approximate figures obtained from TVA showing 789,000,000 kilowatt hours generated and gross revenues of $1,650,000 for the fiscal year ending June 30, 1937.

This document will tend to prove the allegations of the Bill that the primary activity of Defendants is to engage [fol. 2203] in, operate and carry on a proprietary electric utility business; that the other purposes of Defendants are subordinate and secondary and are in fact, non-existent or

merely pretexts. (XVIII, p. 60 et seq., XXII, p. 70); that TVA is disposing of its electric energy below cost and at rates that are non-compensatory and confiscatory and are made possible only through the subsidization of its operations. (XX, p. 65 et seq.)

15. Records showing payment to Walter E. Meyer and purchase of magazine article.

These records will show that TVA had Mr. Meyer on its payroll while the article in question was written and purchased 50,000 copies of it for widespread public distribution.

This document will tend to prove the allegations of the Bill that the primary activity of Defendants is to engage in, operate and carry on a proprietary electric utility business; that the other purposes of Defendants are subordinate and secondary and are in fact non-existent or merely pretexts. (XVIII, p. 60 et seq., XXII, p. 70); that TVA is engaged in the execution of a National Power Policy (XII, pp. 31, 32) which, among other things, is designed to promote and bring about public ownership; and that Defendants have been and are now conducting a campaign of propaganda and solicitation for the purpose of disrupting the established business relations between Complainants and their customers, destroying good will and seizing Complainants' markets. (XVII (24), p. 55 et seq.)

16. Copy of speech by D. E. Lilienthal, on or about November 17, 1933, at Knoxville.

This document contains the remarks delivered by Mr. Lilienthal at Knoxville just before the municipal election which was held November 25, 1933. It will appear from said document that Mr. Lilienthal said that the dams that the TVA were building were power dams and were being built for the purpose of producing electric energy.

This document tends to prove the allegations of the Bill that the primary activity of Defendants is to engage in, operate and carry on a proprietary electric utility business; that the other purposes of Defendants are subordinate and secondary and are in fact non-existent or merely pretexts. (XVIII, p. 60 et seq., XXII, p. 70); and that

COMPLAINANTS' EXHIBIT No. 111

Defendants have carried on a campaign of propaganda designed to disrupt Complainants' business relations and to acquire Complainants' markets for themselves. (XVII (24), p. 55 et seq.)

By the brief descriptions of the documents in this statement we have described merely enough to enable the court to identify the documents described in the subpoena. The references to the Bill herein contained are not intended to be exclusive.

Trabue, Hume & Armistead, Frantz, McConnell & Seymour, Baker, Hostetler, Sidlo & Patterson, Solicitors for Complainants.

[fol. 2204] STATE OF TENNESSEE,
County of Hamilton, ss:

S. D. L. Jackson, Jr., being first duly sworn, says that he has read the foregoing statement; that he has either personally examined copies of a number of the documents described in the subpoena, or, in the preparation of this case, has obtained information as to the existence and substance of such documents from the examination of other documents or from published statements, reports or statements of individuals with respect thereto and believes that such documents are in the possession of Defendants and that the descriptions thereof contained in the foregoing statement are substantially correct, and affiant believes that said documents are material and relevant to the issues in this cause.

S. D. L. Jackson, Jr.

Subscribed and sworn to before me this 18th day of November, 1937. W. A. Broyles, Notary Public. (Seal.)

[fol. 2205] EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 112 FOR IDENTIFICATION, BEING "EXTRACT FROM HEARINGS BEFORE THE SUB-COMMITTEE OF THE COMMITTEE ON APPROPRIATIONS, U. S. SENATE, 73RD CONGRESS, 2ND SESSION (Excluded)

Pages 262-3

Senator Dickinson: Well now, in connection with these dams, the entire purpose is the production of electrical energy?

Dr. Morgan: That is the major purpose. The purpose of the Tennessee Valley Authority Act, of which these dams are a part, is to try to encourage and organize an orderly economic and social development in that region in place of the past haphazard development. With reference to the Tennessee River in particular, if we can develop the power on the Tennessee River by a unified and integrated program, we can, I think, develop power at not over half the rate that it would cost by a series of unrelated dams.

Senator Dickinson: Now, under the law, you are obligated to charge for your power, for your energy, the cost of production. What do you take into account in making out your cost of production?

Dr. Morgan: We take into account the costs of operating these power plants, and their maintenance; the cost of the interest on the investment; of amortization of the investment; and of depreciation and of taxes.

There may be some minor items that I have not included.

Senator Dickinson: Then, according to your theory, it is your expectation that you will be able to pay back into the Treasury the capital investment that the Government is now making in this project.

Dr. Morgan: Yes.

Senator Dickinson: And that is going to be done out of the sale of electrical energy?

Dr. Morgan: Yes.

Senator Dickinson: And, where are you going to sell this electrical energy?

Dr. Morgan: The law says within transmission distance from the power plants.

Senator Dickinson: And what is the transmission distance?

_____

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 112 FOR IDENTIFICATION (Excluded)

Dr. Morgan: About 250 miles is reasonable transmission distance.

Senator Dickinson: That is, a sector with 250 miles as a diameter?

Senator Adams: As a radius, I gather.

Dr. Morgan: As a radius.

Senator Dickinson: As a radius?

Dr. Morgan: Yes.

Page 265

Senator Dickinson: Well now, with the completion of these additional dams that we have already discussed here, how fast will you increase the capacity for production of electrical energy down there?

[fol. 2206] Dr. Morgan: We will have considerable increase in production of prime power, as soon as the Norris Dam is completed. We will actually decrease the production of secondary power. We will give a more even flow to the river. We can produce 105,000 kilowatts of prime power at Wilson Dam by supplementing hydroelectric power during the low-water periods of the year with the steam standby plant at nitrate plant no. 2. With the completion of Norris Dam our prime power output will be approximately doubled.

Pages 266-7

Senator Dickinson: Well, now, when you extend your sale into these various localities, what do you do with competing organizations that are already in these various localities?

Dr. Morgan: So far we have purchased the plants of those utilities.

Senator Hale: Your rates are below their rates, always; are they?

Dr. Morgan: Yes.

Senator McKellar: May I ask, while my friend is hesitating just a minute, is it not true that the private companies have greatly reduced their rates throughout this region since the putting in of the Tennessee Valley Authority rates?

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 112 FOR IDENTIFICATION (Excluded)

Dr. Morgan: Since the Tennessee Valley Authority adopted its rates, the other major companies around there have reduced their rates very substantially.

Senator Dickinson: Now, is that universal, or just in a limited number of cases?

Dr. Morgan: It is true, I think, in the Tennessee Electric Power Co., Alabama Power Co., Georgia Power Co., the Mississippi Power Co., the Tennessee Public Service Co., which is under the Electric Bond & Share ownership, toward the east end of our district. We are negotiating with the latter for the purchase of their entire system there.

Senator McKellar: If I recall aright, all of them have reduced their rates in the whole Tennessee Valley, the States of Tennessee and Mississippi; in Georgia, and Alabama.

Dr. Morgan: I think that just recently the Tennessee Utilities Commission ordered a decrease which included the eastern part also.

Senator Dickinson: You mean by that that the Tennessee Utilities Commission has been derelict in its duty in permitting the charge of excess rates down there in previous years?

Dr. Morgan: I have no opinion to express on the work of the utilities commission.

Senator McKellar. But, you do know that since you started operating down there that these rates have gone down 30 percent, to the benefit of all the people.

[fol. 2207] Dr. Morgan: Yes; and we believe that the rates we are charging are abundant to pay all costs—depreciation, amortization, taxes, and maintenance, and service.

Senator Hale: And, if there are other private companies, then they have to go out of business.

Senator McKellar: Dr. Morgan says that they are endeavoring to buy all of them.

Dr. Morgan: We are negotiating to purchase the private companies. If I may make a short statement.

Senator Dickinson: Yes.

Dr. Morgan: The establishment of the power policy of the Tennessee Valley Authority, which is, by the way, only one item in its program—it has other functions besides power—is an effort, to use the President's language, to

establish a yardstick whereby there could be a case of public ownership to develop what reasonable costs of power may be. In order for that to actually happen, it must have an area in which to sell power. You cannot sell power theoretically. You have to sell it somewhere. That means that these power plants must have some area in which they can actually sell power. If this is to be a fair comparison it means that the area must be adequate; it must be such an area as a well-equipped, well-proportioned utility should have.

To give a power plant no territory in which to sell that power would be just one way of killing it. If there is to be a fair comparison as between a public-operated project and a private-operated project, it must have the qualities of a well-proportioned power development.

Now, in order to get that it must purchase properties that are already there, because all of the time that Muscle Shoals was in contest here, the private companies were surrounding that property with transmission lines, so that when the Government did adopt the policy of selling power, that territory was already fully occupied by the private utilities who had occupied it during the time of this controversy. So, as soon as the Government adopts the policy it finds the territory already occupied. We must acquire the territory. It is the policy of the Tennessee Valley Authority not to enter into destructive competition, if possible.

We have approached the power companies and have tried to enter into agreements with them, in which we would purchase some of their plants, so that this policy of the Government may find expression in the only way in which it can find expression; that is, by occupying certain territory.

So, we have occupied no territory except after agreement and purchase from the private companies, and we hope that will continue in the future.

Senator Dickinson: What will be your policy in case you find you cannot acquire their properties?

[fol. 2208] Dr. Morgan: Well, for instance, we are undertaking now to acquire a certain property. We find that just a few years ago a private utility company added 40

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 112 FOR IDENTIFICATION (Excluded)

percent to its capitalization without adding anything to its properties. Now, we are refusing to buy that water. We are offering to pay the full value of the real investment; but we are refusing to pay a 40-percent inflation of the capital assets.

Now, if we can buy that at a fair capitalization we will. If not, the municipality to which we sell power may have to go in and compete; but we——

Senator Dickinson (interposing). That is, you will contruct a competing utility, install a competing plant there?

Dr. Morgan: Yes; if we cannot purchase at what the property is actually worth, the communities we serve may be forced to compete.

Senator Dickinson: What do you do with reference to the high lines to carry the electricity?

Dr. Morgan: We are offering to purchase those, too.

Page 269

Senator Dickinson: In other words, as I understand it now, you are setting up in a municipality, a municipal cooperative organization for the purpose of buying from you electric current and distributing it among the patrons of that locality.

Dr. Morgan: We are cooperating with an association of citizens.

Senator Dickinson: And in that cooperative organization, what influence do you have on rates?

Dr. Morgan: We make a contract with them in which we prescribe the maximum rates that they may charge.

Senator Dickinson: And that is as to the consumer.

Dr. Morgan: That is as to the consumer.

Page 270

Senator Dickinson: Well, in your testimony before the House committee, did you not suggest that your development would expand where it would include 300,000 or 325,000 square miles?

Dr. Morgan: I beg your pardon. They asked how much area would be in transmission distance of it and I said about 300,000 square miles.

* * * * * * *

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 112 FOR IDENTIFICATION (Excluded)

Senator Hale: But you might at any time reach out and sell your power a good distance away from the home plant?
Dr. Morgan: Yes.

[fol. 2209] Pages 275-6

Dr. Morgan: Now, in that case, it is our business, as I see it, to try to make a study as to how a well balanced economy can exist in that region.

We just now have a project up with a company making carbide. It must have cheap power. It needs cheap coal and the fact that we have cheap power there is the reason for it coming there to use coal. Coal is a chemical to it and not only fuel, and the fact of our being there with cheap power is bringing a new use of coal into that region. It is our business to see how we can best balance that economy so that a benefit in one line is not balanced by a loss in another. That is a part of reasonable planning, to see how benefits can come without suffering losses.

Pages 280-1

Senator McKellar: Well, while we are waiting on Senator Dickinson, Doctor, is there anything that you desire to say to the committee on your own account?

Dr. Morgan: I do not think so. We are endeavoring to carry out the purposes and policies of the Tennessee Valley Authority Act in spirit and in letter so far as the legislative program is concerned, which has been discussed here. We are trying to carry that out in the only way that is feasible; that is, in having a unit that is of such size and such proportion that it can be representative of a well-organized power unit, and these things we are doing are necessary to bring that about.

I would say also that so far as the development of the water power of the Tennessee River is concerned, that a single power plant on the Tennessee River, such as Muscle Shoals, is not even economically feasible. Muscle Shoals, taken by itself, is not an economically feasible unit. If it can be united with others so that reservoir projects can supply it with water in low season, we can make it at least three times as effective per dollar invested as it is today;

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 112 FOR IDENTIFICATION (Excluded)

and the same way with Norris Dam. Taken alone it is not a good investment, but taken in connection with its effects upon the other plants downstream, it becomes a very good investment.

If we can carry out this project as a whole we can produce electric current at not over half what it would cost at a single plant here and there.

Senator McKellar: As I understood your view, in the early part of your testimony you said while there were 45,000 kilowatts produced at Wilson Dam, not including the stand-by plant, that by reason of the building of the Cove Creek or Norris Dam, that there would be over three times as much, or about 150,000 kilowatts.

Dr. Morgan: Yes.

Senator McKellar: Which has a tremendous effect on the cost of current, I imagine.

[fol. 2210] Dr. Morgan: It does. As I say, Muscle Shoals taken alone, is an expensive, inefficient thing. With the project taken as a whole, we can produce the cheapest electric power in America, I believe. That is due to the fact that the Government can coordinate these things, and make them into one unit.

Page 287

Senator Dickinson: And, if it takes $300,000,000 to put in or make this experiment on behalf of the citizens involved here, might I inquire if you would state what you would think it would take from the public treasury and the taxpayers of the United States to help the people in the rest of the United States under a similar program?

Dr. Morgan: Most of that $300,000,000 is for power development, and will be gradually repaid out of revenues. I think it will cost the taxpayers of America altogether less than it is now costing in the rest of the United States. For instance, in Knoxville, the people now are paying a certain rate for electric power. We believe that we can cut that rate decidedly and yet that the people can pay for their entire installation in 10 years out of the rest. That is, the rates they are paying now are so excessive, the taxes they are paying, in the form of electric rates now are so excessive that we can cut that 30 percent and yet out of the rest of it that they can pay the whole thing back in 10 years.

[fol. 2211] COMPLAINANTS' EXHIBIT No. 112

Pages 22-3-4

Power Policy

The formulation of a power policy was the first step in carrying out the power program required by the act. The following policy was announced on August 25, 1933:

1. The business of generating and distributing electric power is a public business.

2. Private and public interests in the business of power are of a different kind and quality and should not be confused.

3. The interest of the public in the widest possible use of power is superior to any private interest. Where the private interest and this public interest conflict, the public interest must prevail.

4. Where there is a conflict between public interest and private interest in power which can be reconciled without injury to the public interest, such reconciliation should be made.

5. The right of a community to own and operate its own electric plant is undeniable. This is one of the measures which the people may properly take to protect themselves against unreasonable rates. Such a course of action may take the form of acquiring the existing plant or setting up a competing plant, as circumstances may dictate.

6. The fact that action by the Authority may have an adverse economic effect upon a privately owned utility

EXCERPTS FROM COMPLAINANTS' EXHIBIT NO. 113 FOR IDENTIFICATION (Excluded)

cess to Authority news as they desire. Many send special writers and others request the Authority to prepare articles and information for their special use.

Several hundred requests for detailed information continue to reach the Authority each week. All are answered by individual letters; no material is sent to private individuals except upon request.

The major projects of the Authority are natural attractions for tourists and other visitors. As of June 30, more than a thousand visitors daily were registering at Wilson Dam at Muscle Shoals and at the sites where Norris and Wheeler Dams are under construction. Trained guides have been employed to insure the safety of visitors and to provide accurate information.

[fol. 2215] COMPLAINANTS' EXHIBIT NO. 113

Annual Report of the Tennessee Valley Authority for the Fiscal Year Ending June 30, 1934

(Original Exhibit)

[fol. 2216] EXCERPTS FROM COMPLAINANTS' EXHIBIT NO. 114 FOR IDENTIFICATION, BEING "HEARING BEFORE THE SUBCOMMITTEE OF HOUSE COMMITTEE ON APPROPRIATIONS, 74TH CONGRESS, 1ST SESSION" (Excluded)

Page 484

Dr. Arthur E. Morgan: We expect to complete the Wheeler and Norris Dams during the coming year. That will leave the Pickwick among those now begun but not yet finished this year.

The Chairman: Will they produce the principal parts of your electrical energy?

Dr. Arthur E. Morgan: Yes.

* * * * * * *

The Chairman: I am speaking now of stopping your expenditure of money on all but 3 or 4 big projects, and if you get those projects completed they will be revenue-producing projects.

Dr. Arthur E. Morgan: Yes.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 114 FOR IDENTIFICATION (Excluded)

The Chairman: Then after that, with the revenues you get you could make other improvements as the revenue increased, with perhaps a small appropriation by Congress.

Dr. Arthur E. Morgan: I think the revenues for considerable time probably will be necessary to provide facilit-es.

The Chairman: Facilit-es for what?

Dr. Arthur E. Morgan: For distribution and transmission.

Page 525

Mr. Arnold: How far can you economically transmit electric current, Doctor?

Dr. Arthur E. Morgan: You can transmit it about 250 miles. But that is not the whole story.

For instance, in the case of a national emergency it could be sent 200 miles to take the place of current that would be sent another 200 miles. We could make current available in Cleveland out of the Tennessee Valley by sending it as far north as possible, and then having that transferred further north.

Mr. Arnold: You mean by having a booster station?

Dr. Arthur E. Morgan: It would not need a booster station. You would transmit it from any center. They send current in all directions.

The Chairman: You have a current center?

Dr. Arthur E. Morgan: You have a current center, yes. Say Columbus, Ohio: Instead of sending current 100 miles south, we send it all to the north. That from the south would come up to meet it. You could by that kind of substitution get clear up to Cleveland or Detroit.

[fol. 2217]

Page 534-5

The Chairman: What are you going to do with this $4,415,000 for transmission lines and substations?

Mr. Lilienthal: My attention has been called to the fact that that figure, which was just revised last night, is incorrect. In the revision the total at the bottom of the column for 1936 is correct, but the figure $4,415,000 should be $3,495,000, because an item of $920,000 was taken out, which could reasonably be deferred until some future year.

EXCERPTS FROM COMPLAINANTS' EXHIBIT NO. 114 FOR IDENTIFICATION (Excluded)

Taking that figure $3,495,000 in lieu of the recorded figure of $4,415,000, the analysis is something of this kind: Two large items make up most of the total. One is an item of $1,100,000 for transmission lines to the site of construction activities.

The Chairman: From where?

Mr. Lilienthal: From Hiwassee Dam to the site of Guntersville Dam and Chickamauga Dam.

Page 535

Mr. Lilienthal: * * * The other large item, about 3½ million dollars, is for the construction of a transmission line connecting the present transmission line at Pickwick Dam in Alabama, near Tennessee, into a group of 20 counties in west Tennessee which have been petitioning for a source of supply for rural electrification, which they do not now have. * * *

Page 536

Mr. Lilienthal: Then there is a projected line and substation totaling $185,000 from the Wheeler Dam, connecting the Wheeler Dam to Decatur and down to Cullman, which is in northern Alabama. Cullman, Ala., has a municipally owned plant, an old steam plant, quite expensive to operate, and the demand has about exceeded the capacity. The county is a reasonably prosperous county and needs rural electrification. That item represents a line to a market at Cullman, Ala., principally.

Then there are a number of small items—a substation at Decatur, Ala., which the engineers require as a part of this big interconnecting line; a substation at Corinth, Miss., $70,000, which is required by reason of the greatly increased load there, plus a change in the source of supply for Mississippi.

That makes up the total of 3½ million dollars.

Page 538

Rural Lines for Temporary Operation in Alabama, Mississippi, and Tennessee

The Chairman: We have here an item for rural lines for temporary operation, which I do not understand.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 114 FOR IDENTIFICATION (Excluded)

[fol. 2218] There is an estimate of $215,000 for Alabama, $420,000 for Mississippi, and $905,000 for Tennessee; a total of $1,540,000. Explain that, please.

Mr. Lilienthal: In the States of Alabama and Mississippi we now own property engaged in the serving, primarily, of farmers.

The Chairman: You own property? You mean you own farms?

Mr. Lilienthal: No; we own farm lines and lines serving very small villages. A considerable number of those farms did not have service prior to this time. The policy of the board has been to operate directly, to serve consumers directly only for a temporary period, then to turn the lines over to cooperative organizations, chiefly county associations, or municipalities, with a security arrangement on the property and the revenues. The TVA then sells power to these public agencies at wholesale. That is the permanent policy.

The Chairman: The Authority owns rural lines?

Mr. Lilienthal: The Authority does own some rural lines; yes, sir.

Page 596

Amount of Horsepower to be Developed by Norris, Wilson, and Wheeler Dams by 1937

Mr. Bacon: How much developed horsepower will you have by 1937 in all your properties?

Mr. Lilienthal: An installed capacity of 424,000 horsepower.

Mr. Bacon: Only 424,000 horsepower?

Mr. Lilienthal: With the Wheeler, Wilson, and Norris Dams.

[fol. 2219] Pages 615-6

Power Development, Norris Dam

Mr. Taber: How much power are you expecting to develop at Norris Dam?

Dr. Arthur E. Morgan: This is primarily a storage dam. It will have 100,000 installed horsepower, but we may use all that in 3 months of the year. That will be used whenever there is a shortage of power because of low water down the river.

Mr. Taber: That is, you will not let the water out there except when there is a demand for water in the other dams; is that it?

Dr. Arthur E. Morgan: Yes, sir; and then we will make power as we let it through, and it will make power again as it goes to the dams.

Mr. Taber: The Norris Dam will be tight while there is plenty of water below?

Dr. Arthur E. Morgan: Yes, sir; except that we will let out somewhat less than 10 percent of the normal flow to keep the river at an average flow.

Mr. Taber: Will that be used for power?

Dr. Arthur E. Morgan: Yes; it will be used for power to correct voltage on the transmission line.

Mr. Taber; But that will not amount to a large power consumption?

Dr. Arthur E. Morgan: No.

Mr. Taber: Then your power development at Norris is not anything that can be used commercially except to take care of a special demand or something of that kind?

Dr. Arthur E. Morgan: Oh, it can be used commercially. It is the most valuable power in the whole system, because we will have to connect a transmission line from Wilson to Norris, so that we can use the power anywhere along that line. But whether it comes from Wilson or whether it comes from Norris, or both, will depend upon whether the rivers are high or whether they are low. During high water it will

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 114 FOR IDENTIFICATION (Ecluded)

all come from the main river below; during low water it will come from Norris Dam, and that same water makes power below.

Page 617

Power Development, Wheeler Dam

Mr. Taber: How much power is the Wheeler Dam supposed to produce?

Dr. Arthur E. Morgan: We are installing 35,000 kilowatts.

Mr. Taber: And is that what you regard as the prime capacity of it?

Dr. Arthur E. Morgan: No, sir.

Mr. Taber: Or is that just a temporary installation?

Dr. Arthur E. Morgan: That is the initial installation.

Mr. Taber: How much do you figure that that will carry, as the minimum?

Dr. Arthur E. Morgan: One hundred and ninety-two thousand kilowatts installation.

[fol. 2220]

Page 635

New Dams to be Started in 1936

Mr. Bacon: I want to clear up one thing that is in doubt in my mind.

Which new dams are you going to begin in the fiscal year 1936 out of the money that is proposed to be appropriated in this act?

The Chairman: If any.

Dr. Arthur E. Morgan: The Hiwassee Dam.

Mr. Bacon: And Guntersville?

Dr. Arthur E. Morgan: We might begin the Guntersville Dam.

Mr. Bacon: Any others?

Dr. Arthur E. Morgan: Guntersville or Chickamauga.

Mr. Bacon: You might begin either Guntersville or Chickamauga?

Dr. Arthur E. Morgan: Yes, sir.

Mr. Bacon: And Hiwassee certain.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 114 FOR IDENTIFICATION (Excluded

Dr. Arthur E. Morgan: Yes, sir. We need an upper river dam to supply water at low stages.

Mr. Bacon: As between Guntersville and Chickamauga, you do not know which you would build?

Dr. Arthur E. Morgan: No, sir. As to Aurora, we have not decided between them.

Mr. Bacon: Of the three, Aurora, Guntersville, and Chickamauga, you will begin only one.

Dr. Arthur E. Morgan: That is my judgment, but possibly two.

Estimate Requested for 1937

The Chairman. We have before us an estimate of $43,000,000 for the Tennessee Valley Authority for the next fiscal year. This estimate appears on page 83 of the 1937 Budget for Regular Public Works requirements of the Government.

I notice on page 1 of your justification you refer to what you call a summary. I suppose those figures you have set down in the summary are correct?

Dr. A. E. Morgan. Substantially so.

The Chairman. Then we will insert in the record the last paragraph on page 1 of your justification, down to the middle of page 2.

Dr. A. E. Morgan. Yes, sir.

Excerpts from Complainants' Exhibit No. 115 for Identification (Excluded)

(The statement referred to is as follows:)

The summary statement at the beginning of section B of this report shows for 1937 estimated receipts of $3,271,350, estimated expenditures on an obligation basis of $47,489,166, leaving $44,217,816 to be financed out of appropriations. Balances to be reappropriated are estimated to be $1,217,816, leaving a net of $43,000,000 to be financed out of a new appropriation. This appropriation contemplates a lower rate of expenditure than during the present fiscal year, for in addition to the $36,000,000 in new funds appropriated for 1936, about $24,000,000 was reappropriated from unexpended balances, against an estimated $1,217,816 reappropriated for 1937. The request for $43,000,000 has been reviewed and approved by the Bureau of the Budget. The estimates included herein have been revised to show more accurately TVA financial requirements than those included in the printed budget for 1937.

Total financing from June 16, 1933, when the TVA was organized, to June 30, 1937, will require total appropriations of $154,000,000, of which $111,000,000 has been made available either by allocation or by direct appropriation. The difference of $43,000,000 in these two items is the estimate of the appropriation now being requested.

Pages 114-5

Mr. Taylor. How many more dams do you think you can build?

Dr. A. E. Morgan. The River and Harbor Act of 1930 together with the TVA Act committed Congress to a navigable channel from Knoxville to the mouth of the river. The higher dams there are, the fewer there are.

[fol. 2223] In addition to those that have been authorized it will require three more dams on the Tennessee River to complete that navigable channel from Knoxville to the mouth. We have not asked to start any larger number of dams than approved last year. We have here a schedule indicating the rate at which these dams would have to be built, just on the basis of good engineering progress. That does not include the beginning in the coming fiscal year of the Watts Bar, the Coulter Shoals, or the Gilbertsville dams.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 115 FOR IDENTIFICATION (Excluded)

We already have approval for one tributary dam, but we do not ask for another one.

Mr. Taber: What does the white line on this chart indicate?

Dr. A. E. Morgan: That is the preliminary work, such as building access roads on the dam site, getting ready for the actual construction of the dam. The black line shows the actual construction of the dam.

Mr. Taber: And the length of the line means the length of time, and has nothing to do with the dollars and cents that are spent on it; is that right?

Dr. A. E. Morgan: The longer ones usually indicate the bigger job. It just represents the length of time.

Pages 121-2

The Chairman: Take the dams that either have been built or have been started, first, to which the Government is absolutely committed then we will come to the others afterward.

Dr. A. E. Morgan: On the main river the highest dam is the Chickamauga Dam, above Chattanooga.

The Chairman: Started when?

Dr. A. E. Morgan: This past year, in the present fiscal year.

Next below that is the Guntersville Dam, near the north line of Alabama, at Guntersville, Ala. That was started during the past year.

The next below that is the Wheeler Dam, which is just about finished. That will be finished in the present fiscal year, except for the installation of the power equipment.

The one below that is the Wilson Dam, and then 2 miles below that is what is called lock and dam no. 1, a small structure, which raises the water 14 feet.

The Chairman: That is already in?

Dr. A. E. Morgan: That was built before the T. V. A. was organized. Fifty miles below Wilson Dam is the Pickwick Landing Dam. That was begun in the fiscal year before the present one. Those are the dams that are now under construction or completed.

[fol. 2224] EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 115 FOR IDENTIFICATION (Excluded)

[1] Including cost of lock built by Corps of Engineers, U. S. Army. In the initial stage, power installation is included at Pickwick, Wilson, Wheeler, and Norris only.

[2] For maximum surcharge to El. 370. For surcharge to El. 362, deduct $14,000,000.

[3] Includes highways, town of Norris, forest lands, etc.

In accordance with available engineering analysis the total minimum flood control storage will be approximately 7,000,000 acre-feet or 300,000,000 cubic feet.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 115 FOR IDENTIFICATION (Excluded)

Page 275

Rural Line Construction

(See p. 284)

The Chairman: You want some rural-line construction.

Mr. Lilienthal: Yes, sir.

The Chairman: That is $1,000,000. It is a considerable increase over the amount you have this year of $200,000.

Mr. Lilienthal: Mr. Chairman, I want to call *to* your attention to the fact that in the Tennessee Valley area we have almost no rural electrification. I think the percentage is about 3 out of 100 farmers using electricity.

The Chairman: It looks like this would be under the new bill, or under the rural electrification program. If they want to get together, and have the current provided——

[fol. 2225] Mr. Lilienthal (interposing): Mr. Chairman, we have been exploring that possibility, and in some cases there can be cooperation with that proposed agency. It is quite difficult, however, in an area where we have a power system such as this, to do any considerable part of the job through another agency, where there is already an agency on the ground.

Continuous capacity of integrated system.....kilowatts		660,000
Annual primary output.....kilowatt-hours		5,780,000,000
Estimated gross annual wholesale power revenue.....		$23,120,000
Estimated annual power expense [1].....	$12,200,000	
Estimated annual dam, lock, and reservoir expense.....	1,170,000	
Estimated total annual expense.....		13,370,000
Estimated annual net revenue for amortization.....		9,750,000
Estimated annual dam, lock, and reservoir expense.....	1,170,000	
Estimated total annual expense.....		13,370,000
Estimated annual net revenue for amortization.....		9,750,000

Approximate time to amortize total estimated cost, 50 years.[2]

[1] Includes: Interest 3½ percent; depreciation 3 percent; taxes 1 percent; operation 1½ percent; all on the total investment in power.
[2] From the date of completion of structures and development of market for power output, estimated from about 1950.

This table has been revised to include the cost of lock at Wheeler Dam and the total historical cost of Wilson Dam.

The cost of Gilbertsville is for surcharge pool elevation 370. The surcharge to elevation 362 would cost $14,000,000 less and reduce the flood-control storage by 1,580,000 acre-feet.

Except for Pickwick, Wilson, Wheeler, and Norris, the estimates of cost are preliminary, and engineering data therefore are incomplete.

The installed capacities given above are the most economical for this system of projects, but space for additional power capacity is provided as shown by table inserted at page 608 transcript to permit utilization of additional regulation of flow by possible future storage.

An amount of $20,000,000 in general contingencies has not been included in this table as it is not an anticipated expenditure to be amortized.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 115 FOR IDENTIFICATION (Excluded)

Page 284

Mr. Lilienthal: Yes, sir. That is on schedule I, the footnote.

I hope the committee will observe that since we are planning to liquidate all the capital expenditure for flood control and navigation it is extremely important that we be given an opportunity to market the power, so as ultimately to liquidate this investment.

You will note that we expect power revenues to liquidate the entire investment in 50 years, and to be on a self-supporting basis soon after the construction period is over.

Rural Line Construction

Mr. Taber: Have you finished with that rural-line construction proposition? I have a question that I want to ask on that.

Mr. Lilienthal: Yes, sir.

Mr. Taber: The 1,500 miles that you already have built are figured on the same basis that the 800 are? They are the same type of construction and ought to cost about the same?

[fol. 2226] Mr. Lilienthal: I am sorry I am not familiar with what you are referring to.

Mr. Taber: That is on page B-72.

Mr. Taylor: Here is what you say:

This amount is to be used in financing rural lines that will be turned over to municipalities and associations. Over 1,500 miles of such lines will be completed and in use by June 30, 1936. The estimate for 1937 provides for approximately an additional 800 miles.

Page 285

Mr. Taylor: What do you mean by this:

This expenditure will be amortized out of increased revenues derived from this new construction.

When and how?

Mr. Lilienthal: These lines are placed on a self-supporting basis. They are not built unless the farmers along the line do two things: Agree to take a certain number of kilowatt-

hours per mile, 662 kilowatt-hours is the figure which is the minimum—and second, support that commitment of 662 kilowatt-hours with valid contracts for the purchase of electric appliances which will use them that total. So that before a rural line is built, or before any group of lines is built, the TVA central office has figures showing that the line will produce revenues to support that line.

[1] Includes $359,503 maintenance during cessation of work in construction period.
[2] Includes $500,000 for raising Wilson Dam.
[3] Includes cost of lock ($1,939,693), built by Corps of Engineers, U. S. Army.
[4] Hiwassee Dam is on the Hiwassee River, which enters the Tennessee River at mile 502.5; Norris Dam is on the Clinch River, which enters the Tennessee River at mile 567.7; and the proposed Fontana Dam is on the Little Tennessee River, which enters the Tennessee River at mile 601.3.
[5] Includes highways, town of Norris, forest lands, etc.

NOTE.—In the initial stage, power installation is included at Pickwick, Wilson, Wheeler, Guntersville, Chickamauga, and Norris. Estimates for river channel improvement are included in the cost estimates as follows: Pickwick, $1,800,000; Wheeler, $130,000; Guntersville, $1,136,400; Chickamauga, $3,810,700; Watts Bar, $662,000; Coulter Shoals, $900,000.

Page 407. MR. WOODRUM. Tell us something about this contract authority for $5,500,000. What project does that refer to?

DR. A. E. MORGAN. That is for ordering generating equipment, which would not be finished during that fiscal year but will extend beyond.

8. Electrical Plant and equipment:				
(a) Transmission lines and substations	$1,346,769	$4,642,655	$4,500,000	$4,700,000
(b) Investment in distribution properties	1,369,816	1,997,391	750,000	300,000
(c) General equipment and inventories	1,082,666	545,799	125,000	100,000
Total	3,799,251	6,094,247	5,375,000	5,100,000

Page 453

Justification of estimates.—In order to dispose of the power generated at the navigation and flood-control works of the Authority, to connect them into an integrated system, and to furnish power for the construction of projects in progress, it is necessary to construct a network of transmission lines throughout the area. In order to increase the distribution of electricity chiefly to rural consumers, the Authority has purchased and constructed distribution properties. These are being sold to cooperative associations and municipalities which repay the Authority over a period of years. The estimate for 1938 for these activities is slightly less than that for 1937. The following map shows the location of the transmission and distribution facilities now in service or under construction.

Transmission lines and substations, $4,700,000.—The individual lines to be constructed out of this estimate cannot be definitely determined for 1938 at this time due to uncertainties as to the outcome of litigation and pending negotiations. During 1937 a considerable amount of this work has been held up by litigation. Uncertainties as to the status of this litigation during 1938 still exists, but it is expected that the Authority will be enabled to expend approximately the [fol. 2230] same amount in 1938 as in 1937. A number of commitments have been entered into with prospective municipal and industrial customers, which will have to be consummated if conditions permit, and for which the estimate

makes provision. It is only by taking power to new markets that the Authority can realize the revenues included in this Budget and at the same time carry out the program set forth in the Tennessee Valley Authority Act of 1933 as amended. This estimate also provides funds for the construction of additional lines and substations needed to interconnect the generating plants at the various dams. With such connections the integrated control of the Tennessee River system for flood control, navigation, and water-power development as directed by Congress becomes feasible.

Investment in distribution properties, $300,000.—This estimate provides for the construction or purchase of rural lines by the Authority for cooperative associations and municipalities, which pay for them over a period of 20 years or less. Some lines are financed by the Rural Electrification Administration, through which the Authority is reimbursed as soon as the construction is completed.

As of June 30, 1936, the investment of the Authority represented by outstanding obligations of the municipalities and associations was nearly $1,000,000. Properties purchased and operated by the Authority pending transfer to municipalities and associations amounted to over $1,000,000. About $1,000,000 more was represented by properties constructed or in process of construction, pending their transfer to municipalities and associations.

No allocation of the 1938 estimate by individual associations and municipalities is possible at this time. Construction of some projects will depend upon the construction of transmission lines to areas not now served. The lines to be financed by the Authority will be limited to areas in which it already has a considerable investment in distribution properties. Work in remaining areas, including that done for new cooperatives, will be financed, it is expected, by the Rural Electrification Administration.

Pages 454-5

Transmission Lines and Substations

Mr. Woodrum: With reference to item (a), transmission lines and substations, $4,700,000, will you give us some information on that program?

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 116 FOR IDENTIFICATION (Excluded)

Mr. Lilienthal: Initially a study was made of all the lines it was felt were necessary in order to carry forward the job of tying the dams together and meeting contractual commitments for power from various communities or industrials or associations, or private utilities. And it was found that a very large figure was called for, a figure of some 13 million dollars. That was a larger figure than the Budget could stand and that was whittled down to $6,000,000 and has since been, through the necessities of keeping the Budget in line, whittled down to $4,700,000.

[fol. 2231] Just how that portion of the lines which ought to be built will actually be expended, it is difficult to say, because there are several needs for every dollar available. But we have broken it down by areas.

Mr. Woodrum: I am just wondering, Mr. Lilienthal, if in order to get a chronological picture of this situation, it would not be a good idea for you to make a brief statement of what you have done up to date in the way of building these transmission lines, your commitments, and so forth, and give us the present situation; what you expect to do in the future, and so forth, in order that we may have in our hearings a chronological story.

Mr. Lilienthal: Through the fiscal year, with an estimate, of course, for the remaining months, but quite an accurate estimate, the following figures, I think, will supply the information you want.

A total of transmission investment, investment under this heading of transmission lines and substations of $11,350,546.

Mr. Woodrum: From the beginning of the program?

Mr. Lilienthal: From the beginning of the program; yes.

Mr. Woodrum: Through the fiscal year 1937.

Mr. Lilienthal: Yes.

Mr. Woodrum: How many lines have you got and how many substations, and what do they do?

Mr. Taber: Does that include the 1937 appropriations, or does it not?

Mr. Lilienthal: That brings us to July 1 of this year.

Mr. Taber: Does it include the expenditure of the whole $4,500,000 that was allocated to you for that purpose in 1937?

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 116 FOR IDENTIFICATION (Excluded)

Mr. Lilienthal: It does.

Mr. Woodrum: Have you not been tied up in litigation on that a good deal?

Mr. Lilienthal: Yes, we have.

Mr. Woodrum: Will you spend that money in 1937, or commit it?

Mr. Lilienthal: Yes. The injunction did not prevent the construction of all lines that were in progress. It did prevent their use in some instances. But this contemplates the expenditure of commitment of the entire appropriation for that purpose.

Mr. Woodrum: The 1937 appropriations?

Mr. Lilienthal: Yes.

Mr. Woodrum: How many miles of transmission lines and how many substations have you, and where are they located?

Mr. Lilienthal: We have this in very considerable detail. I might summarize it and then put these two sheets in the record?

Mr. Woodrum: I suggest that you do that.

Mr. Lilienthal: In the table that is appended, we have a list of all the transmission lines constructed or installed or under construction or authorized by the Authority as of March 1, which is as near the end of the fiscal year as we can get.

[fol. 2231½] Mr. Wigglesworth: Does it show which were constructed and which were purchased?

Mr. Lilienthal: These are constructed. We can supply a separate statement showing the transmission lines acquired.

The total length of miles is 1,078.55 miles. The plant in service cost, as of March 1, $2,865,995.

The estimated total cost of additional work in progress—there are many of them partially constructed—is $4,730,566.

The cost to March 1 of this additional work is $3,677,068.

Then with respect to substations, we will supply the total for the record.

The estimated total cost of substations under construction is $1,689,710.

The cost to March 1 was $1,093,928.

Many of the substations are physically completed. Some

of them are not. The tables show the situation in that respect.

Mr. Wigglesworth: They show how many and where they are?

Mr. Lilienthal: Yes, it designates them.

For example, the table shows as to substations, in case you may want greater detail, Wilson Dam, Ala., and so forth; giving the town or the place where these are.

Page 460

Mr. Woodrum: What dams are generating power now?

Mr. Lilienthal: The Wilson Dam, the Norris Dam, and the Wheeler Dam are.

Mr. Woodrum: Those three dams are now in operation and generating power?

Mr. Lilienthal: Yes.

(Here follow three photolithographs, side folios 2232-2234)

Present and Proposed Transmission System Investment and Revenues—Summary

Investment

Area	Estimated cost, prior years	Estimated cost, fiscal year 1938	Estimated total cost
Middle Tennessee area	$1,481,774	$2,043,200	$3,524,974
West Tennessee area	1,995,003	1,477,000	3,472,003
Alabama area	1,065,994	277,500	1,343,494
Mississippi area	1,212,473	215,000	1,427,473
Chickamauga area	154,641	1,778,700	1,933,341
Norris area	447,705	.....	447,705
Dam substations and inter-connecting lines	4,992,956	2,716,000	7,708,956
Total	$11,350,546	$8,507,400	$19,857,946
Less adjustments and transfers to future years' programs [1]	861,122	3,807,400	4,668,522
Total to June 30, 1938	$10,489,424	$4,700,000	$15,189,424

[fol. 2236] Page 470

Revenue

Consumer	Kilowatt demand	Kilowatt-hour consumption	Annual revenue
Existing customers (1936 revenues):			
Middle Tennessee area	27,180	169,500,000	$459,400
West Tennessee area	2,540	10,900,000	62,000
Alabama area	10,220	32,300,000	187,000
Mississippi area	10,190	44,900,000	233,700
Chickamauga area	1,120	5,000,000	33,200
Norris area	.....	.....	.....
Customers served at dams	43,000	150,500,000	550,000
Total, existing customers	94,250	413,100,000	1,525,300
Estimated for First Full Year of Service			
Prospective customers (first year revenues):			
Middle Tennessee area	50,560	227,400,000	515,000
West Tennessee area	71,700	347,300,000	1,093,000
Alabama area	9,870	32,175,000	231,400
Mississippi area	6,000	24,000,000	100,000
Chickamauga area	21,300	120,000,000	535,000
Norris area	60,000	240,000,000	540,000
Customers served at dams	50,000	300,000,000	760,000
Subtotal, prospective customers	272,030	1,266,775,000	3,739,700
Total	366,310	1,679,275,000	5,265,000
Less temporary direct service, Alabama	5,400	4,000,000	64,000
Total consumption and revenue	360,910	1,675,275,000	5,201,000

[1] Estimated value of transmission property included in statement of distribution investment as "Unclassified." This property was acquired from the Alabama Power Co. and final determination of allocation to various classes of property has not yet been made.

EXCERPTS FROM COMPLAINANTS' EXHIBIT NO. 116 FOR IDENTIFICATION (Excluded)

This estimate covers the cost of proposed transmission-system construction which will be required during the fiscal years 1938 and 1939, in order to take care of the load growth of existing customers and provide service to prospective additional customers, including municipalities, cooperative associations, industrial customers, Tennessee Valley Authority activities, privately owned utilities and others.

The order in which these projects will be undertaken depends entirely upon the outcome of present legal proceedings, the acquisition or construction of distribution systems by certain municipalities, the outcome of negotiations with prospective customers with whom contracts have not yet been signed, the determination of certain policies, and other factors which are indefinite at the present time. The contingencies in connection with each project are given in detail on the attached sheets, together with a list of the individual lines and substations, their estimated costs, and the revenues to be derived from each. It will be noted that the estimated revenue in connection with each of the projects is sufficient to justify the construction cost involved, and it is not proposed to undertake construction in any case until the corresponding revenue is assured and the project has been specifically approved by the Board.

[fol. 2237] It is anticipated that construction totaling at least $4,700,000 will be required during the fiscal year 1938 in order to take advantage of opportunities to obtain additional revenues as the several situations develop. The balance of the program set forth herein will probably be postponed until the fiscal year 1939, although it is not possible at this time to predict the rate of development.

The estimated revenues from prospective customers, as shown above, will not all be realized during the fiscal year 1938, since many of them may not be connected until late in the fiscal year or until the following fiscal year. On the other hand, there are a number of prospective customers throughout the Tennessee Valley Authority area not included in the estimates above who may be connected during the present fiscal year. The estimated revenue for the fiscal year 1938 is shown in another tabulation under the heading "Operations."

Subtotals, prospective customers	50,560	227,400,000	515,000
Total, consumption and revenues	77,740	396,900,000	974,400

EXCERPTS FROM COMPLAINANTS' EXHIBIT NO. 116 FOR IDENTIFICATION (Excluded)

[fol. 2238] The second circuit to Columbia, which will be a 154-kilovolt transmission line extending from either Wilson Dam, Wheeler Dam, or a point on the Norris line, is required in order to fulfill the requirements of the existing contract with Monsanto Chemical Co., and it is to be in service not later than January 1, 1938. The ultimate revenue from the Monsanto Co. is expected to exceed $750,000 annually.

Construction of the Columbia-Nashville line is contingent upon the execution of a contract with the Tennessee Electric Power Co. to provide additional service facilities in the Nashville area in order to supply the power deficiency which already exists at that point, and to replace a certain amount of steam generation.

The Columbia-Shelbyville, Shelbyville-Murfreesboro, and Pulaski-Fayetteville 44-kilovolt lines will probably be required in order to supply adequate service to take care of the load growth of the existing cooperative associations in middle Tennessee.

The 44-kilovolt connection to the Tennessee Electric Power Co. at Columbia is contingent upon an agreement with the Tennessee Electric Power Co., and if undertaken, will provide reinforcement to their 44-kilovolt system in the southern portion of the middle Tennessee area.

West Tennessee Area

Project Investment	Estimated cost, prior years	Estimated cost, fiscal year 1938	Estimated total cost
Existing transmission system (established as of June 30, 1937):			
Lines	$1,550,789	.....	.....
Substations	444,214	.....	.....
Total as of June 30, 1937	1,995,003	.....	.....
Additional lines and substations:			
Completion of south Memphis substation	.....	$65,000	.....
Jackson-Covington-Memphis line	.....	475,000	.....
Memphis substation, north	.....	241,000	.....
Connection to Arkansas Power & Light Co.:			
Line	.....	100,000	.....
Sub	.....	150,000	.....
Jackson substation additions, 110 kilovolts	.....	65,000	.....
Conversion to 154 kilovolts at Memphis	.....	275,000	.....
Jackson-Trenton line	.....	106,000	.....
Total additional, fiscal year 1938	.....	1,477,000	.....
Total investment, west Tennessee	1,995,003	1,477,000	$3,472,003

Excerpts From Complainants' Exhibit No. 116 for Identification (Excluded)

[fol. 2239]

Consumer	Revenues: Kilowatt demand	Kilowatt-hour consumption	Annual revenue
Existing customers (1938 revenues):			
City of Bolivar, Tenn	235	1,000,000	$6,500
City of Jackson, Tenn	430	1,800,000	10,000
City of Milan, Tenn	460	2,000,000	11,000
City of Somerville, Tenn	185	800,000	5,000
Pickwick Electric Membership Corporation	370	1,600,000	9,500
Gibson County Electric Membership Corporation	860	3,700,000	20,000
Subtotal, existing customers	2,540	10,900,000	62,000
Estimated for First Full Year of Service			
Prospective customers (first-year revenues):			
City of Memphis, Tenn	30,000	140,000,000	$600,000
Electric Bond & Share Corporation (Arkansas)	40,000	200,000,000	450,000
City of Trenton, Tenn	1,100	5,000,000	28,000
Southwest Tennessee Electric Membership Corporation	600	2,300,000	15,000
Subtotal, prospective customers	71,700	347,300,000	1,093,000
Total, consumption and revenues, west Tennessee	73,240	358,200,000	1,155,000

The above estimates cover the cost of the necessary transmission system construction in order to provide service to Memphis, Tenn., and to interconnect with the Electric Bond & Share system near Memphis and at Covington, Tenn., for the purpose of supplying their power deficiency in eastern Arkansas and west Tennessee; and also service to other prospective customers in the west Tennessee area.

The necessity for this work depends upon (a) the outcome of court proceedings in the Nineteen Companies suit; (b) ability of the city of Memphis to complete the acquisition or construction of a distribution system; (c) outcome of present negotiations with the Arkansas Power & Light Co. and associated companies; (d) determination of policy with respect to interconnection with these utilities.

In addition to the investment of $1,477,000 for market lines in this area, an investment of $1,125,000 for interconnecting lines between hydro plants will be required. Although this latter amount is not entirely assignable to the west Tennessee area, the necessity for undertaking these particular lines during the coming fiscal year is dependent upon the acquisition of the loads above mentioned.

Excerpts From Complainants' Exhibit No. 116 for Identification (Excluded)

The total investment and total annual revenues by the end of the fiscal year 1938 for this area may be summarized as follows:

Investment, including market and interconnecting lines	$2,602,000
Annual revenues from additional customers	1,093,000

[fol. 2240] Alabama Area

Investment

Project	Estimated cost, prior years	Estimated cost, fiscal year 1938	Estimated total cost
Existing transmission system (estimated as of June 30, 1937):			
Lines	$111,673	.....	.....
Substations	93,199	.....	.....
Total, as of June 30, 1937	204,872	.....	.....
Additional lines and substations:			
110-kilovolt connection from Decatur substation to Guntersville line	.....	$27,500	.....
Substation, 25,000 kilovolt-amperes, 154/110 kilovolts	.....	250,000	.....
Total proposed additions, fiscal year 1938	.....	277,500	.....
Estimated value of transmission property in north Alabama, not yet classified (included in statement of distribution property acquired from Alabama Power Co. (approximate))	861,122	.....	.....
Total investment	1,065,994	277,500	$1,343,494

Revenues

Consumer	Kilowatt demand	Kilowatt-hour consumption	Annual revenue
Existing customers (1938 revenues):			
City of Athens, Ala	1,000	4,500,000	$25,000
City of Florence, Ala	2,600	11,600,000	58,000
City of Muscle Shoals, Ala	80	600,000	3,800
City of Sheffield, Ala	800	3,500,000	20,000
City of Tuscumbia, Ala	340	1,500,000	10,200
Cullman County Electric Membership Corporation	2,000	9,000,000	6,000
Lauderdale County power district	500	800,000	7,000
Colbert County power district	900	800,000	7,000
Alabama power district	4,000	3,000,000	50,000
Total, existing customers	10,220	32,300,000	187,000

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 116 FOR IDENTIFICATION (Excluded)

Consumer	Kilowatt demand	Kilowatt hour consumption	Annual revenue
Estimated for First Full Year of Service			
Prospective customers (first year revenue):			
Morgan and Lawrence Counties, Ala. (including industrials)	4,000	9,000,000	100,000
Lauderdale County Corporation, Ala	500	2,500,000	15,000
Colbert County Corporation, Ala	900	3,000,000	20,000
City of Decatur, Ala	3,000	12,000,000	60,000
City of Russellville, Ala	1,100	4,200,000	26,100
City of Hartselle, Ala	150	600,000	4,200
City of Courtland, Ala	120	475,000	3,300
City of Cherokee, Ala	100	400,000	2,800
Subtotal, prospective customers	9,870	32,175,000	231,400
Total	20,090	64,475,000	418,400
Less temporary rural service	5,400	4,600,000	64,000
Total, consumption and revenues	14,690	59,875,000	354,400

[fol. 2241] The only additional transmission system construction contemplated in the Alabama area for the fiscal year 1938 consists of a 110-kilovolt connection from the Guntersville line to the Decatur substation, including installation of a 154/110-kilovolt substation near Decatur. This construction, or, as an alternate, the acquisition of the existing 110-kilovolt line between Decatur and Wilson Dam, now owned by the Alabama Power Co., will be required in order to eliminate the interchange at Decatur.

In the tabulation of revenues given above, it will be noted that 1938 revenues are shown for the Lauderdale, Colbert, and Alabama power districts for a portion of the year only, and that in the list of prospective customers, revenues from corresponding cooperative associations are shown for a full year. This makes it necessary to deduct the power district revenues from the total in order to eliminate the duplication. The reason for the above is that temporary rural service in the power districts will be discontinued at some time during the fiscal year 1938, at which time the operations will be assumed by electric membership corporations or municipalities.

Prospective customers (first year revenue):			
Sardis Dam (U. S. Army)	5,000	20,000,000	80,000
Pontotoc Cotton Oil Co	500	2,000,000	10,000
Southern Cotton Oil Co	500	2,000,000	10,000
Subtotal, prospective customers	6,000	24,000,000	100,000
Total, consumption and revenues, Mississippi area	16,190	68,900,000	333,700

[fol. 2242] The Tupelo-Pontotoc 44-kilovolt line and the 44-kilovolt substation at Pontotoc will be required in connection with the proposed service to the Sardis Dam project.

EXCERPTS FROM COMPLAINANTS' EXHIBIT NO. 116 FOR IDENTIFICATION (Excluded)

An additional line from Pontotoc to Sardis will be constructed by the Army Engineers or by the dam contractor.

The increased 2,300-volt capacity at Tupelo and Iuka will be required in order to take care of the normal load growth at those locations.

The changing of the Burnsville-Tupelo line to 110 kilovolts, the construction of the Tupelo 110-kilovolt substation, and the New Albany-Pontotoc 44-kilovolt transmission line have all been included in the 1937 estimate, since it is probable that the majority of the commitments and expenditures in connection with these items will be made during the present fiscal year.

The revenue estimate above includes only those customers who are now being served or who appear to be immediately in prospect. The transmission system, upon completion of the proposed 1938 construction, will be of sufficient capacity to take care of a considerable increase in load without further capital expenditures except for line extensions.

Total, consumption and revenues	25,050	100,900,000	533,500

[fol. 2243] The construction of additional transmission facilities in the Chickamauga area, comprising southeast Tennessee and north Georgia, is contingent upon obtaining contracts from the municipalities of Dalton, Lafayette, and Cartersville, Ga., and with the several industrial consumers in the vicinity of these cities, as well as a large industrial user at Cave Springs, near Rome, Ga. It is possible that only a portion of the load will be obtained, which may justify the construction of a part of the ultimate system.

It may be possible to eliminate the construction of certain of these facilities if interchange agreements can be worked out.

Excerpts From Complainants' Exhibit No. 116 for Identification (Excluded)

Norris, Tenn., Area

Investment

Project	Estimated cost, prior years	Estimated cost, fiscal year 1938	Estimated total cost
Existing transmission system (estimated as of June 30, 1937):			
Lines	$421,546	.....	.....
Substations	26,159	.....	.....
Total as of June 30, 1937	447,705	.....	.....
Total investment	447,705	.....	$447,705

Additional lines and substations: (None contemplated during 1938).

Revenues

Consumer	Kilowatt demand	Kilowatt-hour consumption	Annual revenue
Prospective customers (first year revenues): Aluminum Co. of America	[1] 60,000	[1] 240,000,000	[1] 540,000
Total consumption and revenues	[1] 60,000	[1] 240,000,000	[1] 540,000

[1] Estimated for first full year of service.
Note.—Existing customers (1938 revenues): None.

[fol. 2244] The existing investment in transmission facilities in the Norris area consists of the Norris-Alcoa line, which is now under construction, for providing service to the Aluminum Co. of America, and the Clinch River substation, which was installed by the Tennessee Electric Power Co. on behalf of the Authority, to provide service to Norris Dam during the construction period.

Although the revenue estimate for the fiscal year 1938 includes only $100,000 revenue from the Aluminum Co. of America, it is expected that this amount will be greatly exceeded if the present negotiations with the Aluminum Co. of America are completed. A maximum demand of 60,000 kilowatts is anticipated by January 1, 1938, and the probable ultimate demand will be at least 100,000 kilowatts, with an annual revenue of about $1,800,000. Additional transmission facilities will undoubtedly be required in the future to take care of this increase in load.

Commonwealth & Southern Corporation	50,000	309,000,000	760,000
Total consumption and revenues	93,000	450,500,000	1,310,000

EXCERPTS FROM COMPLAINANTS' EXHIBIT NO. 116 FOR IDENTIFICATION (Excluded)

[fol. 2245] The construction of additional facilities for interconnecting the hydroelectric generating plants is necessary in order to provide for the transfer of electrical energy between plants, as load and stream conditions may require, in order to make fullest use of the capacity of the integrated system. The cost of such work cannot be allocated strictly to any particular transmission system project or area, but should be considered rather as a part of the generating cost since, in effect, it increases the availability of electrical energy at each of the plants without a corresponding increase in generating capacity.

The necessity for constructing those lines at this particular time, however, is more or less closely identified with the requirements of the respective market areas and may be allocated approximately as above.

The revenues shown above are from customers who are served at the dams and are, therefore, not assignable to any particular market area. It will be noted, of course, that there is no particular relationship between the revenues from these customers and the investment in interconnecting lines.

Page 485

Mr. Woodrum: Now, Mr. Lilienthal, will you say something briefly about these other two items on page 28—"Investment for distribution property, $300,000?"

Mr. Lilienthal. The item of $300,000 for investment in distribution properties is quite well described in the note on page 28, which, I assume, will be in the record.

Generally speaking, the item is to enable the Authority to purchase on the account of the rural cooperatives, the farm cooperatives, operated by associations and corporations, operating rural projects, capital for small extensions.

The rural projects by and large are financed by the R. E. A.; and some of these associations will have need of relatively small extensions, say for 5 or 10 miles to reach additional customers, which will improve their financial situation. But if the R. E. A. finances those small projects, there will be a great many difficulties in the way of having too many different liens on the same property. It has been found much more expeditious for the T.V.A. to advance that

money rather than to get two bankers into the same association.

Frequently these associations are purchasing existing small lines; and this is for the purpose as authorized under our statute of lending money for that purpose.

Mr. Woodrum: Do you mean that you have a working arrangement with the R.E.A.?

Mr. Lilienthal: Yes. We have a very cooperative arrangement with R.E.A. by which they are furnishing by far the bulk of the financing through this area. But these are exceptional cases. They are not authorized to loan money for the purchase of existing lines for one thing. And then, where you have a small extension where we already have advanced the money, it is very awkward to have two sets of loans, and very expensive.

[fol. 2246] Page 490

2. Electricity operations, $2,649,000 (net credit).—This estimate for electricity operations is based on estimates of operating revenues, operating expenses, revenue deductions, and nonoperating income. These estimates will be explained in the following analysis:

A. Operating revenues, $3,700,000: The 1938 estimate of operating revenues is more than double the corresponding estimate for 1937. As shown in the supporting table, following this test, substantial increases are anticipated from practically all sources. A large increase in power demand in the area over last year, with every indication of continuing increase, has produced a very favorable market situation for the sale of surplus power and increase in revenues. Estimated sales to municipalities are estimated to increase from $248,600 in 1937 to $700,000 in 1938. This estimate is based on normal growth in the requirements of present customers, together with the addition of a few other municipalities where it seems certain that power sales will begin during the fiscal years 1937 or 1938. Much of the increase over the 1937 estimate results from the fact that many of the 1937 estimates are for only part of a fiscal year. Sales to cooperative associations are expected to increase from

$131,400 in 1937 to $275,000 in 1938. This is based on increasing load requirements of present associations. Sales to industries are expected to increase from $50,000 in 1937 to $600,000 in 1938. This increase is based almost entirely on present contracts for the sale of power to industries. Sales to utilities are expected to increase from $756,000 in 1937 to $1,510,000 in 1938. This increase is based on growth in loads on private systems for which no existing generating capacities are available, excepting those being placed in operation by the Authority. During the dry seasons of 1935 and 1936 the Authority was unable to supply the demands of private utilities. With generating units now being completed, it is believed that the Authority will be able to supply these increasing demands. A reduced estimate is included in the 1938 budget for net revenue from power districts. It is planned to dispose of all these properties as rapidly as possible by sales to cooperatives associations. Interdepartmental transfers are expected to increase from $444,000 in 1937 to $550,000 in 1938. This estimate covers the power used in fertilizer manufacture and construction operations.

B. Operating expenses, $941,000: The 1938 estimate for operating expenses exceeds the 1937 estimate by $146,000. As shown in the supporting table following this text the estimate for production expense is increased by $50,000; the remaining increase is accounted for by growth in expense for operation and maintenance of transmission lines and substations, increased electrical development expense and increased general administration expense. These increases are necessary in order to care for the increasing volume of business as shown under operating revenue estimates.

C. Revenue deductions, $185,000: The estimate for revenue deductions is computed on the basis of section 13 of the Tennessee Valley Authority Act, as amended, which requires that 5 per cent of gross revenues from the sale of power shall be paid to the States of Alabama and Tennessee based on the amount of power generated by projects located in these States.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 116 FOR IDENTIFICATION (Excluded)

[fol. 2247] Page 488

Mr. Woodrum: What rate of interest do you charge on those loans?

Mr. Lilienthal: Threé and one-half per cent.

Mr. Wigglesworth: Does that probably amount to about a million dollars?

Mr. Lilienthal: That is about correct.

Mr. Wigglesworth: What collateral, if any, do you have?

• • • • • • •

[fol. 2248] D. Nonoperating income, $75,000: This amount represents estimated interest on properties transferred to municipalities and associations together with other miscellaneous nonoperating receipts.

Pages 510-11

Memorandum on Firm and Secondary Power Rate—Schedule C-1

Availability.—Transmitted firm and secondary power purchased in combination by large industrial customers, with a minimum contract firm demand of 8,000 kilowatts. Firm power shall be available to customer at all times. Secondary power shall be available to customer for at least 300 days, to be selected by Authority out of each calendar year.

Demand charge.—For firm power, $.90 per kilowatt of demand per month.

For secondary power, $.30 per kilowatt of demand per month when secondary power is available.

Energy charge.—For total energy consumed including firm and secondary use; first 100,000 kilowatt-hours consumed per month at 4 mills per kilowatt-hour; next 200,000 kilowatt-hours consumed per month at 3 mills per kilowatt-hour; next 700,000 kilowatt-hours consumed per month at 2.5 mills per kilowatt-hour; excess over 1,000,000 kilowatt-hours consumed per month at 2 mills per kilowatt-hour.

Charge for energy in excess of 360 times the total measured demand as hereinafter defined shall be subject to a reduction of 0.5 mills per kilowatt-hour from the otherwise applicable rate.

Excerpts From Complainants' Exhibit No. 116 for Identification (Excluded)

Determination of Demand

Demand measurement shall be made by suitable instruments at the point of delivery. Total measured demand for any month shall be defined as the highest integrated simultaneous load during 60 consecutive minute period during the month for which determination is made.

For periods during which secondary power is not available, firm demand shall be taken as 100 per cent of the total measured demand or the contract firm demand, whichever is the greater, and there shall be no charge for secondary demand.

For months during which secondary power is available, firm demand shall be taken as 35 per cent of the total measured demand, but in no case shall the firm demand be taken as less than the highest firm demand billed customer during any period when secondary power was not available within the previous consecutive 12 months. Secondary demand shall be taken as the difference between total measured demand and firm demand. During any fractional month for which secondary demand charges are applicable, such charges shall be prorated.

[fol. 2249] Adjustment of Demand Charge for Power Factor

The customer's demand shall, whenever the normal power factor is less than 85 per cent, be determined upon the basis of 85-per cent power factor; that is, whenever said normal power factor is less than 85 per cent, the demand in kilowatts shall be taken to be 85 per cent of the kilovolt-amperes indicated.

Minimum Monthly Bill

The customer agrees to pay each month for firm power, including demand and energy, an amount not less than: $0.90 times three-quarters of the highest measured monthly firm demand in kilowatts occur-ing during any month, during the previous 12-month period, or $0.90 times the contract firm demand in kilowatts, whichever is the greater; and

Customer further agrees to pay each month for secondary power, an amount not less than $0.30 times three-quarters of the highest measured monthly secondary demand occur-

ring during any month, during the previous 12-month period, or the contract secondary demand, whichever is the greater, except that in the event secondary power is not available there will be no minimum bill for secondary service. If secondary power is available for only a fraction of a month, the minimum bill for the secondary service shall be prorated. Customer shall not be obligated to pay a minimum bill for secondary power for more than 300 days in each year.

Discount for Nontransmitted Power

If necessary transmission facilities are furnished by customer and power is purchased at the switchboard of the Authority's hydroelectric generating plants, there shall be no demand charge for secondary power and the above rates shall be subject to a discount of 10 per cent.

Single Point Delivery

The above rates are based upon the supply of service through a single delivery and metering point, and at a single voltage. Separate supply for the same customer at other points of consumption, or at different voltage, shall be separately metered and billed.

Page 513

Mr. Wigglesworth: You gave us yesterday a list of the various transmission lines you are contemplating constructing if this appropriation is approved. In revising your statement, will you indicate in each case the available service in respect to the territory served.

Mr. Lilienthal: Yes, sir.

Mr. Wigglesworth: Please show the available power in the territories which the new lines will serve and the power which is actually being used in each instance in the territories served.

[fol. 2249½] Mr. Lilienthal: I do not know that I quite understand your question.

Mr. Wigglesworth: You are contemplating, for instance, a line from point A to point B, to serve point B. I think it would be interesting to the committee to know what power facilities there may be at the present time available at

point B, the amount available, the sources from which it comes, and the present demand.

Mr. Lilienthal: In some instances that will be quite easy to do, but in others, where an area is involved, there may be some difficulty. I think, perhaps, a map will help to show the existing lines.

Mr. Wigglesworth: I would like to get it also in terms of power consumption and power available at the present time in each instance, as nearly as you can give it to us.

Mr. Lilienthal: We will try to give it to you as nearly as we can.

(Note by Mr. Lilienthal.—We find it impossible to answer the question in the terms in which it is stated. The question is answered in substance in testimony elsewhere in this record on power markets by areas, and by the map accompanying this statement.)

[fol. 2253] COMPLAINANTS' EXHIBIT No. 117

Power Contract Between TVA and City of Athens, Alabama

This agreement, made and entered into this 6th day of April, 1934, pursuant to the Tennessee Valley Authority Act of 1933, between the Tennessee Valley Authority, hereinafter called "Authority" a corporation created by and acting under said Act, and the city of Athens, a municipal corporation duly organized, created, and existing under and by virtue of the laws of the State of Alabama, hereinafter called "Contractor."

Whereas Authority, by section 10 of said Act, is authorized to sell the surplus power generated by it and not used in its operations, and is directed to give preference to states, counties, municipalities, and cooperative organizations of citizens or farmers not organized or doing business for profit; and

Whereas, by section 11 of said Act, it is provided that the sale of power by Authority shall be primarily for the benefit of the People of the Section as a whole, and particularly the domestic and rural consumers to whom the power can economically be made available; and

Whereas, contractor owns and operates a municipal electric distribution system, and

Whereas, Contractor desires to purchase power from Authority for municipal purposes and for re-sale and proposes to make the necessary appropriations in payment therefor; and

Whereas Contractor has by ordinance of its Council duly authorized the making of this contract, and Authority, by its by-laws and resolutions, has likewise so authorized;

Now, therefore, for and in consideration of the mutual covenants herein contained the parties hereto mutually covenant and agree as follows:

1. Term of contract: This contract shall become effective upon the execution hereof, and shall continue in effect for twenty years: Provided, however, That all obligations of the parties hereto with regard to the rendition of service and payment therefor shall begin at such time (hereinafter designated "Date of initial delivery") as Authority shall have acquired, by purchase or construction, such transmission facilities as may be necessary for service to Contractor, and Contractor may legally take such service: Provided

further, that in any case Authority may designate said date of initial delivery by giving not less than 200 days notice to contractor; and all service and payment periods hereinafter referred to shall be computed from the date of initial delivery.

[fol. 2254] 2. Acquisition of transmission facilities: Authority agrees to use all reasonable diligence in acquiring by construction or purchase transmission facilities for service to contractor.

3. Power supply: Authority will, from the date of initial delivery to the expiration hereof, supply electrical energy to contractor for municipal purposes and for resale. Contractor agrees to purchase from Authority, and Authority agrees to supply, the entire power requirements of contractor. Said energy will be delivered in the form of three phase current at approximately 60 cycles per second and approximately 2300 volts, or at such voltage as the parties may from time to time agree. The maximum amount of electricity (called "Reserve Power") which Authority agrees to supply within the first two year period, is 2000 kw., but thereafter Contractor shall have the right to increase such maximum demand as herein specified, and Authority shall deliver the same to Contractor. After two years from the date of initial delivery, as contractor foresees the necessity for more than 2000 kw. Contractor shall make written demand upon Authority for an increase of reserve power. Such increase shall take effect nine months after date of demand if the amount demanded be less than 5000 kw., twelve months after date of demand if the amount be over 5000 kw., and not over 10,000 kw., and two years after date of demand if the amount demanded be in excess of 10,000 kw.

4. Point of delivery: The energy to be supplied contractor hereunder shall be delivered at the main switchboard of contractor's present substation in the city of Athens, or at such other point as Authority may select which will not occasion greater cost to Contractor.

5. Schedule of rates: Attached hereto, and hereby made a part hereof by reference, the same as though physically incorporated herein, is a "Schedule of Rates and Charges."

Contractor agrees to pay for the energy supplied by Authority at the rates fixed in Schedule A, entitled "Tennessee Valley Authority Wholesale Power Rates."

6. Resale rates: In order to carry out the obligations of Authority with respect to the promotion of a wider use of electricity throughout the area in which it operates, contractor agrees to charge all of its consumers the rates prescribed for the several classes of consumers in Schedule B, entitled "Tennessee Valley Authority Resale Rates," and not to depart therefrom except with the written consent of Authority. Authority may from time to time prescribe additional resale schedules for special classes of customers or special uses of electricity, and Contractor agrees to be bound thereby. If it should appear that the rates provided for in said schedule with the surcharges provided for therein do not under economical and efficient management by contractor produce revenues sufficient to maintain the system on a self-supporting and financially sound basis then upon application by contractor, Authority shall con- [fol. 2255] sent to such changes in rates as will provide for such increased revenues as will place the system upon a self-supporting and financially sound basis when operated under economical and efficient management.

7. Rules and regulations of Authority: Attached hereto and hereby made a part hereof, by reference, the same as though physically incorporated herein, is a schedule entitled "Schedule of Rules and Regulations," and it is understood that several provisions of said Schedule, as well as the several provisions of this contract and of the Schedule of Rates and Charges, are of the essence of this contract, and that their violation by Contractor renders this contract voidable at the option of Authority, unless such violations are cured upon reasonable notice.

The Schedule of Rules and Regulations is standard and of uniform applicability to all municipal customers of Authority, and the Contractor hereby agrees to be bound, during the term hereof, by any future additions or amendments of such schedules or rules and regulations, prescribed after conference with representatives of contractor, the same as though such additions or amendments were incorporated therein. If there should be any conflict be-

tween any rules or regulations prescribed pursuant to this and the following article, and the terms of this Contract, the contract shall control.

8. Rules and Regulations of Contractor: In the interest of uniformity and for the protection of both Contractor and Authority Contractor agrees to adopt and enforce such rules and regulations for the sale of electricity to the public as Authority may, after conference with representatives of contractor, from time to time prescribe during the term of this contract for uniform application to all of the municipal customers of Authority deemed to have similar characteristics.

9. Declaration of Policy: This contract is entered into in a spirit of cooperation and with the desire on the part of Authority and contractor so to administer the relationship established by this contract as to operate to the benefit of Contractor and its residents and of the residents of the Tennessee Valley. In furtherance of this cooperative relationship Authority will, by every means within its power, seek to further the economic welfare of contractor by fostering and promoting the increased use of electricity within contractor's corporate limits, and by such other means as are provided by law. Contractor agrees to cooperate with Authority in such program within contractor's area of operations, and to work with Authority in furthering the economic well-being of the entire Tennessee Valley. This contract shall be construed and administered in accordance with this statement of policy.

10. Contract not transferable: Neither this contract nor any interest therein shall be transferable or assignable by contractor to any other party without the consent of Authority.

[fol. 2256] In Witness Whereof, the parties hereto have caused this instrument to be signed and attested by their duly authorized officers, the day and year first above written.

Tennessee Valley Authority, (Signed) by Arthur E. Morgan, Chairman Board of Directors.

Attest: C. A. Bock, Acting Secretary.

City of Athens, (signed) by R. H. Richardson, Jr., Mayor.

Attest: R. A. Smith, City Clerk.

COMPLAINANTS' EXHIBIT No. 117

Approved as to form and correctness, as adopted by the Council of the City of Athens, Alabama.

Edward Goodrich, City Attorney.

Schedule of Rates and Charges

Schedule A—Tennessee Valley Authority Wholesale Power Rates.

Wholesale Rate: Demand charge, $0.90 per kw. per month.

Demand, maximum integrated sixty (60) minute period.

Charge for energy up to and including 360 times the demand: First 100,000 kilowatt hours per month, at 4 mills per kilowatt hour; next 200,000 kilowatt hours per month at 3 mills per kilowatt hour; next 700,000 kilowatt hours per month at 2.5 mills per kilowatt hour; over 1,000,000 kilowatt hours per month at 2 mills per kilowatt hour.

Charge for energy in excess of 360 times the demand shall be subject to a reduction of 0.5 mills per kw. hr. from the otherwise applicable rate.

Minimum monthly bill: The minimum bill for any month shall be equal to the demand charge for said month, but in no case less than the charge for sixty per cent (60%) of the highest demand occurring during any month within the previous twelve (12) months period.

[fol. 2257] Allowance on sales to residential consumers: Authority will adjust bill so that Contractor shall be billed at two mills per kw. hr. for at least so much energy as may be sold by contractor under the residential resale schedule at 4 mills per kw. hr.

Adjustment of demand charge: Demand charge may be adjusted if and when Authority deems necessary to correct for power factors lower than eighty-five (85%) per cent. Such adjustments will be made in such manner as to bring the demand charge to the equivalent of eighty-five (85%) power factor.

Schedule B—Tennessee Valley Authority

Resale Rates

Standard Residential Rates

Available: To residential customers for domestic use in single family residences or apartments, at local distribu-

tion secondary voltage, either 2-wire or 3-wire service as Contractor may require.

First 50 kilowatt hours per month at 3 cents per kilowatt hour; next 150 kilowatt hours per month at 2 cents per kilowatt hour; next 200 kilowatt hours per month at 1 cent per kilowatt hour; next 1000 kilowatt hours per month at 0.4 cents per kilowatt hour; excess over 1400 kilowatt hours per month at 0.75 cents per kilowatt hour.

Minimum monthly bill: 5-ampere meter, $0.75; 15-ampere meter, $1.00; 50-ampere meter, $1.50.

Basic Commercial Rate

Available: To commercial customers taking service from Contractor's secondary system:

First 250 kilowatt hours per month at 3 cents per kilowatt hour; next 750 kilowatt hours per month at 2 cents per kilowatt hour; next 1000 kilowatt hours per month at 1 cent per kilowatt hour; excess over 2000 kilowatt hours per month at 0.8 cents per kilowatt hour.

Minimum monthly bill: 5-ampere meter, 50 kilowatt hours, $1.50; 15-ampere meter, 66⅔ kilowatt hours, $2.00; 50-ampere meter, 100 kilowatt hours, $3.00.

Surcharge: Basic rate subject to a surcharge as provided for in rules and regulations.

Basic Industrial Rate

Available: To industrial power users having demands in excess of 10 kw. service at primary-distribution voltage or secondary-distribution voltage at discretion of Contractor. [fol. 2258] Demand charge: $1.00 per kw. per month. Demand-maximum integrated Thirty (30) Minute Period.

Energy charge: First 10,000 kilowatt hours per month at 10 mills per kilowatt hour; next 25,000 kilowatt hours per month at 6 mills per kilowatt hour; next 65,000 kilowatt hours per month at 4 mills per kilowatt hour; next 400,000 kilowatt hour- per month at 3 mills per kilowatt hour; excess over 500,000 kilowatt hours per month at 2.5 mills per kilowatt hour.

Minimum monthly bill: $1.00 per kw. of maximum demand, but in no case shall the maximum demand for billing purposes be taken as less than sixty per cent (60%) of the

maximum monthly demand billed during the preceding twelve (12) consecutive months.

Small-power rate: Customers having a load of 10 kw. demand or less to be billed on basic commercial rate.

Service taken under the small-power rate will be subject to a minimum bill prescribed for commercial customers.

Surcharge: Basic rate (including small-power rate) subject to surcharge, as provided for in Rules and Regulations.

Seasonal loads: Contractor may in its discretion discontinue service on seasonal loads and establish a minimum payment for idle months sufficient to cover costs involved.

Tennessee Valley Authority Schedule of Rules and Regulations

1. Measurement of demand and energy: Demand measurement shall be made by suitable instruments at the point or points of delivery, or may, at the option of Authority, be installed at some other point or points where housing facilities are available or may be made available and/or operation simplified: Provided, however, That in the event that metering is effected at some other location than at point of delivery, suitable correction shall be made of the amounts determined at such location so that the adjusted amounts will so far as possible reflect the exact quantities delivered at the actual point or points of delivery.

Demand for any month for the purpose of this contract shall be defined as the highest integrated load furnished to contractor during any 60 minute period during the month for which the determination is made.

Energy measurements shall be made by suitable watt-hour meters with the same reservation with respect to location of meters as is applicable to demand meters.

Authority will, at its own expense, install and maintain the necessary meters for measuring the maximum demand and amount of energy furnished contractor: Provided, That should these meters fail or be found inaccurate the maximum demand and amount of energy delivered will be estimated from the best information available.

[fol. 2259] 2. Space heating appliances: Contractor shall keep an accurate record of the space heating appliances installed in residences, and shall, on request furnish Authority

with a correct schedule of all such installations showing maximum connected load in kilowatts. Contractor's monthly maximum demand shall be subject to a reduction of not to exceed sixty-five per cent of the total amount of the above schedule during the heating season beginning October 15th, and ending April 15th. The exact amount of reduction for any given month will be determined by a comparison of demand and usage before and after the heating season, and by the use of other relevant data, and will be adjusted in such manner as will not effect a reduction in billed monthly demand greater than its actual use for residence space heat purposes.

3. Failure to make payments: Payment for energy used in any calendar month shall be due on the 15th of the succeeding month, or five days after receipt of bill from Authority, whichever is the later. Upon failure of Contractor to pay for the energy used in any calendar month within fifteen (15) days after due date, Authority shall have the right to discontinue the supply of energy and refuse to resume delivery so long as any part thereof remain unpaid. Discontinuance of supply under this section or under Section 12 hereof will not relieve Contractor of its liability for the agreed minimum monthly payment during the time the supply of energy is so discontinued. To any amount remaining unpaid on the first day of the calendar month following the due date, there shall be added a penalty of one (1) per cent and an additional one (1) per cent shall be added on the first day of each succeeding month until the amount is paid in full. All payments shall be made to Authority at its offices at Wilson Dam, Florence, Alabama.

4. Interruption of service: Authority will furnish energy as agreed upon continuously so far as reasonable diligence will permit, but Authority, its officers, agents, or employees shall not be liable for damages when, for any reason, suspensions of the operation of the generation and transmission system serving contractor, or any part thereof, interfere with the delivery of electric energy to contractor, nor shall such an interruption constitute a breach of this contract on the part of Authority: Provided, That Authority shall make appropriate adjustment of the demand charge in the event of an interruption.

5. Lower rates to other municipalities: If at any time during the term of this agreement Authority should supply electricity to any municipality at a lower rate than that applicable to contractor, and such lower rate shall not be justified by different conditions of service, making the cost to such other municipality relatively less than to Contractor, such lower rate shall be made available to contractor so long as such lower rate shall be given to such other municipality while this contract is in force.

6. Developmental surcharge: Contractor agrees not to depart from the resale rates set forth in Schedule B of the Schedule of Rates and Charges without first securing the [fol. 2260] consent of Authority: Provided, however, That contractor may apply a prompt payment discount or penalty of not to exceed 10 per cent: And provided further, That in order to maintain Contractor's Revenues in the developmental period in which the increased demand for power may not compensate for the greatly reduced rates provided for in Schedule B, Contractor may impose a surcharge upon such classes of consumers subject to a surcharge under the provisions of said Schedule. Contractor may initially determine and may from time to time vary such surcharge, with the understanding, however, that all revenues over those required for the appropriations set forth in Section 10 (a) herein shall be applied to the reduction or elimination of surcharges. Surcharges shall be based on a straight percentage of net bills, and shall apply uniformly to all members of classes as to which surcharges are authorized.

7. Adjustment of rates: In the event of a major increase or decrease in general price and wage levels of such a substantial character as materially and substantially to change the cost basis upon which the wholesale rates fixed by this contract are predicated, the parties hereto agree, by supplemental contract or contracts, or otherwise, to make appropriate adjustment of such rates. Should the cost of living index for the United States as a whole compiled by the Department of Labor of the United States show a decrease for a period of six consecutive calendar months, or for any month in said period, if index figures are not reported for each month thereof, of 20 per cent or more under the index

figures for the index period including the month in which this contract is signed, or for any month in said period if index figures are not reported for each month thereof, contractor may in writing request authority to agree to such a reduction in rates as the circumstances may warrant, and should such index figures show a 20 per cent or more increase for the same period or month, as the case may be, Authority may in writing request Contractor to agree to such an increase in rates as the circumstances may warrant. If within thirty days after the receipt of such a request the parties shall be unable to agree to a satisfactory adjustment, the question shall be submitted to three arbitrators, one to be appointed by each of the parties, and a third to be appointed by the two so selected. A decision of the arbitrators shall require only a majority vote, and such a decision shall be final and binding upon both parties. Should either of the parties fail or refuse to appoint an arbitrator within fifteen days after receipt of written request from the other party to make such an appointment, or should the arbitrators so appointed fail to agree upon a third arbitrator within such period, Contractor shall only be liable, if costs have decreased, for the amount of its bill as computed under the rates provided for herein, less such a percentage as it may fix, such percentage in no event to exceed the per cent of decrease in the cost of living as determined by the Department of Labor; and if costs have increased, Contractor shall be liable for such an additional amount as Authority may fix, such increase not to exceed the percentage of increase in the cost of living as determined by the Department of Labor. The rates as adjusted pursuant to this Section shall be applied to the billing for the first calendar month following their determination, and shall remain in effect for the duration of the contract, unless there should be other major changes in general price levels, in which case [fol. 2261] the procedure of rate adjustment herein prescribed shall be applicable to successive changes in rates. Should the Department of Labor fail to compile and publish indices on changes in the cost of living, or publish such indices less frequently than once in every six months, other reliable indices on such changes may be used in their stead.

8. Reduction in rates: Authority agrees to reduce the wholesale rates herein fixed whenever, in the opinion of

Authority, reduction in the cost of generating and transmitting energy make feasible such reductions in rates; it being the intention of the parties that Contractor shall participate in the benefits of reductions in the cost of generation and transmission.

9. Administration of Contractor's System: Contractor agrees:

(a) To administer its electric system as a separate department and not to mingle funds or accounts with those of any other of its operations.

(b) To keep its electric system accounts according to a system of accounts to be prescribed by Authority after conference with Contractor, which system of accounts will so far as possible be uniform with other systems prescribed and applied in other municipalities purchasing electrical energy from Authority. Authority agrees at its own expense to render advisory accounting service in the setting up and administering of such accounts.

(c) To furnish promptly to Authority such operating and financial statements relating to electric system operations as may be requested by Authority.

(d) To all the duly authorized agents of Authority to have free access to all books and records relating to electric system operations.

(e) To sell and distribute energy without discrimination between consumers of the same class, and no rate shall be charged or practice adopted which will grant a discriminatory rate, rebate or other special concession to any consumer served by Contractor. Contractor shall observe the principle that the sale of energy for industrial use shall be a secondary purpose, to be utilized principally to secure a sufficiently high load factor and revenue to permit the domestic use and such rural use as may take place under the terms of this contract at the lowest possible rates, and in such manner as to encourage increased domestic and rural use of electricity.

COMPLAINANTS' EXHIBIT No. 117

10. Disposition of Contractor's revenues. Contractor agrees to dispose of revenues from the operation of its municipal electric system in the following manner:

(a) Revenues will first be used for operating expenses, after which, in the order named, revenues shall be made applicable to interest on electric system bonds and/or other indebtedness applicable to said electric system, amortization of such bonds or other indebtedness, reasonable reserves for [fol. 2262] new construction and other contingencies, payment to the general fund of contractor for Taxes at rates equivalent to the taxes assessed against other property of a similar nature, and a return on Contractor's equity of not more than 6 per cent per annum.

(b) After the appropriation of the above amounts Contractor agrees that all remaining revenue shall be applied to the reduction or elimination of surcharges, if there are any, and the balance to reduction in the rates to consumers.

11. Service to nearby areas: Contractor agrees to serve nearby rural and suburban areas whenever such service can feasibly be rendered, and to charge for said service such rates as may be agreed upon between Contractor and Authority.

12. Construction and maintenance of Contractor's equipment: All equipment, material and work in connection with Contractor's electrical installation must conform to accepted modern practice.

13. Sub-metering: Contractor shall not sell current for sub-metering or resale purposes except under a contract obligating the customer to charge no more for such service than Contractor's own rates therefor.

14. Sub-stations: If at the request of Contractor service is rendered from more than one sub-station, or at more than one voltage at the same sub-station, Authority will bill for each point of voltage separately.

[fol. 2263] Power Contract Between TVA and the City of Dayton, Tennessee, Dated September 12, 1934

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Athens, Alabama, except:

1. The maximum amount of electricity which TVA agrees to supply within the first two year period is 750 kw.

2. The point of delivery shall be at the outgoing side of the main switch or switches on the low tension side of the main step-down transformers of a substation to be constructed at the expense of TVA on a site within the corporate limits of the City of Dayton, to be selected by TVA and municipality shall, if requested by TVA, furnish such a site.

[fol. 2264] Power Contract Between TVA and the City of Muscle Shoals, Alabama, Dated January 19, 1935

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Athens, Alabama, except:

1. The maximum amount of electricity which TVA agrees to supply within the first two year period is 750 kw.

2. The point of delivery shall be at or adjacent to the corporate limits of the City of Muscle Shoals at a point to be designated by TVA.

[fol. 2265] Power Contract Between TVA and the City of Pulaski, Tennessee, Dated March 8, 1934

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Athens, Alabama, except:

1. The maximum amount of electricity which TVA agrees to supply within the first two year period is 2000 kw.

[fol. 2266] Power Contract Between TVA and the City of Tupelo, Mississippi, Dated November 13, 1933

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Athens, Alabama, except:

1. The maximum amount of electricity which TVA agrees to supply during the first five years of operation is 7500 kva.

2. The point of delivery shall be "at the outgoing side of main switch or switches on the low tension side of the main

COMPLAINANTS' EXHIBIT No. 117

step-down transformers of a substation to be constructed, owned and maintained by Authority (TVA)".

[fol. 2267] Power Contract Between TVA and the City of Amory, Mississippi, dated March 9, 1934

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Athens, Alabama, except:

1. The maximum amount of electricity which TVA agrees to supply within the first two year period is 1500 kw.

[fol. 2268] Power Contract Between TVA and the City of Okolona, Mississippi

This agreement, made and entered into this 23rd day of April, 1935, between the Tennessee Valley Authority, hereinafter called "Authority, a corporation created by and acting under the Tennessee Valley Authority Act of 1933, and the city of Okolona, a municipal corporation duly organized created, and existing under and by virtue of the laws of the State of Mississippi, hereinafter sometimes called "Municipality", and sometimes "Contractor," and

Witnesseth:

Whereas Authority, by section 10 of said act, is authorized to sell the surplus power generated by it and not used in its operations, and is directed to give preference to States, counties, municipalities, and cooperative organizations of citizens or farmers not organized or doing business for profit; and

Whereas by section 11 of said act it is provided that the sale of power by Authority shall be primarily for the benefit of the people of the section as a whole and particularly the domestic and rural consumers to whom the power can economically be made available; and

Whereas Municipality owns and operates a municipal electric distribution system within and adjacent to its limits, and

Whereas Municipality desires to purchase power from Authority for municipal purposes and for resale and proposes to make the necessary appropriations in payment therefor; and

COMPLAINANTS' EXHIBIT No. 117

Whereas Municipality's electric plant will require improvement to take care of the additional load anticipated for the future; and

Whereas, Municipality has by ordinance of its counsel duly authorized the making of this contract and Authority, by its by-laws and resolutions, has likewise so authorized;

Now, therefore, for and in consideration of the mutual covenants herein contained, the parties hereto mutually covenant and agree as follows:

1. Term of contract: This contract shall become effective upon the execution hereof, and shall continue in effect for twenty years; Provided, however, That all obligations of the parties hereto with regard to the rendition of service and payment therefor shall begin at such time (hereinafter designated "date of initial delivery") as Authority shall have acquired, by purchase or construction and installation, such transmission and transformer facilities as may be necessary for service to Municipality. All service and payment periods hereinafter referred to shall be computed from the date of initial delivery.

[fol. 2269] 2. Acquisition of transmission facilities: Authority agrees to use all reasonable diligence in the acquisition and installation of such transmission and transformer facilities for service to Municipality.

3. Power supply: Authority will, from the date of initial delivery to the expiration hereof, supply electrical energy to Contractor for municipal purposes and for resale. Municipality agrees to purchase from Authority, and Authority agrees to supply, the entire power requirements of Municipality. Said energy will be delivered in the form of three phase, alternating current at approximately 60 cycles per second and approximately 2,300 volts, or at such voltage as the parties may from time to time agree.

4. Point of delivery: The energy to be supplied Municipality hereunder shall be delivered at the main switchboard of the present city light plant in the city of Okolona, or at such other point as Authority may select which will not occasion greater cost to Municipality. Municipality agrees to grant Authority a franchise, in form satisfactory to Authority, for the use of such streets and alleys within Munici-

pality's limits as may be necessary to enable Authority to deliver energy at said city light plant. Municipality agrees also to lease to Authority for the terms of this contract, at a rental of one dollar ($1.00) annually, a plot of ground suitable in nature and location for a substation site.

5. Schedule of rates: Attached hereto, and hereby made a part hereof, is a "Schedule of Rates and Charges." Municipality agrees to pay for the energy supplied by Authority at the rates fixed in schedule A-1 entitled "Tennessee Valley Authority Wholesale Power Rates."

6. Resale rates: In order to promote the more abundant use of electricity throughout the area in which Municipality operates, Municipality agrees to charge consumers the rates prescribed for the several classes thereof in schedules B-1 to B-5, inclusive, of the said Schedule of Rates and Charges, and not to depart therefrom except with the written consent of Authority: Provided, however, That Municipality shall add to its resale rates a temporary amortization charge, applicable to all customers, of one cent (1¢) per kw.-hr. for the first one hundred kw.-hr. used per month, such charge to be not less than $0.25 nor more than $1.00 per customer per month, but such amortization charge shall be temporary only and shall be discontinued as soon as Municipality has paid in full the principal and interest of the pledge orders now outstanding upon its present generating plant, and shall be considered only as a means of amortizing Municipality's indebtedness on this plant which is not now necessary for Municipality's electric operations; and the proceeds of such amortization charge shall be deposited in a special fund to be used only for such amortization. Authority may from time to time prescribe additional resale schedules for special classes of consumers or special uses of electricity, and Municipality agrees to be bound thereby. If it should appear that the rates provided for in said resale schedules with the surcharges provided for therein, do not under economical and efficient management by Municipality produce revenues sufficient to maintain the Municipality's electric system on a self-supporting and financially sound basis, then upon appli- [fol. 2270] cation by Municipality, Authority shall consent to such changes in rates as will provide for such increased revenues as will place the system upon a self-supporting and

financially sound basis when operated under economical and efficient management.

7. Construction of rural lines: Authority agrees, upon request of Municipality, to construct such additional rural lines on the Municipality's electric system, within or adjacent to Chickasaw County, State of Mississippi as the parties may agree, or at its option to assist in such construction in the manner set out below. Should the Authority elect to construct said lines, at its option it may do so, (a) by construction for and on behalf of Municipality, as Municipality's agent for such construction; or (b) by construction on its own account and conveying the lines so constructed to Municipality; or (c) by construction on its own account and leasing the same to Municipality for a period of fifty years (50). If Authority should elect alternative (b) or (c) of this paragraph, Municipality agrees, at request of the Authority promptly to secure the necessary easements, franchises, and rights of way for such lines at its own expense and to transfer and assign such easements, franchises, and rights of way to Authority without charge.

At the election of Authority, in lieu of constructing the rural lines agreed upon, Authority may assist in construction by supplying Municipality with the poles, wire, transformers, hardware, and other materials and equipment necessary in the construction of such lines and with supervisory assistance, whereupon Municipality shall itself construct said lines in accordance with approved engineering standards and subject to Authority's supervision.

Authority agrees in addition to supply and at the request of Municipality, to install such additional meters, of good substantial design, and of appropriate sizes, as are required to make available a meter for every customer now served by Municipality. Municipality agrees that within three (3) months from the date hereof every customer shall be served only through a meter of good and substantial design. At the request of Municipality, Authority shall furnish such additional materials and supplies as the parties may agree.

Municipality agrees to pay Authority for any lines constructed by Authority pursuant to this paragraph for all meters, materials, supplies, and equipment furnished pursuant hereto, and for all work of construction and installa-

tion, at the actual cost thereof as billed by Authority, plus interest at four per cent (4%) per annum on the unpaid balance from its operating revenues, in the manner set forth in section 9 hereof. In computing the cost of work performed by Authority, the costs of overhead, as billed by Authority, shall be added to direct costs.

All payments shall be made to Authority at its offices at Wilson Dam, Alabama, or at such other place as Authority may from time to time designate.

8. Operation, maintenance, and insurance of rural lines: Municipality agrees to operate the rural lines constructed by Authority, or constructed with supplies furnished by Authority, as a part of its distribution system, and to render rural electric service at the same rates and on the same terms and conditions as its urban electric service, except as specified in the "Schedule of Rates and Charges." Municipality [fol. 2271] agrees that it will at all times make, or cause to be made, at its own expense, such repairs, maintenance, renewals and replacements as shall be necessary to maintain, preserve, and keep the rural lines so constructed and the meters so installed in good repair, working order, and condition, and to maintain and preserve the efficiency thereof, and to execute such work of maintenance or improvement as Authority may deem necessary for the protection of its interest in said property, to pay all taxes and assessments thereon, of whatever nature or description, to save harmless Authority from any liability for taxes on the property sold, or leased to or constructed for Municipality, including taxes for the year 1935, and to save Authority harmless from any liability arising out of the operation of said lines or the use of said meters. Municipality agrees to keep such property, whether constructed by Authority as agent for Municipality, or constructed, purchased, or leased by Municipality, insured in such manner and amount as Authority may deem prudent and desirable, for the protection of Authority as its interest may appear.

9. Disposition of Municipality's revenues: Municipality agrees to dispose of its gross revenues from electric operations in the following manner, except as provided in section 6 hereof:

(a) Revenues shall first be used for the payment of all operating expenses, including salaries, wages, cost of materials and supplies, power at wholesale, and insurance.

(b) From remaining revenues Municipality shall next pay the interest on all bonds or other indebtedness applicable to Municipality's electric system, and amortization charges on all such bonds or indebtedness other than the indebtedness to authority created hereby for construction or the furnishing of meter and other equipment.

(c) Thereafter revenues shall be used to set up reasonable reserves for new construction and for contingencies, and to create a reasonable cash working capital fund. As security for Municipality's indebtedness to Authority, Municipality agrees that that Authority may in its discretion fix maximum amounts for the reserves and the fund herein authorized to be set up.

(d) From remaining revenues Municipality shall thereafter pay into its general fund a return on its investment and a tax equivalent as provided in the financial and accounting policy in the Schedule of Rules and Regulations attached hereto: Provided, however, That notwithstanding any other provision in this contract or of the rules and regulations, the amount paid into the general fund as a tax equivalent shall not exceed fifty mills per dollar of property value, less such taxes as may actually be paid to other governmental agencies.

(e) Remaining surplus revenues shall thereafter be paid over to Authority until Municipality's indebtedness to Authority on account of the construction of rural lines or the furnishing of meters and equipment by Authority, shall be satisfied.

(f) All remaining surplus revenues shall be used to reduce or eliminate surcharges to consumers, and thereafter to the reduction of rates.

[fol. 2272] Surplus revenues shall be computed as of December 31 and June 30 of each year, and shall be paid not later than February 1 and August 1, respectively.

10. Municipality's investment in its electric system: For the purpose of this agreement the investment of Municipality in its electric system as of the date hereof is agreed to be the sum of $10,816.82, determined as follows:

Replacement cost, new	$73,943.00	
Less accrued depreciation	22,772.00	
Present value		$50,271.00
Bonds applicable to electric system plus accrued interest	17,650.50	
Pledge orders plus accrued interest	21,803.68	
Total indebtedness applicable to electric system		39,454.12
Net investment		10,816.83

11. Payment for Municipality's energy requirements: Municipality agrees to pay its electric fund from appropriate general or special funds, for all energy required by Municipality for street lighting, water pumping, and other operations and uses not related to the operation of its electric plant, at the regular resale rates.

12. Alienation or encumbrances of property or revenues: Municipality agrees not to sell, pledge, mortgage, assign, hypothecate or otherwise alienate or encumber its electric distribution property or revenues, or any part thereof, without first securing the written approval of Authority, except that it may dispose of stocks of wares and merchandise at retail in the normal course of business.

13. Rules and regulations of Authority: Attached hereto, and hereby made a part hereof by reference, the same as though physically incorpo ated herein, is a schedule entitled "Schedule of Rules and Regulations", and it is understood that the several provisions of said schedule, as well as the several provisions of this contract and of the Schedule of Rates and Charges, are of the essence of this contract and that their violation by Municipality renders this contract voidable at the option of Authority, unless such violations are cured upon reasonable notice.

The Schedule of Rules and Regulations is standard and of uniform applicability to all municipal customers of

Authority, and the Municipality hereby agrees to be bound, during the term hereof, by any future additions or amend- [fol. 2273] ments of such Schedule of Rules and Regulations, prescribed after conference with representatives of Municipality, the same as though such additions or amendments were incorporated herein. If there should be any conflict between any rules or regulations prescribed pursuant to this and the following article, and the terms of this contract, the contract shall control.

14. Rules and regulations of Contractor: In the interest of uniformity, and for the protection of both Municipality and Authority, Municipality agrees to adopt and enforce such rules and regulations for the sale of electricity to the public as Authority may, after conference with representatives of Municipality, from time to time prescribe during the term of this contract for uniform application to all of the municipal customers of Authority deemed to have similar characteristics.

15. Reports to Authority: Municipality agrees that, not later than the first day of August of each year, it will render a report to Authority as to the results of its operations for the preceding year ending June 30, the condition of its property, and such other information as Authority may request. Such reports shall be made in such form as Authority may prescribe. From time to time Municipality agrees promptly to render such additional reports or information to Authority as Authority may request.

16. Discrimination: Municipality agrees to render service without discrimination between consumers of the same class, and this contract shall be voidable at the option of Authority, if a discriminatory rate, rebate, or other special concession is made or given to any customer.

17. Declaration of policy: This contract is entered into in a spirit of cooperation and with the desire on the part of Authority and Municipality so to administer the relationship established by this contract as to operate to the benefit of Municipality and its residents, and of the residents of the Tennessee Valley. In furtherance of this cooperative relationship Authority will seek to further the economic welfare of Municipality by fostering and promoting the in-

creased use of electricity within Municipality's operating area, and by such other means as are provided by law. Municipality agrees to cooperate with Authority in such program. This contract shall be construed and administered in accordance with this statement of policy.

18. Contract not transferable: Neither this contract nor any interest therein shall be transferable or assignable by Municipality to any other party without the consent of Authority.

In witness whereof, the parties hereto have caused this instrument to be signed and attested in duplicate, by their duly authorized officers, the day and year first above written.

Tennessee Valley Authority, by Arthur E. Morgan, Chairman, Board of Directors.

Attest: Charles E. Hoffman, Assistant Secretary.

City of Okolona, Mississippi, by H. S. Wilson, Mayor.

Attest: Edward D. Elias, City Clerk.

[fol. 2274] Approved as to form and correctness, as adopted by the Board of Aldermen of the city of Okolona, Mississippi.

Thos. G. Abernethy, City Attorney.

Schedule A-1.—Tennessee Valley Authority

Wholesale Power Rate

Availability: Available to all Municipal Contractors served from the transmission system of Tennessee Valley Authority.

Rate: Demand charge, $0.90 per kw. of demand per month.

Energy charge: First 100,000 kilowatt-hours consumed per month at 4 mills per kilowatt-hour; next 200,000 kilowatt-hours consumed per month at 3 mills per kilowatt-hour; next 700,000 kilowatt-hours consumed per month at 2.5 mills per kilowatt-hour; excess over 1,000,000 kilowatt-hours consumed per month at 2 mills per kilowatt-hour.

Charge for energy in excess of 360 times the demand shall be subject to a reduction of 0.5 mill per kw.-hr. from the otherwise applicable rate.

Determination of Demand: Demand measurement shall be made by suitable instruments at the point or points of delivery. Demand for any month shall be defined as the highest integrated load during any sixty (60) minute period during the month for which determination is made.

Adjustment of demand charge for power factor: Demand charge may be adjusted if and when Authority deems necessary to correct for power factors lower than eighty-five per cent (85%). Such adjustments will be made in such manner as to bring the demand charge to the equivalent of eighty-five per cent (85%) power factor.

Minimum monthly bill: $0.90 per kw. of demand, but in no case shall the minimum bill be less than the charge for sixty per cent (60%) of the highest demand occurring during any month within the previous consecutive twelve (12) months' period.

Allowance on sales to residential consumers: Authority will adjust bill so that Contractor shall be billed at 2 mills per kilowatt-hour for at least so much energy as may be sold by Contractor under the residential resale schedule at 4 mills per kilowatt-hour.

Discount: Rates above are net.

39363—36—15

Schedule B-1—Standard Residential Rate

Availability: Available for domestic use to all residential customers served from local alternating current distribution systems.

Character of service: Alternating current service at approximately 60 cycles, 110 or 220 volts, either single-phase, two-wire or three-wire; or three-phase, three-wire or four-wire, as may be required by contractor.

[fol. 2275] Rate: First 50 kilowatt-hours consumed per month at 3¢ per kilowatt-hour; next 150 kilowatt-hours consumed per month at 2¢ per kilowatt-hour; next 200 kilowatt-hours consumed per month at 1¢ per kilowatt-hour; next 1,000 kilowatt-hours consumed per month at 0.4¢ per kilowatt-hour; excess over 1,400 kilowatt-hours consumed per month at 0.75¢ per kilowatt-hour.

Minimum monthly bill: $0.75 per meter.

Payment: Above rates including amortization charge are net, the gross rates being ten per cent (10%) higher. In

the event that the current monthly bill is not paid within ten (10) days from date of bill, the gross rates shall apply.

Service under this classification is subject to rules and regulations prescribed by Tennessee Valley Authority.

Schedule B-2—Basic Commercial Rate

Availability: Available to all commercial and all small nonresidential light, heat, and power customers whose average monthly usage does not exceed 4,000 kw.-hr. Customers using in excess of 4,000 kw.-hr. per month will be billed according to the basic industrial rate, schedule B-3.

Character of service: Alternating current service from the local distribution system at approximately 60 cycles, 110 or 220 volts; either single-phase, two-wire or three-wire; or, three-phase, three-wire or four-wire, as may be required by contractor.

Rate: First 250 kilowatt-hours per month at 3¢ per kilowatt-hour; next 750 kilowatt-hours per month at 2¢ per kilowatt-hour; next 1,000 kilowatt-hours per month at 1¢ per kilowatt-hour; excess over 2,000 kilowatt-hours per month at 0.8¢ per kilowatt-hour.

Minimum monthly bill: $1.00 per meter.

Surcharge: Rate is subject to a developmental surcharge as provided in rules and regulations.

Payment: Above rates including surcharge and amortization charge are net, the gross rates being ten per cent (10%) higher. In the event the current monthly bill is not paid within ten (10) days from date of bill, the gross rates shall apply.

Service under this classification is subject to rules and regulations prescribed by Tennessee Valley Authority.

Schedule B-3—Basic Industrial Rate

Availability: Available to all industrial and all large nonresidential light, heat, and power customers having demands of not less than 10 kw. Service may be at primary or secondary distribution voltage at the discretion of Contractor. Small power customers of 10 kw. or less will be billed on the basic commercial rate, schedule B-2.

Character of service: Alternating current, three-phase, sixty cycles. Voltage supplied will be at the discretion of

[fol. 2276] Contractor and will be determined by the voltage available from distribution lines in the vicinity and/or other conditions.

Rate: Demand charge: $1.00 per kw. of demand per month.

Energy charge: First 10,000 kilowatt-hours consumed per month at 10 mills per kilowatt-hour; next 25,000 kilowatt-hours consumed per month at 6 mills per kilowatt-hour, next 65,000 kilowatt-hours consumed per month at 4 mills per kilowatt-hour; next 400,000 kilowatt-hours consumed per month at 3 mills per kilowatt-hour; excess over 500,000 kilowatt-hours consumed per month at 2.5 mills per kilowatt-hour.

Determination of demand: Demand measurement shall be made by suitable instruments at the point or points of delivery, except, at the option of Contractor, demand may be determined by inspection or test. Demand for any month shall be defined as the highest integrated load during any thirty (30) minute period during the month for which determination is made.

Adjustment of demand charge for power factor: Demand charge may be adjusted, if and when Contractor deems necessary, to correct for power factors lower than eighty-five per cent (85%). Such adjustments will be made in such manner as to bring the demand charge to the equivalent of eighty-five per cent (85%) power factor.

Minimum monthly bill: $1.00 per kw. of demand but in no case shall the minimum bill be less than the charge for sixty per cent (60%) of the highest demand occurring during any month within the previous consecutive twelve (12) months' period.

Surcharge: Rate is subject to developmental surcharge as provided in rules and regulations.

Payment: Above rates including surcharge and amortization charge are net, the gross rates being ten per cent (10%) higher. In the event the current monthly bill is not paid within ten days (10) from date of bill, the gross rates shall apply.

Service under this classification is subject to rules and regulations prescribed by Tennessee Valley Authority.

COMPLAINANTS' EXHIBIT No. 117

Schedule B-4—Seasonal Industrial Rate (Optional)

Availability: Available for seasonal service not to exceed six (6) consecutive months per year, only to industrial and large power users having demands not less than 40 kw., whose operations and business are by nature seasonal.

Character of service: Alternating current, three-phase, sixty cycles. Voltage supplied will be at the discretion of Contractor and will be determined by the voltage available from distribution lines in the vicinity and/or other conditions.

Application of rate: For the first four (4) consecutive months per season, customer will be billed according to part I of the schedule, and for remainder of such season (not to exceed two months) customers will be billed according to part II of the schedule. Rules governing payment and deposit and other rules and regulations for service under this classification apply to both part I and part II of this schedule.

[fol. 2277] Part I. Rate: Demand charge: $1.60 per kw. of demand per month.

Energy charge: First 10,000 kilowatt-hours per month at 10 mills per kilowatt-hour; next 25,000 kilowatt-hours per month at 6 mills per kilowatt-hour; next 65,000 kilowatt-hours per month at 4 mills per kilowatt-hour; next 400,000 kilowatt-hours per month at 3 mills per kilowatt-hour; excess over 500,000 kilowatt-hours per month at 2.5 mills per kilowatt-hour.

Determination of demand: Demand measurement shall be made by suitable instruments at the point or points of delivery. except, at the option of Contractor, demand may be determined by inspection or test. Demand for any month shall be defined as the highest integrated load during any thirty (30) minute period during the month for which determination is made.

Adjustment of demand charge for power factor: Demand charge may be adjusted, if and when Contractor deems necessary, to correct for power factors lower than eighty-five per cent (85%). Such adjustments will be made in such manner as to bring the demand charge to the equivalent of eighty-five (85%) per cent power factor.

Minimum monthly bill: Minimum monthly bill shall be $1.60 per kw. of demand, but in no case shall the minimum charge for the season be less than $4.80 per kw. of the highest demand occurring during any month of the seasonal period.

Surcharge: Rate is subject to developmental surcharge as provided in rules and regulations.

Part II. Rate: Demand charge: None.

Energy charge: First 250 kilowatt-hours per month, at 3 cents per kilowatt-hours; next 750 kilowatt-hours per month, at 2 cents per kilowatt-hour; next 1,000 kilowatt-hours per month, at 1 cent per kilowatt-hour; excess over 2,000 kilowatt-hours per month, at 0.8 cents per kilowatt-hour.

Minimum monthly bill: $3.00 per meter.

Surcharge: Rate is subject to developmental surcharge as provided in rules and regulations.

Payment: Above rates, including surcharge and amortization charge, are net, the gross rates being ten per cent (10%) higher. In the event the current monthly bill is not paid within ten (10) days from date of bill, the gross rates shall apply.

Deposit: A deposit or suitable guarantee may be required from each customer, such deposit to be not more than twice the amount of the customer's normal monthly bill as established by application of part I of this schedule.

Service under this classification is subject to rules and regulations prescribed by Tennessee Valley Authority.

Schedule B-5.—Standard Street Lighting Rate

[fol. 2278] Availability: Available for street or roadway lighting for term of not less than one (1) year.

Character of service: Alternating-current service, either series or multiple system or combination.

Application of rate: Where Contractor's electric system bears the cost of operation and maintenance of the equipment used in the street or roadway lighting system, the rate consists of an energy charge at basic commercial rate, schedule B-2, and a maintenance charge.

Where Contractor's electric system does not bear the cost of operation and maintenance of the equipment used in the street or roadway lighting system, only the energy charge will apply.

Rate: Energy charge: Same as basic commercial rate, scheduled B-2.

Maintenance charge:

Lamp rating:	Unit charge per month
1,000 Lumen series, or 100 watt multiple	$0.80
2,500 Lumen series, or 150 watt multiple	1.05
4,500 Lumen series, or 200 watt multiple	1.40
6,000 Lumen series, or 300 watt multiple	1.70
10,000 Lumen series, 500 watt multiple	2.15

Surcharge: Energy charge is subject to a developmental surcharge as provided in rules and regulations. Maintenance charge is not subject to surcharge.

Payment: Above rates including surcharge are net, the gross rates being ten per cent (10%) higher. In the event the current monthly bill is not paid within ten (10) days from date of bill the gross rates shall apply.

Service under this classification is subject to rules and regulations prescribed by Tennessee Valley Authority.

The schedule of Rules and Regulations attached to and made a part of this contract are substantially the same as those attached to and made a part of the contract between TVA and the City of Athens, Alabama, except the following is in lieu of Section 10 of the Rules and Regulations of the TVA-City of Athens, Alabama, contract:

[fol. 2279] 10. Financial and accounting policy: Municipality agrees to be bound by the following statements of financial and accounting policy:

(a) Present value of Electric System: Wherever accounting records are complete and have been properly kept, the present value of the Electric System as of the date of initial delivery shall be taken as the actual historical cost of the property then in use or useful in the distribution of electricity as shown on the books less accrued depreciation. If adequate reserves have not been set up for depreciation, the

amount of depreciation accrued shall be estimated by engineering appraisal. Wherever accounting records are incomplete or have not been kept in such manner as to permit the determination of actual historical cost, the present value shall be determined as the replacement cost new of the property in use or useful in the distribution of electricity less accrued depreciation. For the purpose of determining replacement cost new all existing property devoted to the distribution of electricity shall be included in a physical inventory. The items of such physical inventory shall then be priced on the basis of labor and materials cost then prevailing. The total direct cost of construction shall be increased by not more than 15% for general overheads.

(b) Contractor's investment: The investment of Contractor shall be defined as the present value of the system less all outstanding liabilities. Wherever general obligations have been issued by Contractor the proceeds of which have been used in electric operation and for general city purposes, an estimate shall be made of the amount of such proceeds which actually were used in the Electric System. That part of the total indebtedness which is represented by this amount shall then be allocated or assigned as an obligation of the Electric System.

(c) Maximum return: The amount of Contractor's investment in the Electric System shall be determined as of the initial date of delivery and shall be adjusted subsequently at the end of each fiscal year. Contractor shall receive a return on this investment not to exceed one-half (½) of one (1) per cent per month, computed on the basis of the investment as of the last day of the month next preceding.

(d) Payments in lieu of taxes: The Contractor shall be allowed from the revenues or funds of the Electric Department an amount in lieu of taxes, to be determined as follows:

(1) Tax equivalent to city property tax: The prevailing city property tax rate shall be applied to the value of the property used in electric operations.

(2) Tax equivalent to county and State property tax: If the electric operations of Contractor are not subject to

county and State taxation, the tax equivalent paid to the city under (1) above shall be increased by application of the county and State tax rates to the value of the Electric System. If, however, the county and State governments levy taxes upon the municipal Electric System, this county and State tax equivalent will not be allowed to Contractor.

[fol. 2280] (3) Sales tax equivalent: If there is in effect in the State in which the Municipality is located a sales tax applicable to privately owned Electric Systems and such tax is not applicable to municipally owned Electric Systems, an amount equivalent to the application of such sales tax to the revenues of the municipal Electric System may be paid to the city in addition to the tax equivalent payments set forth above. The payment of this tax shall cease at such time as the State may impose a tax upon municipal Electric Systems.

(4) In determining the amount to which Contractor is entitled in lieu of taxes under (1) and (2) above the tax rate shall be applied to the value of the property as determined in paragraph (a) above plus additions, less retirements. The computations shall be made monthly and shall be based upon the value as determined in paragraph (a) above plus additions, less retirement as shown by the books at the beginning of each current taxable year.

(e) Payment by Electric Department for services: The Electric Department shall pay the salary of those persons who devote their full time to the operation of the Electric System, and an equitable portion of the salary of those persons devoting part time to the operation of the Electric System.

(f) Excessive withdrawals and reinvestments by Contractor: If, at any time, Contractor should withdraw from the funds of the Electric Department amounts, in excess of the allowable return on investment and of the tax equivalent, the city's investment shall be reduced in the amount of such excess withdrawals: Provided, however, That withdrawals of Contractor's investment shall be made only at such times and in such amounts as not to interfere with the efficient operation of the Electric System: Provided, further, That in no event shall the excess withdrawals in any fiscal year ex-

ceed ten per cent (10%) of Contractor's investment on the initial date of delivery as set out above without the written consent of the Authority: And provided further, That in no event shall the excess withdrawals by Contractor exceed the amount of Contractor's investment in the Electric System. If, at any time, Contractor should fail to withdraw the full amount of return due on account of its investment and/or on account of tax equivalent, that part or whole of the return and/or tax equivalent which is not withdrawn shall be added to Contractor's investment.

(g) Short-term loans and advances: Contractor may borrow funds from or lend funds to the Electric Department only on a short-term basis (one year or less without the right of renewal). The amount so borrowed or loaned shall bear a rate of interest the same as the rate of return on investment determined by the governing body of Contractor not to exceed six (6%) per cent per annum. At the end of each fiscal year all borrowings and advances by Contractor and the Electric Department shall be paid or closed out by adjustment of Contractor's investment account: Provided, however, That any short-term obligations then outstanding which are to be paid in the succeeding fiscal year may remain outstanding for the unexpired term, in the discretion of the board of aldermen, or other governing body of Contractor.

(h) Action by governing body of Contractor: Except as limited in this statement, the board of aldermen or other [fol. 2281] governing body of the municipality shall determine the rate or return on Contractor's investment and/or the interest rate on loans and advances. No transfer of funds shall be made between Contractor and the Electric Department, nor shall any change in Contractor's investment in the Electric System be made except pursuant to a resolution of the board of aldermen or other governing body of Contractor.

(i) Publication of statement of Contractor's equity: The board of aldermen or other governing body of the municipality shall publish a statement of the amount of Contractor's investment in its Electric System, the outstanding short-term borrowings and advances, and all other accounts

existing between Contractor and the Electric Department, at the close of each fiscal year. A copy of such statement shall be forwarded to Authority immediately at its office at Wilson Dam, Alabama. After the closing of the books at the end of each month, the board of aldermen or other governing body of the municipality shall make known upon demand to any taxpayer or Contractor or customer of the Electric System the amount of Contractor's investment in the Electric System.

[fol. 2282] Power Contract Between TVA and the City of New Albany, Mississippi, Dated September 13, 1934

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Okolona, Mississippi, except:

1. The point of delivery shall be at the main switchboard of the city light plant in the City of New Albany or at such other point as TVA may select which will not occasion greater cost to municipality.

2. It does not value the investment of the municipality in its electric system.

3. The Schedule of Rates and Schedule of Rules and Regulations are substantially the same as those attached to and made a part of the TVA-City of Athens, Alabama, contract.

[fol. 2283] Power Contract Between TVA and Alcorn County (Mississippi) Electric Power Association

This agreement, made and entered into this 1st day of June, 1934, pursuant to the Tennessee Valley Authority Act of 1933, between the Tennessee Valley Authority, hereinafter called "Authority", a corporation created by and acting under said act, and Alcorn County Electric Power Association, a non-profit civic improvement corporation organized, created, and existing under and by virtue of the laws of the State of Mississippi, hereinafter called "Association".

Witnesseth:

Whereas, Authority, by section 10 of said act, is authorized to sell the surplus power generated by it and not used in its operations, and is directed to give preference to States, coun-

ties, municipalities, and cooperative organizations of citizens or farmers not organized or doing business for profit; and

Whereas by section 11 of said act, it is provided that the sale of power by Authority shall be primarily for the benefit of the people of the section as a whole and particularly the domestic and rural consumers to whom the power can economically be made available; and

Whereas, Authority now owns, has under construction and/or has under option to purchase from the Mississippi Power Company certain properties and facilities for the distribution of electricity in Alcorn County, State of Mississippi; and

Whereas, Association desires to acquire by purchase and/or lease certain of said properties and facilities and to operate them in the distribution of electricity on a membership basis and without profit to the residents and farmers in the area of its operations and for commercial, industrial, and municipal purposes in said area; and

Whereas, Association desires to purchase power from Authority at wholesale for use in its operations, and whereas Association and Authority have by their bylaws and resolutions authorized the execution of this contract;

Now therefore, for and in consideration of the mutual covenants herein contained, the parties hereto mutually convenant and agree as follows:

1. Incorporation of other documents: This contract is executed and shall be construed in connection with certain other conveyances and agreements of even date which are contained in a certain instrument entitled, "Sale, Lease, Trust, and Security Contract Between Tennessee Valley Authority, United States of America, and Alcorn County Electric Power Association", which instrument is attached hereto and hereby made a part hereof. Said conveyances [fol. 2284] and agreements comprise and include the following:

(a) A conveyance by Authority to Association of certain personal property of Authority, used or useful in distributing electricity at retail in Alcorn County, State of Mississippi.

(b) A lease for the term of fifty years of certain rights-of-way and easements of the United States of America en-

trusted to Authority, used or useful in distributing electricity at retail in Alcorn County, State of Mississippi.

(c) Certain covenants intended as security for the obligations to Authority assumed herein by Association. This contract shall not become effective unless and until the instrument hereinabove described shall have been executed.

2. Term of Contract: This contract shall become effective upon the execution hereof and of the instruments hereinabove described, and shall continue in effect for 20 years; Provided, however, That Association's obligations with respect to the payment for property purchased and/or leased from Authority shall continue until such obligations have been satisfied and that Authority may continue to exercise all the power and privileges granted herein, and in the instrument described in article 1, as security for the payment of Association's indebtedness until such indebtedness shall have been satisfied.

3. Power Supply: Authority agrees to supply electrical energy to Association for its own use and for resale. Association agrees to purchase from Authority, and Authority agrees to supply the entire power requirements of Association. Said energy will be delivered in the form of three phase, alternating current at approximately 60 cycles per second and approximately 2,300 volts, or at such voltage as the parties may from time to time agree. The maximum amount of electricity (called "reserve power") which Authority agrees to supply within the first two year period is 2,500 kw., but thereafter Association shall have the right to increase such maximum demand as herein specified, and Authority shall deliver the same to Association. After two years from the date of initial delivery, as Association foresees the necessity for more than 2,500 kw., Association shall make written demand upon Authority for an increase of reserve power. Such increase shall take effect nine months after date of demand if the amount demanded is less than 5,000 kw., twelve months after date of demand, if the amount demanded is over 5,000 kw., and less than 10,000 kw., and two years after date of demand if the amount demanded is 10,000 kw. or more.

4. Point of Delivery: The energy to be supplied Association hereunder shall be delivered at the outgoing side of the main switch or switches on the low tension side of the main step-down transformers of the substation located at Cox and White Streets in the city of Corinth, Alcorn County, Mississippi, or at such other point as Authority may select which shall not occasion greater cost to Association.

5. Payment for Property: In consideration for the property which Authority shall convey to Association by the conveyance described in article 1 (a) hereof and for the property which Authority and/or the United States of [fol. 2285] America shall lease to Association by the lease described in article 1(b) hereof, Association agrees to pay to Authority the sum of one hundred and fourteen thousand, six hundred and thirty two dollars and sixty cents ($114,632.60), hereinafter called the "principal obligation." Association agrees to pay interest upon unpaid balances at the rate of three and one-half (3½) per centum annually. Interest shall be computed semiannually, beginning six calendar months after the date of execution of this contract.

6. Construction of rural lines: Authority agrees to construct, and after construction, to lease for a period expiring not sooner than the lease described in Article 1(b) hereof and/or to convey to Association, at the option of Authority, such additional rural electric distribution or transmission lines, in or adjacent to Alcorn County, State of Mississippi, as Authority may deem advisable, but Authority shall not be obligated to construct any such lines as, added to the rural distribution or transmission lines already owned or leased by Association, shall exceed one hundred (100) miles of such lines. Association agrees to pay, in addition to the principal obligation, the actual cost to Authority, as billed by Authority, of any lines constructed and leased and/or conveyed pursuant to this article, and said additional indebtedness shall be secured in the same manner and to the same extent as the principal obligation, and shall carry the same rate of interest: Provided, however, That Association's liability for such rural lines shall not exceed $125,000.00 without its consent in writing.

COMPLAINANTS' EXHIBIT No. 117

7. Method of payment for property. Association agrees to pay over to Authority on account of its indebtedness, and until such indebtedness shall have been totally repaid, all membership fees received; provided, however, That Association may initially, and until its working capital is built up from its operations, retain so much of its membership fees as may be necessary to enable it to maintain a total cash working capital balance of $2,500.00; Provided, further, That the indebtedness of Association to Authority shall be decreased or satisfied only by the amounts actually paid to Authority.

8. Repayment of Indebtedness: Association agrees, until it has repaid its total indebtedness to Authority, to pay to Authority, in addition to all other amounts provided for in this contract, its total surplus revenues as hereinafter defined. Such surplus revenues, if any, shall be computed as of the 15th day of each month, and shall be paid not later than the first day of the following month. All payments shall be made to Authority at its offices at Wilson Dam, Florence, Alabama, or at such other places as Authority may from time to time designate.

9. Disposition of Association's revenues: Association agrees to dispose of its gross revenues in the following manner:

(a) Revenues shall first be used for the payment of operating expenses, including salaries, wages, cost of materials and supplies, power at wholesale, taxes and insurance.

(b) Thereafter revenues shall be used to set up reasonable reserves for new construction and for contingencies, [fol. 2286] and to create a reasonable cash working capital fund. As further security for Association's indebtedness to Authority, Association agrees that Authority may in its discretion fix maximum amounts for the reserves and the fund herein authorized to be set up, and may direct the investment or disposition of such reserves and funds.

(c) After the payment or setting aside of the above amounts all remaining revenues shall be considered surplus revenues and shall be paid over to Authority in the

manner prescribed above, until Association's indebtedness to Authority on account of accrued interest shall be satisfied.

(d) Remaining surplus revenues shall thereafter be paid over to Authority until Association's indebtedness to Authority on account of property purchased or leased from Authority shall be satisfied.

(e) After payment to Authority in full for property purchased from Authority, all surplus revenues shall be paid over to Authority in the manner prescribed above until Association's remaining indebtedness to Authority and/or the United States of America shall be satisfied.

(f) After the satisfaction of the indebtedness to Authority and/or the United States of America, all surplus revenues shall be used to reduce or eliminate surcharges of Association's members.

(g) After the elimination of surcharges, all surplus revenues shall be used to reimburse members to the extent of not more than the stated value of their memberships (less $10.00 per membership, which shall be non-reimbursable) and/or to the reduction of Association's rates, as Association may determine.

10. Alienation or incumbrance of property or revenues: Association agrees not to sell, pledge, mortgage, assign, hypothecate, or otherwise alienate or incumber its electric property or revenues, or any part thereof, without first securing the written approval of Authority, except that it may dispose of stocks or wares and merchandise at retail in the normal course of business.

11. Maintenance and insurance of property: Association agrees that it will at all times make, or cause to be made, at its own expense, such repair maintenance, renewals, and replacements as shall be necessary to maintain, preserve and keep the rural lines constructed by Association in good repair, working order, and condition, and to maintain and preserve the efficiency thereof (of the plants and properties) and to execute such work of maintenance or improvement as Authority may deem necessary for the protection of its interest in said property, to pay all taxes and assessments

thereon, of whatever nature or description, and to save harmless Authority from any liability for taxes on the property sold or leased to or constructed for Association, including taxes for the year 1934. Association agrees to keep such property, whether purchased or leased, insured in such manner and amount as Authority may deem prudent and desirable, for the protection of Authority as its interest may appear.

[fol. 2287] 12. Schedule of rates: Attached hereto, and hereby made a part hereof by reference, the same as though physically incorporated herein, is a "Schedule of Rates and Charges". Association agrees to pay for the energy supplied by Authority at the rates fixed in schedule A, entitled "Tennessee Valley Authority Wholesale Power Rates".

13. Resale Rates: (a) In order to carry out the obligations of Authority with respect to the promotion of a wider use of electricity throughout the area in which it operates, in order to further the purposes of civic improvement for which Association was organized, and as further security for the indebtedness of Association to Authority, Association agrees to charge all of its members, and non-member governmental customers, if any, the rates prescribed for the several classes of consumers in schedule B, entitled "Tennessee Valley Resale Rates" and not to depart therefrom except with the written consent of Authority. Authority may from time to time prescribe additional resale schedules for special classes of members or special uses of electricity, and Association agrees to be bound thereby. If it should appear that the rates provided for in said schedule with the surcharges provided for therein do not under economical and efficient management by Association produce revenues sufficient to maintain the system on a self supporting and financially sound basis, then upon application by Association, Authority shall consent to such changes in rates as will provide for such increased revenues as will place the system upon a self-supporting and financially sound basis when operated under economical and efficient management.

(b) Association may charge non-member customers other than governmental customers, such higher and different rates

as may be required to yield the full cost of operation to Association, but Association agrees that such rate shall not be discriminatory as between non-member customers or classes thereof and that its non-member operations shall not be conducted for the purpose of making a profit.

14. Non-member Service: Association agrees that it will not, except after having first secured the approval of Authority, serve any non-members: Provided, however, That this provision shall not apply to service to customers who are at the time of the acquisition of any given lines by Association, taking services from such lines and who continue to take service without change of residence, nor to municipal corporations or other political agencies or subdivisions, who shall constitute "governmental customers" as used herein.

15. Terms of membership in Association: Association agrees to make its memberships available without discrimination to any person, corporation, co-partnership, association, municipality, or political body or subdivision within the area of its service. The initial stated value of memberships shall be $100.00, but such value shall be subject to reduction as hereinafter provided. Members who pay the full membership fee in advance shall be entitled to a reduction of not to exceed 20 per cent and the advance payments of balances shall be subject to such reduction as Association may from time to time fix, not to exceed 20 per cent. [fol. 2288] The minimum initial installment on memberships shall not be fixed at less than $10.00 without first securing the written consent of Authority, and the balance shall be payable at the rate of 1 cent per kilowatt hour for each kilowatt hour used per month up to and including 100 kilowatt-hours per month, but in no case less than twenty-five cents ($0.25) per month. The stated value of memberships shall, from time to time, be reduced by the amount of reimbursements made pursuant to article 9 hereof, and new members shall be admitted at the new stated value thus arrived at.

16. Rules and Regulations of Authority: Attached hereto and hereby made a part hereof by reference, the same as though physically incorporated herein, is a schedule entitled "Schedule of Rules and Regulations", and it is understood

that the several provisions of said schedule, as well as the several provisions of this contract and of the Schedule of Rates and Charges are of the essence of this contract, and that their violation by Association renders this contract voidable at the option of Authority, unless such violations are cured upon reasonable notice.

Association hereby agrees to be bound, during the term hereof, by any future additions or amendments of such Schedule of Rules and Regulations, prescribed after conference with representatives of Association, the same as though such additions or amendments were incorporated herein. If there should be any conflict between the rules or regulations prescribed pursuant to this and the following article, and the terms of this contract, the contract shall control.

17. Rules and Regulations of Association: In the interest of uniformity, and for the protection of both Association and Authority, Association agrees to adopt and enforce such rules and regulations for the sale of electricity to both members and nonmembers as Authority may, after conference with representatives of Association, from time to time prescribe during the term of this contract for uniform application to all of the wholesale customers of Authority deemed to have similar characteristics.

18. Rendition of Advisory Services by Authority: Authority agrees to render advisory services to Association in problems of personnel and administration, to secure the attendance of its district engineer at meetings of the board of association, so far as may be practicable and convenient, and to make available to Association the facilities and services of its personnel division so far as may be necessary in the selection of Association's employees. Association agrees that it will not employ or retain in its employ any person deemed by Authority not to qualify for his position or whose services Authority may deem to be unnecessary.

19. Customers Deposits and Accounts Receivable: Authority agrees to turn over to Association all deposits of active customers served by the lines conveyed pursuant to article 1 (a) hereof, with accrued interest thereon, plus all

accounts receivable from such customers for sales of electricity and electrical appliances and merchandise. Association agrees to assume full responsibility for the disposition of such deposits and accrued interest and to save Authority harmless with respect thereto, and agrees further to act as agent of Authority in the collection of ac- [fol. 2289] counts receivable, and promptly to remit to Authority all collections of such accounts. Association agrees to use all customary and usual methods of collecting such accounts, including exercise of the right of discontinuance of service for failure of payment thereof.

20. Use of Association's Lines: Authority shall have the right, to the extent of the transmission capacity of Association's lines, to the free use of Association's poles and wires for transmission purposes, and for service to industrial customers with a demand of 1,000 KW or more who elect to take service from Authority.

21. Reports to Authority: Association agrees that, not later than the first of February of each year, it will render a report to Authority as to the results of its operations of the preceding year, the condition of its property, and such other information as Authority may request. Such reports shall be made in such form as Authority may prescribe. From time to time Association agrees promptly to render such additional reports or information to Authority as Authority may request.

22. Bonding of Employees: Association agrees to bond in a reasonable amount all employees whose duties require or permit them to handle or dispose of money belonging to Association.

23. Discrimination: Association agrees to render service without discrimination between consumers of the same class, and this contract shall be voidable at the option of Authority, if a discriminatory rate, rebate, or other special concession is made or given to member or non-member customers.

24. Declaration of Policy: This contract is entered into in a spirit of cooperation and with the desire on the part of Authority and Association so to administer the relation-

ship established by this contract as to operate to the benefit of the area served by Association and the residents thereof and of the residents of the Tennessee Valley. In furtherance of this cooperative relationship, Authority will, by every means within its power, seek to further the economic welfare of such area by fostering and promoting the increased use of electricity therein, and by such other means as are provided by law. Association agrees to cooperate with Authority in such program within Association's area of operation and to work with Authority in furthering the economic well-being of the entire Tennessee Valley. This contract shall be construed and administered in accordance with this statement of policy.

25. Contract not transferable: Neither this contract nor any interest therein shall be transferable or assignable by Association to any other party without first securing the written consent of Authority.

In witness whereof, the parties hereto have caused this instrument to be signed and attested at Corinth, Mississippi, by their duly authorized officers, the day and year first above written.

Tennessee Valley Authority, by Arthur E. Morgan, Chairman, Board of Directors.

Alcorn County Electric Power Association, by B. F. Liddon, President.

Attest: J. M. Peavey, Secretary.

[fol. 2290] The schedule of Rates and Charges and schedule of Rules and Regulations are substantially the same as those attached to and made a part of the TVA-City of Athens, Alabama, contract.

[fol. 2291] Power Contract Between TVA and Pontotoc County (Mississippi) Electric Power Association, Dated February 15, 1935

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and Alcorn County (Mississippi) Electric Power Association, except:

COMPLAINANTS' EXHIBIT No. 117

1. The maximum amount of electricity which TVA agrees to supply within the first two year period is 1000 kw.

2. The point of delivery shall be at the metering equipment used on the Lee-Pontotoc county line or at such other point as may be mutually agreed upon.

3. The amount to be paid for the property which TVA shall convey to Pontotoc County Electric Power Association and for the property which TVA shall lease to said Association is stated to be $67,645.36.

4. The Association's liability for additional rural lines shall not exceed $40,000 without its written consent.

[fol. 2292] Power Contract Between TVA and Prentiss County (Mississippi) Electric Power Association

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and Alcorn County (Mississippi) Electric Power Association, except:

1. The maximum amount of electricity which TVA agrees to supply within the first two year period is 2000 kw.

2. The point of delivery shall be at the metering equipment situated on the low tension side of the substation in Booneville, Mississippi, or at such other point as may be mutually agreed upon.

3. The amount to be paid for the property which TVA shall convey to Prentiss County Electric Power Association and for the property which TVA shall lease to said Association is stated to be $82,923.77.

4. The Association's liability for additional rural lines shall not exceed $25,000 without its written consent.

[fol. 2293] COMPLAINANTS' EXHIBIT No. 118

Power Contract Between TVA and City of Dickson, Tennessee

This agreement, made and entered into this 23rd day of October, 1935, between the Tennessee Valley Authority,

hereinafter called Authority, a corporation created by the Tennessee Valley Authority Act of 1933, its successors and assigns, and the town of Dickson, Tenn., a municipal corporation duly organized, created, and existing under and by virtue of the laws of the State of Tennessee, hereinafter called municipality, its successors and assigns.

Witnesseth:

Whereas Authority, by section 10 of said act is authorized to sell the surplus power generated by it and not used in its operations, and is directed to give preference to States, counties, municipalities, and cooperative organizations of citizens or farmers not organized or doing business for profit; and

Whereas municipality, by legislative authority, owns and operates a municipal electric distribution system; and

Whereas municipality desires to purchase power from Authority for municipal purposes and for resale and proposes to pay therefor; and

Whereas, after investigation by Authority, it appears that quantities of power generated at Wilson Dam, Ala., sufficient to meet the requirements of municipality, under the terms of this contract, will be available for sale by Authority after all requirements of authority and of the United States have been fulfilled; and

Whereas all parties to this contract have duly authorized its execution:

Now, therefore, for and in consideration of the mutual covenants herein contained, and subject to all of the provisions of the Tennessee Valley Authority Act of 1933, the parties hereto mutually covenant and agree as follows:

1. Term of contract.—This contract shall become effective upon the execution thereof, and shall continue in effect for 20 years: Provided, however, That all obligations of the parties hereto with regard to the rendition of service and payment therefor shall begin at such time (hereinafter designated "date of initial delivery") as Authority shall have constructed and installed the transmission and transformation facilities necessary in the opinion of Authority [fol. 2294] for such service. All service and payment periods hereinafter referred to shall be computed from the date of initial delivery.

2. Construction of transmission facilities.—Authority agrees, with all reasonable diligence, and within one year from the date hereof, to construct and install the transmission and transformation facilities reasonably necessary in the opinion of Authority for continuous and dependable service, giving due consideration to the actual magnitude of municipality's load requirements.

3. Power Supply.—Authority will, from the date of initial delivery to the expiration hereof, supply electricity to municipality for municipal purposes and for resale. Municipality agrees to purchase from Authority, and Authority agrees to supply, the entire electricity requirements of municipality: Provided, however, That should such requirement be in excess of 750 kilowatts demand, Authority shall not be obligated to deliver such excess except on written demand and after reasonable notice, as hereinafter provided. As municipality forsees the necessity for more than 750 kilowatts it may, from time to time, make such written demand for additional power, which demand shall take effect 9 months after date of demand if amount demanded be 5,000 kilowatts or less, 12 months after date of demand if the amount demanded be over 5,000 kilowatts but not over 10,000 kilowatts, and 2 years after date of demand if the amount demanded be in excess of 10,000 kilowatts. Said energy shall be delivered in the form of 3-phase, alternating current, at approximately 60 cycles per second and approximately 2,300 volts, or at such other voltage as the parties may, from time to time, agree. While it is not the function of Authority to guarantee accurate time by the maintenance of accurate frequency, Authority agrees to supply such frequency as is recognized to be good commercial frequency on a hydroelectric system.

4. Point of delivery.—Authority will deliver the electricity purchased hereunder at the present city light plant, located in the third ward, on a plot of ground 50 feet by 50 feet, to be furnished gratis to Authority by municipality for the period hereof and Authority shall have free right of ingress and egress from said plot. The energy to be supplied hereunder shall be metered at the low tension side of the stepdown transformer bank or banks of the substation or substations to be constructed, owned, and operated

by Authority, and Authority will install only such oil circuit breakers as in its opinion are necessary for the protection of its transformer bank or banks and the transmission lines or transmission lines supplying energy to such substations.

5. Schedule of rates.—Attached hereto, and hereby made a part hereof, is a "schedule of rates and charges." Munici- [fol. 2295] pality agrees to pay for the energy supplied by authority at the rates fixed in schedule A-1 entitled "Wholesale power rate." All payments shall be made to Authority at its offices at Wilson Dam, Ala., or at such other place as Authority may from time to time designate.

6. Resale rates.—In order to facilitate the disposition of surplus power generated by Authority and not needed by it in its operations, and in order to carry out the intention of Congress to encourage the more abundant use of electricity throughout the area in which municipality operates, municipality agrees to charge consumers the rates set forth for the several classes thereof in schedules B-1 to B-5, inclusive, of the said schedule of rates and charges, and not to depart therefrom except by agreement of the parties: Provided, however, That this contract shall not affect the rights of municipality under any existing contract of lease whereby rentals are made a part of electricity rates, not to take and deposit in its general funds any excess revenues under such contract over the revenues from the rates set forth herein. Additional resale schedules for special classes of consumers or special uses of electricity may be added from time to time by agreement of the parties. The term "contractor" in said schedule shall be construed to mean municipality. If it should appear that the rates provided for in said resale schedules with the surcharge provided for therein do not produce revenues sufficient to operate and maintain municipality's electric system on a selfsupporting and financially sound basis.

7. Disposition of municipality's revenues.—Municipality, deeming it necessary for the purpose of this contract, and for the purpose of providing reasonable rates for electric service pursuant to this contract and to the law, agrees to dispose of its gross revenues from electric operations in the following manner:

(a) Revenues shall first be used for the payment of all current operating expenses, including salaries, wages, cost of materials and supplies, power at wholesale, and insurance.

(b) From remaining revenues municipality shall next currently provide for the payment at maturity of interest accrued on all bonds or other indebtedness applicable to municipality's electric system, and for amortization charges on all such bonds or other indebtedness and/or sinking fund payments thereon.

(c) Thereafter revenues shall be used currently to set up reasonable reserves for replacements, new construction and for contingencies, and to provide a reasonable amount of cash working capital.

(d) From remaining revenues municipality shall thereafter pay into its general fund a return on its investment and a tax equivalent as provided in the financial and accounting policy in the schedule of terms and conditions of [fol. 2296] contract attached hereto.

(e) All remaining revenues shall be considered surplus revenues and may be devoted by municipality to the purchase or retirement of bonds or other indebtedness applicable to the electric system before maturity, and if not so devoted shall serve as the basis for the reduction or elimination of surcharges to consumers, and thereafter for the reduction of rates.

Surplus revenues shall be computed as of December 31 and June 30 of each year.

8. Municipality's investment in electric system.—For the purpose of this agreement the investment of municipality in its electric system, including stand-by value of generating plant, as of the date hereof is agreed to be the sum of $60,315, determined as follows:

Replacement cost new of distribution system	$60,450
Less accrued depreciation	18,135
Present value of distribution system	42,315
Present stand-by value of generating plant	18,000
Total	60,315

Bonds applicable to electric system plus accrued interest	None.
Other indebtedness applicable to electric system	None.
Total indebtedness applicable to electric system	None.
Net Investment	$60,315

9. Payment for municipality's energy requirements.—Municipality agrees to pay into its electric funds from appropriate general or special funds for all electric service required by municipality for street lighting, waterpumping and other operations and uses, at the resale rates as set forth in the schedule of rates and charges with such modifications and additions as may from time to time be agreed upon by the parties.

10. Terms and conditions; rules and regulations.—Attached hereto, and hereby made a part hereof, are two schedules, entitled respectively "Schedule of terms and conditions of contract" and "Schedule of rules and regulations", and it is understood and agreed that the provisions of either or both schedules may from time to time be changed or supplemented by agreement of municipality and Authority. The term "Distributor" in the latter schedule shall be construed to mean municipality. It is understood and agreed that the several provisions of the said schedules, [fol. 2297] with such changes as may from time to time be adopted pursuant hereto, as well as the several provisions of this contract and of the schedule of rates and charges, are of the essence of this contract. Municipality hereby adopts said schedule of rules and regulations as the rules and regulations of municipality.

11. Reports to Authority.—Municipality agrees that, not later than the first day of September of each year, it will render to Authority a complete report, in such form as Authority may prescribe, of the results of its operations for the preceding year ending June 30, the condition of its property, and such other information as Authority may reasonably request, municipality agrees promptly to render such additional reports and information to Authority as Authority may from time to time reasonably request.

12. Discrimination.—Municipality agrees that the surplus power purchased hereby shall be sold and distributed to the ultimate consumer without discrimination between consumers of the same class, and that no discriminatory rate, rebate or other special concession will be made or given to any customer.

13. Waiver of defaults.—Any waiver at any time by either party hereto of its rights with respect to any default of the other party hereto and/or with respect to any other matter arising in connection with this contract shall not be considered a waiver with respect to any subsequent default or matter.

14. Contract not transferable.—Neither this contract nor any interest therein shall be transferable or assignable by municipality to any other party without the consent of Authority.

In witness whereof, the parties hereto have caused this instrument to be signed and attested in duplicate, by their duly authorized officers the day and year first above written.

Tennessee Valley Authority, by Arthur E. Morgan, Chairman, Board of Directors J. C. S., Leg. Div.

Attest: Charles E. Hoffman, Assistant Secretary.

Town of Dickson, Tenn., by D. B. Beasley, Mayor.

Attest: Robert S. Clement, Recorder.

[fol. 2298] Schedule of Rates and Charges

(Wherever the term "Schedule of terms and conditions" is used it refers to the schedule of terms and conditions of contract of which the schedule of rates and charges is a part.)

Wholesale Power Rate-Schedule A-1

Rate

Demand Charge.—Ninety cents per kilowatt of demand per month.

Energy charge.—First 100,000 kilowatt-hours consumed per month at 4 mills per kilowatt-hour; next 200,000 kilowatt-hours consumed per month at 3 mills per kilowatt-hour; next 700,000 kilowatt-hours consumed per month at 2.5 mills

per kilowatt-hour; excess over 1,000,000 kilowatt-hours consumed per month at 2 mills per kilowatt-hour. Charge for energy in excess of 360 times the demand shall be subject to a reduction of 0.5 mills per kilowatt-hour from the otherwise applicable rate.

Determination of Demand

Demand measurement shall be made by suitable instruments at the point or points of delivery. Demand for any month shall be defined as the highest integrated simultaneous load during any 60-minute period during the month for which determination is made.

Adjustment for Demand Charge for Power Factor

Demand charge may be adjusted if and when Authority deems necessary to correct for power factors lower than 85 percent. Such adjustments will be made in such manner as to bring the demand charge to the equivalent of 85 percent power factor.

Minimum Monthly Bill

Ninety cents per kilowatt of demand, but in no case shall the minimum bill be less than the charge for 60 percent of the highest demand occur-ing during any month within the previous consecutive 12 months' period.

Allowance on Sales to Residential Consumers

Authority will adjust bill so that contractor shall be billed at 2 mills per kolowatt-hour for at least so much energy as may be sold by contractor under the residential resale schedule at 4 mills per kolowatt-hour.

Discount

Rates above are net.

[fol. 2299] Standard Residential Rate—Schedule B-1

Availability

Availability for domestic use to all residential customers served from local alternating-current distribution systems.

Character of Service

Alternating-current service at approximately 60 cycles, 110 or 220 volts, either single phase, 2-wire or 3-wire, or 3-phase, 3-wire, or 4-wire, as may be required by contractor.

Rate

First 50 kilowatt-hours consumed per month at 3 cents per kilowatt-hour; next 150 kilowatt-hours consumed per month at 2 cents per kilowatt-hour; next 200 kilowatt-hours consumed per month at 1 cent per kilowatt-hour; next 1,000 kilowatt-hours consumed per month at 0.75 cents per kilowatt hour.

Minimum Monthly Bill

Seventy-five cents per meter.

Payment

Above rates are net, the gross rates being 10 percent higher. In the event that the current monthly bill is not paid within 10 days from date of bill, the gross rates shall apply.

Service under this classification is subject to rules and regulations of contractor.

Basic Commercial Rate—Schedule B-2

Availability

Available to all commercial and all small non-residential light, heat, and power customers having demands not greater than 20 kilowatts and whose average monthly usage does not exceed 4,000 kilowatt-hours. Customers with demands exceeding 20 kilowatts and/or using on the average in excess of 4,000 kilowatt-hours per month will be billed according to the basic industrial rate, schedule B-3.

Character of Service

Alternating-current service from the local distribution system at approximately 60 cycles, 110 or 220 volts; either single-phase, 2-wire or 3-wire; or, 3-phase, 3-wire, or 4-[fol. 2300] wire, as may be required by contractor.

Rate

First 250 kilowatt-hours per month at 3 cents per kilowatt-hour; next 750 kilowatt-hours per month at 2 cents per

kilowatt-hour; next 1,000 kilowatt-hours per month at 1 cent per kilowatt-hour; excess over 2,000 kilowatt-hours per month at 0.8 cent per kilowatt-hour.

Determination of Demand

In the event of question arising as to the demand, or upon the written request of the customer, it shall be determined by inspection or test, at the option of contractor. The demand for any month shall be defined as the highest integrated load during any 30-minute period during the month for which the determination is made.

Minimum Monthly Bill

$1 per meter.

Surcharge

Rate is subject to a surcharge as provided in schedule of terms and conditions.

Payments

Above rates, including surcharge, are net, the gross rates being 10 percent higher. In the event the current monthly bill is not paid within 10 days from date of bill, the gross rates shall apply.

Service under this classification is subject to rules and regulations of contractor.

Basic Industrial Rate—Schedule B-3

Availability

Available to all industrial and all large non-residential light, heat, and power customers having demands greater than 20 kilowatts and/or customers whose average monthly usage exceeds 4,000 kilowatt-hours. Customers with demands not greater than 20 kilowatts and using on the average not in excess of 4,000 kilowatt-hours per month will be billed according to the basic commercial rate, schedule B-2.

Character of Service

Alternating current, 3-phase, 60 cycles. Voltage supplies will be at the discretion of contractor and will be determined

by the voltage available from distribution lines in the vicinity and/or other conditions.

[fol. 2301]

Rate

Demand Charge.—$1 per kilowatt of demand per month.

Energy Charge.—First 10,000 kilowatt-hours consumed per month at 10 mills per kilowatt-hour; next 25,000 kilowatt-hours consumed per month at 6 mills per kilowatt-hour; next 65,000 kilowatt-hours consumed per month at 4 mills per kilowatt-hour; next 400,000 kilowatt-hours consumed per month at 3 mills per kilowatt-hour; excess over 500,000 kilowatt-hours consumed per month at 2.5 mills per kilowatt-hour.

Determination of Demand

Demand measurement shall be made by suitable instruments at the point or points of delivery, except, at the option of contractor, demand may be determined by inspection or test. Demand for any month shall be defined as the highest integrated load during any 30-minute period during the month for which determination is made.

Adjustment of demand charge for power factor

Demand charge may be adjusted, if and when contractor deems necessary, to correct for power factors lower than 85 per cent. Such adjustments will be made in such manner as to bring the demand charge to the equivalent of 85 per cent power factor.

Minimum Monthly Bill

$1 per kilowatt of demand, but in no case shall the minimum bill be less than the charge for 60 per cent of the highest demand occurring during any month within the previous consecutive 12 months' period.

Surcharge

Rate is subject to a surcharge as provided in schedule of terms and conditions.

COMPLAINANTS' EXHIBIT No. 118

Payment

Above rates, including surcharge, are net, the gross rates being 10 per cent higher. In the event the current monthly bill is not paid within 10 days from date of bill, the gross rates shall apply.

Service under this classification is subject to rules and regulations of contractor.

[fol. 2302] Seasonal Industries Rate (Optional)—Schedule B-4

Availability

Available for seasonal service not to exceed 6 consecutive months per year only to industrial and large power users having demands not less than 25 kilowatts whose operations and business are by nature seasonal.

Character of Service

Alternating current, 3-phase, 60 cycles. Voltage supplied will be at the discretion of contractor and will be determined by the voltage available from distribution lines in the vicinity and/or other conditions.

Application of Rate

For the first 4 consecutive months per season customer will be billed according to part I of the schedule, and for remainder of such season (not to exceed 2 months) customer will be billed according to part II of the schedule. Rules governing payment and deposit and other rules and regulations for service under this classification apply to both part I and part II of this schedule.

Rate—Part I

Demand charge.—$1.60 per kilowatt of demand per month.

Energy charge.—First 10,000 kilowatt-hours per month, at 10 mills per kilowatt-hour; next 25,000 kilowatt-hours per month at 6 mills per kilowatt-hour; next 65,000 kilowatt-hours per month at 4 mills per kilowatt-hour; next 400,000 kilowatt-hours per month at 3 mills per kilowatt-hour; ex-

cess over 500,000 kilowatt-hours per month at 2.5 mills per kilowatt-hour.

Determination of Demand

Demand measurement shall be made by suitable instruments at the point or points of delivery, except, at the option of the contractor, demand may be determined by inspection or test. Demand for any month shall be defined as the highest integrated load during any 30-minute period during the month for which determination is made.

Adjustment of Demand Charge for Power Factors

Demand charge may be adjusted, if and when contractor deems necessary, to correct for power factors lower than 85 per cent. Such adjustments will be made in such manner as to bring the demand charge to the equivalent of 85 per cent power factor.

[fol. 2303] Minimum Monthly Bill

Minimum monthly bill shall be $1.60 per kilowatt of demand, but in no case shall the minimum charge for the season be less than $4.80 per kilowatt of the highest demand occurring during any month of the seasonal period.

Surcharge

Rate is subject to a surcharge as provided in schedule of terms and conditions.

Rate—Part II

Demand charge.—None.

Energy charge.—First 250 kilowatt-hours per month at 3 cents per kilowatt-hour; next 750 kilowatt-hours per month at 2 cents per kilowatt-hours; next 1,000 kilowatt-hours per month at 1 cent per kilowatt-hour; excess over 2,000 kilowatt-hours per month at 0.8 cent per kilowatt-hour.

Minimum Monthly Bill

$3 per meter.

Surcharge

Rate is subject to a surcharge as provided in schedule of terms and conditions.

COMPLAINANTS' EXHIBIT No. 118

Payment

Above rates including surcharge are net, the gross rates being 10 per cent higher. In the event the current monthly bill is not paid within 10 days from date of bill the gross rates shall apply.

Deposit

A deposit or suitable guarantee may be required from each customer, such deposit to be not more than twice the amount of the customer's normal monthly bill as established by application of part of this schedule.

Service under this classification is subject to rules and regulations of contractor.

Standard Street Lighting Rate—Schedule B-5

Availability

Available for street or roadway lighting for term of not less than 1 year.

[fol. 2304] Character of Service

Alternating-current service, either series or multiple system or combination.

Application of Rate

Where contractor's electric system bears the cost of operation and maintenance of the equipment used in the street or roadway lighting system, the rate consists of an energy charge at basic commercial rate, schedule B-2, and a maintenance charge.

Where contractor's electric system does not bear the cost of operation and maintenance of the equipment used in the street or roadway lighting system, only the energy charge will apply.

Rate

Energy charge.—First 250 kilowatt-hours per month at 3 cents per kilowatt-hour; next 750 kilowatt-hours per month at 2 cents per kilowatt-hour; next 1,000 kilowatt-hours per month at 1 cent per kilowatt-hour; excess over 2,000 kilowatt-hours per month at 0.8 cent per kilowatt-hour.

COMPLAINANTS' EXHIBIT No. 118

Maintenance charge

Lamp rating:	Unit charge per month
1,000 Lumen series, or 100-watt multiple	$0.80
2,500 Lumen series, or 150-watt multiple	1.05
4,000 Lumen series, or 200-watt multiple	1.40
6,000 Lumen series, or 300-watt multiple	1.70
10,000 Lumen series, or 500-watt multiple	2.15

Surcharge

Energy charge is subject to a surcharge as provided in schedule of terms and conditions.

Payment

Above rates, including surcharge, are net, the gross rates being 10 per cent higher. In the event the current monthly bill is not paid within 10 days from date of bill the gross rates shall apply.

[fol. 2305] Service under this classification is subject to rules and regulations of contractor.

Schedule of Terms and Conditions of Contract

1. Measurement of demand, energy, and power factor.—Demand and energy measurements shall be made by suitable instruments at the point or points of delivery or may, at the option of Authority, be made at some other point or points where housing facilities are available or may be made available and/or operation simplified; Provided, however, that in the event the metering is effected at some other location than at point of delivery, suitable correction shall be made by Authority of the amounts determined at such location so that adjusted amounts will so far as possible reflect the exact quantities delivered at the actual point or points of delivery.

Authority will, at its own expense, install and maintain the necessary meters for measuring the maximum demand and the amount of energy furnished municipality; Provided, that should these meters fail or be found inaccurate the maximum demand and amount of energy delivered will be

estimated by Authority from the best information available. Authority may also, at its option, from time to time measure power factor. Municipality shall permit the use of its housing facilities, ducts, and supports for Authority's metering equipment.

Municipality shall have the right to install, equip and maintain at its own expense suitable instruments for measuring demand, power factor, and energy adjacent to Authority's measuring devices for purposes of a check on said devices, and Authority agrees that it will so far as practicable provide suitable facilities for the installation of such metering devices within its substation enclosures.

2. Meter tests.—Authority will, at its own expense, and in the presence of representatives of municipality, make periodical tests and inspections of its meters in order to maintain a high standard of accuracy. Authority will make additional tests or inspections of its meters at the request of municipality, and in the presence of representatives of municipality. If such additional tests show that the meter is accurate within 2 per cent, slow or fast, no adjustment will be made in municipality's bill and the testing charge will be paid by municipality. In case the tests show the meter to be in excess of 2 per cent, fast or slow, an adjustment shall be made in municipality's bill over a period of not over 30 days prior to date of such test, and cost of making test shall be borne by Authority.

3. Municipality's lines and equipment—Ownership.—All lines and substations from point of delivery (as defined in the contract of which these terms and conditions are a part), and all electrical equipment, except the metering equipment of Authority, located on Municipality's side of such point of delivery, shall be furnished and maintained by Municipality.

[fol. 2306] 4. Inspections.—Authority shall have the right, but shall not be obligated, to inspect any installation before electricity is introduced or at any later time, and reserves the right to reject any wiring or equipment not in accordance with Authority's reasonable standards; but such inspection, or failure to inspect, or to reject, shall not render Authority liable or responsible for any loss or damage re-

sulting from defects in the installation of any electrical equipment, or from violation of the contract of which these terms and conditions are a part, or from accidents which may occur upon municipality's premises.

5. Municipality's responsibility for Authority's property. —All meters, service connections, and other equipment furnished by Authority shall be, and remain, the property of Authority. Municipality shall exercise proper care to protect the property of Authority or municipality's premises, and in the event of loss or damage to Authority's property, arising from neglect of municipality to care for same, the cost of necessary repairs or replacement shall be paid by municipality.

6. Right of access.—Authority's identified employees shall have access to municipality's premises at all reasonable times for the purpose of reading meters and for testing, repairing, renewing, or exchanging any or all equipment belonging to Authority.

7. Additional load.—The service connection, transformers, meters, and equipment supplied by Authority for municipality have definite capacity and no addition to the equipment or load connected thereto, in excess of such capacity, shall be made except after reasonable notice to Authority. Failure to give such notice of additions or changes in load shall render municipality liable for any damage to Authority's lines or equipment caused by the additional or changed installation.

8. Municipality's lines and equipment Standards.—All lines and equipment of municipality must conform to accepted modern practice, as exemplified by the requirements of the National Electrical Safety Code and the National Electric Code.

9. Accounting and handling of funds.—Municipality agrees:

(a) To administer its electric system as a separate department, to establish and maintain a separate fund for its revenues from electrical operations, and not to mingle funds or accounts with those of any other of its operations.

(b) To keep the general books of accounts of its electric system according to a system of accounts to be prescribed

by Authority after conference with municipality, which system of accounts will so far as possible be uniform with other systems prescribed and applied in other municipalities purchasing electrical energy from Authority. Authority will render such advisory accounting service in the setting up and administering of such accounts as Authority may deem reasonable.

(c) To furnish promptly to Authority such operating and financial statements relating to electric system operations [fol. 2307] as may reasonably be requested by Authority.

(d) To allow the duly authorized agents of Authority to have free access at all reasonable times to all books and records relating to electric system operations.

10. Financial and accounting policy.—Municipality agrees to be bound by the following statement of financial and accounting policy:

(a) Present value of electric system.—Wherever account records are complete and have been properly kept, the present value of the electric system as of the date of initial delivery shall be taken as the actual historical cost of the property then in use or useful in the distribution of electricity as shown on the books, including reasonable spare capacity for expansion and reasonable quantities of materials and supplies, less accrued depreciation, plus property under construction and a reasonable amount of cash working capital. If adequate reserves have not been set up for depreciation, the amount of depreciation accrued shall be estimated by engineering appraisal. Whenever accounting records are incomplete or have not been kept in such manner as to permit the determination of actual historical cost, the present value shall be determined as the replacement cost new of the property devoted to the distribution of electricity shall be included in a physical inventory. The items of such physical inventory shall then be priced on the basis of labor and materials cost then prevailing. The total direct cost of construction shall be increased by not more than 15 per cent for general overheads.

(b) Municipality's investment. The initial investment of municipality shall be defined as the present value of the system (i. e., as of the date of initial delivery), less all

outstanding liabilities incurred in connection with the construction or acquisition of the electric system. Wherever general obligations have been issued by municipality, the proceeds of which have been used for both electric construction on operations and for general city purposes, an estimate shall be made of the amount of such proceeds which actually were used in the electric system. That part of the total indebtedness which is represented by this amount shall then be allocated or assigned as an obligation of the electric system. The initial investment as above defined shall be increased only as herein specifically provided and by the payment of moneys from the funds of municipality (other than the electric fund) for the payment of debt incurred by or on account of the electric system or otherwise for the benefit of the electric system.

(c) Maximum returns.—The amount of municipality's investment in the electric system shall be determined as of the date of initial delivery and shall thereafter be adjusted as necessary from time to time and in any case at the end of each fiscal year. Municipality shall receive a return on this investment each month not to exceed one-half of 1 per cent per month, computed on the basis of the investment as of the last day of the month next preceding.

[fol. 2308] (d) Payments in lieu of taxes.—Municipality may take from the electric department revenues or funds for the general funds of municipality an amount in lieu of taxes, to be determined as follows:

(1) The prevailing municipal property tax rate shall be applied to the value of the property used in electric operations within the municipal limits.

(2) The tax equivalent paid to municipality's general funds under (1) above shall be increased by application of the county and State tax rates to the value of the electric system, unless the county and/or State governments levy property taxes upon the electric system, in which case municipality shall not take the county and State tax equivalent for such taxes as are assessed.

(3) In determining the amount to which municipality is entitled in lieu of taxes under (1) and (2) above the tax

rate shall be applied to the value of the property as determined in paragraph (a) above plus additions, less retirements. The tax computations and remittances in lieu of such taxes shall be made monthly and shall be based upon the value as determined in paragraph (a) above plus additions, less retirements as shown by the books at the beginning of each current taxable year.

(e) Payment by electric department for services.—The electric department shall pay the salary of those persons who devote their full time to the operation of the electric system, and an equitable portion of the salary of those persons devoting part time to the operation of the electric system.

(f) Withdrawals and reinvestments by municipality.—If, at any time, municipality should withdraw from the funds of the electric department for municipality's general funds amounts in excess of the allowable return on investment and of the tax equivalent, municipality's investment shall be reduced in the amount of such excess withdrawals. Withdrawals of municipality's investment shall be made only at such times and in such amounts as will not interfere with the efficient operation of the electric system, including requirements for expansion. In no event shall the excess withdrawals by municipality exceed the amount of municipality's investment in the electric system. If, at any time, municipality should fail to withdraw the full amount due on account of its investment and/or on account of tax equivalent, that part or whole of the return and/or tax equivalent which is not withdrawn shall be added to municipality's investment to the extent such amounts are needed by or used in the operation of the electric system.

(g) Short term loans and advances.—The electric department may lend funds or extend credit to the general fund of municipality only on a short-term basis (1 year or less, without the right of renewal). The amount so lent shall bear a rate of interest the same as the rate of return on investment determined by the governing body of municipality, not to exceed 6 per cent per annum, payable monthly. [fol. 2309] At the end of each fiscal year all such matured loans and advances not yet paid shall be paid or closed out by adjustment of municipality's investment account.

(h) Action by governing body of municipality. Except as limited in this statement, the governing body of municipality shall determine the rate of return on municipality's investment and/or the interest rate on loans and advances to it.

(i) Publication of statement of municipality's investment. Municipality shall publish a statement of the amount of municipality's investment in the electric system and the outstanding loans and advances at the close of each fiscal year. A copy of such statement shall be forwarded to Authority immediately at its office at Wilson Dam, Ala. After the closing of the books at the end of each month, municipality shall make known, upon demand, to any taxpayer of municipality or to any customer of the electric system the amount of municipality's investment in said electric system.

11. Billing.—Payment for energy used in any calendar month shall be due on the fifteenth of the succeeding month, or 5 days after receipt of bill from Authority, whichever is the later. Upon failure of municipality to pay for the energy used in any calendar month within 60 days after due date, Authority shall have the right, upon reasonable notice, to discontinue the supply of energy and refuse to resume delivery so long as any part thereof remains unpaid. Discontinuance of supply under this section will not relieve municipality of its liability for the agreed minimum monthly payment during the time the supply of energy is so discontinued. To any amount remaining unpaid on the first day of the calendar month following the due date there shall be added a penalty of 1 per cent and an additional 1 per cent shall be added on the first day of each succeeding month until the amount is paid in full. All payments shall be made to the Authority at its offices at Wilson Dam, Ala., or at such other place as Authority may from time to time designate.

12. Interruption of service.—Authority will furnish energy as agreed upon continuously so far as reasonable diligence will permit; but Authority, its officers, agents, or employees shall not be liable for damages when, for any reason, suspensions of the operation of the generation and transmission system serving municipality, or any part thereof, interfere with the delivery of electric energy to municipality nor shall such an interruption constitute a breach

of this contract on the part of Authority, but Authority shall make appropriate adjustment of the demand charge in the event of an interruption.

13. Lower rates to other municipalities.—If at any time during the term of this agreement Authority should supply electricity to any municipality, municipal division or department, or cooperative association, at a lower rate schedule than that applicable to municipality, and such lower rate schedule shall not be justified in the judgment of Authority by different conditions of service, making the cost to such other municipality, division, department, or cooperative relatively less than to municipality, such lower rate shall be [fol. 2310] made available to municipality so long as such lower rate schedule shall be given to such other municipality while this contract is in force.

14. Developmental surcharge.—In order to maintain municipality's revenues in the developmental period in which the increased demand for power may not compensate for the greatly reduced rates provided for in schedule B, municipality may also impose a surcharge upon those classes of consumers subject to a surcharge under the provisions of said schedule. Municipality may initially determine and may from time to time vary such surcharges, with the understanding, however, that all surplus revenues (as defined in the contract of which this schedule is a part) shall serve as the basis for the reduction or elimination of such surcharges. Surcharges shall be based on a straight percentage of bills, and shall apply uniformly to all members of classes as to which surcharges are authorized.

15. Adjustment of rates.—In the event of a major increase or decrease in general price and wage levels of such a substantial character as materially and substantially to change the cost basis upon which the wholesale rates fixed by this contract are predicated, the parties hereto agree to an adjustment of such rates. Should the cost-of-living index for the United States as a whole compiled by the Department of Labor of the United States show a decrease for a period of 6 consecutive calendar months, or for any month in said period if index figures are not reported for each month thereof, of 30 per cent or more under the index figures for

the index period including the month in which this contract is signed, or for any month in said period if index figures are not reported for each month thereof, municipality and Authority agree to such a reduction in rates as will conform to the decreased costs of electricity supply, and should such index figures show a 30 per cent or more increase for the same period or month, as the case may be, Authority and municipality agree to such an increase in rates as will conform to the increased costs of electricity supply. Municipality and Authority agree, promptly upon receipt of a request by the other, to confer with each other on the changes in rates necessary to conform to changes in the cost of electricity supply, and to endeavor to agree upon new rates which shall so conform. The new rates shall be substituted for the wholesale rates set forth in the contract of which this schedule is a part.

16. Reduction in rates.—Authority agrees to reduce the wholesale rates herein fixed wherever, in the opinion of Authority, reductions in the cost of generating and transmitting energy make feasible such reductions in rates; the intention of the parties being that municipality shall participate in the benefits of reductions in the cost of generation and transmission.

17. Voltage fluctuations caused by municipality.—Electric service must not be used in such a manner as to cause unusual fluctuations or disturbances to Authority's system. Authority may require municipality at its own expense to install suitable apparatus to reasonably limit such fluctuations.

18. Balancing of loads.—Municipality shall at all times take and use energy in such manner that the load will be bal- [fol. 2311] anced between phases to within nominally 10 percent. In the event of unbalanced polyphase loads, Authority reserves the right to require municipality at its own expense to make the necessary changes to correct this condition, or to compute the balancing demand on the assumption that the load of each phase is equal to that on the greatest phase.

19. Notice of trouble.—Municipality shall notify Authority immediately should the service be unsatisfactory for any reason, or should there be any defects, trouble, or accidents

affecting the supply of electricity. Such notices, if verbal, should be confirmed in writing.

20. Single-point delivery.—Unless otherwise specifically provided in this contract, if service is rendered for more than one substation, or through more than one transformation at the same substation, Authority will bill municipality for energy (but not demand) at each substation on additional transformation separately.

21. Submetering.—Municipality shall not sell electricity for submetering or further resale.

22. Conflict.—In case of conflict between any express contractual provision or any provision of the schedule of rates and charges and these terms and conditions, the contract or rate schedule shall apply.

Schedule of Rules and Regulations Applicable to All Classes of Service

1. Application for service.—Each prospective customer desiring electric service may be required to sign distributor's standard form of application for service on contract before service is supplied by the distributor.

2. Determination of classification.—Service under the standard residential rate shall apply only to electric service in a single private dwelling and its appurtenances, the major use of which is for lighting and household appliances, for the personal comfort and convenience of those residing therein. Private dwellings in which space is occasionally used for the conduct of business by a person residing therein will be served under the standard residential rate. Where premises have mixed use the classification shall be determined by predominatory use of floor space. The residential rate shall not apply to service to:

(a) Institutions such as clubs, fraternities, orphanages, or homes.

(b) Recognized rooming or boarding houses.

(c) The space in an apartment or other residential building primarily devoted to a professional or other office, studio, or other gainful pursuit. Availability of service

under the standard commercial and industrial rates shall be determined according to the schedule of rates and charges.

3. Deposits.—A deposit or suitable guaranty not exceeding twice the average monthly bill may be required of any customer before electric service is supplied. Distributor may at its option return deposit to customer after 1 year. Upon termination of service, deposit may be applied by distributor against unpaid bills of customer, and if any balance [fol. 2312] remains after such application is made, said balance shall be refunded to customer.

4. Point of delivery.—The point of delivery is the point, as designated by distributor, on customer's premises where current is to be delivered to building or premises. All wiring and equipment beyond this point of delivery shall be maintained by the customer.

5. Customer's wiring-Standards.—All wiring of customer must conform to municipal requirements and accepted modern standards, as exemplified by the requirements of the National Electrical Safety Code, and the National Electric Code.

6. Inspections.—Distributor shall have the right, but shall not be obligated, to inspect any installation before electricity is introduced or at any later time, and reserves the right to reject any wiring or appliances not in accordance with distributor's standards; but such inspection or failure to inspect or reject shall not render distributors liable or responsible for any loss or damage resulting from defects in the installation, wiring, or appliances, or from violation of distributor's rules, or from accidents which may occur upon customer's premises.

7. Underground service lines.—Customers desiring underground service lines from distributor's overhead system must bear the excess cost incident thereto. Specifications and terms for such construction will be furnished by distributor on request.

8. Customer's responsibility for distributor's property.—All meters, service connections, and other equipment fur-

nished by distributor shall be, and remain, the property of the distributor. Customers shall provide a space for, and exercise proper care, to protect the property of distributor on its premises; and in the event of loss or damage to distributor's property, arising from neglect of customer to care for same, the cost of necessary repairs or replacements shall be paid by customer.

9. Right of access.—Distributor's identified employees shall have access to customer's premises at all reasonable times for the purpose of reading meters, testing, repairing, removing, or exchanging any or all equipment belonging to distributor.

10. Billing.—Bills will be rendered monthly and shall be paid within 10 days from date of bill at the office of distributor. Failure to receive bill will not release customer from payment obligation. Should bills not be paid as above, the distributor may at any time thereafter, upon 5 days' written notice to customer, discontinue service. Bills paid on or before the final date of payment shall be payable at the net rates, but thereafter the gross rates shall apply, as provided in schedule of rates and charges. Should the final date for payment of the bill at the net rates fall on a Sunday or holiday, the business day next following the final date will be held as a day of grace for delivery of payment. Net rate remittances received by mail after the time limit for payment of said net rates will be accepted by distributor, if the incoming envelope bears United States Post Office date stamp of the final date for payment of the net amount, or any date prior thereto.

11. Discontinuance of service by distributor.—The distributor may refuse to connect or may discontinue service for the violation of any of its rules and regulations, or for [fol. 2313] violation of any of the provisions of the schedules of rates and charges, or of the application of customer or contract with customer. Distributor may discontinue service to customer for the theft of current or the appearance of current theft devices on the premises of customer. The discontinuance of service by distributor for any causes as stated in this rule does not release customer from his obligation to distributor for the payment of minimum bills

as specified in application of customer or contract with customer.

12. Reconnection charge.—Whenever service has been discontinued by distributor, as provided above, a charge of not less than $1 may be collected by distributor before service is restored.

13. Termination of contract by customer.—Customers who have fulfilled their contract terms and wish to discontinue service must give at least 3 days written notice to that effect, unless contract specifies otherwise. Notice to discontinue service prior to expiration of contract term will not relieve customer from any minimum or guaranteed payment under any contract or rate.

14. Service charges for temporary service.—Customers requiring electric service for a period not exceeding 30 days may be required by distributor to pay all costs for connection and disconnection incidental to the supplying and removing of service. This rule applies to circuses, carnivals, fairs, temporary construction, and the like.

15. Interruption of service.—The distributor will use reasonable diligence to provide a regular and uninterrupted supply of current, but in case the supply of current should be interrupted for any cause, distributor shall not be liable for damages resulting therefrom.

16. Voltage fluctuations caused by customer.—Electric service must not be used in such a manner as to cause unusual fluctuations or disturbances to distributor's system. Distributor may require customer, at his own expense, to install suitable apparatus which will reasonably limit such fluctuations.

17. Additional load.—The service connection, transformers, meters, and equipment supplied by distributor for each customer have definite capacity, and no addition to the equipment or load connected thereto will be allowed except by consent of distributor. Failure to give notice of additions or changes in load, and to obtain distributor's consent for same, shall render the customer liable for any damage to any of distributor's lines or equipment caused by the additional or changed installation.

18. Stand-by and resale service.—All purchased electric service (other than emergency or stand-by service) used on the premises of customer shall be supplied exclusively by distributor, and the customer shall not, directly or indirectly, sell, sublet, assign, or otherwise dispose of the electric service or any part thereof.

19. Single-point delivery.—The rates named in the schedule of rates and charges for each class of service are based [fol. 2314] upon the supply of service to the entire premises through a single delivery and metering point and at a single voltage. Separate supply for the same customer at other points of consumption, or at a different voltage, shall be separately metered and billed.

20. Notice of trouble.—Customer shall notify distributor immediately should the service be unsatisfactory for any reason, or should there be any defects, trouble, or accidents affecting the supply of electricity. Such notices, if verbal, should be confirmed in writing.

21. Nonstandard service.—The customer shall pay the cost of any special installation necessary to meet his peculiar requirements for service at other than standard voltages, or for the supply of closer voltage regulation than required by standard practice.

22. Meter tests.—Distributor will, at its own expense, make periodical tests and inspections of its meters in order to maintain a high standard of accuracy. Distributor will make additional tests or inspections of its meters at the request of customer. If such test show that the meter is accurate within 2 per cent, slow or fast, no adjustment will be made in customer's bill and the testing charge of $1 per meter will be paid by customer. In case the test shows meter to be in excess of 2 per cent, slow or fast, an adjustment shall be made in the customer's bill over a period of not over 30 days prior to date of such test, and cost of making test shall be borne by distributor.

23. Filling and posting.—A copy of these rules and regulations, together with a copy of distributor's schedule of rates and charges, shall be kept open to inspection at the offices of distributor.

COMPLAINANTS' EXHIBIT No. 118

24. Scope.—This schedule of rules and regulations is a part of all contracts for receiving electric service from distributor, and applies to all service received from distributor, whether the service is based upon contract, agreement, signed application, or otherwise.

25. Revisions.—These rules and regulations may be revised, amended, supplemented, or otherwise changed from time to time. Such changes, when effective, shall have the same force as the present rules and regulations.

26. Conflict.—In case of conflict between any provision of any rate schedule and the schedule of rules and regulations, the rate schedule shall apply.

[fol. 2315] Power Contract Between TVA and the City of Somerville, Tennessee, Dated December 31, 1935

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Dickson, Tennessee, except:

1. The maximum amount of electricity which TVA shall be obligated to deliver shall not be in excess of 750 kw. except on demand and notice as provided for in said contract between TVA and the City of Dickson, Tennessee.

2. The point of delivery shall be at a substation located adjacent to the present generating plant of said municipality.

3. In lieu of Section 8 of the contract between TVA and the City of Dickson, the following appears:

10. Municipality's investment in electric system.—For the purpose of this agreement the investment of municipality in its electric system as of the date hereof is agreed to be the sum of $00.00, as determined as follows:

Replacement costs, new	$18,900
Less accrued depreciation	7,560
Present value	11,340
Bonds and other indebtedness applicable to electric system	11,340
Net investment	None

COMPLAINANTS' EXHIBIT No. 118

[fol. 2316] Power Contract Between TVA and the City of Milan, Tennessee, Dated December 31, 1935

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Dickson, Tennessee, except:

1. The maximum amount of electricity which TVA shall be obligated to deliver shall not be in excess of 1000 kw. except on demand and notice as provided for in said contract between TVA and the City of Dickson, Tennessee.

2. The point of delivery shall be at the present city light plant.

3. In lieu of Section 8 of the contract between TVA and the City of Dickson, the following appears:

8. Municipality's investment in electric system. For the purpose of this agreement the investment of municipality in its electric system as of the date hereof is agreed to be the sum of —, determined as follows:

Replacement cost new of distribution system	$60,312
Less accrued depreciation	23,927
Present value of distribution system	36,385
Present stand-by value of generating plant	15,365
Total	51,750
Bonds applicable to electric system, plus accrued interest	51,750
Other indebtedness applicable to electric system	None.
Total indebtedness applicable to electric system	51,750

[fol. 2317] Power Contract Between TVA and the City of Bolivar, Tennessee, Dated December 31, 1935

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Dickson, Tennessee, except:

1. The maximum amount of electricity which TVA shall be obligated to deliver shall not be in excess of 450 kw. ex-

cept on demand and notice as provided for in said contract between TVA and the City of Dickson, Tennessee.

2. The point of delivery shall be at the present city light plant on West Market Street in said City of Bolivar.

3. In lieu of Section 8 of the contract between TVA and the City of Dickson the following appears:

8. Municipality's investment in electric system. For the purpose of this agreement the investment of municipality in its electric system, including generating plant, as of the date hereof is agreed to be the sum of $00.00, determined as follows:

Replacement cost, new, of distribution system	$17,808
Less accrued depreciation	5,083
Present value of electric distribution system	12,725
Present stand-by value of generating plant	7,275
Total	20,000
Bonds applicable to electric system plus accrued interest	20,000
Other indebtedness applicable to electric system	None.
Total indebtedness applicable to electric system	20,000
Net investment	None.

[fol. 2318] Power Contract Between TVA and the City of Holly Springs, Mississippi, Dated November 12, 1935

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Dickson, Tennessee, except:

1. The maximum amount of electricity which TVA shall be obligated to deliver shall not be in excess of 450 kw. except on demand and notice as provided for in said contract between TVA and the City of Dickson, Tennessee.

2. The point of delivery shall be at the present city light plant.

3. In lieu of Section 8 of the contract between TVA and the City of Dickson the following appears:

COMPLAINANTS' EXHIBIT No. 118

8. Municipality's investment in electric system. For the purpose of this agreement the investment of municipality in its electric system as of the date hereof is agreed to be the sum of $25,257, determined as follows:

Replacement cost, new	$41,255
Less accrued depreciation	10,313
Present value	30,942
Stand-by value of generating plant	19,315
Total	50,257
Bonds applicable to electric system plus accrued interest	25,000
Other indebtedness applicable to electric system	None.
Total indebtedness applicable to electric system	25,000
Net investment	25,257

[fol. 2319] Power Contract Between TVA and the City of Sheffield, Alabama

This agreement, made and entered into as of the 16th day of March, 1936, pursuant to the Tennessee Valley Authority Act of 1933, between the Tennessee Valley Authority, hereinafter called Authority, a corporation created by and acting under said Act, and the city of Sheffield, hereinafter called Municipality, a municipal corporation duly organized, created and existing under and by virtue of the laws of the State of Alabama.

Whereas Authority, by section 10 of said Act, is authorized to sell the surplus power generated by it and not used in its operations, and is directed to give preference to States, Counties, Municipalities, and cooperative organizations of citizens or farmers not organized or doing business for profit; and

Whereas by Section 11 of said Act it is provided that the sale of power by Authority shall be primarily for the benefit of the People of the section as a whole, and particularly the domestic and rural consumers to whom the power can economically be made available; and

COMPLAINANTS' EXHIBIT No. 118

Whereas the electors of the municipality have by referendum authorized municipality to acquire by construction or purchase a municipal electric distribution system, and municipality intends, with all possible diligence and expedition, to acquire by construction or purchase, and to operate such a system; and

Whereas municipality desires to purchase power from Authority for municipal purposes, and for resale and proposes to pay therefor; and

Whereas municipality has by ordinance of its council duly authorized the making of this contract, and Authority, by its by-laws and resolutions, has likewise so authorized;

Now, therefore, for and in consideration of the mutual covenants herein contained, and subject to all of the provisions of the Tennessee Valley Authority Act of 1933, the parties hereto mutually covenant and agree as follows:

1. Term of contract.—This contract shall be effective as of the 16th day of March, 1936, and all service and payment periods hereinafter referred to shall be computed as from that date. The contract shall continue in effect for twenty (20) years.

2. Acquisition of system.—Municipality agrees to use all reasonable diligence in acquiring by construction or purchase a complete municipal distribution system for the city of Sheffield, and to do all acts and things which it may legally do, which may be necessary or helpful in effectuating such acquisition.

3. Power Supply.—Authority will, from the effective date of this contract to the expiration thereof, supply electricity to municipality for municipal purposes, and for resale. Municipality agrees to purchase from Authority, and Au- [fol. 2320] thority agrees to supply, the entire electricity requirements of municipality. Should municipality during the period of this contract desire to increase its purchases in excess of 4,500 kilowatts, Authority shall deliver such excess upon written demand and after reasonable notice, provided that the requirements of Authority and/or the United States reasonably enable it to do so. Reasonable notice shall be defined as 9 months after date of demand if the additional requirements are 5000 kilowatts or less, 12 months after date of demand if the additional requirements

are over 5000 kilowatts, but not over 10,000 kilowatts and 2 years after date of demand if additional requirements are in excess of 10,000 kilowatts. Said energy shall be delivered in the form of 3-phase alternating current, at approximately 60 cycles per second, and approximately 11,000 volts, or at such other voltage as the parties may from time to time agree. While it is not the function of Authority to guarantee accurate time by the maintenance of accurate frequency Authority agrees to supply such frequency as is recognized to be good commercial frequency on a hydro-electric system.

4. Point of delivery.—Authority shall deliver the electricity purchased hereunder at the metering equipment situated at the west boundary of the United States Government reservation known as Nitrate Plant No. 2, or at such other point or points as shall be mutually agreed upon.

5. Schedule of rates.—Attached hereto, and hereby made a part hereof, is a schedule of rates and charges. Municipality agrees to pay for the energy supplied by Authority at the rates fixed in Schedule A-1 entitled "Wholesale rate." All payments shall be made to Authority at its offices at Wilson Dam, Ala., or at such other place as Authority may from time to time designate.

6. Resale rates.—In order to facilitate the disposition of surplus power generated by Authority and not needed by it in its operations, and in order to carry out the intention of Congress to encourage the more abundant use of electricity throughout the area in which municipality operates, municipality agrees to charge consumers the rates set forth for the several classes thereof in schedules B-1 to B-5, inclusive, of the said schedule of rates and charges, and not to depart therefrom except by agreement of the parties. Additional resale schedules for special classes of consumers, or special uses of electricity may be added from time to time by agreement of the parties. The term "contractor" in said schedule shall be construed to mean municipality. If it should appear that the rates provided for in said resale schedules with the surcharge provided for therein do not produce revenues sufficient to operate and maintain municipality's electric system on a self-supporting and financially sound basis, then municipality shall, by agreement

with Authority, prescribe and enforce such changes in rates as will provide for the increased revenues necessary to place the system upon such a self-supporting and financially sound basis.

7. Disposition of municipality's revenues.—Municipality, deeming it necessary for the purposes of this contract, and for the purpose of providing reasonable rates for electric service, pursuant to this contract and to the law, agrees to dispose of its gross revenues from electric operations in the following manner.

(a) Revenues shall first be used for the payment of all current operating expenses, including salaries, wages, cost of materials, and supplies, power at wholesale, and insurance.

[fol. 2321] (b) From remaining revenues municipality shall next currently provide for the payment at maturity of interest accrued on all bonds or other indebtedness applicable to municipality's electric system, and for amortization charges on all such bonds or other indebtedness and/or sinking-fund payments thereon.

(c) Thereafter revenues shall be used currently to set up reasonable reserves for replacements, new construction, and for contingencies, and to provide a reasonable amount of cash working capital.

(d) From remaining revenues municipality shall thereafter pay into its general fund a return on its investment, and a tax equivalent as provided in the financial and accounting policy in the schedule of terms and conditions attaching hereto.

(e) All remaining revenues shall be considered surplus revenues and may be devoted by municipality to the purchase or retirement of bonds or other indebtedness applicable to the electric system before maturity, and if not so devoted shall serve as the basis for the reduction or elimination of surcharges to consumers, and thereafter for the reduction of rates. Surplus revenues shall be computed as of December 31 and June 30th of each year.

8. Payment for municipality's energy requirements.—Municipality agrees to pay into its electric funds from ap-

propriate general or special funds for all electric service required by municipality for street lighting, water pumping, and other operations and uses, at the resale rates as set forth in the schedule of rates and charges, with such modifications and additions as may from time to time be agreed upon by the parties.

9. Terms and conditions; rules and regulations.—Attached hereto and hereby made a part hereof, are two schedules, entitled respectively "Schedule of terms and conditions," and "Schedule of rules and regulations." The provisions of either or both schedules may from time to time be changed or supplemented by agreement of municipality and Authority without limitation on the right of municipality from time to time, upon not less than 10 days written notice to Authority to prescribe and enforce such additional reasonable rules and regulations as it may determine, not inconsistent with this contract (including the schedules thereof). The term "distributor" in the latter schedule shall be construed to mean municipality. It is understood and agreed that the several provisions of the said schedules with such changes as may from time to time be adopted pursuant hereto, as well as the several provisions of this contract and of the schedule of rates and charges are of the essence of this contract. Municipality hereby adopts said schedule of rules and regulations as the rules and regulations of municipality.

10. Reports to Authority.—Municipality agrees that, not later than the 1st day of September of each year, it will render to Authority a complete report, in such form as Authority may prescribe, of the results of its operations for the preceding year, ending June 30th the condition of its property and such other information as Authority may reasonably request. Municipality agrees promptly to render such additional reports and information to Authority as Authority may from time to time reasonably request.

[fol. 2322] 11. Discrimination.—Municipality agrees that the surplus power purchased hereby shall be sold and distributed to the ultimate consumer without discrimination between consumers of the same class, and that no discriminatory rate, rebate, or other special concession will be made or given to any customer.

12. Waiver of defaults.—Any waiver at any time by either party hereto of its rights with respect to any default of the other parties hereto, and/or with respect to any other matter arising in connection with this contract shall not be considered a waiver with respect to any subsequent default or matter.

13. Contract not transferable.—Neither this contract nor any interest therein shall be transferable nor assignable by municipality to any other party without the consent of Authority.

14. Renewal or extension.—Authority agrees to enter into negotiations with municipality looking to the renewal or extension of this contract, so far as may be permitted by law, at least 2 years before the expiration thereof.

In witness whereof, the parties hereto have caused this instrument to be signed and attested in duplicate, by their duly authorized officers, the day and year first above written.

Tennessee Valley Authority, by Arthur E. Morgan, Chairman, Board of Directors. (Seal.)

Attest: Charles E. Hoffman, Assistant Secretary.

City of Sheffield, by Hoyt Greer, President of the Board of Commissioners and Ex-Officio Mayor. (Seal.)

Attest: Peter Stout (?), City Clerk.

The schedule of Rates and Charges, schedule of Terms and Conditions and schedule of Rules and Regulations attached to and made a part of this contract are substantially the same as the schedule of Rates and Charges, schedule of Terms and Conditions and schedule of Rules and Regulations attached to and made a part of the TVA-City of Dickson, Tennessee, contract.

[fol. 2323] Power Contract Between TVA and the City of Memphis, Tennessee, Dated November 23, 1935

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Sheffield, Alabama, except:

1. The maximum amount of power agreed to be furnished by TVA shall not be in excess of 50,000 kw. except upon

notice as provided for in the contract between TVA and the City of Sheffield, Alabama.

2. TVA agrees to construct transmission facilities on its own rights of way, to or adjacent to the corporate limits of said municipality, and, at the corporate limits, company will connect either directly to substation apparatus or to suitable transmission facilities of the municipality.

3. The municipality agrees to pay TVA the following amounts annually as a minimum:

First year after date of initial delivery	$72,000
Second year after date of initial delivery	72,000
Third year after date of initial delivery	120,000
Fourth year after date of initial delivery	180,000
Fifty year after date of initial delivery	240,000
Each year after the fifty year after the date of initial delivery	240,000

[fol. 2324] Power Contract Between TVA and the City of Knoxville, Tennessee, Dated February 19, 1936

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Sheffield, Alabama, except:

1. The initial amount of power agreed to be furnished by TVA shall not be in excess of 35,000 kw.

2. The point of delivery shall be at a point or points to be selected by TVA within the corporate limits of the City of Knoxville.

3. It supersedes the contract dated March 1934 between TVA and the City of Knoxville.

[fol. 2325] Supplemental Contract Between TVA and the City of Knoxville, Tennessee, Dated May 18, 1936

This contract, omitting the formal parts thereof, is as follows:

Whereas it is desirable that the intention of the parties, as evidenced by the said contract, be clarified, and that all ambiguities be resolved:

Now, therefore, in consideration of the premises, the parties hereto mutually agree as follows:

COMPLAINANTS' EXHIBIT No. 118

1. That the provision in the paragraph preceding section 1 of the said contract, reading "and subject to all of the provisions of the Tennessee Valley Authority Act of 1933", is intended and shall be construed as for the purpose only of limiting the obligations of the Authority to such as may be undertaken pursuant to said act, and is not intended to subject municipality to any obligations or conditions not specifically set out in the other provisions of said contract of February 19, 1936.

2. The last sentence of section 6 of said contract, providing that under certain conditions "Municipality shall, by agreement with Authority, prescribe and enforce such changes in rates as will provide for the increased revenues necessary to place the system upon such a self-supporting and financially sound basis", is intended to and shall be construed to mean that, under the circumstances set out in such sentence, Authority shall agree to such changes in rates.

3. Section 9 of said contract, providing that municipality may prescribe and enforce such additional reasonable rules and regulations as it may determine, not inconsistent with said contract and the schedules thereof, is intended to and shall mean that the schedule of rules and regulations are the rules and regulations of municipality, and are intended for its sole benefit, and may be modified, repealed, or supplemented at any time by municipality, upon giving 10 days' written notice to Authority; except that such charges shall not be inconsistent with the express terms of the contract, the schedule of rates and charges and the schedule of terms and conditions thereof; and except that paragraphs 2 and 19 of said schedule of rules and regulations were intended to be and shall be considered to be interpretations of the schedule of rates and charges, subject to alteration only in the manner provided for the latter schedule.

[fol. 2326] Power Contract Between TVA and the City of Jackson, Tennessee, Dated October 16, 1935

(Omitted)

[fol. 2327] Power Contract Between TVA and North Georgia Electric Membership Corporation

This agreement, made and entered into this 15th day of June 1936, by and between the Tennessee Valley Authority

(hereinafter called Authority), a corporation created by the Tennessee Valley Authority Act of 1933, and the North Georgia Electric Membership Corporation (hereinafter called corporation), a corporation duly organized, created, and existing under and by virtue of the laws of the State of Georgia.

Witnesseth:

Whereas Authority, by section 10 of the Tennessee Valley Authority Act of 1933, is authorized to sell the surplus power generated by it and not used in its operations, and is directed to give preference to States, counties, municipalities, and cooperative organizations of citizens or farmers not organized or doing business for profit; and

Whereas by Section 11 of said act it is provided that the sale of power by Authority shall be primarily for the benefit of the people of the section as a whole and particularly the domestic and rural consumers to whom the power can economically be made available; and

Whereas corporation has been organized under the laws of the State of Georgia for the purpose of acquiring facilities for the purchase and distribution of electric power to its members at the lowest cost consistent with sound business practice and without profit; and

Whereas corporation desires to purchase electric power from Authority to be distributed and sold by corporation to its members, and after investigation by Authority it appears that quantities of power generated at Wilson Dam, Ala., sufficient to meet the requirements of corporation under the terms of this contract will be available for sale by Authority after all requirements of Authority and of the United States have been fulfilled; and

Whereas the parties to this contract have duly authorized its execution;

Now, therefore, for and in consideration of the mutual covenants herein contained (the obligations of Authority being subject to all of the provisions of the Tennessee Valley Authority Act of 1933) the parties hereto mutually covenant and agree as follows:

1. Term of contract.—This contract shall become effective upon the execution hereof and shall continue in effect for 20 years: Provided, however, That all obligations of

[fol. 2328] the parties hereto with regard to the rendition of service and payment therefor shall begin at such time (hereinafter designated "Date of initial delivery") as corporation shall have acquired its distribution system, or any part thereof, and shall be in a position to take such service for its system or part thereof. All service and payment periods shall be computed as from the date of initial delivery.

2. Power supply.—Authority will, for the term hereof, supply electricity to corporation for corporate purposes and for resale. Corporation agrees to purchase from Authority and Authority agrees to supply the entire electricity requirements of corporation. Corporation's demand on Authority shall not exceed 300 kilowatts before January 1, 1937. Should corporation desire to increase its purchases in excess of 300 kilowatts subsequent to January 1, 1937, Authority shall deliver such excess upon written demand and after reasonable notice, provided that the requirements of Authority and/or the United States reasonably enable it to do so. Such electricity shall be delivered in the form of three-phase, alternating current, at approximately 12,000 volts, Y-corrected, or at such other voltage as the parties may from time to time agree upon. While it is not the function of Authority to guarantee accurate time by the maintenance of accurate frequency, Authority agrees to supply such frequency as is recognized to be good commercial frequency on a hydroelectric system.

3. Point of delivery.—Authority will deliver the electricity purchased hereunder at the low-tension side of the substation located at Ooltewah, Tenn., or at such other point as may be mutually agreed upon. The energy to be supplied corporation hereunder shall be metered at the low-tension side of the step-down transformer bank or banks of a substation to be constructed, owned, and operated by Authority, and Authority will install only such oil circuit breakers as in its opinion are necessary for the protection of its transformer bank or banks and/or the transmission line or lines supplying energy to such substation.

4. Corporation agrees that it will not repeal or alter the provisions of article II, sections 4 and 6, and article IV of

the bylaws adopted by its board of directors on June —, 1936, or adopt any bylaws or rules and regulations inconsistent therewith, during the term of this power contract.

5. Schedule of rates.—Attached hereto, and hereby made a part hereof, is a schedule of rates and charges. Corporation agrees to pay for the energy supplied by Authority at the rates fixed in schedule A-1 entitled "Wholesale Power Rate." All payments shall be made to Authority at its offices at Wilson Dam, Ala., or at such other place as Authority may from time to time designate.

6. Resale rates.—In order to facilitate the disposition of surplus power generated by Authority and not needed by it in its operations, in order to carry out the intention of Congress to encourage the more abundant use of electricity throughout the area in which corporation operates, in order to further the purposes for which corporation was organized, and as further security for any and all indebtedness which corporation has incurred or may incur to Authority, corporation agrees to charge consumers the rates set forth for the several classes thereof in schedule B-1 to B-5, inclusive, of the said schedule of rates and charges and not to depart therefrom except by agreement of the parties. Addi- [fol. 2329] tional resale schedules for special classes of consumers or special uses of electricity may be added from time to time by agreement of the parties. The term "contractor" in said schedule shall be construed to mean corporation. If it should appear that the rates provided for in said resale schedule with the surcharge provided for therein do not produce revenues sufficient to operate and maintain corporation's electric system on a self-supporting and financially sound basis, then corporation and Authority shall agree upon, and corporation shall put into effect, such changes in rates as will provide for the increased revenues necessary to place the system upon such a self-supporting and financially sound basis.

7. Amortization charges.—Corporation agrees to collect the amortization charges provided for in the schedule of rates and charges until all its long-term obligations to Authority have been fully discharged. Such charges, when collected, shall be considered trust funds and shall be de-

voted exclusively to the payment of the funded obligations of corporation according to the priority of those obligations.

8. Disposition of corporation's revenues.—Corporation, for the purpose of providing reasonable rates for electric service pursuant to this contract and to law, agrees to dispose of its gross revenues (not including amortization charges, which shall be disposed of as hereinbefore provided) in the following manner:

(a) Revenues shall first be used for the payment of all current operating expenses, including salaries, wages, cost of materials, and supplies, power at wholesale, and insurance;

(b) From remaining revenues corporation shall next currently provide for the payment, at maturity, of interest on all bonds or other indebtedness applicable to corporation's electric system, and for amortization charges on all such bonds or other indebtedness and/or sinking fund payments thereon;

(c) Thereafter revenues shall be used currently to set up reasonable reserves for replacements, new construction, and for contingencies, and to provide a reasonable amount of cash working capital;

(d) All remaining revenues shall be considered surplus revenues and shall be devoted by corporation to the purchase or retirement of bonds or other indebtedness applicable to the electric system before maturity;

(e) Thereafter surplus revenues shall serve as a basis for the reduction or elimination of amortization charges and surcharges to consumers, and thereafter for the reduction of rates.

Surplus revenues shall be computed as of December 31 and June 30 of each year.

9. Terms and conditions.—Attached hereto, and hereby made a part hereof, is a schedule entitled "Schedule of Terms and Conditions.": The provisions of this schedule may from time to time be changed or supplemented by agreement of corporation and Authority. It is understood

and agreed that the several provisions of said schedule, with such changes as may from time to time be adopted pursuant thereto, as well as the several provisions of this contract and of the schedule of rates and charges, are of the essence of this contract.

[fol. 2330] 10. Rules and regulations.—Attached hereto, and hereby made a part hereof, is a schedule of rules and regulations. Corporation hereby adopts said schedule as the rules and regulations of corporation. The provisions of said schedule may be amended by corporation at any time upon 10 days' written notice to Authority setting forth the nature of and the reason for the proposed change. No change shall be made in said schedule, however, which is inconsistent with or in violation of any of the provisions of the remaining part of this contract. In said schedule the term "distributor" shall be construed to mean corporation.

11. Rendition of advisory services by Authority.—Authority agrees to render advisory services to corporation in problems of personnel and administration, to secure the attendance of its officers at meetings of the corporation, its board or executive committee, so far as may be practicable and convenient. Corporation agrees to pay the reasonable value of such advisory services as are rendered by Authority at the request of corporation. Corporation agrees that it will not employ or retain in its employ any person whom Authority reasonably considers unqualified for his position, or whose services Authority reasonably deems to be unnecessary.

12. Use of corporation's lines.—Authority shall have the right, to the extent of the transmission capacity of corporation's lines, to the use of corporation's poles and wires for transmission purposes, and for service to industrial customers with a demand of 1,000 kilowatts or more, who elect to take service from Authority: Provided, however, That Authority shall compensate corporation for such use by such amounts as may be mutually agreed upon, or by an interchange of electricity, compensating corporation for line losses, or both.

COMPLAINANTS' EXHIBIT No. 118

13. Reports to Authority.—Corporation agrees that not later than the first day of September of each year it will render to Authority a complete report, in such form as Authority may prescribe, of the results of its operations for the preceding year ending June 30, the condition of its property, and such other information as Authority may reasonably request. Corporation agrees promptly to render such additional reports and information to Authority as Authority may from time to time reasonably request.

14. Bonding of employees.—Corporation agrees to bond in a reasonable amount all employees whose duties require or permit them to handle or dispose of money belonging to corporation.

15. Discrimination.—Corporation agrees that the surplus power purchased hereunder shall be sold and distributed to the ultimate consumer without discrimination between consumers of the same class, and that no discriminatory rate, rebate, or other special concession will be made or given to any customer.

16. Waiver of defaults.—Any waiver at any time by either party hereto of its rights with respect to any default of the other party hereto and/or with respect to any other matter arising in connection with this contract shall not be considered a waiver with respect to any subsequent default or matter.

[fol. 2331] 17. Contract not transferable.—Neither this contract nor any interest therein shall be transferable or assignable by corporation to any other party without the consent of Authority.

In witness whereof, the parties hereto have caused this instrument to be signed and attested in duplicate by their duly authorized officers the day and year first above written.

Tennessee Valley Authority, By Harcourt A. Morgan, Vice Chairman of the Board of Directors. (Seal.)

Attest: Charles E. Hoffman, Assistant Secretary.

North Georgia Electric Membership Corporation, By R. H. Bandy, President. (Seal.)

Attest: J. C. Johnston, Secretary.

COMPLAINANTS' EXHIBIT No. 118

The schedule of Rates and Charges, schedule of Terms and Conditions and schedule of Rules and Regulations attached to and made a part of this contract are substantially the same as those attached to and made a part of the contract between TVA and the City of Dickson, Tennessee.

[fol. 2332] Power Contract Between TVA and Meigs County (Tennessee) Electric Membership Corporation, Dated October 14, 1935

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and North Georgia Membership Corporation, except:

1. The point of delivery shall be at the low tension side of a substation to be constructed by TVA at a point in or adjacent to Decatur, Tennessee.

[fol. 2333] Power Contract Between TVA and Monroe County (Mississippi) Electric Power Association, Dated July 19, 1935

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and Alcorn County Electric Power Association, except:

1. The point of delivery shall be at such point as may be mutually agreed upon.

2. It does not contain Sections 1, 5, 6, 7, 8, 10, 11, 18, 19 and 20 of the contract between TVA and Alcorn County Electric Power Association.

3. Schedule of Terms and Conditions and Schedule of Rules and Regulations substantially the same as those attached to and made a part of the contract between TVA and the City of Dickson, are attached to and made a part of this contract.

4. It contains the words "subject to" instead of "pursuant to" in the enacting clause.

[fol. 2334] Power Contract Between TVA and Tishomingo County (Mississippi) Electric Power Association, Dated July 19, 1935

COMPLAINANTS' EXHIBIT No. 118

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and Alcorn County Electric Power Association, except:

1. The point of delivery shall be at the metering equipment situated on the low tension side of the substations in Iuka and Burnsville, Mississippi, or at such other points as may be mutually agreed upon.

2. It does not contain Sections 5 and 7 of the contract between TVA and Alcorn County Electric Power Association.

3. Schedule of Terms and Conditions and Schedule of Rules and Regulations substantially the same as those attached to and made a part of the contract between TVA and the City of Dickson, are attached to and made a part of this contract.

4. It contains the words "subject to" instead of "pursuant to" in the enacting clause.

[fol. 2335] Power Contract Between TVA and Tombigbee Electric Power Association, Dated October 19, 1935

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and Alcorn County Electric Power Association, except:

1. The point of delivery shall be on the low tension side of the substations in Fulton and Tupelo, Mississippi, or at such other points as may be mutually agreed upon.

2. It does not contain Sections 6, 7 and 11 of the contract between TVA and Alcorn County Electric Power Association.

3. Schedule of Terms and Conditions and Schedule of Rules and Regulations substantially the same as those attached to and made a part of the contract between TVA and the City of Dickson, are attached to and made a part of this contract.

4. It contains the following provision in lieu of Paragraph 16 of the contract between TVA and Alcorn County Electric Power Association:

12. Terms and conditions; rules and regulations.—Attached hereto, and hereby made a part hereof, are two schedules, entitled respectively, "Schedule of Terms and Conditions of Contract" and "Schedule of Rules and Regulations", and it is understood and agreed that the provisions of either or both schedules may from time to time be changed or supplemented by agreement of corporation and Authority. The term "distributor" in the latter schedule shall be construed to mean corporation. It is understood and agreed that the several provisions of the said schedules, with such changes as may from time to time be adopted pursuant hereto, as well as the several provisions of this contract and of the schedule of rates and charges, are of the essence of this contract. Corporation hereby adopts said schedule of rules and regulations as the rules and regulations of corporation.

5. It contains the words "subject to" instead of "pursuant to" in the enacting clause.

[fol. 2336] Power Contract Between TVA and Pontotoc County (Mississippi) Electric Power Association

This agreement, made and entered into this 12th day of February 1936, by and between the Tennessee Valley Authority (hereinafter called Authority), a corporation created by the Tennessee Valley Authority Act of 1933, its successors and assigns, and the Pontotoc County Electric Power Association, a nonprofit civic improvement corporation, duly organized, created, and existing under and by virtue of the laws of the State of Mississippi (hereinafter called association), its successors and assigns,

Witnesseth:

Whereas, Authority, by section 10 of said act, is authorized to sell the surplus power generated by it and not used in its operations, and is directed to give preference to States, counties, municipalities, and cooperative organizations of citizens or farmers not organized or doing business for profit; and

Whereas association owns and operates an electric transmission and distribution system in and adjacent to Pontotoc County, Miss.; and

COMPLAINANTS' EXHIBIT No. 118

Whereas by a certain instrument designated "Sale, lease, trust, and security contract" (hereinafter referred to as sale, lease, contract) executed as of February 15, 1935, Authority and United States of America disposed of to association, in part by sale and in part by lease, certain electric transmission and distribution facilities in and near Pontotoc County, Miss., and association agreed to pay Authority therefor the sum of $67,645.36, with interest on unpaid balances at the rate of 3½ per cent per annum, payable semiannually; and

Whereas association is now purchasing power from Authority under a certain power contract between Authority and association, dated February 15, 1935 (hereinafter called power contract), and the parties hereto desire to cancel, annul, and rescind said power contract and to enter into a new contract for the purchase of power by association from Authority; and

Whereas association's principal obligation to Authority has been increased from $67,645.36 to $116,831.57 by reason of certain construction and rehabilitation work done by Authority for association, and certain other properties sold by Authority to association, all under the terms of said sale, lease contract, and said power contract; and

Whereas under a certain contract entitled "Sale and Loan Contract Between Tennessee Valley Authority, United States of America, and Pontotoc County Electric Power Association" (hereinafter called sale and loan contract), [fol. 2337] executed on even date herewith and rescinding said sale, lease contract, Authority is loaning to association the further sum of $4,000 to be used in acquiring the Bruce distribution system, and $25,000, or such part thereof as may be required by association, to construct an interconnecting transmission line, making a total principal obligation of association to Authority of $145,831.57, as of the date of execution hereof (subject to deduction if all of the $25,000 is not advanced for the construction of said line); and

Whereas after investigation by Authority, it appears that quantities of power generated at Wilson Dam, Ala., sufficient to meet the requirements of association, under the terms of this contract, will be available for sale by Authority

after all requirements of Authority and of the United States have been fulfilled; and

Whereas the parties to this contract have duly authorized its execution;

Now, therefore, for and in consideration of the mutual covenants herein contained, and subject to all of the provisions of the Tennessee Valley Authority Act of 1933, the parties hereto mutually covenant and agree as follows:

1. Rescission of prior contract.—The power contract between Authority and association, dated February 15, 1935, is hereby canceled, annulled, and rescinded, without prejudice, however, to any rights or obligations of the parties thereto which may have accrued thereunder by reason of any breach thereof by either of the said parties prior to the date hereof.

2. Term of contract.—This contract shall become effective upon the execution hereof, and shall continue in effect for 20 years.

3. Power Supply.—Authority will, for the term hereof, supply electricity to association for corporate purposes and for resale. Association agrees to purchase from Authority, and Authority agrees to supply, the entire electricity requirements of association. Should association during the period of this contract desire to increase its purchases in excess of 1,000 kilowatts Authority shall deliver such excess upon written demand and after reasonable notice, provided that the requirements of Authority and/or the United States reasonably enable it to do so. Such electricity shall be delivered in the form of three-phase, alternating current, at approximately 60 cycles per second and approximately 12,450 volts, or at such other voltage as the parties may from time time agree. While it is not the function of Authority to guarantee accurate time by the maintenance of accurate frequency, Authority agrees to supply such frequency as is recognized to be good commercial frequency on a hydroelectric system.

4. Point of delivery.—Authority will deliver the electricity purchased hereunder at the metering equipment situated on the Lee-Pontotoc County line or at such other point as may be mutually agreed upon. The energy to be

[fol. 2338] supplied association hereunder shall be metered at the low-tension side of the step-down transformer bank or banks of a substation to be constructed, owned, and operated by Authority, and Authority will install only such oil circuit breakers as in its opinion are necessary for the protection of its transformer bank or banks and/or the transmission line or lines supplying energy to such substation.

5. Schedule of rates.—Attached hereto, and hereby made a part hereof, is a schedule of rates and charges. Association agrees to pay for the energy supplied by Authority at the rates fixed in schedule A-1 entitled "Wholesale Power Rate." All payments shall be made to Authority at its offices at Wilson Dam, Ala., or at such other place as Authority may from time to time designate.

6. Resale rates.—In order to facilitate the disposition of surplus power generated by Authority and not needed by it in its operations, in order to carry out the intention of Congress to encourage the more abundant use of electricity throughout the area in which association operates, in order to further the purposes for which association was organized, and as further security for the indebtedness of association to Authority, association agrees to charge consumers the rates set forth for the several classes thereof in schedules B-1 to B-5, inclusive, of the said schedule of rates and charges, and not to depart therefrom except by agreement of the parties. Additional resale schedules for special classes of consumers or special uses of electricity may be added from time to time by agreement of the parties. The term "contractor" in said schedule shall be construed to mean association. If it should appear that the rates provided for in said resale schedules with the surcharge provided for therein do not produce revenues sufficient to operate and maintain association's electric system on a self-supporting and financially sound basis, then association shall, by agreement with Authority, prescribe and enforce such changes in rates as will provide for the increased revenues necessary to place the system upon such a self-supporting and financially sound basis.

Association may charge nonmember customers, other than governmental customers, such other and different rates as may be required to yield the full cost of operation to as-

sociation but association agrees that such rates shall not be discriminatory as between nonmember customers or classes thereof and that its nonmember operations shall not be conducted for the purpose of making a profit: Provided, however, That all such rates prescribed by association shall be subject to the written approval of Authority.

7. Nonmember service.—Association agrees that it will not, except after having first secured the approval of Authority, serve any nonmembers: Provided, however, That this provision shall not apply to service to customers who are at the time of the acquisition of any given lines by association, taking service from such lines, and who continue to take service without change of residence; nor to "governmental customers" which shall be defined as any agency, instrumentality, district, municipality, corporation, or subdivision of the State of Mississippi or of the United States of America: Provided, further, That the association may charge such customers, with the exception of "governmental [fol. 2339] customers", such other and additional rates as provided in section 6.

8. Terms of membership in association.—Association agrees to make its memberships available without discrimination to any person, corporation, copartnership, association, municipality, or political body or subdivision within the area of its service. The initial stated value of memberships shall be $100, but such value shall be subject to reduction as hereinafter provided. Members who pay the full membership fee in advance shall be entitled to a reduction of not to exceed 20 per cent and the advance payments of balances shall be subject to such reduction as association may from time to time fix, not to exceed 20 per cent. The minimum initial installment on memberships shall not be fixed at less than $10 without first securing the written consent of Authority, and the balance shall be payable at the rate of 1 cent per kilowatt-hour for each kilowatt-hour used per month up to and including 100 kilowatt-hours per month, but in no case less than 25 cents per month. The stated value of memberships shall, from time to time, be reduced by the amount of the reimbursements made to members pursuant to section 12 hereof, and new members shall be admitted at the new stated value thus arrived at.

9. Payment of principal obligation.—Association hereby acknowledges its indebtedness to Authority as of the date hereof, on account of property conveyed to or constructed for association and money loaned to association, to be $145,831.57, subject to proper deductions if association does not require and Authority does not advance all of a certain $25,000 loan made by Authority to association to aid association in constructing a certain rural transmission line, as provided in the sale and loan contract, and agrees in consideration thereof to pay that amount to Authority, which sum shall be hereinafter called "principal obligation." Association agrees to pay interest upon unpaid balances as of the first of each calendar month at the rate of 3½ per cent per annum, payable semiannually, beginning on March 1, 1936. Association agrees to pay to Authority on account of said principal obligation, and on account of all indebtedness of association to Authority incurred under this contract, and until such principal obligation and indebtedness shall have been totally repaid: (a) All payments on memberships received; (b) the total surplus revenue as hereinafter defined. The amount received as payments on memberships together with all surplus revenue, if any, shall be computed as of the close of business on the last day of each calendar month and shall be paid to Authority not later than the fifteenth day of the following calendar month. All payments shall be made to Authority at its offices at Wilson Dam, Ala., or at such other place as Authority may from time to time designate. Failure on the part of association to make the payments as provided herein shall constitute a default and Authority may forthwith at its option declare this contract and the sale and loan contract terminated and/or exercise all rights and powers granted Authority on the failure of association to perform any of its obligations or promises.

10. Electric Home and Farm Authority accounts.—Association hereby assumes the rights and obligations of [fol. 2340] Authority with respect to the collection of those accounts of the Electric Home and Farm Authority, Inc. (collected by Authority prior to the execution of the power contract), in the area in which association operates.

11. Security for indebtedness.—There is executed by association in connection herewith, and as of the date hereof,

a certain mortgage as security for the principal obligations of association to Authority, as it may from time to time appear, and for the interest thereon, and to secure the obligations of this contract.

12. Disposition of association's revenues.—Association, for the purpose of providing reasonable rates for electric service pursuant to this contract and to law, agrees to dispose of its gross revenues, not including membership fees, which shall be paid over to Authority immediately after collection as hereinbefore provided, in the following manner:

(a) Revenue shall first be used for the payment of operating expense, including salaries, wages, cost of materials and supplies, power at wholesale, taxes, and insurance.

(b) Thereafter revenues shall be used to set up reasonable reserves for new construction and for contingencies, and to create a reasonable cash working fund. As further security for association's indebtedness to Authority, association agrees that Authority may in its discretion fix maximum amounts for the reserves and the funds herein authorized to be set up, and may direct the investment or disposition of such reserves and funds.

(c) After the payment or setting aside of the above amounts all remaining revenues shall be considered surplus revenues and shall be paid over to Authority in the manner prescribed above, until association's indebtedness to Authority on account of accrued interest shall be satisfied. All interest not paid when due shall, from the date hereof, be added to the principal obligation.

(d) Remaining surplus revenues shall thereafter be paid over to Authority until association's indebtedness to Authority on account of property constructed for association, property purchased or leased from Authority and/or the United States of America, and on account of any loan of money made by Authority pursuant hereto, shall be satisfied. All principal not paid when due shall, from the date thereof, bear interest at the rate of 6 per cent per annum.

(e) After the satisfaction of its indebtedness to Authority and/or the United States of America, all association's

surplus revenues shall be used to reduce or eliminate surcharges to association's members.

(f) After the elimination of such surcharges, all surplus revenues shall be used to reimburse members to the extent of not more than the stated value of their memberships (less $10 per membership which shall be nonreimbursable) and/or for the reduction of association's rates, as association may determine.

[fol. 2341] 13. Alienation or encumbrance of property or revenues.—Association agrees not to sell, pledge, mortgage, assign, hypothecate, or otherwise alienate or encumber its property or revenues, or any part thereof, without first securing the written approval of Authority, except that it may dispose of stocks of wares and merchandise at retail in the normal course of business.

14. Terms and conditions; rules and regulations.—Attached hereto and hereby made a part hereof, are two schedules, entitled respectively "Schedule of Terms and Conditions" and "Schedule of Rules and Regulations." The provisions of either or both schedules may from time to time be changed or supplemented by agreement of association and Authority. Association may, upon reasonable notice to Authority in advance thereof, make and put into effect such additional rules and regulations as it may determine if the same are not inconsistent with this contract (including the schedules thereof). The term "distributor" in the latter schedule shall be construed to mean association. It is understood and agreed that the several provisions of the said schedules, with such changes as may from time to time be adopted pursuant hereto, as well as the several provisions of this contract and of the schedule of rates and charges, are of the essence of this contract. Association hereby adopts said schedule of rules and regulations as the rules and regulations of association.

15. Rendition of advisory services by Authority.—Authority agrees to render advisory services to association in problems of personnel and administration, to secure the attendance of its officers at meetings of the association, its board, or executive committee, so far as may be practicable and convenient, and to make available to association the

facilities and services of its personnel division so far as may be necessary in the selection of association's employees. In the event professional services are rendered at association's request association agrees to pay the reasonable value thereof as billed by Authority. Association agrees that it will not employ or retain in its employ any person deemed by Authority not to qualify for his position or whose services Authority may deem to be unnecessary.

16. Use of association's lines.—Authority shall have the right, to the extent of the transmission capacity of association's lines, to the use of association's poles and wires for transmission purposes, and for service to industrial customers with a demand of 1,000 kilowatts or more who elect to take service from Authority: Provided, however, That Authority shall compensate association for such use by such amounts as may be mutually agreed upon, or by an interchange of electricity, compensating association for line losses, or both.

17. Reports to Authority.—Association agrees that, not later than the first day of September of each year, it will render to Authority a complete report, in such form as Authority may prescribe, of the results of its operations for the preceding year ending June 30, the condition of its property, and such other information as Authority may reasonably request. Association agrees promptly to render [fol. 2342] such additional reports and information to Authority as Authority may from time to time reasonably request.

18. Bonding of employees.—Association agrees to bond in a reasonable amount all employees whose duties require or permit them to handle or dispose of money belonging to association.

19. Discrimination.—Association agrees that the surplus power purchased hereby shall be sold and distributed to the ultimate consumer without discrimination between consumers of the same class, and that no discriminatory rate, rebate, or other special concession will be made or given to any customer.

20. Waiver of defaults.—Any waiver at any time by either party hereto of its rights with respect to any default

of the other party hereto and/or with respect to any other matter arising in connection with this contract shall not be considered a waiver with respect to any subsequent default or matter.

21. Contract not transferable.—Neither this contract nor any interest therein shall be transferable or assignable by association to any other party without the consent of Authority.

In witness whereof, the parties hereto have caused this instrument to be signed and attested in duplicate, by their duly authorized officers, the day and year first above written.

Tennessee Valley Authority, by Arthur E. Morgan, Chairman, Board of Directors. (Seal.)

Attest: Charles E. Hoffman, Assistant Secretary.

Pontotoc County Electric Power Association, by M. L. Higgs, President

Attest: Jas. I. Wilson, Secretary.

STATE OF TENNESSEE,
County of Knox,
City of Knoxville, ss:

On this 12th day of February 1936 before me appeared Arthur E. Morgan and Charles E. Hoffman, to me personally known, who, being by me duly sworn, did say that they are the Chairman of the Board of Directors and the Assistant Secretary, respectively, of the Tennessee Valley Authority, and that the seal affixed to said instrument is the corporate seal of said corporation, and that said instrument was signed and sealed in behalf of said corporation by au- [fol. 2343] thority of its board of directors, and said Arthur E. Morgan and Charles E. Hoffman acknowledged said instrument to be the free act and deed of said corporation.

L. B. Bolt, Jr., Notary Public in and for Knox County, State of Tennessee. My Commission expires October 7, 1936. (Seal.)

COMPLAINANTS' EXHIBIT No. 118

STATE OF MISSISSIPPI,
County of Pontotoc, ss:

On this 13th day of February 1936 before me appeared M. L. Higgs and Jas. I. Wilson, to me personally known, who, being by me duly sworn did say that they are the president and secretary, respectively, of Pontotoc County Electric Power Association, and that the seal affixed to said instrument is the corporate seal of said corporation, and that said instrument was signed and sealed in behalf of said corporation by authority of its board of directors, and said M. L. Higgs and Jas. I. Wilson acknowledged said instrument to be the free act and deed of said corporation.

Mrs. Ludye Williams, Notary Public in and for Pontotoc County, State of Mississippi. My commission expires February 2, 1938. (Seal.)

The Schedule of Rates and Charges, the Schedules of Terms and Conditions and Rules and Regulations attached to this contract are substantially the same as those attached to and made a part of the contract between TVA and the City of Dickson, Tennessee (Complainants' Exhibit No. 118).

[fol. 2344] Power Contract Between TVA and Monsanto Chemical Company

This agreement made this 15th day of May 1936 between Tennessee Valley Authority, a corporation created by the Tennessee Valley Authority Act of 1933, hereinafter called Authority, and Monsanto Chemical Co., a corporation organized and existing under the laws of the State of Delaware, hereinafter called customer,

Witnesseth:

Whereas, by said Tennessee Valley Authority Act of 1933, Authority was entrusted with and is now operating Wilson Dam in the State of Alabama, including generating equipment for the generation of surplus power created by said dam; and

Whereas customer intends to erect a chemical plant at Estes Bend on the Duck River near Columbia, Tenn., and may require up to 50,000 kilowatts of electric power in the operation of said plant; and

Whereas, customer has requested Authority to supply all of its purchased power requirements, and Authority has and will continue to have sufficient power available for the performance of this contract after fulfilling the requirements of the Authority and the United States and without prejudice to any preferential rights of States, counties, municipalities, and nonprofit organizations of citizens and farmers, to purchase electric power from Authority,

Now, therefore, in consideration of the mutual covenants and agreements hereinafter set forth, and subject to the provisions of the Tennessee Valley Authority Act of 1933, the parties hereto mutually agree as follows:

1. Construction of plant.—As an expression of good faith to Authority, customer has begun construction of a chemical plant at Estes Bend on the Duck River near Columbia, Tenn., which will include electric furnaces capable of utilizing not less than approximately 20,000 kilowatts of electricity, and customer agrees to continue said construction to completion with diligence and good faith; and should customer fail to so continue, Authority shall have the right upon 30 days' notice to cancel this agreement and terminate all of its obligations assumed herein, provided, however, that Authority shall not have such right of cancelation if the continuance of said construction is prevented, delayed, or impeded by reason of injunction, strike, riot, invasion, fire, accident, break-down, act of God or any other causes beyond customer's control; and provided further, that [fol. 2345] should Authority give notice of cancelation pursuant to this section, customer may within said 30-day notice period elect to pay the demand charges specified in columns 5 and 6 of the schedule contained in section 4 hereof and in such case Authority shall not have power to cancel this contract until 12 months from the date of said notice, and then only if during said 12-month period customer has failed to continue the construction of said plant with diligence and good faith. In the event of interruption due to any causes beyond customer's control, customer agrees to resume construction of said plant with diligence and good faith. In the event of interruption due to any causes beyond customer's control, customer agrees to resume construction and continue the same to completion as soon as

reasonably possible, and in the event of the failure so to do Authority shall be entitled to exercise the right of cancelation contained herein, subject, however, to customer's right to postpone such right of cancelation as set out above.

2. Sale of electric power.—Authority shall sell and deliver to customer and customer shall, except as hereinafter provided, take and buy from Authority all of customer's electric power requirements for the operation of customer's chemical plants, equipment, and facilities to be erected and installed at the above-mentioned location, in amounts hereinafter set forth, all in accordance with this contract and with the terms and conditions which are attached hereto and hereby made a part hereof. Nothing herein contained shall prevent customer from generating all or any part of the power required in the operation of its chemical plants as byproduct power derived from its manufacturing or processing operations, subject, however, to customer's obligation for minimum charges as hereinafter provided.

If at any time during the period of this contract, or any extension thereof, customer requires in its operations electric power in amounts in excess of the amount that Authority is obligated, or at the time willing, to supply under the terms of this contract, customer shall have the right to purchase from other sources or to generate any such excess requirements.

3. Contract duration.—This contract shall be for a period of 10 years, commencing on the date hereof, provided that customer, by written notice to Authority on or before the fifth anniversary date of this contract, shall have the right to renew this contract upon the same terms and conditions as those herein contained for an additional period of either 5 or 10 years at the option of customer. Such renewal period to date from the date of the expiration of this contract. In the event that said right of renewal is not exercised on or before said fifth anniversary date, customer shall not have any such right of renewal.

It is agreed, however, that if, during the period of this contract, unforeseen conditions arise which make the continued operation of customer's electric-furnace operations in the State of Tennessee disadvantageous, customer shall have the right, provided its said furnacing operations in

[fol. 2346] said State are completely and permanently discontinued, to cancel this contract upon 1 year's written notice, said cancelation to be effective, however, not earlier than 5 years from the date hereof; provided, however, that customer shall not be entitled to exercise this right of cancelation unless its obligations under section 1 hereof have been completely performed.

4. Service specifications and delivery.—Firm power shall be available to customer at all times during the life of this contract. Secondary power shall be available to customer for at least 300 days to be selected by Authority out of each calendar year in amounts up to 65 per cent of the demand, primary and secondary, then contracted for or the excess over 8,000 kilowatts of total demand, whichever is the lesser; but in any 4 successive months there shall not be interruptions of more than 65 days nor interruptions of more than 80 days in any 9 successive months. Authority shall give not less than 14 days' written notice before interrupting the secondary power service and not less than 14 days' written notice before resuming secondary power service and Authority shall not interrupt the secondary service for more than two periods in any calendar year.

Electric power delivered hereunder shall be supplied by Authority and taken by customer in the respective amounts and at the respective dates set forth below, provided that if difficulties beyond the control of Authority should delay completion of construction beyond August 15, 1936, the obligation of Authority to deliver and customer to take power on November 15, 1936, shall be postponed to the extent of the delay beyond August 15, 1936, provided, however, that delivery shall be commenced not later than December 15, 1936, in any event.

Tabulation at top of page 197 to be in photostat form and attached hereto.

Column 1 of the above table sets out the minimum notices which customer shall give Authority before Authority is required to make available the respective amounts of power set out in the corresponding lines of column 4. Column 2 sets out the respective dates when Authority is obligated, upon receipt of proper notice, to make available the respective amounts of power set out in the corresponding lines

of column 4. Column 3 sets out the dates when customer is obligated to pay, as a minimum, demand charges on the demands set out in the corresponding lines of columns 5 and 6, unless it has obligated itself to take power earlier by giving notice as specified in column 1. Column 4 sets out the amounts of power Authority is obligated to make available at the respective dates set out in the corresponding lines of column 2, upon receipt of proper notice from customer. Column 5 sets out the contract firm demands upon which minimum bills will be based, after service is made available in the amounts set out in column 4. Column 6 sets out the corresponding contract secondary demands upon which minimum bills will be based, after service is made available in the amounts set out in column 4.

The electric power supplied hereunder shall be in the form of 3-phase, 60-cycle, 11,900-volt alternating current. [fol. 2347] Said frequency, generation, transmission, service, and voltage shall be maintained in accordance with the best commercial standard for hydroelectric systems. Voltage variations at primary bus shall not exceed 2½ per cent up or down for normal, except in case of temporary interruption to service.

5. Point of delivery.—Point of delivery shall be on the 11,900-volt side of the Authority's substation to be located on customer's property at Estes Bend on the Duck River near Columbia, Tenn. Customer shall furnish Authority without charge a suitable substation site for the transformers and other equipment of Authority necessary for service hereunder and with the necessary rights-of-way for transmission lines over customer's property to such site, and Authority shall have the right of ingress to and egress from said site and rights-of-way. The route of said rights-of-way and the location of said substation site shall be agreed upon between the parties hereto, provided that the substation site shall be located within 1,000 feet from customer's furnace plant.

Maintenance by Authority at the point of delivery of the stated voltage and frequency, and the capacity contracted for shall constitute delivery of electric power for the purposes of this contract, but nothing herein contained shall require customer to pay for energy (as contrasted with demand) not consumed.

Authority agrees, at its own expense, from and after January 1, 1938, to make available at least two transmission circuits over different routes from the sources of supply, each of which shall be of adequate capacity to enable Authority to comply with its obligations as to delivery hereunder.

Authority agrees to install and maintain an oil circuit breaker in the 11,900-volt circuit.

6. Electric-power rates.—Customer shall pay Authority for electricity in accordance with the following rate schedule.

Demand charge.—For firm power, 90 cents per kilowatt of demand per month; for secondary power, 30 cents per kilowatt of demand per month when secondary power is available.

Energy charge.—For total energy consumed including firm and secondary use; First 100,000 kilowatt-hours consumed per month at 4 mills per kilowatt-hour; next 200,000 kilowatt-hours consumed per month at 3 mills per kilowatt-hour; next 700,000 kilowatt-hours consumed per month at 2.5 mills per kilowatt-hour; excess over 1,000,000 kilowatt-hours consumed per month at 2 mills per kilowatt-hour. Charge for energy in excess of 360 times the total measured demand as hereinafter defined shall be subject to a reduction of 0.5 mills per kilowatt-hour from the otherwise applicable rate. It is understood, however, that there shall be no energy charge except to the extent that energy is actually consumed by customer.

[fol. 2348] Determination of Demand

Demand measurement shall be made by suitable instruments at the point of delivery. Total measured demand for any month shall be defined as the highest integrated simultaneous load during any 60 consecutive minute period during the month for which determination is made.

For periods during which secondary power is not available, firm demand shall be taken as 100 per cent of the total measured demand, and there shall be no charge for secondary demand.

For months during which secondary power is available, firm demand shall be taken as 35 per cent of the total measured demand. In no case shall firm demand be taken as

less than 1,000 kilowatts in the period from December 15, 1936, to June 1, 1937, and then after not less than 8,000 kilowatts, even though said 1,000 or 8,000 kilowatts, as the case may be, shall be in excess of 35 per cent of the total measured demand. Secondary demand shall be taken as the difference between total measured demand and firm demand. During any fractional month for which secondary demand charges are applicable, such charges shall be prorated.

Adjustment of Demand Charge for Power Factor

The customer's demand shall, whenever the normal power factor is less than 85 per cent, be determined upon the basis of 85 per cent power factor; that is, whenever said normal power factor is less than 85 per cent, the demand shall be taken to be 85 per cent of the kilovolt amperes indicated, unless such low power factor is due to causes beyond customer's control.

Adjustment During Developmental Period

Authority recognizing that the rate schedule applicable to electricity delivered hereunder results in a relatively high average power cost to customer during customer's developmental period, agrees to charge customer each month at an average rate not exceeding 3½ mills per kilowatt-hour during the first year of service hereunder.

Minimum Monthly Bill

The customer agrees to pay each month for firm power, including demand and energy, an amount not less than 90 cents times three-quarters of the highest measured monthly firm demand occurring during any month, during the previous 12-month period, or the contract firm demand whichever is the greater; and customer further agrees to pay each month for secondary power, including demand and energy, an amount not less than 30 cents times three-quarters of the highest measured monthly secondary demand occurring during any month, during the previous 12-month [fol. 2349] period, or the contract secondary demand, whichever is the greater, except that in the event secondary power is not available, there will be no minimum bill for

secondary service. If secondary power is available for only a fraction of a month, the minimum bill for secondary service shall be prorated. Customer shall not be obligated to pay a minimum bill for secondary power for more than 300 days in each year.

7. Curtailment.—If, during the life of this contract, conditions in customer's business are such that customer cannot economically operate so as to use all of the then contracted capacity, customer shall have the right upon giving Authority 12 months' written notice to reduce the then existing contract demand to an amount to be designated by customer, but to not less than 14,000 kilowatts of demand, of which not less than 8,000 kilowatts or 35 per cent (whichever is the greater) shall be primary demand, if the curtailed contract demand is less than 23,000 kilowatts, customer shall have the right, upon 12 months' notice, to increase its contract demand to not over 23,000 kilowatts, of which not less than 8,000 kilowatts or 35 per cent (whichever is the greater) shall be primary demand, but customer shall not thereafter have the right to increase its demand in excess of 23,000 kilowatts or the curtailed contract demand, whichever is the greater, except by agreement of Authority.

8. Adjustment of rates.—Pursuant to the Authority's general policy of nondiscrimination, Authority will in good faith throughout the period of this contract attempt to prevent a situation arising in which electric power generated by the Authority is sold either directly or indirectly in substantial amounts during sustained periods of time to any competitor of customer at lower rates or upon more favorable terms and conditions than those provided in this contract. Authority agrees that, if at any time during the period of this contract, customer calls to its attention any such situation, Authority will in good faith endeavor to agree with customer upon some adjustment in the rates or in the terms and conditions contained herein sufficient to remedy such situation, and Authority agrees that if at any time during the life of this contract Authority should supply transmitted electric power of the same quality as that supplied hereunder to any other industrial customer engaged in substantial manufacture and production sim-

ilar to that carried on to a substantial extent by customer at its Estes Bend plant, at lower rates than that provided by this contract, Authority shall extend to customer the benefit of such lower rates, for the quality of power to which such rates are applicable and to the extent such power is utilized in manufacture or production similar to that of the customer to whom lower rates are available, during the period such lower rates are available to any such other customer; and if during said period Authority should sell nontransmitted electrie power of such quality to any such customer under such circumstances at a rate schedule lower than that set forth in schedule A attached hereto and hereby made a part hereof, customer shall be entitled to a reduction in rates equalling the difference, for the quality of power to which applicable, between the rate schedule set out in schedule A and the lower rate schedule made applicable in such case, during the period such lower rate schedule is available to any such other customer. Authority further agrees that if at any time it lowers its basic demand rate or its basic energy rate for a class of [fol. 2350] quality or service similar to that rendered customer, it will make corresponding reductions in the rate to customer for the class or quality of service as to which the reduction has been made, so long as such reduced rates remain the basic rates of Authority for such class or quality of service.

9. Arbitration.—In case any dispute arises respecting the interpretation or performance of this contract or the rights and duties of either party hereunder, and the parties shall be unable to agree with respect to the matter or matters in dispute, the same shall, at the option of either party, be submitted for determination to a board of arbitrators chosen as herein determined. The party desiring arbitration shall give written notice to the other party setting forth in general terms the matters to be arbitrated and the section or sections of this contract under which the right of arbitration arises and appoint an arbitrator. The other party may in like manner add to the points in dispute and cause them to be submitted to such arbitration and shall within 10 days appoint second arbitrator, but if such appointment is not so made, the party desiring arbitration

may make application to any judge of the United States Court of Appeals for the Sixth Circuit for the appointment of such second arbitrator. The two arbitrators so appointed shall within 10 days after the appointment of the latter select a third arbitrator but if they shall fail to do so within said period of 10 days either party, after notice to the other, may make application to any of the judges aforesaid and it is hereby agreed that said judge may appoint such arbitrator. Should any arbitrator fail or refuse to act, successors shall be appointed in the same manner as the original arbitrators. The arbitrators, however, named, may act as a majority and shall forthwith hear the parties and shall consider and decide the dispute and shall likewise fix their own compensation and decide how the expense of arbitration shall be borne and shall notify the parties in writing of their decision. Such decision shall be binding upon the parties, subject, however, to such appeal as may at the time be provided by the laws of Tennessee.

In case of dispute, if neither party has given notice to the other of its desire to have such dispute arbitrated, and one party has brought suit against the other on account of matters arising out of the contract, or its alleged breach, then the right to arbitrate shall not apply to the particular matters of dispute then involved in the suit.

10. Previous agreements.—All previous agreements between the parties hereto, whether oral or written, with reference to the subject matter of this agreement, are hereby abrogated. This agreement constitutes the entire contract between the parties and there are no understandings, representations, or warranties of any kind not expressly set forth herein.

11. Waiver of defaults.—Any waiver at any time by either party hereto of its rights with respect to the other party or with respect to any other matter arising in connection with this contract, shall not be considered a waiver with respect to any subsequent default or matter.

[fol. 2351] 12. Assignment.—This contract shall inure to the benefit of and be binding upon the respective successors and assigns of the parties hereto: Provided, however, That

the parties hereto shall remain liable for the faithful performance of this contract in all respects by such successors or assigns, and the successors and assigns by acceptance of such transfer or assignment shall likewise become bound for the full performance of the contract until the expiration thereof.

In witness whereof the parties hereto have caused this contract to be executed by their officers, each thereunto duly authorized, the day and year first above written.

Tennessee Valley Authority, by Arthur E. Morgan.

Attest: F. X. Reynolds.

Monsanto Chemical Co., by W. W. Schneider, Secretary.

Attest: C. J. Colley.

Terms and Conditions

1. Metering.—Authority shall at its expense install and maintain the necessary meters of generally approved make and type for measuring electricity supplied to customer. Customer shall have the right to install and maintain at its expense meters for similar purposes, adjacent to Authority's meters, as a check of Authority's meters, and Authority agrees to provide suitable space and facilities for the installation of customer's meters within Authority's substation and to give customer access thereto. All such measurements shall be on the 11,900-volt or low-tension side of Authority's step-down transformers.

Authority shall at its expense and in the presence of representatives of customer upon reasonable notice given to customer make periodical tests and inspections of its meters and transformers in order to maintain a high standard of accuracy.

Authority shall make additional tests and inspections of its meters upon request of customer and in the presence of customer's representatives. If such additional tests show that the meters are accurate within 1 per cent fast or slow at the average low during the preceding 30 days, no adjustment shall be made in customer's bills and the cost of

making such additional tests or inspections shall be paid by customer. If such additional tests or inspections show the meters to be in excess of 1 per cent fast or slow, the cost of such additional tests or inspections shall be borne by Authority and an adjustment shall be made in customer's [fol. 2352] bills in accordance therewithin over a period not exceeding 30 days prior to the date of such tests. Any of Authority's meters or other equipment found to be defective or more than 1 per cent inaccurate shall be promptly repaired, replaced, or readjusted by Authority. Should Authority's meters at any time fail to register, the consumption during the period of failure shall be determined from customer's meters or by other mutually satisfactory means.

2. Billing.—Bills for electric power service hereunder shall be rendered monthly in accordance with the rates provided for herein. Payment for electric power used in any calendar month shall be due on the fifteenth day of the succeeding month or 10 days after receipt of bill from Authority, whichever is the later. Upon failure of customer to pay for electric power used in any calendar month within 15 days after the due date, Authority shall have the right upon 10 days' written notice to customer to discontinue the supply of electric power and to refuse the resumption of delivery so long as any past due account remains unpaid. To any amount remaining unpaid on the first day of the calendar month following the due date there shall be added a penalty of 1 per cent and an additional 1 per cent shall be added on the first day of each succeeding month until the amount is paid in full; provided, that when any dispute arises as to the correctness of the amount billed, Authority shall not have the right to discontinue supply of electric service nor shall any penalties accrue if within such period of 10 days after such written notice the parties cannot agree on the amount due and within a further period of 10 days thereafter customer pays to Authority the amount which it believes to be due and gives written notice to Authority of its desire to submit the dispute to arbitration and appoints an arbitrator, whereupon the amount due shall be determined by arbitration as herein provided for matters which may be submitted to arbitration.

All payments shall be made to Authority at its offices at Wilson Dam, Ala., or at such other place as Authority may from time to time designate.

3. Resale of electric power.—The electric power supplied hereunder is for the use of customer's plant, equipment, and facilities, and the plant, equipment, and facilities of any wholly owned or controlled subsidiary of customer at the specified location and shall not be resold. Power delivered to such a subsidiary shall be deemed part of customer's requirements and shall be billed to and paid by customer in the same manner as if customer were using all of said power, provided, that Authority shall be obligated to maintain only a single point of delivery for service to customer and that customer shall be responsible for the redelivery of such part of the power sold hereunder as customer may wish to redeliver to its subsidiaries.

4. Ownership of properties.—Authority shall furnish all facilities for delivering electric power to the point or points of delivery of customer, including transformers, metering and switching equipment and the necessary housing and fencing, and such facilities shall be and remain the property of and be maintained by Authority.

Customer shall exercise reasonable care to protect the property of Authority or customer's premises, and in the [fol. 2353] event of loss or damage to Authority's property on customer's premises arising from failure of customer to exercise reasonable care for same, the cost of necessary repairs or replacements shall be paid by customer. Authority's properly accredited employees shall have access to Authority's substation on customer's premises at all reasonable times for the purpose of reading meters and for testing, repairing, replacing, or removing any and all equipment belonging to Authority. Authority shall remove at its expense its meters and other property from customer's premises upon the termination of this contract.

5. Liability.—Authority shall hold customer harmless against any loss or damage to the public or its employees arising out of the operation of Authority's transmission lines or equipment and the transmission of electric power delivered hereunder up to the point or points of delivery

herein specified, unless it be proven that such loss or damage was caused by the sole negligence of customer or its subsidiaries, its or their agents, servants, or employees. Conversely, customer shall hold Authority harmless against any loss or damage to the public or its employees arising on the customer's side of point of delivery in connection with the utilization of electric power delivered hereunder, unless it be proven that such loss or damage was caused by the sole negligence of Authority or its agents, servants, or employees.

6. Service.—Authority shall furnish electric power continuously as agreed upon, but Authority, its officers, agents, or employees shall not be liable for damages or breach of contract when service is interrupted or suspended by reason of injunction, strike, riot, invasion, fire, accident, breakdown, act of God, or from any other causes beyond Authority's control, or caused by the making of necessary repairs on Authority's system or by connecting or disconnecting customer's services, but Authority shall make appropriate adjustment of the demand and energy charges in the event of such interruption or suspension of service. Authority shall give as much notice as possible before interrupting service to make repairs. Authority shall as far as possible avoid discontinuance of service hereunder for routine operating purposes, and when such discontinuance is necessary, Authority shall restore service as speedily as possible. During such interruption or suspension of service, customer shall have the right to purchase such other power as may be available.

Customer shall notify Authority immediately should the service be unsatisfactory for any reason or should there be any difficulties, troubles, or accidents affecting the supply of electricity. Such notices, if verbal, shall be confirmed in writing.

In the event of customer's operations being interrupted or suspended by reason of injunction, strike, riot, invasion, fire, accident, breakdown, act of God, or from any other causes beyond customer's control, customer will not be obligated to take or buy any electric power as herein provided for nor to pay demand or minimum charges during the period of such interruption, and the demand and minimum

charges for the month in which such interruption occurs shall be adjusted accordingly.

Should Authority fail for any reason to supply either firm or secondary power in the amounts herein provided for or to maintain voltage and frequency within the prescribed limits, or to avoid undue interruptions or irregularities [fol. 2354] of service, or to fulfill the requirements of any arbitration proceedings thereunder, or otherwise fail to meet any of the obligations imposed by this contract, customer may, after 60 day's written notice of such defaults with specifications thereof, and subject to the arbitration provisions hereof relating to any issues of fact involved, itself generate any part of its electric-power requirements or purchase such requirements from any other source during all or any part of the unexpired period of this contract. Such electric power as customer continues to receive from Authority, supplementary to other sources of power in accordance with the foregoing, shall be paid for in accordance with the provisions hereof. Such substitution of other sources of power shall not relieve Authority of any of the obligations hereof.

Should customer fail to fulfill the requirements of this contract or of any arbitration proceedings hereunder, or to take and pay for electric power under the terms hereof, Authority may, after 60 days' written notice of such default with specifications thereof, if the customer does not correct such default within 60 days after receiving such notice, refuse to continue to deliver power hereunder to customer and may dispose of the power contracted for hereunder to others. Such disposition of power to others shall not relieve customer of any of the obligations hereof.

Either party shall have the right to maintain suit at any time for any loss that may previously have occurred without waiting until expiration of the contract period and without losing or waiving any right to maintain suit for subsequent losses occurring during the period of the contract, and recovery in any such suit shall not be deemed a splitting of the cause of action.

7. Addition of load.—The service connection, transformers, meters, and equipment supplied by Authority for cus-

tomer have definite capacity and no addition to customers' equipment or load connected thereto, in excess of such capacity, shall be made except after reasonable notice to Authority. Failure to give such notice of additions or changes in load shall render customer liable for any damage to Authority's lines or equipment caused by the additional or charged installation.

8. Customer's lines and equipment.—All lines and equipment of customer must conform to accepted modern practice. Authority shall have the right but shall not be obligated to require a certificate from the chief engineer of customer as to the quality and condition of customer's installation before electricity is introduced, or at any later time, and reserves the right to reject any wiring or equipment so certified which is not in accordance with Authority's reasonable standards. The requirement of such a certificate, or the failure to require such a certificate or to reject any installation so certified, shall not render Authority liable or responsible for any loss or damage resulting from the defects in the installation of any electrical equipment, or from violation of the contract, or from accidents which may occur upon customer's premises.

9. Voltage fluctuations caused by customer.—Electric service must not be used in such manner as to cause fluctuations or disturbances, unusual to normal electric furnace op- [fol. 2335] erations, to Authority's system, and Authority may require customer at its own expense to install suitable apparatus to reasonably limit such fluctuations.

10. Phase balancing.—Customer shall at all times take and use energy in such manner that the load will be balanced between phases to with 10 per cent of normal. In the event of polyphase loads unbalanced in excess of 10 per cent, Authority reserves the right to require customer on 60 days' written notice at its own expense to make the necessary changes to correct such unbalancing, and if such unbalancing is not then corrected, to compute the demand on the assumption that the load of each phase is equal to that on the greatest phase.

COMPLAINANTS' EXHIBIT No. 118

Schedule A

Contract Between Tennessee Valley Authority and Monsanto Chemical Co.

Demand charge.—For firm nontransmitted power delivered at the switchboard of the Authority's hydroelectric generating plants, $0.81 per kilowatt of demand per month.

For secondary nontransmitted power delivered at the switchboard of the Authority's hydroelectric generating plants available to customers 300 days, to be selected by the Authority, out of each successive 12-month period, no demand charge.

Energy charge.—First 100,000 kilowatt-hours consumed per month at 3.6 mills per kilowatt-hour; next 200,000 kilowatt hour consumed per month at 2.7 mills per kilowatt-hour; next 700,000 kilowatt-hours consumed per month at 2.25 mills per kilowatt-hour; excess over 1,000,000 kilowatt-hours consumed per month at 1.8 mills per kilowatt-hour. Charge for energy in excess of 360 times the total measured demand shall be subject to a reduction of 0.45 mill per kilowatt-hour from the otherwise applicable rate.

The above rates are subject to contract provisions and rules and regulations of the Authority.

[fol. 2356] Power Contract Between TVA and Monsanto Chemical Company, Dated May 16, 1936

This contract, omitting the formal parts thereof, is as follows:

Whereas it is expected that customer will require electric power for such plant and equipment for a temporary period prior to November 15, 1936 and the parties desire to enter into a separate agreement for such earlier service, or terms and conditions similar to those contained in said contract of May 15, 1936;

We, therefore, in consideration of the mutual covenants and agreements hereinafter set forth, and subject to the provisions of the Tennessee Valley Authority Act of 1933, the parties hereto mutually covenant and agree as follows:

1. Authority shall make available to customer 250 kilowatts of firm electric power at any time between August

15 and September 15, 1936, upon 7 days' advance written notice from customer. Customer shall be obligated to pay, as a minimum, the demand charges on such 250 kilowatts on and after September 15, 1936, unless customer has obligated itself by written notice to Authority to take such power at an earlier date. Authority shall make available to customer a total of 1,000 kilowatts of firm electric power (which includes the foregoing 250 kilowatts) at any time between September 1 and October 1, 1936, upon 15 days' advance written notice from customer. Customer shall be obligated to pay, as a minimum, the demand charges on such 1,000 kilowatts on and after October 1, 1936, unless customer has obligated itself to take such additional power at an earlier date; Provided, however, That if difficulties beyond the control of Authority shall delay completion of construction beyond August 15, 1936, the obligation of Authority to deliver and customer to purchase power on August 15, 1936, shall be postponed to the extent of the delay beyond August 15, 1936. Delivery shall in no event commence later than September 15, 1936.

2. All the terms, conditions, and provisions of said contract of May 15, 1936, between the parties hereto, not inconsistent herewith, including service specifications, rates, delivery, determination of demand, adjustments, metering, billing, et cetera, shall apply to and are hereby made a part of this contract. This contract, however, is a separate undertaking and does not in any way alter, modify, or supplement the said contract of May 15, 1936.

3. The service covered by this contract is in addition to that covered by the contract of May 15, 1936, and the service and obligations of the parties under this contract shall cease and terminate upon the commencement of service to customer under said contract of May 15, 1936.

[fol. 2357] Amendatory Contract to Contract of May 15, 1936, Between TVA and Monsanto Chemical Company, Dated June 2, 1936

This contract, omitting the formal parts thereof, is as follows:

1. The last paragraph of section 4 of said contract shall read as follows:

COMPLAINANTS' EXHIBIT No. 118

"The electric power supplied hereunder shall be in the form of 3-phase, 60-cycle, 44,000-volt alternating current. Said frequency, generation, transmission, service, and voltage shall be maintained in accordance with the best commercial standard for hydroelectric systems. Voltage variation at primary bus shall not exceed 2½ per cent up or down from normal, except in case of temporary interruption to service."

2. The first sentence of the first paragraph of section 5 of said contract shall read as follows:

"5. Point of delivery.—Point of delivery shall be on customer's side of the Authority's substation to be located on customer's property at Estes Bend on the Duck River near Columbia, Tenn."

3. The last paragraph of section 5 of said contract shall read as follows:

"Authority agrees to install and maintain an oil circuit breaker on the incoming side of the above-described substation."

4. The first paragraph of section 1 (titled "Metering") of the terms and conditions attached to and made a part of said contract shall read as follows:

"1. Metering.—Authority shall at its expense install and maintain the necessary meters of generally approved make and type for measuring electricity supplied to customer. Customer shall have the right to install and maintain at its expense, meters for similar purposes, adjacent to Authority's meters, as a check on Authority's meters, and Authority agrees to provide suitable space and facilities for the installation of customer's meters within Authority's substation and to give customer access thereto. All such measurements shall be on customer's side of Authority's substation."

[fol. 2358] COMPLAINANTS' EXHIBIT No. 119

Power Contract Between Tennessee Valley Authority and City of Amory, Mississippi

This Agreement, made and entered into this 15th day of October, 1936, between the Tennessee Valley Authority,

hereinafter called "Authority," a corporation created by the Tennessee Valley Authority Act of 1933, its successors and assigns, and City of Amory, Mississippi, a municipal corporation duly organized, created, and existing under and by virtue of the laws of the State of Mississippi, hereinafter called "Municipality," its successors and assigns,

Witnesseth:

Whereas, Authority, by Section 10 of said Act, is authorized to sell the surplus power generated by it and not used in its operations, and is directed to give preference to States, Counties, Municipalities, and cooperative organizations of citizens or farmers not organized or doing business for profit; and

Whereas, by Section 11 of said Act it is provided that the sale of power by Authority shall be primarily for the benefit of the people of the section as a whole and particularly the domestic and rural consumers to whom the power can economically be made available; and

Whereas, Municipality by legislative authority owns and operates a municipal electric distribution system; and

[fol. 2359] Whereas, Municipality desires to purchase power from Authority for municipal purposes and for resale and proposes to pay therefor; and

Whereas, after investigation by Authority, it appears that quantities of power generated at Wilson Dam, Alabama, sufficient to meet the requirements of Municipality, under the terms of this contract, will be available for sale by Authority after all requirements of Authority and of the United States have been fulfilled; and

Whereas, all parties to this contract have duly authorized its execution;

Now, Therefore, for and in consideration of the mutual covenants herein contained, and subject to all of the provisions of the Tennessee Valley Authority Act of 1933, as amended, the parties hereto mutually covenant and agree as follows:

1. Term of Contract.—This contract shall become effective upon the execution hereof, and shall continue in effect for twenty years; Provided, that all obligations of the parties hereto with regard to the rendition of service and payment therefor shall begin upon the date of execution hereof.

All service and payment periods hereinafter referred to shall be computed from the date first above written.

2. Power Supply.—Authority will, from the date of initial delivery to the expiration hereof, supply electricity to Municipality for municipal purposes and for resale. Municipality agrees to purchase from Authority, and Authority agrees to supply, the entire electricity requirements of Municipality. Should Municipality during the period of this contract desire to increase its purchases in excess of 6000 kw. Authority shall deliver such excess upon written de- [fol. 2360] mand and after reasonable notice; Provided that the requirements of Authority and/or the United States reasonably enable it to do so. Reasonable notice shall be defined as nine (9) months after date of demand if the additional requirements are 5000 kw. or less, twelve (12) months after date of demand if the additional requirements are over 5000 kw. but not over 10,000 kw. and two (2) years after date of demand if the additional requirements are in excess of 10,000 kw. Said energy shall be delivered in the form of three phase, alternating current, at approximately 60 cycles per second and approximately 2,300 volts, or at such other voltage as the parties may from time to time agree.

3. Point of Delivery.—Authority will deliver the electricity purchased hereunder at the low tension side of the transformer bank or banks owned by Authority and located adjacent to Municipality's water and light plant in the City of Amory, Mississippi. The energy to be supplied Municipality hereunder shall be metered at the metering equipment owned by Authority and located in said substation yard. The Authority will install only such oil circuit breakers as in its opinion are necessary for the protection of its transformer bank or banks, and/or the transmission line or lines, supplying energy to such substation.

4. Schedule of Rates.—Attached hereto, and hereby made a part hereof, is a "Schedule of Rates and Charges." Municipality agrees to pay for the energy supplied by Authority at the rates fixed in Schedule A-1 entitled "Wholesale Power Rate." All payments shall be made to Authority at its offices at Wilson Dam, Alabama, or at such other place as Authority may from time to time designate.

COMPLAINANTS' EXHIBIT No. 119

[fol. 2361] 5. Resale Rates.—In order to insure a wide and ample distribution of electricity in the area served by Municipality, Authority and Municipality agree as follows:

(a) Municipality agrees that the surplus power purchased hereby shall be sold and distributed to the ultimate consumer without discrimination between consumers of the same class, and that no discriminatory rate, rebate, or other special concession will be made or given to any customer.

(b) Municipality shall charge consumers, including all municipal and governmental customers and departments, the rates set forth for the several classes thereof in Schedules B-1, B-2, B-3, and B-5 of the Schedule of Rates and Charges, and not to depart therefrom except by agreement of the parties. Additional resale schedules for special classes of consumers or special uses of electricity may be added from time to time by agreement of the parties.

(c) If it should appear that the rates provided for in said resale schedules, with the surcharge provided for therein, do not produce revenues sufficient to operate and maintain Municipality's electric system on a self-supporting and financially-sound basis, including requirements for interest and amortization on indebtedness applicable to Municipality's electric system, Authority and Municipality shall agree upon, and Municipality shall put into effect, such changes in rates as will provide for the increased revenues necessary to place the system upon such self-supporting and financially-sound basis.

(d) Municipality shall dispose of its gross revenues from electric operations in the following manner:

[fol. 2362] (1) Revenues shall first be used for the payment of all current operating expenses, including salaries, wages, cost of materials and supplies, power at wholesale and insurance.

(2) From remaining revenues Municipality shall next currently provide for the payment at maturity of interest accrued on all bonds or other indebtedness applicable to Municipality's electric system, and for amortization charges on all such bonds or other indebtedness and/or sinking fund payments thereon.

(3) Thereafter revenues shall be used currently to set up reasonable reserves for replacements, new construction and for contingencies, and to provide a reasonable amount of cash working capital.

(4) From remaining revenues Municipality shall thereafter pay into its General Fund a return on its investment and a tax equivalent as provided in the Financial and Accounting Policy in the Schedule of Terms and Conditions of Contract attached hereto.

(5) All remaining revenues shall be considered surplus revenues and may be devoted by Municipality to the purchase or retirement of bonds or other indebtedness applicable to the electric system before maturity, and if not so devoted shall serve as the basis for the reduction or elimination of surcharges to consumers, and thereafter for the reduction of rates. Surplus revenues shall be computed as of December 31, and June 30, of each year.

6. Municipality's Investment in Electric System.—For the purpose of this agreement the investment of Municipality in its electric system, including standby value of generating plant, as of the date of initial delivery of electricity to Municipality by Authority (September 2, 1934) is agreed [fol. 2363] to be the sum of $39,663.00 as determined as follows:

Replacement Cost New of Distribution System	$86,532.00	
Less Accrued Depreciation	21,009.00	
Present Value of Distribution System		$65,523.00
Present Standby Value of Generating Plant		22,140.00
Total		$87,663.00
Bonds Applicable to Electric System plus Accrued Interest	$48,000.00	
Other Indebtedness Applicable to Electric System	None.	
Total Indebtedness Applicable to Electric System		$48,000.00
Net Investment		$39,663.00

7. Payment for Municipality's Energy Requirements.—Municipality agrees to pay into its electric funds from appropriate general or special funds for all electric service required by Municipality for street lighting, water pumping and other operations and uses, at the resale rates as set forth in the Schedule of Rates and Charges, with such modifications and additions as may from time to time be agreed upon by the parties.

8. Terms and Conditions.—Attached hereto, and hereby made a part hereof, is a schedule entitled, "Schedule of Terms and Conditions." The provisions of this schedule may from time to time be changed or supplemented by agreement of Municipality and Authority. It is understood and agreed that the several provisions of the said schedule, with such changes as may from time to time be adopted pursuant hereto, as well as the several provisions of this contract and of the Schedule of Rates and Charges, are of the essence of this contract.

[fol. 2364] 9. Rules and Regulations.—Attached hereto and hereby made a part hereof is a "Schedule of Rules and Regulations." Municipality hereby adopts said Schedule of Rules and Regulations. The provisions of said schedule may be amended, supplemented or repealed by Municipality at any time upon ten (10) days written notice to Authority setting forth the nature of and reason for the proposed change. No change shall be made in said schedule, however, which is inconsistent with or in violation of any of the provisions of the remaining part of this contract. In said schedule the term "Distributor" shall be construed to mean Municipality.

10. Waiver of Defaults.—Any waiver at any time by either party hereto of its rights with respect to any default of the other party hereto and/or with respect to any other matter arising in connection with this contract shall not be considered a waiver with respect to any subsequent default or matter.

11. Contract not Transferable.—Neither this contract nor any interest therein shall be transferable or assignable by Municipality to any other party without the consent of Authority.

COMPLAINANTS' EXHIBIT No. 119

12. Re-cission of Prior Contracts.—The power contract dated March 9, 1934, and the investment contract dated March 15, 1935, between the parties hereto, are hereby cancelled, annulled and rescinded.

In Witness Whereof, the parties hereto have caused this [fol. 2365] instrument to be signed and attested in duplicate, by their duly authorized officers, the day and year first above written.

Tennessee Valley Authority, (Sgd.) by Arthur E. Morgan, Chairman, Board of Directors. C. G. D., Legal Division. (Seal.)

Attest: (Sgd.) Charles E. Hoffman, Assistant Secretary.

City of Amory, Mississippi, by J. R. Buchanan, Mayor. (Seal.)

Attest: (Sgd.) O. H. Owens, City Clerk.

JLF:CGD:LJ.

[fol. 2366] The Schedule of Rates and Charges, the Schedules of Terms and Conditions and Rules and Regulations attached to this contract are substantially the same as those attached to and made a part of the contract between TVA and the City of Dickson, Tennessee. (Complainants' Exhibit No. 118.)

[fol. 2367] COMPLAINANTS' EXHIBIT No. 120

Power Contract Between TVA and the City of New Albany, Mississippi, Dated March 1, 1937

(Here omitted as such contract appears in full at pages 251 et seq., of the Annual Report of TVA, for the fiscal year ended June 30, 1937, received in evidence as Defendants' Exhibit No. 154 and which is an original exhibit.)

[fol. 2368] COMPLAINANTS' EXHIBIT No. 121

Supplemental Contract Between TVA and the City of Okolona, Mississippi, Dated March 24, 1937

This contract, omitting the formal parts thereof, is as follows:

Whereas, the parties hereto have heretofore entered into a certain contract entitled "Power Contract Between Tennessee Valley Authority and City of Okolona, Mississippi," dated May 1, 1935, under which Municipality purchases power at wholesale from Authority, and

Whereas, the amortization collections which are being made under Article 6 of said Power Contract are to terminate upon the satisfaction of certain indebtedness which Municipality had incurred on its generating plant, and said indebtedness will have been satisfied sometime during the month of April, 1937, and

Whereas, a judgment of $5,000.00 was entered on October 17, 1935, against Municipality in a Federal District Court in Mississippi, in a case entitled Gillespie v. City of Okolona, which judgment arose out of the operation of Municipality's electric system, but prior to the execution of the Power Contract referred to above, and the parties hereto have agreed that half of said judgment, or $2,500.00, shall be paid by the electric system, and the other half shall be paid out of general funds of Municipality, and

Whereas, pursuant to the terms of Article 7 of said Power Contract Municipality is indebted to Authority in the sum of $7,831.00, and

Whereas, Municipality contemplates making further additions and replacements that will cost approximately $8,000.00, and

Whereas, Municipality desires to continue these amortization collections and the Authority is willing that said indebtedness should be paid in part from such amortization collections, any provisions of the Power Contract to the contrary notwithstanding, and

Whereas, all the necessary acts have been done to authorize the making of this contract,

Now, Therefore, in Consideration of the premises and the mutual covenants herein contained, the parties do hereby agree as follows:

COMPLAINANTS' EXHIBIT No. 121

1. Article 6 of the Power Contract referred to above is hereby amended so that Municipality may continue to add to its resale rates the temporary amortization charge, applicable to all customers, of one cent (1¢) per kwh. for the first one hundred (100) kwh. used per month, such charge to be not less than twenty-five cents (25¢) or more than one dollar ($1.00) per customer per month, until the following indebtedness is paid:

A. $2,500.00 and accrued interest and one half the costs on the judgment entered on October 17, 1935, against Municipality in the Federal District Court, Northern Division of Mississippi, in the case entitled Gillespie v. City of Okolona.

[fol. 2369] B. $7,831.00, with interest at 3½% per annum, payable semi-monthly on the unpaid balance, which represents the indebtedness of Municipality to Authority, under the provisions of Article 7 of said Power Contract. The rate of interest provided in said Article 7 is hereby reduced from 4% to 3½% per annum, payable semi-annually on the unpaid balance, including interest on any unpaid interest, such change to become effective as of the effective date of this contract.

C. $8,000.00, which sum is to be used by Municipality for the rehabilitation of its electric distribution system.

Municipality shall keep all such amortization collections separate from other funds and shall treat them as trust funds to be applied exclusively to the payment of the items mentioned in subsections A, B, and C above. To the amount collected each month as amortization charges there shall be added an amount from gross revenues which shall make available for the above described indebtedness a total sum of $300.00 every month. Said $300 payments shall be devoted, first, to the amortization of the indebtedness set out in subsection A, second, to the indebtedness set out in subsection B, and lastly, to the indebtedness set out in subsection C. In the event amortization collections exceed the sum of $300 monthly all such collections shall be used for the amortization of the above indebtedness.

2. In no event shall Municipality continue to make these amortization collections after January 1, 1942.

COMPLAINANTS' EXHIBIT No. 121

3. Nothing herein contained shall be construed to affect Municipality's obligation to the United States of America acting through the Federal Emergency Administration of Public Works for the repayment of the loan used by Municipality in constructing rural lines in the vicinity of the City of Okolona.

4. Nothing herein contained shall be construed to rescind or annul any clauses in said Power Contract that are not plainly inconsistent herewith. Nor shall the manner of payment herein set forth be regarded as a waiver by Authority of its right to surplus revenues as defined in Article 6 of said Power Contract.

5. This contract shall become effective the first day of April, 1937.

In Witness Whereof, the parties hereto have caused this instrument to be executed the day and year first above written.

Tennessee Valley Authority (S.) by Arthur E. Morgan, Chairman, Board of Directors.

Attest: (S.) Charles E. Hoffman, Assistant Secretary.

City of Okolona, Mississippi, (S.) by J. C. Lieper, Mayor.

Attest: (S.) E. D. Elias, City Clerk.

[fol. 2370] COMPLAINANTS' EXHIBIT No. 122

Supplemental contract between TVA and the City of Holly Springs, Mississippi, dated February 2, 1937.

This contract, omitting the formal parts thereof, is as follows:

Now, Therefore, for and in consideration of the mutual covenants herein contained, the parties hereto mutually covenant and agree as follows:

1. Paragraph 8 of that agreement entitled "Power Contract Between Tennessee Valley Authority and City of

Holly Springs" executed on November 12, 1935, is hereby amended to read as follows:

8. Municipality's Investment in Electric System.—For the purpose of this agreement the investment of Municipality in its electric system as of the date hereof is agreed to be the sum of $28,812.00 determined as follows:

Replacement Cost New	$53,530.00	
Less Accrued Depreciation	19,033.00	
Present Value		$34,497.00
Standby Value of Generating Plant		19,315.00
Total		$53,812.00
Bonds Applicable to Electric System Plus Accrued Interest	$25,000.00	
Other Indebtedness Applicable to Electric System	None.	
Total Indebtedness Applicable to Electric System		$25,000.00
Net Investment		$28,812.00

In Witness Whereof, the parties hereto have caused this instrument to be signed and attested in duplicate, by their duly authorized officers, the day and year first above written.

Tennessee Valley Authority (Sgd.) by Arthur E. Morgan, Chairman of the Board. W. T. M., Legal Div. (Seal.)

Attest: (Sgd.) Charles E. Hoffman, Assistant Secretary.

City of Holly Springs, (Sgd.) by Geo. M. Buchanan, Mayor. (Seal.)

Attest: (Sgd.) C. B. Smith, City Clerk.

Power Contract Between TVA and the City of Knoxville, Tennessee, Dated March 1, 1934

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Athens, Alabama, except:

1. The maximum amount of power TVA shall be obligated to deliver during the first two year period is 3500 kw.

2. The point of delivery shall be at the outgoing side on the low tension side of the main step-down transformer of the substation or substations to be constructed, owned and operated by TVA, to be located at a point or points to be selected by TVA within the corporate limits of the City of Knoxville, Tennessee.

3. The City of Knoxville is to use all reasonable diligence in acquiring by construction or purchase a municipal distribution system and TVA agrees, upon request of said City, to render without compensation such accounting, legal and engineering assistance looking to the acquisition of such a system as TVA may deem helpful or advisable.

Power Contract Between TVA and the City of Decatur, Alabama, Dated March 14, 1934

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Athens, Alabama, except:

1. The maximum amount of electricity which TVA agrees to supply within the first two year period is 7500 kw.

2. The point of delivery shall be at or within the corporate limits of the City of Decatur at a point to be selected by TVA.

3. The City of Decatur is to use all reasonable diligence in acquiring by construction or purchase a municipal distribution system and TVA agrees, upon request of said City, to render without compensation such accounting, legal and engineering assistance looking to the acquisition of such a system as TVA may deem helpful or advisable.

[fol. 2375] COMPLAINANTS' EXHIBIT No. 128

Power Contract Between TVA and the City of Guntersville, Alabama, Dated May 21, 1937

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Sheffield, Alabama, except:

1. The initial amount of electricity which TVA shall be obligated to deliver shall not be in excess of 3000 kw.

COMPLAINANTS' EXHIBIT No. 128

2. The point of delivery shall be at a point within or near the corporate limits of the City of Guntersville and at a point to be mutually agreed upon between TVA and the City of Guntersville, Alabama.

3. It contains the following provisions in lieu of paragraph 8 of the contract between TVA and the City of Sheffield, Alabama (Complainants' Exhibit 118):

"8. Terms and Conditions.—Attached hereto, and hereby made part hereof, is a schedule entitled "Schedule of Terms and Conditions." The provisions of this schedule may from time to time be changed or supplemented by agreement of Municipality and Authority. It is understood and agreed that the several provisions of the said schedule, with such changes as may from time to time be adopted pursuant hereto, as well as the several provisions of this contract and of the Schedule of Rates and Charges, are of the essence of this contract.

9. Rules and Regulations.—Attached hereto and hereby made a part hereof is a "Schedule of Rules and Regulations." Municipality hereby adopts said Schedule of Rules and Regulations. The provisions of said schedule may be amended, supplemented, or repealed by Municipality at any time upon ten (10) days' written notice to Authority setting forth the nature of and reason for the proposed change. No change shall be made in said schedule, however, which is inconsistent with or in violation of any of the provisions of the remaining part of this contract. In said schedule the term "Distributor" shall be construed to mean Municipality."

[fol. 2376] COMPLAINANTS' EXHIBIT No. 129

Power Contract Between TVA and the City of Chattanooga, Tennessee, Dated June 17, 1937

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and the City of Sheffield, Alabama, except:

1. The maximum amount of power agreed to be furnished by TVA shall not be in excess of 30,000 kw. except upon

notice as provided for in the contract between TVA and the City of Sheffield, Alabama.

2. The point of delivery shall be at the Chickamauga Dam site on the south side of the Tennessee River.

3. It contains the following provisions in lieu of paragraph 8 of the contract between TVA and the City of Sheffield, Alabama (Complainants' Exhibit 118):

"7. Terms and Conditions.—Attached hereto, and hereby made a part hereof, is a schedule entitled 'Schedule of Terms and Conditions.' The provisions of this schedule may from time to time be changed or supplemented by agreement of Board and Authority. It is understood and agreed that the several provisions of the said schedule, with such changes as may from time to time be adopted pursuant hereto, as well as the several provisions of this contract and of the Schedule of Rates and Charges, are of the essence of this contract.

8. Rules and Regulations.—Attached hereto and hereby made a part hereof is a 'Schedule of Rules and Regulations.' Board hereby adopts said Schedule of Rules and Regulations. The provisions of said schedule may be amended, supplemented, or repealed by Board at any time upon ten (10) days' written notice to Authority setting forth the nature of and reason for the proposed change. No change shall be made in said schedule, however, which is inconsistent with or in violation of any of the provisions of the remaining part of this contract. In said schedule the term 'Distributor' shall be construed to mean Board."

[fol. 2377] COMPLAINANTS' EXHIBIT No. 130

Power Contract Between Tennessee Valley Authority and City of Middlesborough, Kentucky

This Agreement, made and entered into this 29th day of July, 1937, between the Tennessee Valley Authority, hereinafter called "Authority," a corporation created by the Tennessee Valley Authority Act of 1933, its successors and assigns, and the City of Middlesborough, Kentucky, a mu-

nicipal corporation duly organized, created, and existing under and by virtue of the laws of the State of Kentucky, hereinafter called "Municipality," its successors and assigns:

Witnesseth

Whereas, Authority, by Section 10 of said act, is authorized to sell the surplus power generated by it and not used in its operations, and is directed to give preference to States, Counties, Municipalities, and co-operative organizations of citizens or farmers not organized or doing business for profit; and,

Whereas, by section 11 of said act it is provided that the sale of power by Authority shall be primarily for the benefit of the people of the section as a whole and particularly the domestic and rural consumers to whom the power can economically be made available; and,

Whereas, the electorate of Municipality have by referendum authorized Municipality to acquire by construction or purchase a municipal electric distribution system, and Municipality intends to acquire and operate such a system;

Whereas, Municipality desires to purchase power from Authority for municipal purposes and for resale and proposes to pay therefore; and

Whereas, after investigation by Authority, it appears that quantities of power generated at Authority's dams, sufficient to meet the requirements of Municipality under the terms of this contract, will be available for sale by Authority after all requirements of Authority and of the United States have been fulfilled; and,

Whereas, all parties to this contract have duly authorized its execution; Now, Therefore, for and in consideration of the mutual covenants herein contained, and subject to all the provisions of the Tennessee Valley Authority Act of 1933, as amended, the parties hereto mutually covenant and agree as follows:

1. Term of Contract.—This contract shall become effective upon the execution thereof, and shall continue in effect for twenty years; Provided, that all obligations of the parties hereto with regard to the rendition of service and payment therefor shall begin at such time (hereinafter designated "date of initial delivery") as Authority shall have

completed acquisition or construction of the transmission and transformation facilities necessary to serve Municipality, and Municipality shall have acquired its distribution system, or any part thereof, and shall be in physical position to take such service for its said system or part thereof. All service and payment periods hereinafter referred to shall be computed from the date of initial delivery.

2. Acquisition of System.—Municipality agrees to use all reasonable diligence in acquiring, by construction or purchase, a municipal distribution system. Upon six month's notice in writing that Municipality has completed arrangements and executed firm contracts for the purchase or construction of said system and the financing thereof, including customer commitments giving Municipality an assured load of at least 1000 kw., Authority agrees to arrange to construct or acquire such transmission facilities as are reasonably necessary to supply Municipality's [fol. 2378] wholesale power requirements, giving due regard to the magnitude thereof. In the event Municipality determines to construct its distribution system it shall also notify Authority of the date on which actual construction is begun, in order that Authority may coordinate its construction or acquisition plans with those of the Municipality. In no event shall Authority be obligated to commence delivery of power to Municipality hereunder prior to December 30, 1938.

3. Power Supply.—Authority will, from the date of the initial delivery to the expiration hereof, supply electricity to Municipality for municipal uses and for resale. Municipality agrees to purchase from Authority, and Authority agrees to supply, the entire electrical requirements of Municipality. Should Municipality during the period of this contract, desire to increase its purchase in excess of 3000 kw., Authority shall deliver such excess upon written demand and after reasonable notice, provided that the requirements of Authority and/or the United States reasonably enable it to do so. Reasonable notice shall be defined as nine months after date of demand if the additional requirements are 5000 kw. or less, twelve (12) months after date of demand if the additional requirements are over 5000 kw. but not over 10,000 kw., and two (2) years after

date of demand if the additional requirements are in excess of 10,000 kw. Said energy shall be delivered in the form of three phase, alternating current, at approximately 60 cycles per second and approximately 11,000 volts, or at such other voltage as the parties may from time to time agree.

4. Point of Delivery.—Authority shall deliver the power purchased hereunder at such point within or near the corporate limits of the Municipality as shall hereafter be agreed upon between Authority and Municipality, and Municipality shall furnish Authority gratis a sub-station site for the period of this contract. The energy to be supplied Municipality hereunder shall be metered at the low tension side of the step-down transformer bank or banks of the sub-station or sub-stations to be constructed, owned, and operated by Authority, and Authority will install only such oil circuit breakers as in its opinion are necessary for the protection of its transformer bank or banks and/or the transmission line or lines supplying energy to such sub-stations.

5. Schedule of Rates.—Attached hereto, and hereby made a part hereof, is a "Schedule of Rates and Charges." Municipality agrees to pay for the energy supplied by Authority at the rates fixed in Schedule A-1 entitled "Wholesale Power Rate." Municipality shall pay Authority the following amounts annually: as a minimum:

First year after date of initial delivery	$15,000 per year.
Second year after date of initial delivery	$40,000 per year.
Third year after date of initial delivery	$60,000 per year.

In the event that this contract terminates on a date other than an anniversary of the date of initial delivery, the minimum bill for the partial year shall be prorated on a calendar basis. Any sums due under the minimum bill provisions of this section shall be paid within thirty (30) days after the end of the year or partial year for which such sums are due. All payments shall be made to Authority at its office at Wilson Dam, Alabama, or at such other place as Authority may from time to time designate.

6. Resale Rates.—In order to insure a wide and ample distribution of electricity in the area served by Municipality, Authority and Municipality agree as follows:

(a) Municipality agrees that the surplus power purchased hereby shall be sold and distributed to the ultimate consumer without discrimination between consumers of the [fol. 2379] same class, and that no discriminatory rate, rebate, or other special concession will be made or given to any customer.

(b) Municipality agrees to charge consumers, including all municipal and governmental customers and departments, the rates, set forth for the several classes thereof in Schedule B-1, B-2, B-3, and B-5 of the Schedule of Rates and Charges, and not to depart therefrom except by agreement of the parties. Additional resale schedules for special classes of consumers or special uses of electricity may be added from time to time by agreement of the parties.

(c) If it should appear that the rates provided for in said resale schedules, with the surcharge provided for therein, do not produce revenue sufficient to operate and maintain Municipality's electric system on a self-supporting and financially-sound basis, including requirements for interest and amortization on indebtedness applicable to Municipality's electric system, Authority and Municipality shall agree upon, and Municipality shall put into effect such changes in rates as will provide for the increased revenues necessary to place the system upon such self-supporting and financially-sound basis.

(d) Municipality agrees to dispose of its gross revenues from electric operations in the following manner:

(1) Revenues shall first be used for the payment of all current operating expenses, including salaries, wages, cost of material and supplies, power at wholesale and insurance.

(2) From remaining revenues Municipality shall next currently provide for the payment at maturity of interest accrued on all bonds or other indebtedness applicable to Municipality's electric system, and for amortization charges on all such bonds or other indebtedness and/or sinking fund payments thereon.

(3) Thereafter revenues shall be used currently to set up reserves for replacements, new construction and for con-

tingencies, and to provide a reasonable amount of cash working capital.

(4) From remaining revenues Municipality shall thereafter pay into its General Fund a return on its investment and a tax equivalent as provided in the Financial and Accounting Policy in the Schedule of Terms and Conditions of Contract attached hereto.

(5) All remaining revenues shall be considered surplus revenues and may be devoted by Municipality to the purchase or retirement of bonds or other indebtedness applicable to the electric system before maturity, and if not so devoted shall serve as the basis for the reduction or elimination of surcharges to consumers, and thereafter the reduction of rates. Surplus revenues shall be computed as of December 31 and June 30 of each year.

6. Payment for Municipality's Energy Requirements.—Municipality agrees to pay into its electric funds from appropriate general or special fund for all electric service required by Municipality for street lighting, water pumping, and other operations and uses, at the resale rates as set forth in the Schedule of Rates and Charges, with such modifications and additions as may from time to time be agreed upon by the parties.

7. Terms and Conditions: Attached hereto, and hereby made a part hereof, is a schedule entitled "Schedule of Terms and Conditions." The provisions of this schedule may from time to time be changed or supplemented by agreement of Municipality and Authority. It is understood and agreed that the several provisions of the said schedule, with such changes as may from time to time be adopted pursuant hereto, as well as the several provisions of this contract and the Schedule of Rates and Charges, are of the [fol. 2380] essence of this contract.

8. Rules and Regulations.—Attached hereto and hereby made a part hereof is a "Schedule of Rules and Regulations." Municipality hereby adopts said Schedule of Rules and Regulations. The provisions of said schedule may be amended, supplemented or repealed by Municipality at any time upon ten (10) days written notice to Authority set-

ting forth the nature of and reason for the proposed change. No change shall be made in said schedule, however, which is inconsistent with, or in violation of, and of the provisions of the remaining part of this contract. In said schedule the term "Distributor" shall be construed to mean Municipality.

9. Waiver of Defaults.—Any waiver at any time by either party hereto of its rights with respect to any default of the other party hereto and/or with respect to any other matter arising in connection with this contract shall not be considered a waiver with respect to any subsequent default or matter.

10. Contract Not Transferable.—Neither this contract nor any interest therein shall be transferable or assignable by Municipality to any other party without the consent of Authority.

In Witness Whereof, the parties hereto have caused this instrument to be signed and attested in duplicate, by their duly authorized officers, the day and year first above written.

Tennessee Valley Authority, By Harcourt A. Morgan, Vice-Chairman Board of Directors.

Attest: Charles E. Hoffman, Assistant Secretary.

City of Middlesborough, Kentucky, By Ike Ginsburg, Mayor.

Attest: Edw. L. Johnson, City Clerk.

[fol. 2381] The Schedule of Rates and Charges, the Schedules of Terms and Conditions and Rules and Regulations attached to this contract are substantially the same as those attached to and made a part of the contract between TVA and the City of Dickson, Tennessee. (Complainants' Exhibit No. 118.)

[fol. 2382] COMPLAINANTS' EXHIBIT No. 131

Amendatory Agreement Between TVA and the City of Middlesboro, Kentucky, Dated October 20, 1937

(Omitted)

[fol. 2383] COMPLAINANTS' EXHIBIT No. 132

Power Contract Between Tennessee Valley Authority and City of Trenton, Tennessee

This agreement, made and entered into this 23rd day of August, 1937, between the Tennessee Valley Authority, hereinafter called "Authority," a corporation created by the Tennessee Valley Authority Act of 1933, its successors and assigns, and the city of Trenton, hereinafter called "Municipality," a municipal corporation duly organized, created and existing under and by virtue of the laws of the State of Tennessee, its successors and assigns,

Witnesseth:

Whereas, Authority, by section 10 of said act, is authorized to sell the surplus power generated by it and not used in its operations, and is directed to give preference to States, counties, municipalities, and cooperative organizations of citizens or farmers not organized or doing business for profit; and

Whereas, Municipality, by legislative authority owns and operates a municipal electric distribution system; and

Whereas, Municipality desires to purchase power from Authority for municipal purposes and for resale and proposes to pay therefor; and

Whereas, after investigation by Authority, it appears that quantities of power sufficient to meet the requirements [fol. 2384] of Municipality, under the terms of this contract, will be available for sale by Authority after all requirements of Authority and of the United States have been fulfilled; and

Whereas, all parties to this contract have duly authorized its execution;

Now, Therefore, for and in consideration of the mutual covenants herein contained, and subject to all of the provisions of the Tennessee Valley Authority Act of 1933, as amended, the parties hereto mutually covenant and agree as follows:

1. Term of Contract.—This contract shall become effective upon the execution thereof, and shall continue in effect for twenty (20) years; Provided, however, That all obligations of the parties hereto with regard to the rendition of service and payment therefor shall begin at such time (hereinafter designated "date of initial delivery") as Authority

shall have constructed and installed the transmission and transformation facilities necessary in the opinion of Authority for such service. All service and payment periods hereinafter referred to shall be computed from the date of initial delivery.

2. Construction of Transmission Facilities.—Authority agrees, with all reasonable diligence, to construct and install the transmission and transformation facilities reasonably necessary in the opinion of Authority for continuous and dependable service, giving due consideration to the actual magnitude of Municipality's load requirements.

3. Power Supply.—Authority will, from the date of initial delivery to the expiration hereof, supply electricity to Municipality for municipal purposes and for resale. Munici- [fol. 2385] pality agrees to purchase from Authority, and Authority agrees to supply, the entire electricity requirements of Municipality. Should Municipality during the period of this contract desire to increase its purchases in excess of 1500 kw., Authority shall deliver such excess upon written demand and after reasonable notice, provided that the requirements of Authority and/or the United States reasonably enable it to do so. Reasonable notice shall be defined as nine (9) months after date of demand if the additional requirements are 5000 kw. or less, twelve (12) months after date of demand if the additional requirements are over 5000 kw. but not over 10,000 kw., and two (2) years after date of demand if the additional requirements are in excess of 10,000 kw. Said energy shall be delivered in the form of three phase, alternating current, at approximately 60 cycles per second and approximately 2300 volts, or at such other voltage as the parties may from time to time agree.

4. Point of Delivery.—Authority will deliver the electricity purchased hereunder at the present City Light Plant, Municipality to furnish Authority gratis a substation site adjacent thereto for the period of this contract. The energy to be supplied Municipality hereunder shall be metered at the low tension side of the stepdown transformer bank or banks of the substation or substations to be constructed, owned, and operated by Authority, and Authority will install only such oil circuit breakers as in its opinion are necessary for the protection of its transformer bank or banks

and/or the transmission line or transmission lines supplying energy to such substations. Authority shall have free access to such substation site and substation for purposes of operation, maintenance, repair, improvement, replacements and removal.

[fol. 2386] 5. Schedule of Rates.—Attached hereto, and hereby made a part hereof, is a "Schedule of Rates and Charges," in which the term "Contractor" shall be construed to mean Municipality. Municipality agrees to pay for the energy supplied by Authority at the rates fixed in Schedule A-1 entitled "Wholesale Power Rate." All payments shall be made to Authority at its offices at Wilson Dam, Alabama, or at such other place as Authority may from time to time designate.

6. Resale Rates.—In order to insure a wide and ample distribution of electricity in the area served by Municipality, Authority and Municipality agree as follows:

(a) Municipality agrees that the surplus power purchased hereby shall be sold and distributed to the ultimate consumer without discrimination between consumers of the same class, and that no discriminatory rate, rebate, or other special concession will be made or given to any customer.

(b) Municipality shall charge consumers, including all municipal and governmental customers and departments, the rates set forth for the several classes thereof in Schedules B-1, B-2, B-3, and B-5 of the Schedule of Rates and Charges, and not depart therefrom except by agreement of the parties. Additional resale schedules for special classes of consumers or special uses of electricity may be added from time to time by agreement of the parties; Provided, however, that Municipality may, for a period not to exceed two (2) years from the date of this agreement, add to its resale rates a temporary amortization charge, applicable to all customers, of one cent (1c) per kwh. for the first one hundred (100) kwh. used per month, such charge to be not [fol. 2387] less than $0.25 nor more than $1.00 per customer per month, but such amortization charge shall be temporary only and shall be considered only as a means of amortizing Municipality's indebtedness, if any, for loans of money or materials for the rehabilitation of or extension to its elec-

tric system. The proceeds of such amortization charge, if any, shall be deposited in a special fund to be used only for amortization of any such indebtedness.

(c) If it should appear that the rates provided for in said resale schedules, with the surcharge provided for therein, do not produce revenues sufficient to operate and maintain Municipality's electric system on a self-supporting and financially-sound basis, including requirements for interest and amortization on indebtedness applicable to Municipality's electric system, Authority and Municipality shall agree upon, and Municipality shall put into effect, such changes in rates as will provide for the increased revenues necessary to place the system upon such self-supporting and financially-sound basis.

(d) Municipality shall dispose of its gross revenues from electric operations in the following manner:

(1) Revenues shall first be used for the payment of all current operating expenses, including salaries, wages, cost of materials and supplies, power at wholesale and insurance.

(2) From remaining revenues Municipality shall next currently provide for the payment at maturity of interest accrued on all bonds or other indebtedness applicable to Municipality's electric system, and for amortization charges on all such bonds or other indebtedness and/or sinking fund payments thereon.

(3) Thereafter revenues shall be used currently to [fol. 2388] set up reasonable reserves for replacements, new construction and for contingencies, and to provide a reasonable amount of cash working capital.

(4) From remaining revenues Municipality shall thereafter pay into its General Fund a return on its investment and a tax equivalent as provided in the Financial and Accounting Policy in the Schedule of Terms and Conditions of Contract attached hereto.

(5) All remaining revenues shall be considered surplus revenues and may be devoted by Municipality to the purchase or retirement of bonds or other indebtedness applicable to the electric system before maturity, and if not so

devoted shall serve as the basis for the reduction or elimination of surcharges to consumers, and thereafter for the reduction of rates; Provided, however, that Municipality need not reduce its rates nor reduce or eliminate surcharges unless net earnings, defined as the amount remaining after deducting from the total income of the electric system all operating expenses as defined in subsection (d) (1) of this section, exceed Sixteen Thousand Dollars ($16,000.00) annually, and then only to the extent of such excess. Surplus revenues shall be computed as of December 31 and June 30 of each year.

7. Present Value of Municipality's Electric System.—For the purpose of this agreement the present value of Municipality's electric system, including generating plant, as of the date of execution of this agreement, is agreed to be the sum of Fifty Thousand Seven Hundred Thirty-one and 52/100 Dollars ($50,731.52) determined as follows:

[fol. 2389] Replacement Cost New of Distribution System	$37,978.08	
Less Accrued Depreciation	11,054.40	
Present Value of Electric Distribution System		$26,923.68
Present Standby Value of Generating Plant		23,807.84
Total		$50,731.52

The net investment of Municipality in its electric system, for the purpose of this agreement as of the date of execution, is agreed to be zero determined as follows:

Present Value of System		
Less Bonds Applicable to System	$50,731.52	
And Other Indebtedness Applicable to System	None	
Total Indebtedness Applicable to System		50,731.52
Net Investment		Zero.

8. Payment for Municipality's Energy Requirements.—Municipality agrees to pay into its electric funds from appropriate general or special funds for all electric service required by Municipality for street lighting, water pumping, and other operations and uses, at the resale rates as set forth in the Schedule of Rates and Charges, with such modifications and additions as may from time to time be agreed upon by the parties.

9. Terms and Conditions.—Attached hereto, and hereby made a part hereof, but subject to the express provisions of this contract which in case of conflict shall control, is a schedule entitled "Schedule of Terms and Conditions." The provisions of this schedule may from time to time be changed or supplemented by agreement of Municipality and [fol. 2390] Authority. It is understood and agreed that the several provisions of the said schedule with such changes as may from time to time be adopted pursuant hereto, as well as the several provisions of this contract and of the Schedule of Rates and Charges, are of the essence of this contract.

10. Rules and Regulations.—Attached hereto and hereby made a part hereof is a schedule of Rules and Regulations. Municipality hereby adopts said schedule as the Rules and Regulations of Municipality, subject to the express provisions of this contract, which in case of conflict shall control. The provisions of said schedule may be amended, supplemented, or repealed by Municipality at any time upon ten (10) days' written notice to Authority, setting forth the nature of and reason for the proposed change. No change shall be made in said schedule, however, which is inconsistent with or in violation of any of the provisions of the remaining part of this contract. In said schedule the term "Distributor" shall be construed to mean Municipality.

11. Reports to Authority.—Municipality agrees that not later than the first day of September each year, it will render Authority a complete report of the condition of its property and the results of its operations for the preceding year ending June 30. Municipality agrees promptly to supply Authority with such additional information with regard to its property and operations as Authority may from time to time reasonably request.

COMPLAINANTS' EXHIBIT No. 132

12. Waiver of Default.—Any waiver at any time by either party hereto of its rights with respect to any default of the other party hereto and/or with respect to any other matter arising in connection with this contract shall not be considered a waiver with respect to any subsequent default or matter.

[fol. 2391] 13. Contract Not Transferable.—Neither this contract nor any interest therein shall be transferable or assignable by either party, without the consent of the other party.

14. Previous Agreements.—This agreement constitutes the entire contract between the parties, and there are no understandings or representations of any kind not expressly set forth herein.

In Witness Whereof, the parties hereto have caused this instrument to be signed and attested in triplicate by their duly authorized officers the day and year first above written.

[fol. 2392] The Schedule of Rates and Charges, the Schedules of Terms and Conditions and Rules and Regulations attached to this contract are substantially the same as those attached to and made a part of the contract between TVA and the City of Dickson, Tennessee. (Complainants' Exhibit No. 118.)

[fol. 2393] COMPLAINANTS' EXHIBIT No. 133

Power Contract Between Tennessee Valley Authority and the City of Jackson, Tennessee

This Agreement, made and entered into as of the 1st day of September, 1937, between the Tennessee Valley Author-

ity, hereinafter called "Authority," a corporation created by the Tennessee Valley Authority Act of 1933, its successors and assigns, and The City of Jackson, Tennessee, hereinafter called "Municipality," a municipal corporation duly organized, created, and existing under and by virtue of the laws of the State of Tennessee, its successors and assigns,

Witnesseth:

Whereas, Authority, by Section 10 of said Act, is authorized to sell the surplus power generated by it and not used in its operations, and is directed to give preference to States, Counties, Municipalities, and cooperative organizations of citizens or farmers not organized or doing business for profit; and,

Whereas, by Section 11 of said Act it is provided that the sale of power by Authority shall be primarily for the benefit of the people of the section as a whole and particularly the domestic and rural consumers to whom the power can economically be made available; and,

[fol. 2394] Whereas, Municipality owns and operates an electric street lighting system and water pumping plant, and the electors of Municipality have by referendum authorized Municipality to acquire by construction or purchase a municipal electric distribution system, and Municipality intends to acquire and operate such a system; and,

Whereas, Municipality desires to purchase power from Authority for municipal purposes and for resale and proposes to pay therefor; and,

Whereas, after investigation by Authority, it appears that Authority will have sufficient quantities of power available to meet the requirements of Municipality under the terms of this contract after all requirements of Authority and of the United States have been fulfilled; and,

Whereas, all parties to this contract have duly authorized its execution;

Now, Therefore, for and in consideration of the mutual covenants herein contained, and subject to all of the provisions of the Tennessee Valley Authority Act of 1933, as amended, the parties hereto mutually covenant and agree as follows:

COMPLAINANTS' EXHIBIT No. 133

1. Term of Contract.—This contract shall become effective upon the execution hereof, and shall continue in effect for twenty years.

2. Acquisition of Plant.—Municipality agrees with all reasonable diligence to acquire by purchase or construction a municipal electric distribution system for The City of Jackson, and to do all acts and things which it may legally do, which may be necessary or helpful in effectuating such purpose.

[fol. 2395] 3. Construction of Transmission Facilities.—Authority agrees, with all reasonable diligence to construct and install the transmission and transformation facilities reasonably necessary in the opinion of Authority for continuous and dependable service, giving due consideration to the actual magnitude of Municipality's load requirements.

4. Power Supply.—Authority will, from the date of execution of this contract to the expiration hereof, supply electricity to Municipality for municipal purposes and for resale. Municipality agrees to purchase from Authority, and Authority agrees to supply, the entire electricity requirements of Municipality. Should Municipality during the period of this contract desire to increase its purchases in excess of 600 KVA, Authority shall deliver such excess upon written demand and after reasonable notice, provided that the requirements of Authority and/or the United States reasonably enable it to do so. Reasonable notice shall be defined as six (6) months after date of demand if the additional requirements are 3,000 kw. or less, twelve (12) months after date of demand if the additional requirements are over 3,000 kw. but not over 5,000 kw., and two (2) years after date of demand if the additional requirements are in excess of 5,000 kw. Said energy shall be delivered in the form of three phase, alternating current, at approximately 60 cycles per second and approximately 2,300 volts, or at such other voltage as the parties may from time to time agree.

5. Point of Delivery.—Authority will deliver and meter the electricity purchased hereunder at the low tension side

of Authority's substation located adjacent to Municipal-
[fol. 2396] ity's present water and light plant on South Royal Street in the city of Jackson, Tennessee, or at such other point as the parties may from time to time agree upon. Authority will install only such oil circuit breakers as in its opinion are necessary for the protection of its transformer bank or banks and/or the transmission line or lines supplying energy to such substation.

6. Schedule of Rates.—Attached hereto, and hereby made a part hereof, is a "Schedule of Rates and Charges." Municipality agrees to pay for the energy supplied by Authority at the rates fixed in Schedule A-1 entitled "Wholesale Power Rate." All payments shall be made to Authority at its offices at Wilson Dam, Alabama, or at such other place as Authority may from time to time designate.

7. Resale Rates.—In order to insure a wide and ample distribution of electricity in the area served by Municipality, Authority and Municipality agree as follows:

(a) The surplus power purchased by Municipality hereunder shall be sold and distributed by Municipality to the ultimate consumer without discrimination between consumers of the same class, and no discriminatory rate, rebate, or other special concession will be made or given by Municipality to any customer.

(b) Municipality shall charge consumers, including all municipal and governmental customers and departments, the rates set forth for the several classes thereof in Schedules B-1, B-2, B-3, and B-5 of the Schedule of Rates and Charges, and shall not depart therefrom except by agreement of the parties. Additional resale schedules for special [fol. 2397] classes of consumers or special uses of electricity may be added from time to time by agreement of the parties.

(c) If it should appear that the rates provided for in said resale schedules, with the surcharge provided for therein, do not produce revenues sufficient to operate and maintain Municipality's electric system on a self-supporting and financially-sound basis, including requirements for

interest and amortization on indebtedness applicable to Municipality's electric system, Authority and Municipality shall agree upon, and Municipality shall put into effect, such changes in rates as will provide for the increased revenues necessary to place the system upon such self-supporting and financially-sound basis.

(d) Municipality shall dispose of its gross revenues from electric operations in the following manner:

(1) Revenues shall first be used for the payment of all current operating expenses, including salaries, wages, cost of materials and supplies, power at wholesale and insurance.

(2) From remaining revenues Municipality shall next currently provide for the payment at maturity of interest accrued on all bonds or other indebtedness applicable to Municipality's electric system, and for amortization charges on all such bonds or other indebtedness and/or sinking fund payments thereon.

(3) Thereafter revenues shall be used currently to set up reasonable reserves for replacements, new construction and for contingencies, and to provide a reasonable amount of cash working capital.

[fol. 2398] (4) From remaining revenues Municipality shall thereafter pay into its General Fund a return on its investment and a tax equivalent as provided in the Financial and Accounting Policy in the Schedule of Terms and Conditions of Contract attached hereto.

(5) All remaining revenues shall be considered surplus revenues and may be devoted by Municipality to the purchase or retirement of bonds or other indebtedness applicable to the electric system before maturity, and if not so devoted shall serve as the basis for the reduction or elimination of surcharges to consumers, and thereafter for the reduction of rates. Surplus revenues shall be computed as of December 31, and June 30, of each year.

8. Payment for Municipality's Energy Requirements.—Municipality agrees to pay into its electric funds from appropriate general or special funds for all electric service

required by Municipality for street lighting, water pumping, and other operations and uses, at the resale rates as set forth in the Schedule of Rates and Charges, with such modifications and additions as may from time to time be agreed upon by the parties.

9. Terms and Conditions.—Attached hereto, and hereby made a part hereof, is a schedule entitled, "Schedule of Terms and Conditions." The provisions of this schedule may from time to time be changed or supplemented by agreement of Municipality and Authority. It is understood and agreed that the several provisions of the said schedule, with such changes as may from time to time be adopted pursuant hereto, as well as the several provisions of this contract and of the Schedule of Rates and Charges, are of the essence of this contract.

[fol. 2399] 10. Rules and Regulations.—Attached hereto and hereby made a part hereof is a "Schedule of Rules and Regulations." Municipality hereby adopts said Schedule of Rules and Regulations. The provisions of said schedule may be amended, supplemented or repealed by Municipality at any time upon ten (10) days written notice to Authority setting forth the nature of and reason for the proposed change. No change shall be made in said schedule, however, which is inconsistent with or in violation of any of the provisions of the remaining part of this contract. In said schedule the term "Distributor" shall be construed to mean Municipality.

11. Waiver of Defaults.—Any waiver at any time by either party hereto of its rights with respect to any default of the other party hereto and/or with respect to any other matter arising in connection with this contract shall not be considered a waiver with respect to any subsequent default or matter.

12. Contract Not Transferable.—Neither this contract nor any interest therein shall be transferable or assignable by Municipality to any other party without the consent of Authority.

13. Termination of Prior Contract.—The term of the power contract dated October 16, 1935, between the parties

COMPLAINANTS' EXHIBIT No. 133

hereto, shall be deemed to expire and terminate as of the date of this contract, and said contract of October 16, 1935, shall be superseded by this contract.

In Witness Whereof, the parties hereto have caused this instrument to be signed and attested by their duly author- [fol. 2400] ized officers, the day and year first above written.

Tennessee Valley Authority, (S.) by Arthur E. Morgan, Chairman, Board of Directors. W. T. M. Legal Div. (Seal.)

Attest: (S.) Charles E. Hoffman, Assistant Secretary.

The City of Jackson, Tennessee, (S.) by A. B. Foust, Mayor and Chairman of Board of Public Utilities. (Seal.)

Attest: (S.) D. W. Luckey, City Recorder.

WTM:EW

[fol. 2401] The Schedule of Rates and Charges, the Schedules of Terms and Conditions and Rules and Regulations attached to this contract are substantially the same as those attached to and made a part of the contract between TVA and the City of Dickson, Tennessee. (Complainants' Exhibit No. 118.)

[fol. 2402] COMPLAINANTS' EXHIBIT No. 134

Power Contract Between Tennessee Valley Authority and City of Paris, Tennessee

This Agreement, made and entered into this 2nd day of November, 1937, between the Tennessee Valley Authority, hereinafter called "Authority," a corporation created by the Tennessee Valley Authority Act of 1933, its successors and assigns, and City of Paris, Tennessee, a municipal corporation duly organized, created, and existing under and by virtue of the laws of the State of Tennessee, hereinafter called "Municipality," its successors and assigns:

Witnesseth:

Whereas, Authority, by Section 10 of said Act, is authorized to sell the surplus power generated by it and not used

in its operations, and is directed to give preference to States, counties, municipalities, and cooperative organizations of citizens or farmers not organized or doing business for profit; and

Whereas, by section 11 of said Act it is provided that the sale of power by Authority shall be primarily for the benefit of the people of the section as a whole and particularly the domestic and rural consumers to whom the power can economically be made available; and

[fol. 2403] Whereas, the electors of Municipality have by referendum authorized Municipality to acquire by construction or purchase a municipal electric distribution system, and Municipality intends to acquire and operate such a system; and

Whereas, Municipality desires to purchase power from Authority for municipal purposes and for resale and proposes to pay therefor; and

Whereas, after investigation by Authority, it appears that quantities of power generated at Authority's dams, sufficient to meet the requirements of Municipality under the terms of this contract, will be available for sale by Authority after all requirements of Authority and of the United States have been fulfilled; and

Whereas, all parties to this contract have duly authorized its execution;

Now, Therefore, for and in consideration of the mutual covenants herein contained, and subject to all of the provisions of the Tennessee Valley Authority Act of 1933, as amended, the parties hereto mutually covenant and agree as follows:

1. Term of Contract.—This contract shall become effective upon the execution hereof, and shall continue in effect for twenty (20) years; Provided, that all obligations of the parties hereto with regard to the rendition of service and payment therefor shall begin at such time (hereinafter designated "date of initial delivery") as Authority shall have completed acquisition or construction of the transmission and transformation facilities necessary to serve [fol. 2404] Municipality, and Municipality shall have acquired its distribution system, or any part thereof, and shall be in physical position to take such service for its said system or part thereof. All service and payment periods

hereinafter referred to shall be computed from the date of initial delivery.

2. Acquisition of Systems.—Municipality agrees to use all reasonable diligence in acquiring, by construction, purchase, or otherwise, a distribution system, operation of which is permitted by Municipality. Upon six months' notice in writing that Municipality has completed arrangements and executed firm contracts for the purchase, construction, or acquisition of said system and the financing thereof, including customer commitments giving Municipality an assured load of at least 750 kw., Authority agrees to arrange to construct or acquire such transmission and transformation facilities as are reasonably necessary to supply Municipality's wholesale power requirements, giving due regard to the magnitude thereof. In the event Municipality determines to construct its distribution system, it shall also notify Authority of the date on which actual construction is begun, in order that Authority may coordinate its construction or acquisition plans with those of Municipality. In no event shall Authority be obligated to commence delivery of power to Municipality hereunder prior to December 30, 1938.

3. Power Supply.—Authority will, from the date of initial delivery to the expiration hereof, supply electricity to Municipality for municipal purposes and for resale. Municipality agrees to purchase from Authority, and Authority agrees to supply, the entire electricity requirements of Municipality. Should Municipality during the period of [fol. 2405] this contract desire to increase its purchases in excess of 1500 kw., Authority shall deliver such excess upon written demand and after reasonable notice, provided that the requirements of Authority and/or the United States reasonably enable it to do so. Reasonable notice shall be defined as nine (9) months after date of demand if the additional requirements are 5,000 kw. or less, twelve (12) months after the date of demand if the additional requirements are over 5,000 kw. but not over 10,000 kw., and two (2) years after date of demand if the additional requirements are in excess of 10,000 kw. Said energy shall be delivered in the form of three phase, alternating current, at approximately 60 cycles per second and approximately

2300 volts, or at such other voltage as the parties may from time to time agree.

4. Point of Delivery.—Authority shall deliver the power purchased hereunder at such point within or near the corporate limits of Municipality as shall hereafter be agreed upon between Authority and Municipality, and Municipality shall furnish Authority gratis a substation site for the period of this contract. The energy to be supplied Municipality hereunder shall be metered at the low tension side of the step-down transformer bank or banks of the substation or substations to be constructed, owned, and operated by Authority, and Authority will install only such oil circuit breakers as in its opinion are necessary for the protection of its tranformer bank or banks and/or the transmission line or lines supplying energy to such substations.

5. Schedule of Rates.—Attached hereto, and hereby made a part hereof, is a "Schedule of Rates and Charges." [fol. 2406] Municipality agrees to pay for the energy supplied by Authority at the rates fixed in Schedule A-1 entitled "Wholesale Power Rate." Municipality shall pay Authority the following amounts annually as a minimum:

First year after date of initial delivery	$15,000 per year.
Second year after date of initial delivery	18,000 per year.
Third and succeeding years after date of initial delivery	25,000 per year.

In the event that this contract terminates on a date other than an anniversary of the date of initial delivery, the minimum bill for the partial year shall be prorated on a calendar basis. Any sums due under the minimum bill provisions of this section shall be paid within thirty (30) days after the end of the year or partial year for which such sums are due. All payments shall be made to Authority at its offices at Wilson Dam, Alabama, or at such other place as Authority may from time to time designate.

6. Resale Rates.—In order to insure a wide and ample distribution of electricity in the area served by Municipality, Authority and Municipality agree as follows:

(a) Municipality agrees that the surplus power purchased hereby shall be sold and distributed to the ultimate con-

sumer without discrimination between consumers of the same class, and that no discriminatory rate, rebate, or other special concession will be made or given to any customer.

(b) Municipality agrees to charge consumers, including all municipal and governmental customers and departments, the rates set forth for the several classes thereof in Schedules B-1, B-2, B-3, and B-5 of the Schedule of Rates and Charges, and not to depart therefrom except by agreement [fol. 2407] of the parties. Additional resale schedules for special classes of consumers or special uses of electricity may be added from time to time by agreement of the parties.

(c) If it should appear that the rates provided for in said resale schedules, with the surcharge provided for therein, do not produce revenues sufficient to operate and maintain Municipality's electric system on a self-supporting and financially-sound basis, including requirements for interest and amortization on indebtedness applicable to Municipality's electric system, Authority and Municipality shall agree upon, and Municipality shall put into effect such changes in rates as will provide for the increased revenues necessary to place the system upon such self-supporting and financially-sound basis.

(d) Municipality agrees to dispose of its gross revenues from electric operations in the following manner:

(1) Revenues shall first be used for the payment of all current operating expenses, including salaries, wages, cost of materials and supplies, power at wholesale, and insurance.

(2) From remaining revenues Municipality shall next currently provide for the payment at maturity of interest accrued on all bonds or other indebtedness applicable to Municipality's electric system, and for amortization charges on all such bonds or other indebtedness and/or sinking fund payments thereon.

(3) Thereafter revenues shall be used currently to set up reasonable reserves for replacements, new construction, and for contingencies, and to provide a reasonable amount of cash working capital.

[fol. 2408] (4) From remaining revenues Municipality shall thereafter pay into its General Fund a return on its

investment and a tax equivalent as provided in the Financial and Accounting Policy in the Schedule of Terms and Conditions of Contract attached hereto.

(5) All remaining revenues shall be considered surplus revenues and may be devoted by Municipality to the purchase or retirement of bonds or other indebtedness applicable to the electric system before maturity and if not so devoted shall serve as the basis for the reduction or elimination of surcharges to consumers, and thereafter for the reduction of rates. Surplus revenues shall be computed as of December 31 and June 30 of each year.

7. Payment for Municipality's Energy Requirements.—Municipality agrees to pay into its electric funds from appropriate general or special funds for all electric service required by Municipality for street lighting, water pumping, and other operations and uses, at the resale rates as set forth in the Schedule of Rates and Charges, with such modifications and additions as may from time to time be agreed upon by the parties.

8. Terms and Conditions.—Attached hereto, and hereby made a part hereof, is a schedule entitled "Schedule of Terms and Conditions." The provisions of this schedule may from time to time be charged or supplemented by agreement of Municipality and Authority. It is understood and agreed that the several provisions of the said schedule, with such changes as may from time to time be adopted pursuant hereto, as well as the several provisions of this contract and of the Schedule of Rates and Charges, are of the essence of this contract.

[fol. 2409] 9. Rules and Regulations.—Attached hereto and hereby made a part hereof is a "Schedule of Rules and Regulations." Municipality hereby adopts said Schedule of Rules and Regulations. The provisions of said schedule may be amended, supplemented, or repealed by Municipality at any time upon ten (10) days' written notice to Authority setting forth the nature of and reason for the proposed change. No change shall be made in said schedule, however, which is inconsistent with or in violation of any of the provisions of the remaining part of this contract. In said schedule the term "Distributor" shall be construed to mean Municipality.

COMPLAINANTS' EXHIBIT No. 134

10. Waiver of Defaults.—Any waiver at any time by either party hereto of its rights with respect to any default of the other party hereto and/or with respect to any other matter arising in connection with this contract shall not be considered a waiver with respect to any subsequent default or matter.

11. Contract Not Transferable.—Neither this contract nor any interest therein shall be transferable or assignable by Municipality to any other party without the consent of Authority.

In Witness Whereof, the parties hereto have caused this instrument to be signed and attested in quadruplicate, by their duly authorized officers, the day and year first above written.

Power Contract Between TVA and Southwest Tennessee Electric Membership Corporation, Dated December 9, 1936

(Here omitted as such contract appears in full at pages 239 et seq., of the Annual Report of TVA, for the fiscal year ended June 30, 1937, received in evidence as Defendants' Exhibit No. 154 and which is an original exhibit.)

[fol. 2415] COMPLAINANTS' EXHIBIT No. 142

Power Contract Between TVA and Joe Wheeler Electric Membership Corporation, Dated September 24, 1937

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and North Georgia Electric Membership Corporation, except:

1. The maximum amount of electricity which TVA shall be obligated to deliver shall not be in excess of 1000 kw. except on demand and notice as provided for in the contract between TVA and the City of Sheffield, Alabama.

2. The point of delivery shall be on the low tension side of TVA's substations located near Courtland, Alabama, and in Hartselle, Alabama.

[fol. 2416] COMPLAINANTS' EXHIBIT No. 143

Power Contract Between TVA and Cherokee County (Alabama) Electric Membership Corporation, Dated November 2, 1937

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the contract between TVA and North Georgia Electric Membership Corporation, except:

1. The maximum amount of electricity which TVA agrees to supply before January 1, 1939, is 1000 kw.

2. The point of delivery shall be at TVA's metering equipment located in the vicinity of Crossville, Alabama.

[fol. 2417] COMPLAINANTS' EXHIBIT No. 144

Power Contract Between TVA and Northeast Mississippi Electric Power Association, Dated March 26, 1937

(Here omitted as such contract appears in full at pages 277 et seq., of the Annual Report of TVA, for the fiscal year ended June 30, 1937, received in evidence as Defendants' Exhibit No. 154 and which is an original exhibit.)

[fol. 2418] COMPLAINANTS' EXHIBIT No. 145

Supplement to Power Contract Between TVA and North East Mississippi Electric Power Association, Dated July 27, 1937

This contract, omitting the formal parts thereof is as follows:

"Whereas, said agreement dated March 26, 1937, provided in Paragraph 2 thereof that such electricity supplied by the Authority to the Association should be used or resold in the counties of Pontotoc and Union exclusively, which territorial restriction it is now desired to abandon;

Now, Therefore, in consideration of the premises and the mutual covenants herein contained, said agreement dated March 26, 1937, is hereby supplemented and amended as follows:

1. Authority will, from and after the "Date of initial delivery" as defined in Paragraph 1 of said original agreement, supply electricity to the Association for corporate purposes and for resale, to be used or resold in any counties to which the Association's distribution lines now or hereafter constructed may extend, including, but not limited to, the counties of LaFayette and Marshall, in addition to those counties, being Pontotoc and Union, originally provided for.

Association agrees to purchase from Authority the entire electricity requirements of Association, whether for use or resale in any territory into which its lines may now or hereafter extend.

157—Power contract between TVA and Volunteer Portland Cement Company, August 14, 1936 (omitted) 2425 2891
158—Assignment of contract between Volunteer Portland Cement Company and TVA 2428 2892
159—Contract between TVA and United States of America concerning Sardis Dam, March 14, 1937 (omitted) 2430 2894
160—Contract between TVA and Victor Chemical Works, July 2, 1937 (omitted)..... 2430 2895
161—Contract between TVA and Electro Metallurgical Company, August 17, 1937 (omitted) 2431 2895
162—Construction contract between TVA and Meigs County Electric Membership Corporation, June 29, 1936..... 2432 2895
163—Construction contract between TVA and Cullman County Electric Membership Corporation, dated August 4, 1936..... 2449 2909
164—Construction contract between TVA and Cullman County Electric Membership Corporation, dated February 19, 1936... 2453 2911
165—Supplemental construction contract between TVA and Cullman County Electric Membership Corporation, dated February 27, 1937..... 2454 2912
166—Construction contract between TVA and North Georgia Electric Membership Corporation, September 4, 1936..... 2455 2913
167—Construction contract between TVA and Middle Tennessee Electric Membership Corporation, September 15, 1936..... 2456 2914
168—Construction contract between TVA and Southwest Tennessee Electric Membership Corporation, December 3, 1936.... 2457 2914
169—Construction contract between TVA and Gibson County Electric Membership Corporation, March 30, 1937..... 2458 2915
170—Construction contract between TVA and Joe Wheeler Electric Membership Corporation, September 24, 1937..... 2459 2916
170-A—Construction contract between TVA and Joe Wheeler Electric Membership Corporation, May 14, 1937..... 2464 2919
171—Construction contract between TVA and Monroe County Electric Power Association, July 7, 1937..... 2472 2925

Record from D. C. U. S., Eastern District of Tennessee—Continued.
Statement of evidence—Continued.
Complainants' Exhibits Nos.—Continued. Original Print
172—Construction contract between TVA and Duck River Electric Membership Corporation, June 15, 1937 ..... 2473 2925
173—Construction contract between TVA and City of Pulaski, August 23, 1935 ..... 2474 2926
174—Construction contract between TVA and City of Dayton, January 24, 1936 ..... 2479 2929
175—Construction contract between TVA and Town of Bolivar, September 7, 1937 ..... 2490 2937
176—Operating contract between TVA and Lincoln County Electric Membership Corporation, October 1, 1935 ..... 2491 2938
177—Supplemental contract between TVA and Lincoln County Electric Membership Corporation, June 19, 1936 ..... 2495 2941
178—Operating contract between TVA and Monroe County Electric Power Association, February 1, 1936 ..... 2496 2941
179—Operating contract between TVA and Pickwick Electric Membership Corporation, April 21, 1936 ..... 2499 2943
180—Operating contract between TVA and Bedford Electric Membership Corporation, May 18, 1936 ..... 2505 2947
181—Sale and loan contract between TVA and Gibson County Electric Membership Corporation, August 13, 1936 ..... 2510 2950
182—Map showing the location of new industries in the State of Alabama (original exhibit) [omitted] 2522 2960
183—Chart showing the Alabama Power Company gross sales of appliances annually from 1927 to 1936 (original exhibit) [omitted] 2523 2960
184—Graph showing the number of miles of rural lines of the Alabama Power Company in each of the years from 1923 to date (original exhibit) [omitted] 2523 2960
185—Copy of the rules of the Alabama Public Service Commission concerning rural lines 2524 2961
186—Memorandum listing municipalities which sold their systems to the Alabama Power Company 2531 2967
187—Rotogravure pamphlet issued by the Electric Home and Farm Authority (original exhibit) [omitted] 2532 2968
188—Booklet printed by the United States Printing Office describing the various TVA projects (original exhibit) 2533 2969

	Original	Print
Record from D. C. U. S., Eastern District of Tennessee—Continued.		
Statement of evidence—Continued.		
Complainants' Exhibits Nos.—Continued.		
189—Booklet entitled "TVA Electricity Rates" (original exhibit)	2533	2977
190—Booklet entitled "Development of the Tennessee Valley" (original exhibit)	2533	2985
191—List of Alabama towns voting to acquire electric systems in the years 1933 to 1937	2534	3001
192—Comparison of the rates of the Alabama Power Company and the TVA	2535	3002
193—Contingent power contract between residential consumers and the City of Albertville, Alabama (omitted)	2536	3003
194—Letter from Rockwood Alabama Stone Company to Alabama Power Company, giving notice of termination of contract.	2537	3003
195—Letter from Decatur Iron & Steel Company to Alabama Power Company, giving notice of termination of contract	2538	3004
196—Power contract between TVA and Alcorn County Electric Power Association, dated June 30, 1937	2539	3004
197—Binder contract signed by Hammond Green with the City of Albertville, Alabama	2541	3006
198—Comparison of The Tennessee Electric Power Company and Tennessee Valley Authority rates	2542	3007
199—Map of Northeast Mississippi showing lines of Mississippi Power Company, TVA, cooperatives and municipalities (original exhibit) [omitted]	2542	3007
200—Letters from the City of Columbus to the Mississippi Power Company	2544	3008
201—Letters from the City of Aberdeen to the Mississippi Power Company	2547	3011
202—Letter from the Mayor of Starkville to the Mississippi Power Company	2552	3015
203—Binder contract circulated in the City of Columbus, Mississippi	2553	3016
204—Questionnaire filled out by J. L. Street for the City of Columbus, Mississippi	2554	3016
205—Map of West Tennessee and Paris districts of Kentucky-Tennessee Light & Power Company (original exhibit) [omitted]	2558	3017
206—Map of North Tennessee division of the Tennessee Electric Power Company (original exhibit) [omitted]	2559	3017

Record from D. C. U. S., Eastern District of Tennessee—Continued.
Statement of evidence—Continued.
Complainants' Exhibits Nos.—Continued.

	Original	Print
207—Map of East Tennessee division of Tennessee Electric Power Company (original exhibit) [omitted]	2560	3017
208—Map of Middle Tennessee division of The Tennessee Electric Power Company (original exhibit) [omitted]	2561	3017
209—Map of Cumberland division of The Tennessee Electric Power Company (original exhibit) [omitted]	2562	3018
210—Map of West Tennessee Power & Light Company territory (original exhibit) [omitted]	2563	3018
211—List of former customers of West Tennessee Power & Light Company now being served by the City of Jackson with TVA power	2564	3019
212—Letter November 2, 1937 from Thompson Baking Company to West Tennessee Power & Light Company	2565	3020
213—Letter of Earl Wall of TVA distributed in West Tennessee Power & Light Company territory	2566	3021
214-223, incl.—Franchises granted by Alabama counties to TVA	2567	3022
224—Power contract dated November 5, 1937 between TVA and Tippah County Electric Power Association	2572	3026
225-264, incl.—Franchises granted by Tennessee Counties to TVA	2573	3026
265—Franchise from Town of Fayetteville to TVA	2594	3037
266—Map of Tennessee showing counties granting franchises to TVA (original exhibit) [omitted]	2597	3040
267-274, incl.—Charters of Alabama Co-operative Associations	2598	3040
275-319, incl.—Franchises granted by Tennessee counties to co-operative associations	2607	3049
320—Map of Tennessee showing counties granting franchises to co-operative associations (original exhibit) [omitted]	2631	3066
321—Map of Tennessee showing counties which have granted electric franchises to TVA counties which have granted electric franchises to electric membership corporations and counties which have granted electric franchises to both TVA and electric membership corporations (original exhibit) [omitted]	2632	3066

Record from D. C. U. S., Eastern District of Tennessee—Continued.
Statement of evidence—Continued.
Complainants' Exhibits Nos.—Continued. Original Print
322—Certificate of Secretary of State showing TVA has not qualified to do business in Tennessee 2633 3066
323—Certificate of Secretary of State of Georgia showing TVA has not qualified to do business in Georgia..... 2635 3067
324—Certificate of Secretary of State showing TVA has not qualified to do business in Mississippi 2635 3067
325—Certificate of Secretary of State showing TVA has not qualified to do business in Alabama 2635 3068
326—Map of Northern Division of Alabama Power Company (original exhibit) [omitted] 2636 3068
327—Map entitled "Transmission and Distribution systems of the complainant companies and transmission lines of others situated within 250 miles of any TVA dam whether constructed or authorized or recommended for construction" (original exhibit) [omitted] 2637 3068
328—Report to Congress by TVA on "The Unified Development of the Tennessee River System" (original exhibit) [omitted]... 2638 3068
329—Map of the Dalton division of the Georgia Power Company (original exhibit) [omitted] 2639 3069
330—Map of the State of Georgia showing transmission and distribution system of the Georgia Power Company and municipalities in which that Company owns distribution systems and arcs 100, 150 and 250 miles from Chickamauga, Guntersville and Hiwassee Dams (original exhibit) [omitted] 2640 3069
331—Tabulation showing the number of customers and the total kwh. sales within each of the three zones shown on map, Exhibit 330 ..... 2641 3070
332—Map of the transmission and rural distribution lines of the complainant companies, the Tennessee Valley Authority and the cooperatives (original exhibit) [omitted] 2642 3071
332-a—Map entitled "Transmission and rural distribution lines completed, under construction and proposed in the area penetrated by TVA as of November 1, 1937" (original exhibit [omitted]..... 2642 3071

Record from D. C. U. S., Eastern District of Tennessee—Continued.
Statement of evidence—Continued.
Complainants' Exhibits Nos.—Continued. Original Print
333—Map showing the relation of the TVA transmission lines to the load centers in the area (omitted) 2642 3071
333-a—Map entitled "TVA Transmission lines completed, under construction and proposed, and principal load centers of TVA and complainant companies situated within 100 miles of any TVA dam conconstructed, or authorized or recommended for construction" (original exhibit) [omitted] 2643 3071
334—Design of a system to serve existing TVA loads (original exhibit) [omitted]..... 2643 3071
335—Map showing the transmission lines of the complainants and the load centers in the area (omitted) 2643 3072
335-a—Map entitled "Transmission lines of complainant companies completed and under construction and principal load centers of TVA and complainant companies situated within 100 miles of any TVA dam constructed or authorized or recommended for construction" (original exhibit) [omitted] 2644 3072
336—Maps showing the lines of the Tennessee Electric Power Company by five-year intervals from 1917 to date (original exhibit) [omitted] 2645 3072
337—Letter May 14, 1937 of notice sent by the Tennessee Railroad and Public Utilities Commission in connection with the proposed Nashville steam plant (omitted). 2645 3072
338—Contract between the Yates Bleachery Company and The Tennessee Electric Power Company dated April 13, 1937 (omitted in printing) 2646 3072
339—Pencil memorandum in the hand writing of Mr. Ayres, containing a comparison of TVA, TEP Co., and the Georgia Power Company rates 2650 3073
340—Note left by Mr. Ayres with A. E. Yates, giving T. R. Hunnicutt's Chattanooga address (omitted) 2651 3073
341—Proposed contract between the Yates Bleachery Company and the North Georgia Electric Membership Corporation 2652 3074
342—Map and profile showing the low dam plan (original exhibit) [omitted]..... 2666 3088

	Original	Print
Record from D. C. U. S., Eastern District of Tennessee—Continued.		
Statement of evidence—Continued.		
Complainants' Exhibits Nos.—Continued.		
343—Map and profile showing the TVA plan (original exhibit) [omitted].....	2666	3083
344—Chart showing water traffic on the Tennessee River, 1927 to 1934, relation of sand and gravel movement (original exhibit) [omitted]	2666	3083
345—Chart showing the approximate distribution of average freight movements on the Tennessee River, 1927 to 1934, inclusive (original exhibit) [omitted]...	2666	3083
346—Chart showing a comparison of the alternative methods of developing the Tennessee River (original exhibit) [omitted]	2666	3083
347—A page from the Waterways Journal of St. Louis, Missouri, September 18, 1937, relating an incident concerning a storm near Wheeler Dam (omitted)	2667	3083
348—Tabulation showing the 1930 population of cities and towns on the Tennessee River and tributaries which suffer from flood damage	2668	3084
349—Table showing the flood damages to cities and towns, railways and highways in the entire Tennessee River Basin.....	2669	3084
350—Chart showing variation in flow day by day during the maximum flood to be expected on the Tennessee River at and above Chattanooga (Knoxville, Loudon and Chattanooga) (original exhibit) [omitted]	2670	3085
351—Chart of the flood profile of the Tennessee River from Knoxville to Chattanooga, showing the bottom of the river, the low water line, a line joining the highest stage at various points reached by the highest flood of record, and a line joining the peak stage at various points reached by the maximum flood to be expected (original exhibit) [omitted]..	2670	3085
352—Map of the Tennessee River Basin showing the location of the system of flood control reservoirs designed by Ford Kurtz and the existing power reservoirs in May, 1933 (original exhibit) [omitted]	2670	3085
353—Table showing certain engineering data on system of flood control to achieve maximum practicable protection	2671	3086

Record from D. C. U. S., Eastern District of Tennessee—Continued.
Statement of evidence—Continued.
Complainants' Exhibits Nos.—Continued. Original Print
354—Map of the Tennessee River Basin showing the TVA Unified Plan recommended to Congress and the existing power reservoirs in May, 1933 (original exhibit) [omitted] 2672 3087
355—Table showing the engineering data on the elements of the TVA Unified Plan which would in any way affect floods at and above Chattanooga..... 2673 3088
356—Table listing the towns and cities on the main river and the Emory River showing the comparison of reductions in maximum flood stage above Chattanooga which would be brought about by the Kurtz system of flood control and the non-dependable reductions which might be brought about by the TVA Unified Plan 2674 3088
357—Chart showing reductions in flow day by day which would be brought about by flood control system recommended by Kurtz and by the TVA Unified Plan during the maximum flood to be expected on the Tennessee River at and above Chattanooga (Knoxville, Loudon and Chattanooga) (original exhibit) [omitted] 2675 3089
358—Chart showing the reduction in flow day by day which would be brought about at Harriman by the proposed flood control system during the maximum flood to be expected on the Emory River (original exhibit) [omitted]..... 2675 3089
359—Graph entitled "Flood profile of the Tennessee River, Knoxville to Chattanooga, showing reductions in stage which would be brought about by recommended flood control system and by TVA Unified Plan" (original exhibit) [omitted]..... 2675 3089
360—Table showing a comparison of lands which would be flooded by the recommended flood control system and by the TVA Unified Plan..... 2676 3090
361—Chart showing a comparison of the recommended flood control system and the TVA Unified Plan as to construction costs and additional prime power at sixty per cent load factor (original exhibit) [omitted] 2677 3091

Record from D. C. U. S., Eastern District of Tennessee—Continued.
Statement of evidence—Continued.
Complainants' Exhibits Nos.—Continued. Original Print
362—Chart entitled "Comparison of the power and flood control functions of the Norris Dam and reservoir as constructed in TVA's Unified Plan with the proposed dam and reservoir on the Clinch River in the recommended flood control system" (original exhibit) [omitted]..... 2677 3091
363—Tabulation showing the costs of transportation on land and on water..... 2678 3091
364 (Excerpts from)—Hearings before the Committee on Interstate and Foreign Commerce, House of Representatives, Seventy-Fourth Congress, First Session (original exhibit) 2679 3092
365 Excerpts from)—Hearings before the Committee on Military Affairs, House of Representatives, Seventy-Fourth Congress, First Session (original exhibit). 2694 3110
366 (Excerpts from)—Hearings before the Committee on Military Affairs, House of Representatives, Seventy-Fourth Congress, First Session, Volume 2 (original exhibit) 2706 3121
367—Table showing combined one-hour peaks by months for the Appalachian Electric Power Company, the Kentucky and West Virginia Power Company and Kingsport Utilities, Inc. for the years 1928 to 1937 2711 3126
368—Graph showing the curve of the combined system peaks of Appalachian Electric Power Company, Kentucky & West Virginia Power Company, and Kingsport Utilities, Inc., and also the estimate of the demand for the future..... 2712 3126
369—Table showing by years the combined loads and generating capacities from 1928 to 1941 inclusive of the Appalachian Electric Power Company, the Kentucky and West Virginia Power Company and Kingsport Utilities, Inc..... 2713 3126
370—Graph showing the combined loads and generating capacities from 1928 to 1941 for Appalachian Electric Power Company, Kentucky & West Virginia Power Company, and Kingsport Utilities, Inc..... 2714 3126
371—Table "Summary of Capacities Available to Commonwealth & Southern System—1937 (Southern System)"..... 2715 3127

Record from D. C. U. S., Eastern District of Tennessee—Continued.
Statement of evidence—Continued.
Complainants' Exhibits Nos.—Continued. Original Print
372—Graph of Commonwealth & Southern Corporation southern properties, capacities and loads from 1929 to 1939 (original exhibit) [omitted] 2716 3128
373—Complete resolution of the Knoxville City Council dated February 21, 1933..... 2717 3128
374—A booklet consisting of ten sheets entitled "Adequacy of Power Supply Facilities, Carolina Power & Light Company, Tennessee Public Service Company and Holston River Electric Company"..... 2718 3128
375—A booklet consisting of seven pages entitled "Adequacy of Power Supply Facilities, Arkansas Power & Light Company, Louisiana Power & Light Company, Memphis Power & Light Company, Mississippi Power & Light Company and West Tennessee Power & Light Company"..... 2729 3139
376—A booklet consisting of three pages entitled "Birmingham Electric Company Actual and Estimated Load Data 1927 to 1940, inclusive" 2736 3146
377—A contingent power contract for residential consumers circulated in Scottsboro prior to the municipal election there..... 2739 3149
378—A letter, dated February 22, 1936, from David Lilienthal to Roy McCullough, Jr. 2740 3150
379—This number inadvertently was given to a non-existent deposition exhibit..... 2742 3153
380—Copy of an agreement dated April 6, 1936, between TVA and the promoters of the North Georgia Electric Membership Corporation 2743 3153
381—Petition for charter of the North Georgia Electric Membership Corporation [omitted] 2748 3155
382—Order of Whitfield County Superior Court granting the charter to the North Georgia Electric Membership Corporation [omitted] 2748 3156
383—Assignment of the promoters' agreement by the promoters to the North Georgia Electric Membership Corporation 2749 3156
384—Map of the lines of the North Georgia Electric Membership Corporation attached to the TVA-North Georgia Electric Membership Corporation construction contract of June, 1936 [omitted]..... 2752 3157

	Original	Print
Record from D. C. U. S., Eastern District of Tennessee—Continued.		
Statement of evidence—Continued.		
Complainants' Exhibits Nos.—Continued.		
385—Construction loan contract between the United States of America (REA) and North Georgia Electric Membership Corporation dated September 2, 1936 [omitted]	2753	3158
386—Mortgage deed of trust between North Georgia Electric Membership Corporation and the First National Bank of Dalton [omitted]	2753	3158
387—By-laws of the North Georgia Electric Membership Corporation	2754	3158
388—Article entitled "Here are the Answers"	2771	3169
389—Letter dated March 31, 1937, from R. Carter Pittman to T. R. Hunnicutt, Division Manager of TVA at Chattanooga	2775	3171
390—Transcribed notes of a meeting at Cullman on May 6, 1936, at which a cooperative organization was organized	2777	3173
391—Form TVA 189-DE [omitted]	2794	3184
392—TVA form 231-DE [omitted]	2794	3184
393—Rural electrification survey neighborhood plan, information sheet [omitted]	2794	3184
394—TVA form 211-DE for discount on wiring for electric ranges and water heaters	2795	3185
395—Check dated July 21, 1937, from TVA to T. L. Bonner for wiring house	2797	3186
396—Remittance advice from TVA to T. L. Bonner	2798	3187
397—Envelope in which matter was sent by TVA to T. L. Bonner	2799	3188
398—Minutes of meeting of Directors of Middle Tennessee Electric Membership Corporation of June 24, 1936	2800	3189
399—Minutes of meeting of Directors of Middle Tennessee Electric Membership Corporation of November 4, 1936	2818	3201
400—Minutes of meeting of Directors of Middle Tennessee Electric Membership Corporation on November 13, 1936	2821	3204
401—Minutes of meeting of Directors of Middle Tennessee Electric Membership Corporation dated March 4, 1937	2828	3209
402—Minutes of meeting of Directors of Middle Tennessee Electric Membership Corporation of March 19, 1937	2833	3212
403—Minutes of meeting of Directors of Middle Tennessee Electric Membership Corporation of April 6, 1937	2837	3215

405—Minutes of meeting of Directors of Middle Tennessee Electric Membership Corporation of June 16, 1937	2849	3223
406—Minutes of meeting of Directors of Middle Tennessee Electric Membership Corporation of July 6, 1937	2864	3233
407—By-laws of Middle Tennessee Electric Membership Corporation [omitted]	2871	3238
408—TVA Proposed Rural Electrical Development, Rutherford-Wilson project	2872	3238
409—Map entitled "Mississippi River System, drainage areas of main tributaries" (original exhibit) [omitted]	2882	3244
410—Map showing Mississippi River flood control plan (original exhibit) [omitted]	2883	3244
411—Diagram showing relation between valley storage without dam, valley storage eliminated by reservoir, and controllable storage available	2884	3244
412—Letter dated September 8, 1937, to J. F. Burleson, as Mayor of Haleyville, from Martin G. Glaeser of TVA	2885	3244
413—Letter dated February 12, 1935, from F. F. Beauchamp of TVA to the City of Cullman, Alabama [omitted]	2886	3245
414—Letter dated April 13, 1936, to F. F. Beauchamp of TVA from Mayor Dunlap of Cullman [omitted]	2886	3245
415—Letter dated May 27, 1936, to F. F. Beauchamp of TVA from Mayor Dunlap of Cullman [omitted]	2886	3245
416—Letter dated July 9, 1936, to Mayor Dunlap from F. F. Beauchamp [omitted]	2886	3245
417—Letter dated August 4, 1936, to F. F. Beauchamp from Mayor Dunlap [omitted]	2886	3246
418—Report of Electric Power Board of Review re City of Decatur, Alabama	2887	3246
419—Application for loan and grant by Sheffield, Alabama. (Original and revised applications)	2893	3249
420—Loan and grant contract between Sheffield, Alabama and PWA dated December 28, 1934	2895	3251
421—Application for loan and grant by Tuscumbia, Alabama. (Original and revised applications)	2916	3270

Record from D. C. U. S., Eastern District of Tennessee—Continued.
Statement of evidence—Continued.
Complainants' Exhibits Nos.—Continued. Original Print
422—Loan and grant contract between PWA and Tuscumbia, Alabama 2916 3270
423—Application for loan and grant by Courtland, Alabama 2917 3271
424—Loan and grant contract between Courtland, Alabama, and PWA [omitted]..... 2919 3272
425—PWA Form 210, dated July 1, 1936, entitled "Terms and Conditions [omitted].... 2919 3272
426—Application for loan and grant by Decatur, Alabama 2920 3273
427—PWA loan and grant contract with the City of Decatur, dated December 6, 1934.... 2923 3276
428—Letter from David Lilienthal to Captain R. H. Elliott, Director of PWA, dated April 6, 1934, re Decatur application..... 2924 3276
429—Letter dated April 10, 1934, to David E. Lilienthal from R. H. Elliott in reply to preceding Exhibit..... 2926 3278
430—Application for loan and grant by Hartselle, Alabama 2927 3278
431—PWA loan and grant contract with Hartselle, Alabama [omitted] 2929 3280
432—Supplemental PWA contract with Hartselle, Alabama, dated December 4, 1935.. 2929 3281
433—Application for loan and grant by Muscle Shoals, Alabama 2930 3281
434—PWA loan and grant contract dated December 16, 1935, with Muscle Shoals, Alabama [omitted] 2931 3282
435—Subsequent PWA contract with Muscle Shoals, Alabama, dated February 29, 1936 [omitted] 2931 3282
436—Application for loan and grant by Russellville, Alabama 2931 3282
437—PWA loan and grant contract with Russellville, Alabama, dated November 9, 1935 [omitted] 2932 3283
438—Subsequent PWA contract with Russellville, Alabama, dated December 4, 1935 [omitted] 2932 3283
439—Application for loan and grant by Guntersville, Alabama..... 2932 3283
440—PWA loan and grant contract with Guntersville, Alabama, dated November 2, 1935 [omitted] 2935 3286
441—PWA contract with City of Guntersville, Alabama, dated December 4, 1935 [omitted] 2935 3286

Record from D. C. U. S., Eastern District of Tennessee—Continued.
Statement of evidence—Continued.
Complainants' Exhibits Nos.—Continued. Original Print
442—Application for loan and grant by Tarrant City, Alabama. (Original and revised applications) 2935 3286
443—PWA loan and grant contract with Tarrant City, Alabama..... 2938 3289
444—Application for loan and grant by Bessemer, Alabama. (Original and revised applications) 2939 3290
445—Hackett. PWA loan and grant contract with Bessemer, Alabama..... 2943 3294
446—Memorandum from O. M. Rau of the Electrical Power Board of Review of PWA to Henry T. Hunt, PWA Deputy Administrator, dated August 29, 1934..... 2944 3295
447—Letter dated August 31, 1934, to David E. Lilienthal from Henry T. Hunt..... 2949 3298
448—Letter dated September 11, 1934, from V. D. L. Robinson, of TVA, to Henry T. Hunt 2950 3299
449—Letter dated September 22, 1934, from David E. Lilienthal to Henry T. Hunt.. 2951 3300
450—Letter dated October 8, 1934, from David E. Lilienthal to Henry T. Hunt..... 2953 3301
451—Application for loan and grant by Starkville, Mississippi 2954 3301
452—PWA loan and grant contract with Starkville, Mississippi [omitted]..... 2955 3302
453—Application for loan and grant by Okolona, Mississippi [omitted] 2955 3302
454—PWA loan and grant with Okolona, Mississippi [omitted]..... 2956 3302
455—Subsequent PWA contract with Okolona, Mississippi [omitted] 2956 3302
456—Application for loan and grant by Aberdeen, Mississippi [omitted]..... 2956 3303
457—PWA loan and grant contract with Starksville, Mississippi [omitted]..... 2957 3304
458—PWA loan and grant contract with Aberdeen, Mississippi [omitted]..... 2957 3304
459—Application for loan and grant by Knoxville, Tennessee,, dated November 15, 1933 ..... 2958 3304
460—PWA loan and grant contract with Knoxville, dated April 2, 1934..... 2960 3305
461—Telegram dated February 18, 1934, from B. W. Thoron, Assistant Finance Director of PWA, to Joseph C. Swidler, TVA attorney 2963 3309

Record from D. C. U. S., Eastern District of Tennessee—Continued.

[fol. 2426] COMPLAINANTS' EXHIBIT No. 158

Assignment to City of Knoxville of Power Contract Between Volunteer Portland Cement Company and Tennessee Valley Authority.

This Agreement, made and entered into this 14th day of September, 1937, between Tennessee Valley Authority, a corporation created by and acting under the Tennessee Valley Authority Act of 1933, hereinafter called "Authority," and City of Knoxville, a municipal corporation duly organized, created, and existing under and by virtue of the laws of the State of Tennessee, hereinafter called "Municipality,"

Witnesseth:

Whereas, by agreement dated August 14, 1936, between Authority and Volunteer Portland Cement Company, a Delaware corporation, hereinafter called "Customer," Authority agreed to supply, and Customer agreed to take and pay for, the electric power required for the operation of Customer's cement plant near Knoxville, Tennessee, for a period of ten years, on terms and at rates set out in said agreement, and

Whereas, Municipality, by referendum of its citizens dated November 25, 1933, authorized the acquisition of a municipal electric distribution system by purchase or construction, and

Whereas, by agreement dated February 19, 1936, as amended by agreement dated May 18, 1936, Authority agreed to supply, and Municipality to take and pay for, the [fol. 2427] electric power required for the operation of Municipality's electric distribution system, for a period of twenty years, on terms and at rates set out in said agreement, and

Whereas, Customer's cement plant is within a few miles of the corporate limits of Municipality, and the power contract between Authority and Customer was entered into with a view to eventual assumption of the obligations of Authority by the City of Knoxville when Municipality's plans for the acquisition of an electric system were sufficiently advanced, and

Whereas, the said power contract between Authority and Municipality makes provision for such service by Munici-

pality to Customer and the billing arrangements consequent thereto, and

Whereas, Municipality, by action of its Council on June 23, 1936, duly authorized the letting of bids for the construction of the first unit of its municipal distribution system known as the "North Knoxville" unit, and said proposed unit is within convenient service distance of the plant of Customer, and

Whereas, Municipality now desires to supply the electricity requirements of its trade area, including the requirements of Customer, and

Whereas, Authority is now constructing a transmission line to the premises of Customer and installing a substation at said premises, and said transmission line and substation constitute a convenient point of delivery to Municipality of the power required by Customer and by such other customers as Municipality may desire to serve in this vicinity.

[fol. 2428] Now, therefore, in consideration of the premises and of the agreements hereinafter set forth, the parties hereto mutually agree as follows:

1. For value received, Authority hereby transfers and assigns to Municipality all its right, title, and interest in and to that certain power contract between Authority and Customer dated August 14, 1936.

2. In consideration of said assignment, Municipality hereby assumes all of the obligations of Authority under and pursuant to said agreement, and agrees to save Authority harmless from any claim or demand under or pursuant to said agreement.

3. Authority agrees to supply power to Municipality over the transmission line now under construction from Norris Dam to the premises of Customer, such power to be in the form of three-phase alternating current, at approximately sixty cycles, and at approximately 2,300 volts, and to be delivered to Municipality at the low-tension side of the substation now under construction by Authority at the premises of Customer. Such power shall be delivered, taken, and paid for under the provisions of the power contract between Authority and Municipality dated February 19, 1936, as amended by agreement dated May 18, 1936, and shall con-

COMPLAINANTS' EXHIBIT No. 158.

stitute a second source of supply as provided for by section 20 of the Terms and Conditions attached to and made a part of said power contract of February 19, 1936, as amended.

4. Authority agrees to continue construction of the transmission line between Norris Dam and the premises of Customer, and the substation at said premises, with all reason-[fol. 2429] able diligence, and to complete the same (unless prevented by causes beyond its control) not later than December 15, 1937. Municipality shall establish, operate, and maintain the connection between the low-tension side of the said substation of the Authority and the substation of Customer. Authority will provide suitable space in its substation structure for the measuring equipment of Municipality, and Municipality shall have free access to said substation for the purpose of meter reading, checking, repair, removal, and replacement.

In Witness Whereof, the parties hereto have caused this agreement to be executed in six counterparts, each of which shall be considered an original, by their duly authorized officers, the day and year first above written.

[fol. 2432] COMPLAINANTS' EXHIBIT No. 162

Construction Contract Between Tennessee Valley Authority and Meigs County Electric Membership Corporation

This Agreement, made and entered into the 29 day of June, 1936, between Tennessee Valley Authority, hereinafter called "Contractor," a corporation created by Act of Congress May 18, 1933, and the Meigs County Electric Membership Corporation, a corporation organized and existing by virtue of the laws of the State of Tennessee, hereinafter called, "Owner," is made pursuant to a Loan Contract dated April 1, 1936, between the United States of America, hereinafter called "Government," by the Administrator of the Rural Electrification Administration, hereinafter called "Administrator," and the Meigs County Electric Membership Corporation,

Witnesseth:

Whereas, Owner has executed a Loan Contract with Government acting through Administrator, in the amount of $212,200, by which Owner is to deliver funds to be used in

the construction of rural electric lines in Meigs, McMinn, Hamilton, Rhea, and Cumberland Counties and vicinity; and

Whereas, Contractor, by Section 10 of the Tennessee Valley Authority Act of 1933 is authorized to construct transmission lines to farms and small villages that are not otherwise supplied with electricity, at reasonable rates; and

Whereas, Owner has contracted with the Harrison-Wright Company for the construction of rural transmission and distribution lines in Meigs and Hamilton Counties, and [fol. 2433] vicinity, the cost of which construction will not exceed $92,200; and

Whereas, Owner desires that Contractor construct the remainder of the project, or, more specifically, the lines shown on the maps attached hereto or that portion of the project or lines which shall not exceed the cost of $120,000; and

Whereas, all parties to this contract have duly authorized its execution,

Now, therefore, for and in consideration of the mutual covenants herein contained, and subject to all the provisions of the Tennessee Valley Authority Act of 1933, the parties hereto mutually covenant and agree as follows:

1. The Contractor shall make or cause to be made such engineering surveys, maps, plans, drawings and specifications which shall be necessary for the construction of the rural electric transmission and distribution lines and systems and necessary appurtenances which were agreed to be constructed by the Owner under the terms of a certain Loan Contract dated April 1, 1936, between Owner and Government, acting by Administrator, and which are not covered by a certain Construction Contract heretofore entered into by and between the Owner and Harrison-Wright Company, which said Construction Contract is dated the 6th day of May, 1936. Engineering services for the construction of said last mentioned lines and systems are being performed by Contractor under its separate Engineering Contract with Owner dated the first day of May, 1936.

2. Contractor will furnish material, labor, tools, and equipment necessary for the construction and shall construct those rural electric transmission and distribution lines and [fol. 2434] systems and necessary appurtenances which are shown on maps numbers C-C-813 and C-C-1057, attached

hereto, and hereby incorporated herein, in accordance with Contractor's standard specifications attached hereto and hereby incorporated herein.

3. Owner shall pay to Contractor, Contractor's total cost as billed by Contractor, including incidental charges, and including a twelve and one-half per cent overhead charge, of furnishing the services described in Sections 1 and 2 above or in any of the subsequent provisions of this contract, it being the intention of the parties hereto that the Contractor shall furnish such services to Owner for actual cost, including overhead, without any profit whatsoever, but that the Contractor shall be fully reimbursed for all of its costs plus overhead incurred pursuant to this agreement. Contractor shall not be required to perform any part or portion of the services defined herein in the event the rendition of such services shall exceed the cost of $120,000.

4. Contractor shall render monthly bills to Owner for the services rendered pursuant to this contract, which bills shall be submitted by Owner to the Administrator for approval. Owner shall not be obligated to pay Contractor any sum or sums whatsoever on account of services rendered to it under Sections 1 and 2 above by Contractor, until the bills therefor have first been approved by the Administrator. Upon the approval by the Administrator of any such bill so rendered, the Owner shall pay the approved amount thereof to Contractor. Upon the payment in full by the Owner to Contractor for the services rendered pursuant to this contract, Contractor will deliver the rural electric transmission and distribution lines and systems and necessary appurtenances so constructed to the Owner and shall release its liens thereon: Provided, however, that Contractor agrees [fol. 2435] to deliver to Owner and release its liens upon that portion of said lines the cost of which has been paid by Owner to Contractor pursuant to the bills rendered.

5. The work to be done under this contract is to be begun within 30 days after the receipt by the Contractor from the Owner of notice to begin work, and is to proceed with all due dispatch to the satisfaction of the Owner and the Administrator, and shall be fully completed on or before the 1st day of January, 1937.

6. The Contractor shall comply with all laws, municipal rules, ordinances, and regulations in the construction of this work or in the handling of materials incident thereto.

7. Any permits necessary for the handling or use of dynamite or other explosives shall be obtained by Contractor.

8. The owner and duly authorized Supervisor appointed by the Administrator shall have the right to direct the Contractor to execute any part or parts of the work before any other part or parts thereof, and the Contractor agrees to comply with such reasonable direction.

9. The Contractor shall give the work his constant supervision or employ a competent person to superintend it. Either the Contractor or such superintendent shall be on the site of the work at all times during working hours. The Contractor must also have capable, experienced, and reliable foremen and such skilled workmen as may be required for the various classes of work in the system. Directions and instructions given to the superintendent shall be binding upon the Contractor. The Owner reserves the right to require the removal of any employee of the Contractor, if in the judgment of its Engineer, it shall be for the best interests of the work.

[fol. 2436] 10. All materials shall be subject to the inspection, tests and approval of the Engineer and the Administrator and the Contractor shall furnish all information required concerning the nature or source of any material or appliances and provide every facility for testing and inspecting the same.

11. In the event that the Administrator appoints a supervisor, as provided by the said Loan Contract, the Contractor shall comply with all the reasonable instructions given by such supervisor.

12. The Contractor shall provide necessary watchmen as determined by the Engineer to properly protect all work and materials under this contract.

13. The Contractor shall take such precautions as are necessary to avoid accidents from any cause to persons and property and to avoid contingencies which may delay com-

pletion of the work. He shall so lay out and conduct the work as to cause the least possible obstruction on the public highways, alleys, and streets.

14. The Contractor shall provide and maintain all guard lights and protection for the public as are required by public authority or by local conditions.

15. The Contractor shall take such steps and do all things necessary or expedient to properly protect any and all parallel lines, joint line poles, highways and any and all property of others from damage and in the event that any such parallel lines, joint line poles, highways or other property is damaged in the course of the construction of this project, the Contractor will place any or all of such damaged [fol. 2437] property in as good a state of repair as the same was before such damage occurred.

16. Where the right of way is across cultivated lands, the Contractor shall refrain from unnecessarily damaging the crops, orchards, or property. All fences, which are necessarily opened or moved during the construction of the line shall be replaced in as good condition as they were found and precautions taken to prevent the escape of livestock.

17. The project, from the commencement to the completion of the work shall be subject to the risk and under the charge and control of the Contractor. During such period the Contractor shall make good and fully repair all injuries and damages to the project by reason of any act of God or other casualty or cause, whether or not the same occurs by reason of the Contractor's negligence. The Contractor agrees to defend all claims for injuries to persons or for damage to property happening by reason of any neglect, default, or misconduct on the part of the Contractor or any of his agents, or of any one in his employ during the execution of the work.

18. Any and all excess earth, rock, debris, underbrush, and other useless material shall be removed by the Contractor from the highways or other properties as rapidly as possible as the work progresses.

19. Simultaneously with the rendition of the bill to Owner for completed construction, Contractor shall deliver unto

the Owner a waiver or release of Contractor's lien. Upon the execution of any subcontract the Contractor shall secure from the subcontractor a waiver or release of subcontractor's lien. The Contractor and any and all subcontractors shall, prior to or upon delivery of materials, appliances, and supplies, secure from any materialmen furnishing [fol. 2438] such materials, appliances and supplies a waiver or release of materialmen's liens.

20. The Engineer, in behalf of the Owner, may, from time to time, during the progress of the work, make such additions to or subtractions from the plans, list of materials, and specifications as conditions may warrant, provided, however, that any material change in the extent of work to be done may require a reasonable extension of time in view of additions, under which conditions such reasonable extension will be granted. The Contractor shall not be entitled to any claim for damages on account of such reasonable additions, subtractions or changes as may be made in the extent of work to be done under this contract or on account of any delay occasioned thereby.

In case of any additions or subtractions to the work covered by the contract, the Contractor shall receive payment for all work completed by him.

21. Upon the completion of work to be performed under and by virtue of the terms and provisions of this contract, the Contractor shall certify to the total amount of work and materials required for the completed project, and the Owner shall thereupon certify the same to the Government, together with a certificate of the total cost of the work performed under this contract. Upon the approval of said certificate by the Government the Owner will make final payment to the Contractor hereunder.

22. The acceptance of any material or equipment by the Engineer shall not prevent its subsequent rejection if found defective after delivery or installation and any such material or equipment found defective before final acceptance of [fol. 2439] the work shall be replaced by the Contractor.

23. Any improper or imperfect work or material shall be removed and replaced or otherwise remedied by the Contractor. Any condemned material shall be immediately

removed from the site of the work by the Contractor. Vouchers for payments will not be approved by the Engineer until defects have been corrected.

24. The Contractor shall pay each subcontractor, if any, within five (5) days after each payment made to the Contractor, the amount allowed the Contractor for and on account of work performed by the subcontractor to the extent of the subcontractor's interest therein.

25. It is the duty of the Owner under its contract with the Government to obtain all franchises, authorizations, permits, and approvals from Federal, State, County, Municipal, and other authorities and all rights of way and easements necessary or advisable to be obtained in connection with the construction and operation of this project, and the Contractor shall be under no duty to procure the same. The Owner shall be responsible for negotiating any necessary joint pole agreements or other agreements with public utility companies.

26. All guarantees of material and workmanship running in favor of the Contractor shall be transferred and assigned to the Owner on completion of all work and at such time as he receives final payment.

27. All royalties or patents that may be involved in the work contracted for, or in the use thereof, shall be satisfied or procured by Contractor and the Contractor shall defend any and all claims, suits, and proceedings for infringement of any patent or patents.

28. Every right or remedy herein conferred upon or reserved to the Owner or the Government or the Adminis-[fol. 2440] trator shall be cumulative and shall be in addition to every right and remedy given hereunder or now or hereafter existing at law or in equity or by statute. The pursuit of any right or remedy shall not be construed as an election.

29. Each and all of the covenants and agreements herein contained shall extend to and be binding upon the successors and assgins of the parties hereto.

30. No lines or parts of lines shall be energized prior to the completion of the entire contract except on specific

arrangements therefor between the Owner and the Contractor, which said arrangements shall have been approved by the Administrator.

31. The Contractor shall erect and maintain during the construction of the project in an appropriate place or places at the site of the project, a sign or signs approved by the Administrator, bearing the legend "Federal Rural Electrification Project," or such similar legend as the Administrator may designate.

32. The Contractor shall not assign this contract or any part hereof without the approval of the Owner and the Administrator.

33. The Contractor shall perform, directly and without subcontracting, not less than twenty-five per cent (25%) of the construction, to be calculated on the basis of the total cost hereof.

34. No part of this contract shall be sublet without the approval of the Owner and the Administrator. If the Contractor shall sublet any part of this contract, the Contractor shall be as fully responsible to the Owner and the Government for the acts and omissions of his subcontractor and of the persons either directly or indirectly employed by his subcontractor, as he is for his own acts and omissions and [fol. 2441] those of persons directly employed by him.

35. The Contractor shall provide all labor, services, materials, and equipment necessary to perform and complete the work under this contract, except as otherwise provided herein.

36. The Contractor shall purchase all materials and supplies outright and not subject to any conditional sales agreement, bailment lease, or other agreement reserving to the seller any right, title, or interest.

37. All materials and supplies shall become the property of the Contractor when delivered at the site of the work; provided, however, that the Owner or the Administrator may condemn any such materials and supplies as do not comply with the Plans and Specifications, either before or

after incorporation of such materials and supplies into the project, and thereafter any such condemned materials and supplies shall be removed and immediately replaced with materials and supplies complying with the Plans and Specifications.

38. All employees other than those in executive, administrative, supervisory or highly skilled positions shall be paid in full, at least semi-monthly within ten (10) days after the close of the semi-monthly period in lawful money of the United States.

39. The Administrator shall have the right to supervise the performance of this contract and shall have the right to inspect all work and materials and shall have access to all payrolls, records of personnel, invoices of material, and all other data and records relevant to the performance of this contract. Reasonable facilities shall be provided for the [fol. 2442] use of agents of the Administrator.

40. In the performance of this contract there shall be used only such manufactured articles, materials, and supplies as have been mined or produced in the United States, and only such manufactured articles, materials, and supplies as have been manufactured in the United States substantially all from articles, materials, or supplies mined, produced, or manufactured, as the case may be, in the United States, provided, however, that if the Administrator shall find that in respect to some particular articles, materials, or supplies it is impracticable to make such requirement or that it would unreasonably increase the cost, an exception shall be noted in the Specifications as to that particular article, material, or supply.

41. Preference in the employment of workers shall be given to persons from the public relief rolls who are competent for the several classifications of labor necessary for the performance of this contract and who are available at the site of the work. The Contractor agrees to apply to the nearest office of the United States Employment Service in the County where the work is to be performed for such workers from public relief rolls, and agrees to employ persons so furnished, if competent and available.

COMPLAINANTS' EXHIBIT No. 162

42. Wage rates for persons employed, except in executive, administrative, supervisory, and highly skilled positions, shall be as follows:

Trade or Occupation	Hourly Wage Rate
Lineman	1.00
Lineman's apprentice	.75
Lineman's helper	.60
Truck driver (line truck)	.75
Truck driver (light truck)	.60
Powderman and compressor	.75
Labor	.45

[fol. 2443] 43. If after the execution of this contract it becomes necessary to employ any person in a trade or occupation not hereinabove listed, such person shall be paid at an hourly wage rate determined by the Administrator in accordance with local conditions and such wage rate shall be retroactive to the time of the initial employment of such person in such trade or occupation. Unless otherwise provided by law, claims or disputes pertaining to the classification of labor under this contract shall be decided by the Administrator whose decision shall be final and binding on all persons concerned.

44. The maximum hours of work for persons employed, except in executive, administrative, supervisory, and highly skilled positions shall not be in excess of 8 hours per day and 40 hours per week, except in special or unusual circumstances when the above limitations are not feasible or practicable.

45. Only one member of a family group may be employed on the project, except as specifically authorized by the Works Progress Administration.

46. All work shall be conducted in accordance with safe working conditions, and every effort shall be made for the prevention of accidents.

47. The Contractor and each subcontractor shall prepare the payrolls upon forms to be prescribed and in accordance with instructions to be furnished by the Works Progress Administration. Not later than the third day following the payment of the wages, a certified legible copy of each

payroll, whether paid by the Contractor or any subcontractor, shall be transmitted by the Contractor to such office as may be designated by the Works Progress Administration. The Contractor and each subcontractor shall sub- [fol. 2444] mit reports at such times and on such forms as may be required by the Works Progress Administration covering purchases of, and requisitions for, materials, together with such other information as may be required to determine the progress and status of the completion of the work on the project.

48. The Contractor and each subcontractor shall report to the United States Department of Labor monthly, within five days after the close of each calendar month, upon forms to be prescribed, and in accordance with instructions to be furnished, by the United States Department of Labor, covering the number of persons on their respective payrolls directly connected with the project, the aggregate amounts of such payrolls and the man-hours worked, and an itemized statement of the total expenditures for materials. The Contractor shall also furnish to the United States Department of Labor the names and addresses of all subcontractors on the work, at the earliest date practicable.

49. The Works Progress Administration, through its authorized agents, shall have the right to inspect all work as it progresses, and shall have access to all payrolls, records of personnel, invoices of materials, and any and all other data relevant to the performance of this contract.

50. No person under the age of sixteen (16) years, and no one whose age or physical condition is such as to make his employment dangerous to his health or safety, or the health and safety of others, may be employed on the project. This paragraph shall not be construed to operate against the employment of physically handicapped persons, otherwise employable, where such persons may be safely assigned [fol. 2445] to work which they can ably perform.

51. No person currently serving sentence to a penal or correctional institution shall be employed on the project.

52. Wages to be paid, or for which reimbursement is to be made, by the Federal Government may not be pledged

or assigned, and any purported pledge or assignment shall be null and void.

53. The Contractor acknowledges that he has received copies of the Emergency Relief Appropriation Act of 1935, Regulations Nos. 1, 2, 3, and 4 issued thereunder, the so-called "Kick-back" Statute (48 Stat. 948), and all Regulations issued pursuant thereto, and Section 35 of the Criminal Code as amended, and the Contractor and each subcontractor agree to comply with the provisions of all of said Statutes and all regulations issued thereunder which are hereby incorporated into and made a part of this contract.

54. In the event that any of the provisions of this contract are violated by the Contractor or by any of his subcontractors, the Owner or the Administrator may serve written notice upon the Contractor of intention to terminate such contract, such notice to contain the reasons therefor, and, unless within ten days after the serving of such notice upon the Contractor such violation shall cease and arrangements for correction satisfactory to both the Owner and the Administrator be made, the contract shall, upon the expiration of said ten days, cease and terminate. In the event of any such termination, the Owner or the Administrator or the Government may take over the work and prosecute the same to completion by contract or otherwise for the account of the Contractor. In such event the Owner or the Administrator may take possession of and utilize in completing the work, [fol. 2446] such materials, tools, supplies, equipment, appliances, and plant as may be on the site of the work and necessary therefor. In the event of any such termination the Owner and the Government may exercise any rights, claims, or demands that the Contractor may have against third persons in connection with this contract or the work prosecuted or to be prosecuted hereunder, and for such purpose the Contractor does hereby assign, transfer, and set over unto the Owner and the Government any and all such rights, claims and demands.

55. The foregoing provisions numbered 32 to 55 inclusive, shall be incorporated verbatim in all subcontracts for construction of any part of the work to be performed under this contract, except that whenever appropriate the name of the

principal Contractor may be substituted for the word "Owner."

In Witness Whereof, the above-bounden parties have executed this instrument under their several seals this 29th day of June, 1936, the name and corporate seal of each corporate party being hereto affixed and these presents duly signed by its undersigned representative pursuant to authority of its governing body.

Meigs County Electric Membership Corporation, (Signed) by J. W. Lillard, President. (Seal.)

[fol. 2447] Tennessee Valley Authority

Board of Directors: Arthur E. Morgan, Chairman; Harcourt A. Morgan, David E. Lilienthal

August 24, 1936.

Mr. J. W. Lillard, President, Meigs County Electric Membership Corporation, Decatur, Tennessee.

Refer to Tennessee-1-Meigs

DEAR MR. LILLARD:

Under date of June 29, 1936, a "Construction Contract" was entered into between the Meigs County Electric Membership Corporation and Tennessee Valley Authority.

The Tennessee Valley Authority hereby agrees that Section 3 of said Contract shall be amended and shall be considered amended to read as follows:

"Owner shall pay to Contractor, Contractor's total direct cost, as billed by Contractor, of furnishing the services described in Sections 1 and 2 above or in any of the sub-

sequent provisions of this contract, plus twelve and one-half per centum (12½%) of such direct cost to cover overhead charges, it being the intention of the parties hereto that the Contractor shall furnish such services to Owner for actual cost, including overhead as above provided, without any profit whatsoever, but that the Contractor shall be fully reimbursed for all its direct costs plus said overhead incurred pursuant to this agreement. Contractor shall not be required to perform any part or portion of the services defined herein in the event the rendition of such services shall exceed in cost the amount of the loan provided for in said Loan Contract and any amendments thereto."

It is further agreed that Section 19 of said contract be amended and shall be considered amended to read as follows:

[fol. 2448] "Upon the execution of any subcontract the Contractor shall secure from the subcontractor a waiver or release of subcontractor's lien. The Contractor and any and all subcontractors shall, prior to or upon delivery of materials, appliances, and supplies, secure from any material men furnishing such materials, appliances, and supplies, a waiver or release of material men's liens."

Your signature in the space provided for that purpose at the end of this letter will indicate approval of this change on behalf of the Meigs County Electric Membership Corporation by you as President of said Corporation, and pursuant to the authority vested in you by the Board to negotiate a construction contract. Will you please sign three copies of the letter in order that each of the interested parties may have an original? In the event that this change is accepted, the change should, of course, be ratified by the Board of Directors of the Corporation at its next meeting.

Very truly yours, Tennessee Valley Authority,
(Signed) Arthur E. Morgan, Chairman of the Board.

Accepted. (Signed) J. W. Lillard, President, Meigs County Electric Membership Corporation.

[fol. 2449] COMPLAINANTS' EXHIBIT No. 163

Contract Between Tennessee Valley Authority and Cullman County Electric Membership Corporation

This Agreement, made and entered into this 4th day of August, 1936, by and between Tennessee Valley Authority (hereinafter called "Authority"), a corporation created by the Tennessee Valley Authority Act of 1933, its successors and assigns, and the Cullman County Electric Membership Corporation (hereinafter called "Corporation"), a corporation duly organized, created, and existing under and by virtue of the laws of the State of Alabama.

Witnesseth:

Whereas, Corporation and Authority have entered into a power contract of even date herewith, under the terms of which Corporation agrees to purchase from Authority and Authority agrees to supply the entire electricity requirements of Corporation; and

Whereas, Authority is empowered by Section 10 of the Tennessee Valley Authority Act to promote and encourage the fullest possible use of electric light and power on farms and in small villages by constructing rural transmission lines thereto; and

Whereas, Corporation has requested that Authority construct rural transmission lines in Cullman County, Alabama, and to sell such lines to Corporation; and

[fol. 2450] Whereas, Corporation and Authority desire to set forth and define the terms and conditions upon which Authority shall build such lines and transfer same to Corporation.

Now, Therefore, for and in consideration of the mutual covenants contained herein, the parties hereto mutually agree as follows:

1. Authority shall construct for Corporation in Cullman County, Alabama, such rural transmission lines as Authority may deem feasible from the standpoint of both Authority and Corporation.

2. Corporation shall accept the rural transmission lines heretofore or hereafter constructed by Authority in Cullman County, Alabama, and shall reimburse Authority for the cost to Authority of constructing such lines, including overheads.

3. Corporation agrees to secure at its own expense the easements necessary for the construction of the lines Authority elects to build for Corporation hereunder. Such easements shall be secured in form acceptable to Authority and shall run to and be the property of Corporation and assigns.

4. Corporation agrees to secure all the franchises and consents from the governing bodies of the counties and the governing bodies of incorporated towns which may be necessary for the construction and operation by Authority or Corporation of the rural transmission lines herein provided for.

5. Authority agrees to proceed with due diligence to construct those rural transmission lines in Cullman County which it deems feasible, and further agrees to deliver to Corporation such part or parts of said rural transmission [fol. 2451] lines when the construction has progressed to such a stage that the properties are practicably usable for electric service by Corporation. Corporation agrees to accept such lines as delivered by Authority and to operate them on Corporation's behalf.

6. Authority will notify Corporation upon the completion of the construction of the project and upon the determination of the cost thereof. Authority will execute a conveyance transferring all of its rights to this property to Corporation and will present to Corporation for execution a note or bond to the Tennessee Valley Authority covering the cost of the lines. Corporation agrees to secure the payment of this obligation by a mortgage covering all of the property so conveyed to the Corporation, made in favor of Authority (and to the Rural Electrification Administration in the event that agency finances a portion of the lines constructed in Cullman County).

7. Corporation agrees to save Authority harmless from any liability arising out of Corporation's operation of the lines. Corporation agrees to secure adequate workmen's compensation insurance and to secure public liability insurance in an amount of not less than Twenty-five Thousand Dollars ($25,000) for injuries, including wrongful death to any one person, and subject to the same limit for each per-

son in an amount not less than Fifty Thousand Dollars ($50,000) for injuries including wrongful death to two or more persons on account of one accident, and property damage insurance in an amount of not less than Ten Thousand Dollars ($10,000).

[fol. 2452] In Witness Whereof, the parties hereto have caused this instrument to be executed the day and year first above written.

Tennessee Valley Authority (Signed) by Arthur E. Morgan, Chairman of the Board of Directors. C. G. D., Legal Division.

Attest: (Signed) Charles E. Hoffman, Asst. Secretary.

Cullman County Electric Membership Corporation, (Signed) by W. T. Clemons, President. (Seal.)

Attest: (Signed) Emmett S. Oden, Secretary-Treasurer.

[fol. 2453] COMPLAINANTS' EXHIBIT No. 164

Construction Contract Between TVA and Cullman County (Alabama) Electric Membership Corporation, Dated February 19, 1936.

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as Complainants' Exhibit No. 162 except:

(1) The construction loan contract with Rural Electrification Administration is stated to be in the amount of $105,000.00 to be used in the construction of rural electric lines in the County of Cullman, State of Alabama;

(2) The completion date is on or before the 31st day of May, 1937;

(3) It does not contain provisions Nos. 38, 40, 41, 42, 43, 44, 45, 47, 48, 49, 50 and 51 of Complainants' Exhibit No. 162;

(4) It does contain the following provision, which does not appear in Complainants' Exhibit No. 162:

COMPLAINANTS' EXHIBIT No. 164

44. In the event Owner does not, within a reasonable time after the date of the contract, (due to lack of necessary consents or authorizations, or otherwise) deliver its deed of trust and mortgage bond in accordance with said Construction Loan Contract between Government and Owner, then Contractor shall be under no obligation to Owner under this Construction Contract and all of the lines engineered and constructed by Contractor in Cullman County, Alabama, shall be and remain the property of Contractor and in such event Owner agrees to assign to Contractor (or part to Contractor and part to the United States of America pursuant to the Tennessee Valley Authority Act of 1933 if Contractor shall stipulate that form of conveyance) all rights of way, easements, consents and franchises which Owner has obtained covering the lines so engineered and constructed by Contractor and thenceforth Owner shall not be considered as having any further interest in the lines whatsoever. For the purpose of this Contract a "reasonable time" shall be interpreted to mean three months from the date hereof. This remedy shall be in addition to such other remedy or remedies which Contractor may have under the Construction Contract. The pursuit of this or any other remedy by Contractor shall not be deemed to constitute an election.

[fol. 2454] COMPLAINANTS' EXHIBIT No. 165

Supplemental Contract Between TVA and Cullman County Electric Membership Corporation, Dated February 27, 1937

This contract amends provision No. 44 in the contract between TVA and Cullman County Electric Membership Corporation, dated September 19, 1936 (Complainants' Exhibit No. 164) so that it will read as follows:

44. In the event Owner does not, within a reasonable time after the date of the contract, (due to the lack of necessary consents or authorizations, or otherwise) deliver its deed of trust and mortgage bond in accordance with said Construction Loan Contract between Government and

COMPLAINANTS' EXHIBIT No. 165

Owner, then Contractor may at its election terminate its obligations to Owner under this Construction Contract. If Contractor so elects to terminate such obligations, all of the lines engineered and constructed by Contractor in Cullman County, Alabama, shall be and remain the property of Contractor and in such event Owner agrees to assign to Contractor (or partly to Contractor and partly to the United States of America pursuant to the Tennessee Valley Authority Act of 1933, if Contractor shall request that form of conveyance) all rights of way, easements, consents and franchises which Owner has obtained covering the lines so engineered and constructed by Contractor and thenceforth Owner shall not be considered as having any further interest in the lines whatsoever. For the purpose of this contract a "reasonable time" shall be interpreted to mean six (6) months from the date hereof. The election of Contractor to enforce its rights under this section shall not be deemed to be a waiver of any other remedy which Contractor may have under this contract.

Construction Contract Between TVA and North Georgia Electric Membership Corporation, Dated September 4, 1936

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as Complainants' Exhibit No. 162 except:

(1) The construction loan contract with Rural Electrification Administration is stated to be in the amount of $375,000.00 to be used in the construction of rural electric lines in the counties of Catoosa, Chattooga, Whitfield, Floyd, Dade, Murray, Gordon and Walker in the State of Georgia, and Hamilton County, Tennessee;

(2) The completion date is on or before the 1st day of May, 1937.

[fol. 2456] COMPLAINANTS' EXHIBIT No. 167

Construction Contract Between TVA and The Middle Tennessee Electric Membership Corporation, Dated September 15, 1936

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as Complainants' Exhibit No. 162 except:

(1) The construction loan contract with Rural Electrification Administration is stated to be in the amount of $254,000.00 to be used in the construction of rural electric lines in the Counties of Rutherford, Wilson, Davidson, Cannon and Smith in the State of Tennessee;

(2) The completion date is on or before the 31st day of May, 1937;

(3) It does not contain provisions Nos. 38, 40, 41, 42, 43, 44, 45, 47, 48, 49, 50 and 51 of Complainants' Exhibit No. 162;

(4) It contains the provision No. 44 which appears in Complainants' Exhibit No. 164.

[fol. 2457] COMPLAINANTS' EXHIBIT No. 168

Construction Contract Between TVA and Southwest Tennessee Electric Membership Corporation, Dated December 9, 1936

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as Complainants' Exhibit No. 162 except:

(1) The construction loan contract with Rural Electrification Administration is stated to be in the amount of $290,000.00 to be used in the construction of rural electric lines in the Counties of Haywood, Madison, Tipton and Lauderdale in the State of Tennessee;

(2) The completion date is on or before the 1st day of June, 1937;

(3) It does not contain provisions Nos. 38, 40, 41, 42, 43, 44, 45, 47, 48, 49, 50 and 51 of Complainants' Exhibit No. 162;

COMPLAINANTS' EXHIBIT No. 168

(4) It does contain the following provision, which does not appear in Complainants' Exhibit No. 162:

44. In the event the Construction Loan Contract between Government and Owner hereinbefore referred to is not executed on or before January 15, 1937, then Contractor shall be under no obligation to Owner under this contract and all of the lines engineered and constructed by Contractor in Haywood, Tipton, Madison, and Lauderdale Counties in the State of Tennessee shall be and remain the property of Contractor and in such event Owner agrees to assign to Contractor all rights of way, easements, consents and franchises which Owner has obtained covering the lines so engineered and constructed by Contractor and thenceforth Owner shall not be considered as having any further interest in the lines whatsoever.

[fol. 2458] COMPLAINANTS' EXHIBIT No. 169

Construction Contract Between TVA and Gibson County (Tennessee) Electric Membership Corporation, Dated March 30, 1937

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as Complainants' Exhibit No. 162 except:

(1) The construction loan contract with Rural Electrification Administration is stated to be in the amount of $143,500.00 to be used in the construction of rural electric lines in the Counties of Gibson, Dyer and Obion in the State of Tennessee;

(2) The completion date is on or before the 6th day of January, 1938;

(3) It does not contain provisions Nos. 38, 40, 41, 42, 43, 44, 45, 47, 48, 49, 50 and 51 of Complainants' Exhibit No. 162.

[fol. 2459] COMPLAINANTS' EXHIBIT No. 170

Agreement for Sale and Construction of Rural Lines Between Tennessee Valley Authority and Joe Wheeler Electric Membership Corporation

This Agreement, made and entered into the 14th day of May, 1937, by and between Tennessee Valley Authority (hereinafter called "Authority"), a corporation created by the Tennessee Valley Authority Act of 1933, and Joe Wheeler Electric Membership Corporation (hereinafter called "Corporation"), a corporation duly organized, created, and existing under and by virtue of the laws of the State of Alabama.

Witnesseth:

Whereas, pursuant to sections 10 and 12 of the Tennessee Valley Authority Act of 1933, as amended, Authority has constructed and/or acquired and now owns certain rural electric transmission and distribution lines in Morgan and Lawrence Counties, Alabama; and

Whereas, Corporation has been chartered and duly organized under the laws of the State of Alabama as a nonprofit electric membership corporation for the purpose of acquiring and/or constructing a rural electric distribution system to be used in distributing electricity to its members [fol. 2460] at the lowest cost consistent with sound economy, and without profit; and

Whereas, Corporation desires to purchase from Authority certain of the rural electric distribution lines which Authority now owns in Morgan and Lawrence Counties, Alabama, and to have certain additional rural lines constructed by the Authority for Corporation in and adjacent to said counties, and the parties desire to set forth and agree upon the procedure, terms, and conditions under which said sale shall be effected and said construction done;

Now, Therefore, for and in consideration of the mutual benefits to both parties hereto and of the covenants and agreements herein contained, the parties hereto covenant and agree as follows:

1. Sale of Existing Rural Lines.—Corporation agrees to purchase from Authority such of the rural electric lines now owned by Authority in Morgan and Lawrence Counties, Alabama, as Authority may find unnecessary to be retained as a part of Authority's own distribution system

and Corporation finds necessary or desirable as a part of Corporation's rural distribution system.

2. Construction of Additional Rural Lines.—Corporation hereby requests Authority to construct for Corporation such additional rural electric distribution lines in and adjacent to Morgan and Lawrence Counties, Alabama, as Corporation and Authority may from time to time agree upon and designate.

[fol. 2461] A. Designation of Additional Lines.—Any such rural lines shall be deemed to have been agreed upon by Authority and Corporation for the purposes of this section when (1) Authority's work order covering the proposed lines has been presented to Corporation's Executive Committee and said committee has approved the same, and (2) the President of the Corporation has signed the work order on behalf of the Corporation.

B. Easements for Additional Lines.—Corporation agrees to secure at its own expense all rights of way and easements over privately or publicly owned land which may be necessary for the construction, maintenance, and operation of the additional rural lines to be built by Authority for Corporation under this section. Such easements shall be taken in form acceptable to Authority and shall run to and be the property of Corporation and assigns.

3. Franchises and Consents.—Corporation agrees to secure at its own expense all franchises and consents from the governing bodies of counties and incorporated towns, or other appropriate State bodies, which may be necessary for the construction, maintenance, and operation of the rural electric lines herein provided for, or the acquisition thereof by Corporation.

4. Payment by Corporation for Rural Lines.—Corporation agrees to pay Authority for the rural lines purchased from Authority under section 1, and the rural lines constructed by Authority for Corporation under section 2 of this agreement, an amount equal to the cost to Authority of acquiring or constructing the same, plus overheads.

[fol. 2462] 5. Delivery and Conveyance of Rural Lines to Corporation, and Execution of Power Contract, Note, and Mortgage.—Upon completion of construction of a sufficient number of rural lines by Authority for Corporation to provide a rural electric system which in Authority's judgment may be economically and satisfactorily operated by Corporation, Authority shall convey to Corporation the rural lines prescribed under section 1 hereof, and shall deliver possession to Corporation of the rural lines constructed for Corporation under section 2 hereof. Prior to or simultaneously with the conveyance and delivery of such rural lines to Corporation, Corporation shall execute with Authority a power contract in the standard form in effect between Authority and similar electric membership corporations, providing for the supply by Authority of Corporation's wholesale electric requirements, the resale of such electric energy, and the method of payment of Corporation's long-term obligations to Authority.

Simultaneously with the conveyance and delivery of rural lines by Authority to Corporation, Corporation shall execute its note to Authority in an amount equal to the cost to Authority of constructing or acquiring such rural lines, plus overhead, and Corporation shall further execute its first mortgage, covering all present or after acquired property of the Corporation, as security for the payment of Corporation's note or other obligations to Authority.

In Witness Whereof, the parties hereto have caused this agreement to be signed and sealed by their duly authorized [fol. 2463] officers the day and year first above written.

Tennessee Valley Authority, by (S.) Arthur Morgan, Chairman of the Board.

Attest: (S.) Charles E. Hoffman, Ass't Secretary.

Joe Wheeler Electric Membership Corporation, by (S.) W. F. Price, President.

Attest: (S.) J. W. Smith, First Vice President.

[fol. 2464] COMPLAINANTS' EXHIBIT No. 170-A

Supplemental Agreement Between Tennessee Valley Authority and Joe Wheeler Electric Membership Corporation

This agreement, made and entered into the 24 day of September, 1937, by and between Tennessee Valley Authority (hereinafter called "Authority"), a corporation created by the Tennessee Valley Authority Act of 1933, and Joe Wheeler Electric Membership Corporation (hereinafter called "Corporation"), a corporation duly organized, created and existing under and by virtue of the laws of the State of Alabama,

Witnesseth:

Whereas, on May 14, 1937, Authority and Corporation entered into a certain contract entitled "Agreement for Sale and Construction of Rural Lines between Tennessee Valley Authority and Joe Wheeler Electric Membership Corporation" (hereinafter called the "Agreement") under which Authority agreed to sell, and Corporation to purchase, certain rural lines owned by Authority in Morgan and Lawrence counties, Alabama, and under which Authority further agreed to construct certain additional rural lines for Corporation, Corporation to reimburse Authority therefor at its actual costs plus overheads, and

Whereas, Corporation has requested delivery of the lines purchased from Authority under section 1 of the Agreement, and also of the lines which have been completed by Author-
[fol. 2465] ity for Corporation under section 2 of the Agreement, in order that Corporation may commence operation of its distribution system, and

Whereas, the parties desire to set forth and agree upon the terms and conditions upon which the transfer of such lines shall be effected,

Now, therefore, for and in consideration of the mutual benefits to both parties hereto, and of the covenants and agreements herein contained, the parties hereto covenant and agree as follows:

1. Transfer of Lines—Authority shall deliver to Corporation on October 1, 1937, and Corporation shall accept delivery of, the approximately 78.52 miles of rural transmission and distribution lines which Authority owns in Morgan and Lawrence counties, Alabama, and which Authority agreed

to sell to Corporation under section 1 of the Agreement. Authority shall also deliver to Corporation such of the rural lines which Authority is constructing for Corporation under section 2 of the Agreement as have been completed on October 1 and are suitable for immediate operation by Corporation. As additional rural lines are completed by Authority for Corporation pursuant to said Agreement, they shall be transferred to Corporation for operation as a part of its distribution system. An itemized list of the work orders covering the above lines, property and improvements is attached to this contract as "Exhibit A."

2. Payment for Lines—Corporation agrees to pay Authority One Hundred Twenty Thousand Three Hundred Ninety-eight Dollars and Forty-five Cents ($120,398.45) for the rural lines and properties sold Corporation under section 1 of the Agreement. The estimated cost of the additional [fol. 2466] rural lines which Authority is constructing for Corporation under section 2 of the Agreement is One Hundred Ten Thousand Five Hundred Seventy-one Dollars ($110,571.00). This amount, however, shall be subject to adjustment, plus or minus, when the construction of rural lines for Corporation has been completed and the total cost therof can be definitely determined.

3. Accounts Receivable—Corporation hereby purchases from Authority all accounts receivable which Authority holds on October 1, 1937, against customers receiving service on the lines transferred to Corporation. Such accounts receivable shall be delivered to Corporation and the total amount thereof shall be added to Corporation's long-term obligation to Authority. The amount of such accounts is estimated to be Two Thousand Two Hundred Forty-one Dollars and Thirty-eight Cents ($2,241.38), but this sum shall be subject to adjustment, plus or minus, when the precise amount thereof has been determined. Corporation hereby assumes the rights and obligations of Authority with respect to the collection of those accounts of the Electric Home and Farm Authority, Inc., (which are now being collected by Authority) in the area in which Corporation operates.

4. Meter Deposits and Amortization Charges—Authority will credit Corporation in the amount of all its remaining

active customer deposits plus accrued interest to October 1, 1937, which were made by customers on the lines transferred hereunder before said lines were acquired by Authority, together with all remaining deposits made by customers during the period in which Authority operated such lines. The total amount of such deposits and accrued interest shall be credited upon Corporation's long-term obligation to Authority, and Corporation agrees to assume full responsi- [fol. 2467] bility for the disposition or return of all deposits and accrued interest and to save Authority harmless from any liability or controversy which may arise in respect thereto.

Authority shall also determine the amount of amortization charges collected by Authority from customers on the transferred lines during the period of operation by Authority, and shall credit Corporation's long-term obligation with the amount thereof.

For the purpose of this transfer, the amount of such deposits, accrued interest, and amortization charges is estimated to be Four Thousand Two Hundred Nineteen Dollars and One Cent ($4,219.01), but this sum shall be subject to adjustment, plus or minus, when the precise amount thereof has been determined.

5. Long-Term Obligation—The tentative amount of Corporation's long-term obligation to Authority under this contract and under the Agreement is Two Hundred Twenty-eight Thousand Nine Hundred Ninety-one Dollars and Eighty-two Cents ($228,991.82). Said obligation shall be paid by Corporation in the manner set forth in the Agreement and the Power Contract executed between Authority and Corporation on even date herewith. When the rural lines which Authority is constructing for Corporation shall have been completed and the definite cost thereof determined, Corporation shall issue its note to Authority in the amount of its long-term obligation, secured by a Mortgage of all present and after-acquired property of Corporation, as provided by section 5 of the Agreement. Until the execution of said note and Mortgage, Authority and the United States of America shall retain full title to all lines sold to Corporation under section 1 of the Agreement and Authority shall retain a first lien upon all lines and property con-

[fol. 2468] structed for Corporation under section 2 of the Agreement.

6. Maintenance and Insurance of Property—Corporation agrees that it will at all times make or cause to be made at its own expense such repairs, renewals and replacements as shall be necessary to maintain, preserve and keep in good repair and working order the property delivered hereunder. Corporation shall pay all taxes and assessments on the property and shall save Authority harmless from all suits, liability or claims which may arise from or in connection with the maintenance and operation of the system. Corporation further agrees to preserve and keep in force public, property, and Workmen's Compensation insurance in such amounts as Authority may reasonably deem necessary for security of the payment of Corporation's obligations.

7. Power Contract—Corporation agrees to perform and abide by all the covenants and agreements contained in the Agreement and in the Power Contract, and Corporation recognizes that compliance with the above contract is an essential part of the consideration of this Supplemental Agreement.

8. Contract Not Transferable—Neither this contract nor any interest therein shall be transferable or assignable by Corporation unless the written consent of Authority thereto is first obtained.

In witness whereof, the parties hereto have caused this instrument to be signed and attested by their duly authorized officers the day and year first above written.

(1) The construction loan contract with Rural Electrification Administration is stated to be in the amount of $368,908.00 to be used in the construction of rural electric lines in the Counties of Marshall, Moore, Maury and Franklin in the State of Tennessee;

(2) The completion date is on or before the 15th day of June, 1938;

(3) It does not contain provisions Nos. 38, 40, 41, 42, 43, 44, 45, 47, 48, 49, 50 and 51 of Complainants' Exhibit No. 162.

[fol. 2474] COMPLAINANTS' EXHIBIT No. 173.

Agreement Between Tennessee Valley Authority and Town of Pulaski, Tennessee

Construction of Rural Lines

This Agreement made and entered into this 23rd day of August, 1935, between the Tennessee Valley Authority, hereinafter called "Authority," a corporation created by and acting under the Tennessee Valley Authority Act of 1933, and the Town of Pulaski, Tennessee, a municipal corporation duly organized, created and existing under and by virtue of the laws of the State of Tennessee, hereinafter called "Municipality."

Witnesseth:

Whereas, on March 8, 1934, a power contract was entered into between Authority and Municipality by virtue of which Authority has been furnishing surplus power generated by it and not used in its operations to Municipality, and

Whereas, Municipality desires to extend its area of service to include suburban and rural customers in and adjacent to Giles County, Tennessee, and

Whereas, Authority is empowered by Section 10 of the [fol. 2475] Tennessee Valley Authority Act to promote the use of electric light and power on farms and small villages by constructing rural transmission lines, and

Whereas, Municipality desires that Authority construct such lines on behalf of Municipality or aid in their construction and Municipality proposes to make the necessary appropriations in payment therefor;

Now, Therefore, for and in consideration of the mutual covenants contained herein, the parties hereto mutually agree as follows:

1. Construction of Rural Lines.—Authority agrees, upon request, of Municipality, to construct such additional rural lines on the Municipality's electric system, within or adjacent to Giles County, State of Tennessee, as the parties may agree, or at its option to assist in such construction in the manner set out below. Should the Authority elect to construct said lines, at its option it may do so (a) by construction for and on behalf of Municipality, as Municipality's agent for such construction; or (b) by construction on its own account and conveying the lines so constructed

to Municipality; or (c) by construction on its own account and leasing the same to Municipality for a period of fifty (50) years. If Authority should elect alternative (b) or (c) of this paragraph, Municipality agrees, at request of the Authority, promptly to secure the necessary easements, franchises and rights-of-way for such lines at its own expense and to transfer and assign such easements, franchises and rights-of-way to Authority without charge.

At the election of Authority, in lieu of constructing the rural lines agreed upon, Authority may assist in such con- [fol. 2476] struction by supplying Municipality with the poles, wire, transformers, hardware, and other materials and equipment necessary in the construction of such lines and with supervisory assistance, whereupon Municipality shall itself construct said lines in accordance with approved engineering standards and subject to Authority's supervision.

Municipality agrees to pay Authority for any lines constructed by Authority pursuant to this paragraph, for all materials, supplies, and equipment furnished pursuant hereto, and for all work of construction and installation, at the actual cost thereof as billed by Authority, plus interest at four per cent (4%) per annum on the unpaid balance. In computing the cost of work performed by Authority, the costs of overhead, as billed by Authority, shall be added to direct costs.

2. Operation, Maintenance and Insurance of Rural Lines. —Municipality agrees to operate the rural lines constructed by Authority, or constructed with supplies furnished by Authority, as a part of its distribution system, and to render rural electric service at the same rates and on the same terms and conditions as its urban electric service subject to the qualifications hereinafter contained. Municipality agrees that it will at all times make, or cause to be made, at its own expense, such repairs, maintenance, renewals, and replacements as shall be necessary to maintain, preserve, and keep the rural lines so constructed and the equipment so installed in good repair, working order, and condition, and to maintain and preserve the efficiency thereof, and to execute such work of maintenance or improvement as Authority may deem necessary for the protection of its

interest in said property, to pay all taxes and assessments thereon of whatever nature or description, to save harmless [fol. 2477] Authority from any liability for taxes on the property sold or leased to or constructed for Municipality, including taxes for the year 1935, and to save Authority harmless from any liability arising out of the operation of said lines. Municipality agrees to keep such property, whether constructed by Authority as agent for Municipality, or constructed, purchased, or leased by Municipality, insured in such manner and amount as Authority may deem prudent and desirable, for the protection of Authority as its interest may appear.

3. Municipality agrees to charge all consumers on the lines constructed pursuant to this agreement the rates prescribed for the several classes of customers in Schedule B, entitled "Tennessee Valley Authority Resale Rates," attached to and made a part of the power contract referred to above between Authority and Municipality, and not to depart therefrom except with the written consent of Authority; Provided, however, that Municipality may add to the resale rates therein prescribed a temporary amortization charge applicable to all customers on the lines constructed pursuant to this agreement of 1c per kwh for the first 100 kwh used per month, such charge to be not less than 25c nor more than $1.00 per customer per month, but such amortization charge shall be temporary only and shall be discontinued as soon as Municipality has paid the full principal and interest of the indebtedness due Authority under this contract. The proceeds of such amortization charge shall be deposited in a special fund to be used only for the amortization of the lines constructed hereunder.

4. Municipality agrees to pay to Authority on account of its indebtedness under this contract and until such indebtedness shall have been totally repaid, (a) all amortization [fol. 2478] charges collected under this agreement, (b) the total surplus or remaining revenue specified in Section 10 (b) of the "Schedule of Rules and Regulations," attached to and made a part of the power contract referred to above between Authority and Municipality. Such surplus revenue shall be paid to Authority by Municipality prior to the amortization of the amount referred to in Article VI of the

agreement between Authority and Municipality as to Municipality's investment in its electric system dated August 22nd, 1935.

In Witness Whereof, the parties hereto have caused this instrument to be signed and attested by their duly authorized officers, the day and year first above written.

Tennessee Valley Authority (Signed), by Arthur E. Morgan, Chairman, Board of Directors. I. C. S., Leg. Div.

Attest: Charles E. Hoffman, Assistant Secretary.

Town of Pulaski, Tennessee, by W. R. Rackley, Mayor.

Attest: Lew Jones, City Recorder.

[fol. 2479] COMPLAINANTS' EXHIBIT No. 174

Construction Contract Between Tennessee Valley Authority and City of Dayton, Tennessee

This agreement made and entered into the 24th day of January 1936, between the Tennessee Valley Authority, hereinafter called Contractor, a corporation created by Act of Congress, May 18, 1933, and the City of Dayton, Tennessee, a municipal corporation organized and existing by virtue of the laws of the State of Tennessee, hereinafter called Owner is made pursuant to a loan contract dated November 4, 1935, between the United States of America (hereinafter called "Government") by the Administrator of the Rural Electrification Administration (hereinafter called "Administrator") and the City of Dayton, Tennessee.

Witnesseth:

Whereas, Owner has executed a loan contract with Government acting through Administrator in the amount of $38,058 by which Owner is to receive funds to be used in the construction of rural electric lines in and adjacent to Rhea County, Tennessee, and

Whereas, Contractor by Section 10 of the Tennessee Valley Authority Act of 1933 is authorized to construct trans-

mission lines to farms and small villages that are not otherwise supplied with electricity at reasonable rates, and

Whereas, all parties to this contract have duly authorized its execution,

[fol. 2480] Now Therefore, for and in consideration of the mutual covenants herein contained and subject to all the provisions of the Tennessee Valley Authority Act of 1933, the parties hereto mutually covenant and agree as follows:

1. The Contractor and Owner shall jointly and/or severally make or cause to be made such preliminary engineering, surveys, maps, plans, drawings, specifications and estimates and perform such other related services as are necessary or useful in determining the feasibility, and in constructing the proposed project. The total cost of such preliminary engineering, surveys, maps, plans, drawings, specifications, estimates, legal expenses and other services shall not exceed 10% of the total cost of $38,058, as is provided in Section 1 of Article IV of the Loan Contract, between the Government and Owner, dated 4th day of November, 1935. Owner shall pay to Contractor the cost of such preliminary engineering, surveys, maps, plans, drawings, specifications and estimates so prepared and the cost of other related services rendered by Contractor, at Contractor's direct cost plus overhead, but which cost together with the cost of the preliminary engineering, surveys, maps, plans, drawings, specifications and estimates prepared and the cost of legal and other services rendered by Owner shall not exceed the total cost of $3,805.80. Contractor shall furnish the material, labor, tools and equipment necessary for the construction, and shall construct those rural transmission lines (shown on Map No. HC-781 and Drawings LC-782, LC-783, LC-785, LC-786, LC-787, attached hereto and hereby incorporated herein, and in accordance with Contractor's standard specifications attached hereto and hereby incorporated herein) which the [fol. 2481] Owner shall request and which shall not exceed the cost to contractor of $38,058, less the cost of the preliminary engineering, surveys, maps, plans, drawings, specifications, estimates, legal expenses and other services of Contractor and Owner referred to above. Owner shall pay Contractor at Contractor's direct cost plus overhead for all

the lines so constructed. All sums due hereunder shall be paid by Owner to Contractor within thirty (30) days after the presentation of invoice therefor by Contractor.

2. (a) The Contractor shall not assign this Contract or any part hereof without the approval of the Owner and the Administrator.

(b) The Contractor shall perform, directly and without subcontracting, not less than 25 per cent of the construction, to be calculated on the basis of the total contract price.

(c) No part of this Contract shall be sublet without the approval of the Owner and the Administrator. If the Contractor shall sublet any part of this Contract, the Contractor shall be as fully responsible to the Owner and the Government for the acts and omissions of his subcontractor and of the persons either directly or indirectly employed by his subcontractor, as he is for his own acts and omissions and those of persons directly employed by him.

3. (a) The Contractor shall provide all labor, services, materials, and equipment necessary to perform and complete the work under this Contract, except as otherwise provided in the plans and specifications.

(b) The Contractor shall purchase all materials and supplies outright and not subject to any conditional sales [fol. 2482] agreement, bailment lease, or other agreement reserving to the seller any right, title or interest.

(c) All materials and supplies shall become the property of the Owner when the invoice rendered by Contractor to Owner, under Section 1, shall be fully paid; provided, however, that the Owner or the Administrator may condemn any such materials and supplies as do not comply with the plans and specifications, either before or after incorporation of such materials and supplies into the Project, and thereafter any such condemned materials and supplies shall be removed and immediately replaced with materials and supplies complying with the plans and specifications.

4. All employees other than those in executive, administrative, supervisory or highly skilled positions shall be paid in full, at least once every two weeks within ten (10) days after the close of the payroll period.

5. The Administrator shall have the right to supervise the performance of this contract and shall have the right to inspect all work and materials and shall have access to all payrolls, records of personnel, invoices of material, and all other data and records relevant to the performance of this contract. Reasonable facilities shall be provided for the use of agents of the Administrator.

6. In the performance of this contract there shall be used only such unmanufactured articles, materials, and supplies as have been mined or produced in the United States, and only such manufactured articles, materials and supplies as [fol. 2483] have been manufactured in the United States substantially all from articles, materials, or supplies mined, produced, or manufactured, as the case may be, in the United States, provided, however, that if the Administrator shall find that in respect to some particular articles, materials, or supplies it is impracticable to make such requirement or that it would unreasonably increase the cost, an exception shall be noted in the specifications as to that particular article, material or supply.

7. Preference in the employment of workers shall be given to persons from the public relief rolls who are competent for the several classifications of labor necessary for the performance of this contract and who are available at the site of the work. The Contractor agrees to apply to the nearest office of the United States Employment Service in the County where the work is to be performed for such workers from public relief rolls, and agrees to employ persons so furnished, if competent and available.

8. (a) Wage Rates for persons employed, except in executive, administrative, supervisory and highly skilled positions, shall be as follows:

Trade or Occupation	Hourly Wage Rate
Lineman	$1.00
Lineman's Apprentice	.75
Lineman's Helper	.60
Truck Driver (Line Truck)	.75
Truck Driver (Light Trucks)	.60
Powderman and Compressor	.75
Labor	.45

[fol. 2484] (b) If after the execution of this Contract it becomes necessary to employ any person in a trade or occupation not hereinabove listed, such person shall be paid at an hourly wage rate which shall be not less than the prevailing rate of wages for work of a similar nature in that vicinity, and such wage rate shall be retroactive to the time of the initial employment of such person in such trade or occupation. Unless otherwise provided by law, claims or disputes pertaining to the classification of labor under this Contract shall be decided by the Administrator whose decision shall be final and binding on all persons concerned.

9. The maximum hours of work for persons employed, except in executive, administrative, supervisory and highly skilled positions, shall not be in excess of 8 hours per day and 40 hours per week, except in special or unusual circumstances when the above limitations are not feasible or practicable.

10. Only one member of a family group may be employed on the Project, except as specifically authorized by the Works Progress Administration.

11. All work shall be conducted in accordance with safe working conditions, and every effort shall be made for the prevention of accidents.

12. The Contractor and each subcontractor shall prepare the payrolls upon forms to be prescribed and in accordance with instructions to be furnished by the Works Progress Administration. Not later than the third day following the payment of the wages, a certified legible copy of each payroll, whether paid by the Contractor or any subcontractor, shall be transmitted by the Contractor to such of-[fol. 2485] fice as may be designated by the Works Progress Administration. The Contractor and each subcontractor shall submit reports at such times and on such forms as may be required by the Works Progress Administration covering purchases of, and requisitions for, materials, together with such other information as may be required to determine the progress and status of the completion of the work on the Project.

13. The Contractor and each subcontractor shall report to the United States Department of Labor monthly, within five days after the close of each calendar month, upon forms to be prescribed, and in accordance with instructions to be furnished, by the United States Department of Labor, covering the number of persons on their respective payrolls directly connected with the Project, the aggregate amounts of such payrolls and the man-hours worked, and an itemized statement of the total expenditures for materials. The Contractor shall also furnish to the United States Department of Labor the names and addresses of all subcontractors on the work, at the earliest date practicable.

14. The Works Progress Administration, through its authorized agents, shall have the right to inspect all work as it progresses, and shall have access to all payrolls, records of personnel, invoices of materials, and any and all other data relevant to the performance of this Contract.

15. No person under the age of sixteen (16) years, and no one whose age or physical condition is such as to make his employment dangerous to his health or safety, or the health and safety of others, may be employed on the Project. This paragraph shall not be construed to operate [fol. 2486] against the employment of physically handicapped persons, otherwise employable, where such persons may be safely assigned to work which they can ably perform.

16. No person currently serving sentence to a penal or correctional institution shall be employed on the Project.

17. Wages to be paid, or for which reimbursement is to be made, by the Federal Government may not be pledged or assigned, and any purported pledge or assignment shall be null and void.

18. The Contractor acknowledges that he has received copies of the Emergency Relief Appropriation Act of 1933, Regulations Nos. 1, 2, 3 and 4 issued thereunder, the so-called "Kick-back" Statute (48 Stat. 948), and all regulations issued pursuant thereto, and Section 35 of the Criminal Code as amended, and the Contractor and such subcontractor agree to comply with the provisions of all of said Statutes and all regulations issued thereunder which are

hereby incorporated into and made a part of this Contract.

19. In the event that any of the provisions of this Contract are violated by the Contractor or by any of his subcontractors, the Owner or the Administrator may serve written notice upon the Contractor of intention to terminate such Contract, such notice to contain the reasons therefor, and, unless within 10 days after the serving of such notice upon the Contractor such violation shall cease and arrangement for correction satisfactory to both the Owner and the Administrator be made, the Contract shall, upon the expiration of said 10 days, cease and terminate. In the event of any such termination, the Owner or the Government may take over the work and prosecute the same to [fol. 2487] completion by contract or otherwise for the account and at the expense of the Contractor, and the Contractor shall be liable to the Owner and the Government for any excess cost occasioned thereby. In such event the Owner or the Administrator may take possession of and utilize in completing the work, such material, tools, supplies, equipment, appliances, and plant as may be on the site of the work and necessary therefor. In the event of any such termination the Owner and the Government may exercise any rights, claims or demands that the Contractor may have against third persons in connection with this Contract or the work prosecuted or to be prosecuted hereunder, and for such purpose the Contractor does hereby assign, transfer and set over unto the Owner and the Government any and all such rights, claims and demands.

20. With the exception of Section 1, all of the foregoing provisions shall be incorporated verbatim in all subcontracts for construction of any part of the work to be performed under this Contract, except that wherever appropriate the name of the principal Contractor may be substituted for the word "Owner."

21. The work to be done under this Contract is to be begun within thirty days after the receipt by the Contractor from the Owner of notice to begin work, and is to proceed with all due dispatch to the satisfaction of the

Owner and the Government, and shall be fully completed on or before the 30th day of June, 1936.

22. In the event that the Administrator appoints a supervisor, as hereinbefore provided, the Contractor shall comply with all the reasonable instructions given it by such supervisor.
[fol. 2488] The Owner and/or the said Supervisor shall be at liberty to direct the Contractor to execute any part or parts of the work before any other part or parts thereof.

23. The Project, from the commencement of the work to the completion of the same, is to be under the Contractor's charge; it is to be held responsible for and to make good all injuries, damages and repairs occasioned or rendered necessary to the same by reason of any fire, cyclone, tornado, windstorm or other casualty or causes over which the Contractor may or may not have control. The Contractor will hold the Owner harmless from any claims for injuries to persons or for damage to property happening by reason of any neglect, default or misconduct on the part of the Contractor or any of its agents, or of any one in its employ during the execution of the work.

24. Simultaneously with the payment of the invoice referred to in Section 1 above, Contractor shall deliver unto the Owner a release of Contractor's lien. Upon the execution of any subcontract the Contractor shall secure from the subcontractor and deliver to the Owner a release of Subcontractor's lien.

25. During the entire period of the construction of the work covered by this Contract the Contractor shall erect and maintain at least one sign, for each one-half mile of line covered by this Contract, which shall have previously been approved by the Administrator, bearing the legend "Federal Rural Electrification Project."

26. All clauses of this Contract shall apply to any changes, omissions or extra work in like manner and to the same effect as to the work contracted for and no changes, omissions or extra work shall annul or invalidate this Contract.

COMPLAINANTS' EXHIBIT No. 174

[fol. 2489] 27. Every right or remedy herein conferred upon or reserved to the Owner or the Government or the Administrator shall be cumulative and shall be in addition to every right and remedy given hereunder or now or hereafter existing at law or in equity or by statute. The pursuit of any right or remedy shall not be construed as an election.

28. The contract entered into between the Tennessee Valley Authority and City of Dayton, Tennessee, as an Agreement for Cooperation in Construction of Rural Lines, dated 2nd day of November, 1935, is hereby annulled, cancelled and is to be of no further force and effect.

In Witness Whereof, the parties hereto have caused this instrument to be executed by their duly authorized officers the day and year first above written.

[fol. 2490] COMPLAINANTS' EXHIBIT No. 175

Construction Contract Between TVA and Town of Bolivar, Tennessee, Dated September 7, 1937

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as Complainants' Exhibit No. 162 except:

(1) The construction loan contract with Rural Electrification Administration is stated to be in the amount of

$13,200.00 to be used in the construction of rural electric lines in the County of Hardeman, State of Tennessee;

(2) The completion date is on or before the 15th day of July, 1938;

(3) It does not contain provisions Nos. 24, 33, 34, 35, 38, 40, 41, 42, 43, 44, 45, 47, 48, 49, 50, 51, 52 and 55 of Complainants' Exhibit No. 162;

(4) It contains the following provision which does not appear in Complainants' Exhibit No. 162:

38. In the event the Construction Loan Contract between Government and Owner hereinabove referred to is not executed on or before January 1, 1938, or in the event the Contractor substantially performs its obligations hereunder but Owner does not receive the full amount of funds from Government for reimbursement of Contractor, then Owner shall execute and deliver its bonds to Contractor in the amount of its outstanding obligation to Contractor hereunder, such bonds to be secured by a pledge of the revenues of the lines and facilities constructed hereunder but not paid for, and by a first mortgage lien upon said lines and facilities.

[fol. 2491] Complainants' Exhibit No. 176

Contract Between Tennessee Valley Authority and Lincoln County Electric Membership Corporation

Collection of Bills and Other Services

This Agreement, made and entered into the 1st day of October, 1935, between Tennessee Valley Authority, a corporation created by Act of Congress of May 18, 1933, hereinafter called Authority, and the Lincoln County Electric Membership Corporation, a corporation created and existing under and by virtue of the laws of the State of Tennessee, hereinafter called Corporation,

Witnesseth:

Whereas, Authority has constructed and is now engaged in the construction of rural electric transmission lines in

and adjacent to Lincoln County, Tennessee, which lines are to be energized as soon as feasible and used in the transmission and sale of electric energy, and

Whereas, Corporation, by a resolution of its Board of Directors, has requested that Authority complete the construction of said rural lines and operate same until January 1, 1936, or until such time thereafter as Corporation requests that the lines be sold and delivered to Corpora- [fol. 2492] tion, and

Whereas, Authority deems it advisable to complete the construction of these rural lines in Lincoln County, contained in Authority's Work Orders numbered 1155 and 1156, as revised, and to energize same before transferring said lines to Corporation, and

Whereas, Corporation proposes to cooperate with Authority during the construction and interim operation of said rural lines by aiding in the collection of bills and by furnishing other services to Authority.

Now, Therefore, for and in Consideration of the mutual covenants contained herein, the parties hereto mutually covenant and agree as follows:

1. Authority will proceed with due diligence in the construction of the rural lines in Lincoln County, the construction of which has been authorized by and is contained in Authority's Work Orders numbered 1155 and 1156, as revised, and which construction is hereby authorized and requested by Corporation. Corporation shall purchase and accept and Authority shall sell and deliver to Corporation prior to June 30, 1936, at Authority's cost plus overheads all of the property constructed hereunder. Authority will energize those lines or portions of same as soon as construction has proceeded to such an extent as to make it feasible in the opinion of Authority to do so.

2. Corporation agrees to collect the sum of Ten ($10.00) Dollars from each prospective customer agreeing to take [fol. 2493] electric service from the rural lines constructed by Authority under Section 1 hereof prior to Authority's connecting such prospective customer for service, said payment to constitute the prospective customer's membership

fee in Corporation. Corporation shall give to each natural or artificial person from whom such fee is collected a membership certificate in Corporation in accordance with Corporation's by-laws. If it is not feasible for Corporation to give the membership certificate at the time the payment is made, a receipt for such payment shall be given the prospective customer, in return for which he may obtain, at some later date, a membership certificate in Corporation.

Corporation further agrees to guarantee the payment of each and every account for electric service as billed by Authority of each customer taking service from Authority on the lines constructed under Section 1 hereof to the extent of Ten Dollars ($10.00) for each customer. When any bill remains unpaid after the gross rate applies under Authority's rate schedule in effect in Lincoln County, Corporation shall pay to Authority on demand the amount of such unpaid bill to the extent of Ten Dollars ($10.00) per unpaid bill. Upon receipt of such payment Authority shall assign to Corporation the unpaid bill to the extent of the amount paid by Corporation to Authority.

3. Authority agrees to collect an amortization charge as provided in Authority's rate schedule in effect in Lincoln County of one (1) cent per kwh. for the first one hundred (100) kwh. used per month, such charge not to be less than twenty-five cents (25c) nor more than One Dollar ($1.00) [fol. 2494] per customer per month. These amortization collections shall be entered on the books of Authority in such manner as to make the amount of same paid by each customer readily discernible. The total amount of these amortization collections shall be credited to Corporation and deducted from Corporation's indebtedness to Authority when Corporation purchases the property referred to herein.

4. Corporation agrees to furnish Authority part time clerical and stenographic services to aid in the construction, operation, and maintenance of the lines referred to herein during the interim period of Authority's operation of the rural lines.

5. Authority will pay Corporation the sum of Fifty Dollars ($50.00) per month during the interim period in which

COMPLAINANTS' EXHIBIT No. 176

Authority operates the rural lines and until the Corporation purchases and begins operating same in its own behalf.

In Witness Whereof, the parties hereto have caused this instrument to be signed and attested by their duly authorized officers as of the day and year first above written.

Supplemental Contract Between TVA and Lincoln County Electric Membership Corporation, Dated June 19, 1936

This contract extends the contract dated October 1, 1935 (Complainants' Exhibit No. 176) until June 30, 1937, or until the rural electric lines which TVA is constructing for Lincoln County Electric Membership Corporation are completed as a unit and suitable for operation, whichever is the earlier.

[fol. 2496] COMPLAINANTS' EXHIBIT No. 178

Contract Between Tennessee Valley Authority and Monroe County Electric Power Association

Operation of Rural Transmission Line and Collection of Bills

This Agreement, made and entered into this first day of February, 1936, between Tennessee Valley Authority, a corporation created by Act of Congress May 18, 1933, hereinafter called Authority, and the Monroe County Electric Power Association, a corporation created and existing under and by virtue of the laws of the State of Mississippi, hereinafter called Association,

COMPLAINANTS' EXHIBIT No. 178

Witnesseth:

Whereas, Authority has constructed a certain rural transmission line in Monroe County, Mississippi, under the terms of a construction contract between the Authority and the Association, dated January 14, 1936; and

Whereas, Association has requested that Authority operate and maintain said rural transmission line until Association is in a position to take over the operation of same, which shall be not later than June 1, 1936, and

Whereas, Association has agreed to pay Authority for the operation of said rural transmission line by letter dated January 31, 1936, signed on behalf of the Association by R. G. Christian, President, and A. H. Ritter, Secretary, and [fol. 2497] Whereas, both parties hereto deem it advisable to set out more fully the terms upon which Authority will operate said rural transmission line,

Now, Therefore, for and in Consideration of the mutual covenants contained herein, the parties hereto mutually covenant and agree as follows:

1. Authority agrees to operate and maintain that rural transmission line, together with all taps therefrom, known as the gravel pit-Bigbee line and located in Monroe County, Mississippi, until such time as the Association is in a position to take over the operation and maintenance of same, which Association agrees shall not be later than June 1, 1936. In consideration of the Authority's operating and maintaining said line Authority shall retain the gross revenues, with the exception of amortization charges which shall be handled as hereinafter set out, paid by the customers on said line for electric service.

2. This provision is the same as provision No. 2 in Complainants' Exhibit No. 176.

3. This provision is the same as provision No. 3 in Complainants' Exhibit No. 176.

4. Association agrees to reimburse Authority at its direct cost plus overhead for any additional capital expenditures made by Authority in extending service to new customers along the line, or otherwise.

COMPLAINANTS' EXHIBIT No. 178

[fol. 2499] COMPLAINANTS' EXHIBIT No. 179

Operation Contract Between Pickwick Electric Membership Corporation and Tennessee Valley Authority

This Agreement, entered into as of the 21st day of April, 1936, between the Pickwick Electric Membership Corporation (hereinafter called "Corporation"), a corporation duly organized and existing under the laws of the State of Tennessee, and Tennessee Valley Authority (hereinafter called "Authority"), a corporation created by the Tennessee Valley Authority Act of 1933.

Witnesseth:

Whereas, at its meeting on January 15, 1936, the Board of Directors of Corporation requested Authority to construct rural transmission lines in Hardin, McNairy and Chester Counties, Tennessee, and agreed that Corporation would purchase said lines from Authority at cost plus overhead; and

Whereas, pursuant to that request Authority is constructing certain rural lines in the above counties for Corporation (said lines being hereinafter referred to as "new lines"); and

Whereas, under an agreement entitled, "Sale and Assignment Contract between Alcorn County Electric Power Association, Pickwick Electric Membership Corporation and

Tennessee Valley Authority," executed on even date herewith, Authority has loaned to Corporation the funds neces-
[fol. 2500] sary to enable Corporation to purchase, and Corporation has purchased, certain rural lines in Hardin and McNairy Counties, Tennessee, from the Alcorn County Electric Power Association (said lines being hereinafter referred to as "ACE lines"); and

Whereas, it is not feasible for Corporation to begin the operation of the ACE lines or of the new lines being constructed by Authority for Corporation until such new lines are completed as a unit and Corporation shall have acquired a superintendent and completed the organization necessary for operating all such lines as a unit; and

Whereas, it is necessary for Authority to operate for Corporation the ACE lines and the new lines as and when completed during the interim period above described, and Corporation and Authority desire to define and set forth the terms and conditions upon which the same will be operated.

Now, Therefore, for and in consideration of the mutual covenants contained herein the parties hereto mutually covenant and agree as follows:

1. Construction of New Lines and Payment Therefor.— Authority shall proceed with the construction for Corporation of such new lines in Hardin, McNairy and Chester Counties, Tennessee, as Authority may deem feasible from the standpoint of both Authority and Corporation.

2. Operation of ACE Lines and New Lines.— Authority shall operate the ACE lines for Corporation from the effective date of this contract, together with such new lines constructed for Corporation as Authority may deem suitable for energizing at said date. As and when additional new lines, if any, are constructed by Authority for Cor-
[fol. 2501] poration, Authority will energize and operate such lines for Corporation when Authority considers such lines ready for operation.

3. Application For Service.—Any person desiring service from the ACE lines (other than members transferred from the Alcorn County Electric Power Association whose status shall be as provided in the Sale and Assignment Contract above referred to) and any person desiring service from the

new lines, during the period of interim operation, shall apply to Corporation for membership in Corporation, and if the Authority deems it feasible to serve such applicant and such applicant shall agree to comply with the provisions of Corporation's charter and by-laws, Corporation shall collect the sum of Ten Dollars ($10.00) from said applicant and shall issue him a certificate of membership in Corporation, or a receipt entitling the holder to a certificate of membership when said certificates have been prepared. Authority will then connect and serve said customer.

4. Rates, Charges and Revenues.—Authority will supply electricity over all said lines at the retail rates prescribed in the schedules of the standard power contracts now in use by Authority with cooperative associations, including the amortization charge of One Cent (1¢) per kwh. of energy consumed, such amortization charge not to exceed One Dollar ($1.00) nor to be less than Twenty-five Cents (25¢) for each customer per month. All such amortization charges collected by Authority shall be entered on Authority's books so as to make the total amount paid by each customer during the interim period readily discernible. The total amount of these amortization collections shall be credited to Corporation on its obligation to Authority under [fol. 2502] the Sale and Assignment Contract referred to above and its obligations to Authority for the construction of the new lines. Authority will retain all revenues accruing from all lines during this interim period, other than the amortization charges above provided for, as compensation for Authority's services in operating such lines.

5. Collection of Bills.—All bills for energy furnished over such lines during the interim period of operation shall be submitted and collected by Authority. However, Corporation guarantees the payment of each and every such account as billed by Authority to the extent of Ten Dollars ($10.00) per customer per month. If any bill remains unpaid after the gross rate applies under Authority's rate schedule Corporation agrees to pay to Authority the amount of such unpaid bill to the extent of Ten Dollars ($10.00) per unpaid bill. The bill will then be assigned to Corporation to the extent of the amount paid thereon by Corporation to Au-

thority and Corporation shall collect such amount from the delinquent customer.

6. Payments for Range and Water Heater Installations.—Authority shall make payments for range and water heater installations only to customers receiving service on the new lines constructed by Authority. Any range or water heater payments to customers receiving service on the ACE lines must be made by Corporation. All payments made by Authority on these items shall be collected in a work order and charged to Corporation when the operation of all the lines is turned over to Corporation.

7. Bookkeepers Services.—Corporation agrees to furnish Authority part-time clerical and stenographic services to aid in the construction, operation and maintenance of the [fol. 2503] ACE lines and the new lines during the interim period, and Authority will pay Corporation the sum of Fifty Dollars ($50.00) per month for such part-time services during the said interim period. This paragraph shall be effective as of April 1, 1936.

8. Term of Contract.—When Authority shall notify Corporation that the new lines constructed for Corporation have been completed and that it is feasible for Corporation to take over the control and operation of all lines as a unit, which shall be not later than September 1, 1936, the above arrangement for interim operation by Authority shall terminate. Corporation agrees to accept at that time the conveyance of all new lines constructed by Authority for Corporation, and to take over control and operation of all such new lines and the ACE lines. Corporation agrees to execute at that time Authority's standard Power Contract and Sale and Security Contract providing for the purchase of power by Corporation from Authority for operating such lines, evidencing Corporation's obligation to Authority for the construction of the new lines and the loan by Authority to Corporation used in purchasing the ACE lines, and providing for the method of payment of such obligations, and Corporation further agrees to execute to Authority a good and valid first mortgage covering all property now owned or hereafter acquired by Corporation as security for the payment of Corporation's obligations to Authority.

[fol. 2505] COMPLAINANTS' EXHIBIT No. 180

Operation Contract Between Bedford County Electric Membership Corporation and Tennessee Valley Authority

This agreement entered into this 18th day of May, 1936, between Bedford County Electric Membership Corporation (hereinafter called Corporation), a corporation duly organized and existing under the laws of the State of Tennessee, and Tennessee Valley Authority (hereinafter called Authority), a corporation created by the Tennessee Valley Authority Act of 1933.

Witnesseth:

Whereas, Corporation has requested Authority to construct for it rural transmission and distribution lines in and adjacent to Bedford County, Tennessee, and has agreed that Corporation will reimburse Authority therefor at cost plus overhead, and

Whereas, pursuant to that request Authority is constructing and has constructed certain rural lines in and adjacent to Bedford County, Tennessee, for Corporation, and

Whereas, it is not practicable for Corporation to begin the maintenance and operation of said lines until the same have been completed as a unit and the load sufficiently built up, and

Whereas, the parties hereto desire to enter into an agreement whereby Authority will energize and operate such lines or parts thereof as soon as it is practicable for Authority

[fol. 2506] to do so and until the lines have been completed as a unit and it is feasible for Corporation to take over the maintenance and operation of the complete unit.

Now, therefore, for and in consideration of the mutual covenants contained herein, the parties hereto mutually covenant and agree as follows:

1. Construction of lines and payment therefor—Authority will proceed with due diligence in the construction of such rural lines in and adjacent to Bedford County as may be requested by Corporation and considered feasible by Authority from the standpoint of both Authority and Corporation. Corporation agrees to pay Authority therefor the cost to Authority of constructing such lines plus overheads.

2. Preliminary operation of lines—Authority will energize those lines or portions thereof as soon as construction has proceeded to such an extent as to make it feasible in the opinion of Authority to do so. Such lines will be operated directly by Authority under the terms and provisions of this contract. Provided, however, that on or before January 1, 1937, Authority shall turn over to Corporation and Corporation shall accept the maintenance and operation of all lines which Authority has completed for Corporation prior to that date.

3. Terms and conditions of preliminary operation:

(a) Application for services—Any person desiring service during the period of preliminary operation of the lines constructed hereunder shall apply to Corporation for membership therein, and if Authority deems it feasible to serve [fol. 2507] such applicant and such applicant agrees to comply with the provisions of Corporation's charter and by-laws, Corporation shall collect the sum of Ten Dollars ($10) from said applicant and shall issue to him a certificate of membership in Corporation, or a receipt entitling the holder to a certificate of membership when such certificates have been prepared. Authority will then connect and serve said customer.

(b) Rates, charges and revenues—Authority will supply electricity over all such lines at the retail rates prescribed in the schedules of the standard power contracts now in use

by Authority with cooperative associations, including the amortization charge of 1¢ per kwh. of energy consumed, such amortization charge not to exceed One Dollar ($1.00) nor to be less than 25¢ for each customer per month. All such amortization charges collected by Authority shall be entered on Authority's books so as to make the total amount paid by each customer during the interim period readily discernible. The total amount of these amortization collections shall be credited to Corporation on its obligation to Authority for the construction of rural lines. Authority will retain all revenues accruing from all lines during this interim period, other than the amortization charges above provided for, as compensation for Authority's services in operating such lines.

(c) Collection of bills—All bills for energy furnished over such lines during the interim period of operation shall be submitted and collected by Authority. However, Corporation guarantees the payment of each and every such account as billed by Authority to the extent of Ten Dollars ($10) [fol. 2508] per customer per month. If any bill remains unpaid after the gross rate applies under the Authority's rate schedule, Corporation agrees to pay to Authority the amount of such unpaid bill to the extent of Ten Dollars ($10) per unpaid bill. The bill will then be assigned to Corporation to the extent of the amount paid thereon by Corporation to Authority and Corporation shall collect such amount from the delinquent customer.

(d) Bookkeeper's services—Corporation agrees to furnish Authority part-time clerical and stenographic services to aid Authority in constructing, operating and maintaining rural lines herein provided for, and Authority will pay Corporation the sum of Fifty Dollars ($50) per month for such part-time services during said interim period.

4. Term of preliminary operation—When Authority shall notify Corporation that the lines constructed for Corporation have been completed as a unit and that it is feasible for Corporation to take over the control and operation of such lines, which shall be not later than January 1, 1937, the above arrangement for interim operation by Authority shall terminate. Corporation agrees to accept at that time the

COMPLAINANTS' EXHIBIT No. 180

delivery of such lines as have been completed by Authority for Corporation, and to take over the control and operation of such lines. Corporation agrees to execute Authority's standard power contract providing for the purchase of power by Corporation from Authority for operating such lines, and Authority's standard sale and security contract evidencing Corporation's obligation to Authority for the construction of rural lines and providing for the method of payment of such obligation. Corporation further agrees to execute to Authority a good and valid first mortgage cov- [fol. 2509] ering all property now owned or hereafter acquired by Corporation as security for the payment of Corporation's obligations to Authority.

In Witness Whereof, the parties hereto have caused this instrument to be signed and attested by their duly authorized officers as of the day and year first above written.

Contract TV-6057

Agreement for Sale and Loan Between Tennessee Valley Authority and Gibson County Electric Membership Corporation

This Agreement, made and entered into this thirteenth day of August, 1936, by and between the Tennessee Valley Authority (hereinafter called "Authority"), a corporation created by the Tennessee Valley Authority Act of 1933, its successors and assigns, and the Gibson County Electric Membership Corporation (hereinafter called "Corporation"), a corporation duly organized, created, and existing under and by virtue of the laws of the State of Tennessee,

COMPLAINANTS' EXHIBIT No. 181.

Witnesseth:

Whereas, Corporation and Authority have entered into a power contract of even date herewith under the terms of which Corporation agrees to purchase from Authority, and Authority agrees to supply, the entire electric requirements of Corporation; and

Whereas, Authority, by virtue of Section 10 of the Tennessee Valley Authority Act, has constructed and is engaged in constructing rural transmission lines to farms and small villages in Gibson County, Tennessee, in order to promote and encourage the fullest possible use of electric light and power on such farms and in such small villages; and

[fol. 2511] Whereas, Corporation desires to purchase the lines so constructed by Authority in Gibson County, Tennessee, and to maintain and operate them so as to promote the fullest possible use of electricity among the members of said Corporation; and

Whereas, Corporation desires to acquire the urban distribution system in the town of Gibson, Gibson County, Tennessee, from the present owners, and has reason to believe that Corporation can purchase said urban distribution system for the sum of three thousand six hundred and eighteen dollars ($3,618.00); and

Whereas, Corporation has requested that Authority advance to Corporation three thousand six hundred and eighteen dollars ($3,618.00) for the acquisition of said distribution system, and further to extend additional credit up to the sum of five thousand five hundred dollars ($5,500.00) in order that Corporation might rehabilitate said distribution system;

Now, Therefore, in consideration of the mutual benefits to all parties hereto and of the covenants and agreements herein contained and those also contained in said Power Contract, and subject to the provisions of the Tennessee Valley Authority Act of 1933, as amended, the parties hereto covenant and agree, as follows:

1. Incorporation of Power Contract.—This instrument is executed in connection with and is to be considered a part of the contract styled, "Power Contract Between Tennessee Valley Authority and Gibson County Electric Membership

SERVICE CLASSIFICATION "E-1"

SUBURBAN ELECTRIC SERVICE
110-220 Volts

Single Phase

AVAILABILITY

Available to any consumer served from a single-phase suburban distribution line of the Company for electric lighting, cooking, heating, refrigeration or power service having a demand of less than 50 kilowatts, or any combination of these, where the total consumption can be measured at one delivery point.

RATE

$1.25 net ($1.375 gross) for the first 5 KWH or less consumed per month; plus
5 cents net (5.5c gross) per KWH for the next 45 KWH consumed per month; plus
3 cents net (3.3c gross) per KWH for the next 950 KWH consumed per month; plus
2 cents net (2.2c gross) per KWH for the next 4000 KWH consumed per month; plus
1 cent net (1.1c gross) per KWH for all over 5000 KWH consumed per month.

The above monthy charge for the first 5 KWH or less is applicable for service with contracted capacity requirements of 1.5 kilowatts, as hereinafter determined, and will be increased 15 cents net (16.5c gross) for each 100 watts of capacity requirements contracted for in excess of 1.5 kilowatts.

DETERMINATION OF CONSUMERS PER MILE

The Consumers per mile shall be the total number of Consumers served from the line divided by the total mileage of distribution pole line serving such Consumers, exclusive of service connections and exclusive of customer-owned distribution lines over and across private right-of-way.

DETERMINATION OF CONSUMERS' CONTRACTED CAPACITY REQUIREMENTS.

LIGHTING LOAD:
The lighting load within one residence and/or 200 watts of commercial or any other lighting load will not be counted but will be allowed each Consumer on account of the above 1.5 kilowatts contracted capacity requirements. All other lighting load will be in addition to the above allowance of 1.5 kilowatts of contracted capacity requirements and will be counted at 100% of the lamp wattage or volt-ampere rating. The Lighting Load of each church, lodge, and day-school will be counted at 200 watts.

MOTOR LOAD:
Motors with manufacturer's rating of less than one (1) horsepower will not be counted in determining the contracted capacity requirements:

a. GENERAL POWER:
The kilowatts of motor load, other than Seasonal Power, and other than motors less than one-horse-power each, shall be as follows:
70% of the first ten (10) horsepower of connected motor load; plus
40% of all over ten (10) horsepower of connected motor load.

Effective for bills dated January 1, 1937 and thereafter.

Corporation" dated thirteenth day of August, 1936 (hereinafter called "Power Contract").

2. Construction of Project.—Authority agrees to construct and to convey to Corporation, subject to the provi- [fol. 2512] sions hereinafter contained, the rural transmission lines and the other properties represented by Work Orders 2132, 2133, 2142, 2272, 2273, and 2185, explanations of which are attached hereto and hereby made a part hereof as "Exhibit A." The estimated cost of the construction to be done pursuant to the above Work Orders is one hundred ten thousand sixty and 75/100 dollars ($110,060.75), but this sum shall be subject to adjustment plus or minus when the Work Orders have been closed and the costs thereof determined.

3. Acceptance of Project by Corporation.—Corporation shall accept the properties heretofore or hereafter constructed by Authority, pursuant to the Work Orders referred to in Section 2 above, in Gibson County, Tennessee, and shall reimburse Authority for all of Authority's costs under said Work Orders, including overheads.

4. Rights of Way and Easements.—Corporation agrees to secure at its own expense the rights of way and easements necessary for the construction of the lines Authority elects to build for Corporation under said Work Orders. Such easements shall be secured in form acceptable to Authority and shall run to and be the property of Corporation and assigns.

5. Franchises and Consents.—Corporation agrees to secure all the franchises and consents from the governing bodies of the counties and the governing bodies of incorporated towns which may be necessary for the construction and operation by Authority or Corporation of the rural transmission lines and properties herein provided for.

6. Building of Project.—Authority will proceed with due diligence in the construction of the project covered by said Work Orders and will deliver to Corporation a part or parts of the properties when construction has progressed to such a stage that such part is practicably usable for electric service by Corporation. Corporation agrees to accept such

[fol. 2513] lines as delivered by Authority and to operate and maintain them on Corporation's behalf.

7. Determination of Costs.—As soon as possible after the completion of the Work Orders designated in Section 2 above, the completion of which is hereby authorized and requested by Corporation, Authority shall determine the precise total amount of the cost to Authority of the project constructed pursuant to said Work Orders, as shown by the records of Authority, which cost shall include overhead charges.

8. (a) Loan to Association.—Authority agrees to advance three thousand six hundred eighteen dollars ($3,618.00) to Corporation to be used by Corporation in purchasing the urban distribution system serving the town of Gibson, Tennessee, which properties were purchased by E. H. Wright at a Trustee's sale on June 9, 1936. Upon the presentation by Corporation to Authority of (1) proof that Corporation has an option to purchase said Gibson distribution system for a sum not to exceed three thousand six hundred eighteen dollars ($3,618.00), conveyance to be made by warranty deed, and free of all liens and encumbrances, except liens for ad valorem taxes of 1936, which shall be prorated, and the present owner to operate the system until the Corporation shall have connected said system to a transmission line of Corporation to be used for serving said Gibson distribution system with electricity, and (2) proof that Corporation has all necessary or advisable franchises, permits, licenses, and other government approvals, and all rights of way and easements necessary or advisable for the operation of said distribution system, and (3) a certified copy of the resolution of the Board of Directors of Corporation requesting that the advance be made, and (4) an opinion of counsel (who shall be satisfactory to Authority), that E. H. [fol. 2514] Wright is the owner of said system and is capable of giving the Corporation valid title thereto, and that all the acts and proceedings of the Corporation necessary for borrowing said money from Authority and purchasing said system from said E. H. Wright have been duly taken and are within the powers of the Corporation, and (5) a receipt acknowledging the payment of said three thousand six hundred eighteen dollars ($3,618.00) by Authority

to Corporation, Authority will issue a check payable to Corporation in the sum of three thousand six hundred eighteen dollars ($3,618.00).

(b) Authority agrees to loan to Corporation that amount required by Corporation to improve and rehabilitate the Gibson distribution system, said amount not to exceed the sum of fifty-five hundred dollars ($5500.00). Upon the presentation by Corporation to Authority of (1) proof that Corporation has all necessary or advisable franchises, permits, licenses, and other governmental approvals, and all rights of way and easements necessary or advisable for the improvement and rehabilitation of said system, and (2) a certified copy of a resolution of the Board of Directors of the Corporation requesting such advance, and (3) an opinion of counsel that Corporation has power and has taken necessary steps to borrow such money and rehabilitate and improve such system, and (4) a receipt acknowledging the advance of such money, Authority will issue a check payable to Corporation in the sum of fifteen hundred dollars ($1500.00). Authority will make further advances to Corporation up to said fifty-five hundred dollars ($5500.00) as needed from time to time in the course of the improvement and rehabilitation of the distribution system, upon presentation of similar requests and receipts for such advances accompanied by a certificate stating in detail the use to which prior advances have been put and the use to which the sum applied for is to be put.

[fol. 2515] Corporation agrees that it will improve and rehabilitate, or cause the Gibson electric distribution system to be improved and rehabilitated, according to and in compliance with Authority's "Specifications for Rural Electric Distribution Lines." In the event such specifications do not cover the type work which is necessary or advisable for Corporation to perform in the rehabilitation and improvement of the distribution system, Corporation agrees to perform such work in compliance with the National Electric Safety Code, as from time to time amended by the proper authorities. If the terms of the Authority's Specification for Rural Electric Distribution Line" and the terms of the National Electric Safety Code shall conflict, the former shall control.

Corporation further agrees that Authority shall have the right to demand that the specifications for such improvement and rehabilitation be presented to Authority, and to inspect the project at any time during the improvement thereof, in order that Authority may ascertain whether Corporation is complying with this section.

Corporation agrees to reimburse Authority for the actual cost of making such inspections and reviewing Corporation's specifications, such sum, however, not to exceed five per centum (5%) of the total cost of rehabilitation and improvement of the system. If Authority finds that Corporation's specifications, or its construction, is not in compliance with the specifications with which Corporation has agreed to conform, and Corporation refuses to alter the same, Authority shall not be obligated to advance any further sums to Corporation under this section.

(c) Corporation hereby expressly agrees that it will not use any funds advanced by Authority to Corporation under paragraphs (a) and (b) hereof, except for the purposes [fol. 2516] therein stated, and Corporation further agrees that all advances so made shall become a part of the obligation of Corporation to Authority and the payment thereof shall be secured to Authority in the manner set out hereinafter.

9. Construction of Rural Lines.—Authority agrees to construct at its own expense on rights of way and/or easements to be secured by Corporation, such additional electric transmission lines in or adjacent to Gibson County, Tennessee, as the parties may from time to time agree. Said lines will be constructed by Authority for and on behalf of Corporation as Corporation's agent for such construction.

Corporation agrees to pay to Authority, in addition to all other outstanding indebtedness to Authority, the actual cost to Authority as billed by Authority, of any line so constructed pursuant to this agreement, and said additional indebtedness shall be added to the obligation of Corporation under this contract and shall become a part thereof.

10. Execution of Note, Mortgage—Payment of Indebtedness.—Authority will notify Corporation upon the comple-

tion of the construction of the Work Orders described in Section 2 above, and upon the determination of the costs thereof. Authority will also notify Corporation of the amount borrowed by Corporation for the acquisition, improvement and rehabilitation of the Gibson electric distribution system.

Authority will execute a conveyance to Corporation transferring all of its rights to the project constructed under the Work Orders described in Section 2 hereof, and will present to Corporation for execution a note or bond to the Tennessee Valley Authority covering the cost of the project constructed by Authority and in addition the amount advanced by Authority to Corporation with which Corporation acquired, rehabilitated, and improved the Gibson distribution system. [fol. 2517] Corporation agrees to execute said note or bond to the Tennessee Valley Authority and further agrees to secure the payment of said obligation by a mortgage in favor of Authority and the United States of America covering all of the property of Corporation then owned and thereafter acquired. Corporation agrees to pay said obligation to Authority with interest on the unpaid balance at the rate of three and one-half per centum (3½%) per annum, payable semi-annually and at the times and in the manner provided for in said Power Contract between Corporation and Authority. Interest shall not begin to run, however, on any money loaned by Authority to Corporation hereunder until such money has actually been advanced and turned over to Corporation. Interest on the properties constructed under Section 2 hereof shall run from the date of the delivery of any part of said project to Corporation, but only upon the sum representing the cost of such delivered portion.

11. Insurance and Maintenance of Property.—Corporation agrees to save Authority harmless from any liability arising out of Corporation's operation of the lines, properties and systems referred to herein. Corporation agrees to secure adequate workmen's compensation insurance and to secure public liability insurance in an amount of not less than twenty-five thousand dollars ($25,000.00) for injuries, including wrongful death, to any one person, and subject to the same limit for each person in an amount of not less

than fifty thousand dollars ($50,000.00) for injuries, including wrongful death, to two or more persons on account of one accident, and property damage insurance in an amount of not less than ten thousand dollars ($10,000.00). Corporation shall at all times make or cause to be made, at its own expense, such repairs, maintenance, renewals, and replacements as shall be necessary to maintain, preserve, and keep the property described herein in good repair, working order, and condition.

[fol. 2518] 12. Corporation agrees to construct, cause to be constructed, or acquire and to operate all of the rural lines in Gibson County, Tennessee, described as additions to properties now under construction pursuant to the work order set out in Section 2 hereof, which additional lines are more fully described and set out on the map attached hereto and hereby incorporated herein as Exhibit B. Corporation further agrees to construct, cause to be constructed, or to acquire and to operate all or such portion of the rural lines in Madison, Haywood, Dyer, and Obion Counties, Tennessee, which are more fully described and set out in the table and maps attached hereto and hereby incorporated herein as Exhibit C, as Authority may request; Provided, however, that Corporation shall not be obligated under this Section 12 unless Corporation is successful in securing the financing of said additional lines from the Tennessee Valley Authority or the Rural Electrification Administration; and Provided, further, that in no event shall Corporation be required hereunder to construct, cause to be constructed, or acquire lines which shall exceed in cost to Corporation the sum of $335,000.00.

13. Contract Not Transferable.—Neither this contract nor any interest therein shall be transferable or assignable by Corporation to any other party without first securing the written consent of Authority.

In Witness Whereof, the parties hereto have caused this instrument to be signed and attested by their duly authorized officers the day and year first above written.

Attest: (Signed) M. O. Zorecor, Secretary.

[fol. 2520] Exhibit A

1. Work Order 2132—Construct in Gibson and northern part of Madison Counties 79 miles of single phase two-wire No. 2 and No. 4 ACSR, 6900 volts, grounded neutral rural lines with transformers, secondaries and services to serve customers along the routes.

2. Work Order 2133—Construct in Gibson and northern part of Madison Counties 25 miles of three phase four-wire No. 2 ACSR, 11,950 Y volt grounded neutral rural lines from Baker's Chapel to Trenton and from New Enterprise to Milan, including transformers, secondaries and services to serve customers along the routes.

3. Work Order 2142—Install three 37½ kva. 6900 volt step type voltage boosters in the Baker's Chapel-Milan 12 kv. line at Gibson, Tennessee, complete with pole platform, switches, and accessories.

4. Work Order 2272—Service extension including necessary transformers and metering equipment to serve Trenton Cotton Oil Company.

5. Work Order 2273—Service extension including necessary transformers and metering equipment to serve the Banks-Hammond Cotton Gin in Trenton.

6. Work Order 2185—This work order is issued to collect the payments to be made by the Authority toward wiring cost on installation of ranges and hot water heaters to Gibson County, Tennessee.

SERVICE CLASSIFICATION "E-1"

SUBURBAN ELECTRIC SERVICE
110-220 Volts

Single Phase

AVAILABILITY

Available to any consumer served from a single-phase suburban distribution line of the Company for electric lighting, cooking, heating, refrigeration or power service having a demand of less than 50 kilowatts, or any combination of these, where the total consumption can be measured at one delivery point.

RATE

$1.25 net ($1.375 gross) for the first 5 KWH or less consumed per month; plus
5 cents net (5.5c gross) per KWH for the next 45 KWH consumed per month; plus
3 cents net (3.3c gross) per KWH for the next 950 KWH consumed per month; plus
2 cents net (2.2c gross) per KWH for the next 4000 KWH consumed per month; plus
1 cent net (1.1c gross) per KWH for all over 5000 KWH consumed per month.

The above monthy charge for the first 5 KWH or less is applicable for service with contracted capacity requirements of 1.5 kilowatts, as hereinafter determined, and will be increased 15 cents net (16.5c gross) for each 100 watts of capacity requirements contracted for in excess of 1.5 kilowatts.

DETERMINATION OF CONSUMERS PER MILE

The Consumers per mile shall be the total number of Consumers served from the line divided by the total mileage of distribution pole line serving such Consumers, exclusive of service connections and exclusive of customer-owned distribution lines over and across private right-of-way.

DETERMINATION OF CONSUMERS' CONTRACTED CAPACITY REQUIREMENTS.

LIGHTING LOAD:
The lighting load within one residence and/or 200 watts of commercial or any other lighting load will not be counted but will be allowed each Consumer on account of the above 1.5 kilowatts contracted capacity requirements. All other lighting load will be in addition to the above allowance of 1.5 kilowatts of contracted capacity requirements [illegible] of the [illegible] watts or volt ampere rating. The Light-

9. The following conditions shall govern credits when applicable to suburban lines:
   (a) Consumers served from any suburban line which is used to extend service to a community at urban rates shall not be charged for any capacity requirements in excess of that determined by their actual connected loads.
   (b) Should the Company elect to construct a suburban line on existing poles supporting a transmission line of the Company, the suburban line shall be credited with two and one-half (2½) KW per mile of such joint pole line.
   (c) A suburban line shall not receive any credits for temporary service.

10. The Company shall not be required to construct a suburban line more than two-tenths (2/10) of a mile of line per Consumer without the right to require the Consumer or Consumers to make a guarantee to secure the permanency of the Company's investment by special deposit, or other manner acceptable to the Company.

MINIMUM BILL

In consideration of the readiness of the Company to furnish such service, each consumer shall pay a monthly minimum charge equal to the monthly charge for the first 5 KWH, plus $1.00 net ($1.10 gross) per KW for all over 10 KW of residential cooking and heating loads and or all over 10 KW of other loads except lighting and motors.

PROMPT PAYMENT DISCOUNT

The prompt payment discount is the difference between the net and gross rates and will be allowed on all bills paid within ten days from the due date.

TERM OF CONTRACT

Service under this classification shall be for an initial period of five (5) years, and thereafter from year to year until terminated by thirty days' written notice by either the Consumer or the Company of intention to terminate the contract, for the original Consumers who sign applications for service prior to the construction of the suburban line.

The term of contract for Consumers who sign applications for service subsequent to the completion of the suburban line shall be for a period then equal to the unexpired part of the five years for which the original Consumers signed applications for service, and thereafter from year to year until terminated by thirty days' written notice by either the Consumer or the Company of intention to terminate the contract.

Upon and after the expiration of the initial period of five years for which the original Consumers sign applications for service, the term of contract for all Consumers on the suburban line shall be for one year and thereafter from year to year until terminated by thirty days' written notice by either the Consumer or the Company of intention to terminate the contract.

Experimental rate customers who were receiving service on September 2, 1933, under Service Classification "D" and properly classified thereunder, may continue to be served on the same schedule of rates.

Rules of Alabama Public Service Commission concerning rural lines.

By Order of Alabama Public Service Commission
Non Docket 982, September 5, 1935, July 17, 1936, December 17, 1936.

Alabama Power Company No. 1
Fourth Revised Sheet No. 12a

SERVICE CLASSIFICATION "E-1"

(Continued)

b. SEASONAL POWER:
The kilowatts of all motors of 7½ horsepower rating or over used exclusively for seasonal operations of an individual farm shall be as follows:
7½ h.p. motors—fifty per cent (50%).
10 h.p. motors or larger—forty per cent (40%).

COOKING AND HEATING LOAD:

Cooking and heating applicances with manufacturer's rating of 880 watts or less will not be counted.

The connected load for cooking and baking equipment ordinarily used in the preparation of food, air heaters, water heaters, melting pots on linotype machines, X-rays, hair dryers, and or ten kilowatts of connected load for sterilizers, vulcanizers, permanent wave machines, hotbed heating elements and heating elements in incubators and brooders shall be counted only in determining the minimum charge.

ALL OTHER LOAD:

All other load will be counted at the manufacturer's rating in watts or volt-amperes of such equipment, or by test.
Where double throw switches are used, the maximum sum total of consumer's loads, as determined herein which can be operated at one time, will be counted.

MINIMUM CONTRACTED CAPACITY:

The Minimum Contracted Capacity Requirements per consumer shall be 1½ kilowatts. Before beginning construction of any suburban line, the Company may require the consumer or consumers to be served therefrom to contract for a total Minimum Capacity Requirements at the rate of 7½ kilowatts per mile of line. At the expiration of the first five years of service from a suburban line the Minimum Capacity Requirements shall be reduced to 5 kilowatts per mile of line, without otherwise affecting the rate.

OPTIONAL DEPOSIT IN LIEU OF MONTHLY CHARGE FOR FIRST 5 KWH:

Any consumer receiving service from a suburban line may, at his option and in lieu of the monthly charge for the first 5 KWH, deposit with the Company an amount equal to $150.00 for each $1.00 of monthly charge as determined above. Such deposit will be returned to the Consumer in full without interest at the time of the termination of his contract, but in no instance less than one year from the beginning of service.

SPECIAL RULES GOVERNING THE APPLICATION OF SERVICE CLASSIFICATION "E-1"

suburban distribution line of the Company for electric lighting, cooking, heating, refrigeration or power service having a demand of less than 50 kilowatts, or any combination of these, where the total consumption can be measured at one delivery point.

"OBJECTIVE" RATE

$1.25 net ($1.375 gross) for the first 15 KWH or less per month; plus
4.5c net (4.95c gross) per KWH for the next 15 KWH per 100 watts per month; plus
2.0c net (2.20c gross) per KWH for the next 10 KWH per 100 watts per month, but not less than 150 KWH per month; plus
1.25c net (1.375c gross) per KWH for the next 500 KWH per month; plus
1.0c net (1.10c) gross per KWH for all KWH per month in excess of above amounts.

DETERMINATION OF CAPACITY REQUIREMENTS

The capacity requirements of each Consumer, as determined below to the nearest 100 watts, shall be based on the connected load but shall not be considered as less than 400 watts for residences nor less than 1,000 watts for commercial or other farm uses.

(a) RESIDENTIAL
The connected load of each residence and 200 watts of yard, barn, garage or other lighting, will be considered as 400 watts in determination of the capacity requirements.
The initial monthly charge of $1.25 net ($1.375 gross) shall be increased $1.00 net ($1.10 gross) per KW for electric range and heating load in excess of 10 KW, and 75c net (82.5c gross) per HP for all connected motor loads in excess of 3 HP.
The maximum size of any single motor shall not exceed 3 HP.

(b) OTHER THAN RESIDENTIAL

LIGHTING—
100% of the first 1,000 watts of connected lamp wattage or volt ampere rating; plus
80% of the next 9,000 watts of connected lamp wattage or volt ampere rating; plus
50% of all over 10,000 watts of connected lamp wattage or volt ampere rating.

MOTORS—
40% of the first 10 HP of connected motor load; plus
30% of all over 10 HP of connected motor load.
Motors with manufacturer's rating of 1/6 HP or less will not be counted.
One (1) HP of motor load as determined above shall be the equivalent of 750 Watts.

ALL OTHER LOADS—
Appliances with manufacturer's rating of 880 watts or less and 10 KW of cooking and heating loads will not be counted. All other connected loads will be counted at 50% of manufacturer's rating in the determination of the capacity requirements.

Effective for bills dated September 1, 1935 and thereafter.

for seasonal operations of an individual farm shall be as follows:

7½ h.p. motors—fifty per cent (50%).
10 h.p. motors or larger—forty per cent (40%).

COOKING AND HEATING LOAD:

Cooking and heating applicances with manufacturer's rating of 880 watts or less will not be counted.

The connected load for cooking and baking equipment ordinarily used in the preparation of food, air heaters, water heaters, melting pots on linotype machines, X-rays, hair dryers, and or ten kilowatts of connected load for sterilizers, vulcanizers, permanent wave machines, hotbed heating elements and heating elements in incubators and brooders shall be counted only in determining the minimum charge.

ALL OTHER LOAD:

All other load will be counted at the manufacturer's rating in watts or volt-amperes of such equipment, or by test.
Where double throw switches are used, the maximum sum total of consumer's loads, as determined herein which can be operated at one time, will be counted.

MINIMUM CONTRACTED CAPACITY:

The Minimum Contracted Capacity Requirements per consumer shall be 1½ kilowatts. Before beginning construction of any suburban line, the Company may require the consumer or consumers to be served therefrom to contract for a total Minimum Capacity Requirements at the rate of 7½ kilowatts per mile of line. At the expiration of the first five years of service from a suburban line the Minimum Capacity Requirements shall be reduced to 5 kilowatts per mile of line, without otherwise affecting the rate.

OPTIONAL DEPOSIT IN LIEU OF MONTHLY CHARGE FOR FIRST 5 KWH:

Any consumer receiving service from a suburban line may, at his option and in lieu of the monthly charge for the first 5 KWH, deposit with the Company an amount equal to $150.00 for each $1.00 of monthly charge as determined above. Such deposit will be returned to the Consumer in full without interest at the time of the termination of his contract, but in no instance less than one year from the beginning of service.

SPECIAL RULES GOVERNING THE APPLICATION OF SERVICE CLASSIFICATION "E-1"

1. A suburban line is defined to be:
   (a) Any electrical distribution line of 11,000 volts or less, not within the corporate limits of a municipality, which serves less than twenty Consumers per mile of pole line, and/or

Effective for bills dated January 1, 1937 and thereafter.

COMPLAINANTS' EXHIBIT No. 185

Rules of Alabama Public Service Commission concerning rural lines.

SERVICE CLASSIFICATION "E-1"

(Continued)

(b) Any electrical distribution line of 11,000 volts or less, within the corporate limits of a municipality, upon approval of the Alabama Public Service Commission.

2. Each suburban line as originally constructed shall be considered a unit in applying the monthly charge for the first 5 KWH or less, unless there is such a wide difference in Consumer-density between sections or branches of such line as to constitute marked discrimination against the higher density group, and in this event such sections or branches may be considered separate suburban lines.

3. New Consumers added to a suburban line will be served at the same base monthly charge for the first 5 KWH or less as existing Consumers on such line, unless such addition constitutes an extension which would reduce the average number of Consumers per mile of line, in which event the extension shall be considered a new suburban line.

4. (a) Any section of a suburban line, which is immediately adjacent to an urban distribution system and is served by an extension to such urban distribution system, serving 20 Consumers or more per mile shall become an urban line and service shall be rendered to such section at such urban rates as may be applicable, provided the remainder of such suburban line can be served without increase in the monthly minimum charge for the first 5 KWH to the consumers served therefrom.

(b) The Consumers of any section of a suburban line having a total of 75 Consumers or more and a density of 20 Consumers or more per mile, not including any Consumer located at a distance of one-half mile or more from the nearest other Consumer, shall be served at urban rates provided the remainder of such suburban line can be served without increase in the monthly minimum charge for the first 5 KWH to the Consumers served therefrom.

5. The monthly charge for the first 5 KWH or the equivalent Optional Deposit of each Consumer shall be subject to adjustment as of January 1 of each year.

6. The Company shall furnish and install, free of expense to the Consumer, service wires from its pole line to the first approved point of permanent support, or to the first pole of service on Consumer's premises. Special service or distribution lines required to be constructed on private property shall be constructed by the Company at cost and will be subject to a special agreement between the Company and the Consumer, or Consumers, to be served.

7. Where facilities are available at the premises of any Consumer for three-phase service, such service may be established under this classification for motor loads of 5 H.P. and over. The Company shall not, however, be required to construct any additional facilities for the purpose of supplying three-phase service unless the revenue to be derived immediately therefrom shall be sufficient to yield the Company a fair return on the value of such additional facilities.

In consideration of the readiness of the Company to furnish such service, each Consumer shall pay a monthly minimum charge of $1.25 net ($1.375 gross); plus 75c net (82.5c gross) per HP for all connected motor load other than motors of 3 HP rating or less, not exceeding a total of 3 HP used exclusively for residential purposes; plus $1.00 net ($1.10 gross) per KW for all over 10 KW of residential cooking and heating loads and/or all over 10 KW of other non-lighting load.

PROMPT PAYMENT DISCOUNT

The prompt payment discount is the difference between the net and gross rates and will be allowed on all bills paid within ten days from due date of bill.

APPLICATION OF RATE PLAN

(1) For present suburban Consumers who have taken service for at least 12 months and whose monthly bills figured at "Objective" Service Classification "E-4" equal or exceed the amount paid to the Company for service the same month during the service year ending May, 1934, "Objective" Service Classification "E-4" shall be applied by the Company for that month unless the application of Service Classification "E-1" results in a lower bill.

(2) Whenever during any month Service Classification "E-1" would result in a bill less than the amount paid to the Company for service the same month during the service year ending May, 1934, Service Classification "E-1" shall be applied by the Company for that month.

(3) Whenever the Consumer's bill for any month, computed under "Objective" Service Classification "E-4," would be less than the amount paid to the Company for service the same month during the service year ending May, 1934, but would be greater at Service Classification "E-1", then the bill rendered shall be equal to the amount paid to the Company for service the same month during the year ending May, 1934.

(4) For Consumers connected for less than twelve months preceding June, 1934, and for new Consumers, Service Classification "E-1" will apply for such Consumers until the first twelve months of service shall have elapsed, and thereafter "Objective" Service Classification "E-4" will be applicable on the basis provided for in Paragraphs 1, 2 and 3 hereof.

(5) Any residential suburban consumer using electric service for any combination of cooking, refrigeration and water heating shall have a maximum *base* bill of $8.00 per month for the first two (2) KW or less of contracted capacity, plus 40c per 100 watts of contracted capacity in excess of two (2) KW, such contracted capacity to be determined on the basis of Service Classification "E-1."

No such suburban residential consumer shall be billed in any month for an amount in excess of the maximum base bill determined as above, unless such consumer's uses of electric service figured at Service Classification "E-4" exceed the amount of such base bill for that month.

Special Rules Governing the Application of Service Classification "E-1" shall apply to and govern the application of this Service Classification.

(b) Any electrical distribution line of 11,000 volts or less, within the corporate limits of a municipality, upon approval of the Alabama Public Service Commission.

2. Each suburban line as originally constructed shall be considered a unit in applying the monthly charge for the first 5 KWH or less, unless there is such a wide difference in Consumer-density between sections or branches of such line as to constitute marked discrimination against the higher density group, and in this event such sections or branches may be considered separate suburban lines.

3. New Consumers added to a suburban line will be served at the same base monthly charge for the first 5 KWH or less as existing Consumers on such line, unless such addition constitutes an extension which would reduce the average number of Consumers per mile of line, in which event the extension shall be considered a new suburban line.

4. (a) Any section of a suburban line, which is immediately adjacent to an urban distribution system and is served by an extension to such urban distribution system, serving 20 Consumers or more per mile shall become an urban line and service shall be rendered to such section at such urban rates as may be applicable, provided the remainder of such suburban line can be served without increase in the monthly minimum charge for the first 5 KWH to the consumers served therefrom.

(b) The Consumers of any section of a suburban line having a total of 75 Consumers or more and a density of 20 Consumers or more per mile, not including any Consumer located at a distance of one-half mile or more from the nearest other Consumer, shall be served at urban rates provided the remainder of such suburban line can be served without increase in the monthly minimum charge for the first 5 KWH to the Consumers served therefrom.

5. The monthly charge for the first 5 KWH or the equivalent Optional Deposit of each Consumer shall be subject to adjustment as of January 1 of each year.

6. The Company shall furnish and install, free of expense to the Consumer, service wires from its pole line to the first approved point of permanent support, or to the first pole of service on Consumer's premises. Special service or distribution lines required to be constructed on private property shall be constructed by the Company at cost and will be subject to a special agreement between the Company and the Consumer, or Consumers, to be served.

7. Where facilities are available at the premises of any Consumer for three-phase service, such service may be established under this classification for motor loads of 5 H.P. and over. The Company shall not, however, be required to construct any additional facilities for the purpose of supplying three-phase service unless the revenue to be derived immediately therefrom shall be sufficient to yield the Company a fair return on the value of such additional facilities.

8. Industrial power consumers served from the suburban lines as herein defined shall be billed at the rates and charges prescribed by the standard power service classification applicable to such service.

COMPLAINANTS' EXHIBIT No. 185

Rules of Alabama Public Service Commission concerning rural lines.

SERVICE CLASSIFICATION "E-1"

(Continued)

9. The following conditions shall govern credits when applicable to suburban lines:

   (a) Consumers served from any suburban line which is used to extend service to a community at urban rates shall not be charged for any capacity requirements in excess of that determined by their actual connected loads.

   (b) Should the Company elect to construct a suburban line on existing poles supporting a transmission line of the Company, the suburban line shall be credited with two and one-half (2½) KW per mile of such joint pole line.

   (c) A suburban line shall not receive any credits for temporary service.

10. The Company shall not be required to construct a suburban line more than two-tenths (2/10) of a mile of line per Consumer without the right to require the Consumer or Consumers to make a guarantee to secure the permanency of the Company's investment by special deposit, or other manner acceptable to the Company.

MINIMUM BILL

In consideration of the readiness of the Company to furnish such service, each consumer shall pay a monthly minimum charge equal to the monthly charge for the first 5 KWH, plus $1.00 net ($1.10 gross) per KW for all over 10 KW of residential cooking and heating loads and or all over 10 KW of other loads except lighting and motors.

PROMPT PAYMENT DISCOUNT

The prompt payment discount is the difference between the net and gross rates and will be allowed on all bills paid within ten days from the due date.

TERM OF CONTRACT

Service under this classification shall be for an initial period of five (5) years, and thereafter from year to year until terminated by thirty days' written notice by either the Consumer or the Company of intention to terminate the contract, for the original Consumers who sign applications for service prior to the construction of the suburban line.

The term of contract for Consumers who sign applications for service subsequent to the completion of the suburban line shall be for a period then equal to the unexpired part of the five years for which the original Consumers signed applications for service, and thereafter from year to year until terminated by thirty days' written notice by either the Consumer or the Company of intention to terminate the contract

COMPLAINANTS' EXHIBIT No. 185

"OBJECTIVE" SERVICE CLASSIFICATION "E-4"
SUBURBAN ELECTRIC SERVICE
110-220 VOLTS
SINGLE PHASE

AVAILABILITY

Available on the basis provided herein to any Consumer served from a single phase suburban distribution line of the Company for electric lighting, cooking, heating, refrigeration or power service having a demand of less than 50 kilowatts, or any combination of these, where the total consumption can be measured at one delivery point.

"OBJECTIVE" RATE

$1.25 net ($1.375 gross) for the first 15 KWH or less per month; plus
4.5c net (4.95c gross) per KWH for the next 15 KWH per 100 watts per month; plus
2.0c net (2.20c gross) per KWH for the next 10 KWH per 100 watts per month, but not less than 150 KWH per month; plus
1.25c net (1.375c gross) per KWH for the next 500 KWH per month; plus
1.0c net (1.10c) gross per KWH for all KWH per month in excess of above amounts.

DETERMINATION OF CAPACITY REQUIREMENTS

The capacity requirements of each Consumer, as determined below to the nearest 100 watts, shall be based on the connected load but shall not be considered as less than 400 watts for residences nor less than 1,000 watts for commercial or other farm uses.

(a) RESIDENTIAL

The connected load of each residence and 200 watts of yard, barn, garage or other lighting, will be considered as 400 watts in determination of the capacity requirements.

The initial monthly charge of $1.25 net ($1.375 gross) shall be increased $1.00 net ($1.10 gross) per KW for electric range and heating load in excess of 10 KW, and 75c net (82.5c gross) per HP for all connected motor loads in excess of 3 HP.

The maximum size of any single motor shall not exceed 3 HP.

(b) OTHER THAN RESIDENTIAL

LIGHTING—

100% of the first 1,000 watts of connected lamp wattage or volt ampere rating; plus
80% of the next 9,000 watts of connected lamp wattage or volt ampere rating; plus
50% of all over 10,000 watts of connected lamp wattage or volt ampere rating.

MOTORS—

40% of the first 10 HP of connected motor load; plus
30% of all over 10 HP of connected motor load.
Motors with manufacturer's rating of 1/6 HP or less will not be counted.
One (1) HP of motor load as determined above shall be the equivalent of 750

(Continued)

MINIMUM BILL

In consideration of the readiness of the Company to furnish such service, each Consumer shall pay a monthly minimum charge of $1.25 net ($1.375 gross); plus 75c net (82.5c gross) per HP for all connected motor load other than motors of 3 HP rating or less, not exceeding a total of 3 HP used exclusively for residential purposes; plus $1.00 net ($1.10 gross) per KW for all over 10 KW of residential cooking and heating loads and/or all over 10 KW of other non-lighting load.

PROMPT PAYMENT DISCOUNT

The prompt payment discount is the difference between the net and gross rates and will be allowed on all bills paid within ten days from due date of bill.

APPLICATION OF RATE PLAN

(1) For present suburban Consumers who have taken service for at least 12 months and whose monthly bills figured at "Objective" Service Classification "E-4" equal or exceed the amount paid to the Company for service the same month during the service year ending May, 1934, "Objective" Service Classification "E-4" shall be applied by the Company for that month unless the application of Service Classification "E-1" results in a lower bill.

(2) Whenever during any month Service Classification "E-1" would result in a bill less than the amount paid to the Company for service the same month during the service year ending May, 1934, Service Classification "E-1" shall be applied by the Company for that month.

(3) Whenever the Consumer's bill for any month, computed under "Objective" Service Classification "E-4," would be less than the amount paid to the Company for service the same month during the service year ending May, 1934, but would be greater at Service Classification "E-1", then the bill rendered shall be equal to the amount paid to the Company for service the same month during the year ending May, 1934.

(4) For Consumers connected for less than twelve months preceding June, 1934, and for new Consumers, Service Classification "E-1" will apply for such Consumers until the first twelve months of service shall have elapsed, and thereafter "Objective" Service Classification "E-4" will be applicable on the basis provided for in Paragraphs 1, 2 and 3 hereof.

(5) Any residential suburban consumer using electric service for any combination of cooking, refrigeration and water heating shall have a maximum *base* bill of $8.00 per month for the first two (2) KW or less of contracted capacity, plus 40c per 100 watts of contracted capacity in excess of two (2) KW, such contracted capacity to be determined on the basis of Service Classification "E-1."

No such suburban residential consumer shall be billed in any month for an amount in excess of the maximum base bill determined as above, unless such consumer's uses of electric service figured at Service Classification "E-4" exceed the amount of such base bill for that month.

[fol. 2530] COMPLAINANTS' EXHIBIT No. 185

Alabama Power Company

Paragraph 5 of First Revised Sheet No. 12-e of "Objective" Service Classification "E-4"

(5) Any suburban consumer using electric service for any combination of residential cooking, refrigeration and water heating shall have a maximum base bill of $8.00 per month for the first two (2) kw. or less of contracted capacity requirements; plus forty cents (40c) per one hundred (100) watts of contracted capacity requirements in excess of two (2) kw., such contracted capacity requirements to be determined on the basis of Service Classification "E-1".

Approved by Alabama Public Service Commission in its Non-Docket 982, May 18, 1936. To be effective on bills dated June 1, 1936, and thereafter.

(Original Exhibit)

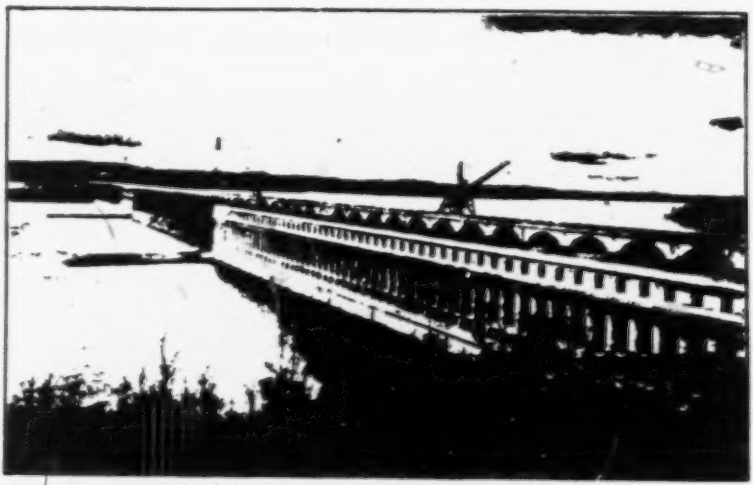
THE TENNESSEE VALLEY AUTHORITY



WILSON DAM AND POWER HOUSE AT MUSCLE SHOALS

"The continued idleness of a great national investment in the Tennessee Valley leads me to ask the Congress for legislation necessary to enlist this project in the service of the people."

President Roosevelt said this in his message to Congress proposing creation of the Tennessee Valley Authority. The great national investment to which he referred is the Government's war-time developments at Muscle Shoals designed to produce nitrates for use in making explosives. These are represented by Wilson Dam and power house, nitrate plants nos. 1 and 2, together with quarries, railroads, transmission lines, and other accessories needed for their operation.

But the President had more in mind than merely enlisting this Muscle Shoals investment in the service of the people. He said further in his message to Congress:

"It is clear that the Muscle Shoals development is but a small part of the potential public usefulness of the entire Tennessee River. Such use, if envisioned in its entirety, transcends mere power development: it enters the wide fields of flood control, soil erosion, afforestation, elimination from agricultural use of marginal lands, and distribution and diversification of industry. In short, this power development of war days leads logically to national planning for a complete river watershed involving many States and the future lives and welfare of millions. It touches and gives life to all forms of human concerns."

125969°—35

It is upon such a program that the Tennessee Valley Authority now is launched. The following are some of the fields in which work is being done:

Land classification, improvement of agriculture, and proper utilization of marginal lands.

Coordination of agriculture and industry along practical lines.

Development of domestic industries to supplement agriculture in providing local employment. An effort to achieve a balance between mass-production industry based on raw materials and cheap power, small "quality" industries based on the large supply of intelligent labor, and industries for home consumption.

Development of the power resources of the Tennessee Valley watershed as an integrated system.

Utilization of the power resources of the Tennessee Valley as a yardstick in determining the relative costs of public and private power operation; distribution of this power to the greatest number of people at the least possible cost, and conservation of its national defense assets.

Experiments leading to the production of more and better fertilizer and fertilizer materials for the United States.

Opening the Tennessee River to an economic maximum of navigation.

Maximum flood control.

Promotion of reforestation and methods of retarding soil erosion.

Conservation and utilization of the basin's mineral and other natural resources.

☆ ☆ ☆

Administration of this program as authorized by act of Congress on May 18, 1933, is placed in the care of a board of three directors appointed by the President with the approval of the Senate. The members of the board are: Arthur E. Morgan, chairman; Harcourt A. Morgan, and David E. Lilienthal.

The development embraces more than 40,000 square miles and encompasses the drainage area of the Tennessee River and its tributaries in Tennessee and portions of six other States—Virginia, North Carolina, Georgia, Alabama, Mississippi, and Kentucky. More than 2,000,000 people live within this area, with about 6,000,000 in the immediate sphere of influence.

MUSCLE SHOALS PROPERTIES [1]

When the T.V.A. was created, the Government properties at Muscle Shoals were turned over to its care. These properties, erected during the

[1] The rapids in the Tennessee River, extending from Browns Island to Florence, Ala., a distance of 37 miles with a total fall of 134 feet, long constituted a handicap to navigation, especially during low water. There is a popular story that the Indians named these rapids "Muscle Shoals" because it required "heap big muscle" to get their canoes around the place. Another tale is that the Shoals were originally named "Mussel" because of the fresh-water mussels once said to abound there. However, "muscle" and "mussel" are synonymous in old dictionaries. Atlases and maps of the late 1700's refer to the Alabama shoals as "Muscle Shoals." It so appears in the Cherokee Treaty signed at Washington in 1806 and in numerous acts of Congress and Government reports since 1828. In 1892 the United States Geographic Board decided that the correct spelling is "Muscle Shoals", and so it is today.

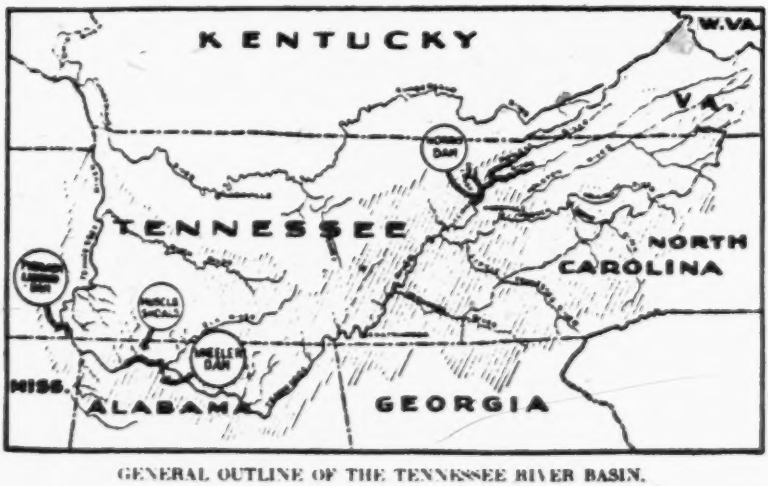
COMPLAINANTS' EXHIBIT No. 188

World War, include Wilson Dam, Nitrate Plant No. 1, Nitrate Plant No. 2, and Waco Quarry.

The Tennessee River is formed at the confluence of the French Broad and Holston Rivers 1½ miles above Knoxville, Tenn. Wilson Dam is 393 miles below that point. It is 259 miles above Paducah, Ky., where the Tennessee joins the Ohio. By road it is 115 miles from Nashville, 135 miles from Birmingham, and 155 miles from Memphis. The dam was formerly known as Dam No. 2 until named in honor of President Wilson. It is a gravity-type concrete structure approximately nine tenths of a mile long, 107 feet high from base to level of lake, 101 feet wide at base, has fifty-eight 38-foot-wide spillways, each permitting the flow of 10,000 cubic feet of water per second at normal lake level. A 20-foot concrete roadway crosses the river along the crest of the dam.

The construction of the dam and the buildings necessary for its operation required the pouring of 1,331,501 cubic yards of concrete. Extending from the spillway section and paralleling the left front of the dam is the power house—1,197 feet long by 115 feet wide—housing the generating machinery. The building contains 9 turbines (243 tons of moving parts)—4 of 35,000 horsepower, 4 of 30,000 horsepower, and 1 auxiliary of 1,000 horsepower—a total of 261,000 installed horsepower. There is room for additional turbines, or a total ultimate installation of 14 of 35,000 horsepower, 4 of 30,000 horsepower, and 2 auxiliaries of 1,000 horsepower—making 612,000 horsepower.

Tandem locks are provided for navigation around the north end of Wilson Dam. Each lock is 300 feet long by 60 feet wide and provides a depth of 9½ feet. Together they can lift a barge 89 feet in less than an hour. The locks are spanned by a single-leaf 148-foot lift bridge which



GENERAL OUTLINE OF THE TENNESSEE RIVER BASIN.

2533-B

nnks the highway on the dam to the shore. The canal and locks remain under War Department navigation jurisdiction.

The water impounded by Wilson Dam stretches upstream for 17 miles, covers 23 square miles, and is 97 feet deep at the dam. The normal pool elevation is 505 feet above mean sea level.

NITRATE PLANT NO. 1

Nitrate Plant No. 1 is on a 1,900-acre Government reservation on the south bank of the Tennessee River about 7 miles below Wilson Dam. This plant was constructed during 1917–18 at a war-time cost of approximately $12,000,000 to manufacture ammonium nitrate by the synthetic or modified Haber process. The plant was intended to produce 22,000 tons of grained ammonium nitrate per year. The construction of this plant by the Federal Government was a national defense measure during the World War. The plant is now obsolete.

NITRATE PLANT NO. 2

Nitrate Plant No. 2 is on a 2,306-acre Government reservation on the south bank of the Tennessee River about 1 mile below Wilson Dam. It is the largest plant in the world for the fixation of atmospheric nitrogen by the cyanamid process. The equipment includes a steam-electric generating plant with a capacity of 76,000 horsepower. The plant was built during the war period at a cost of about $75,000,000 and is capable of producing 110,000 tons of ammonium nitrate per year.

The T.V.A. is empowered to use the nitrate plants in the production of new and better forms of fertilizers "by modernizing existing plants or by any other process or processes that shall appear wise in lowering the cost of production, distribution, and application of the major elements of plant food." Experiments are now being conducted along such lines by means of a new demonstration plant which T.V.A. has constructed at Nitrate Plant No. 2.

WHEELER DAM

Wheeler Dam is located near the head of Wilson Lake, about 15½ miles above Wilson Dam, on the Tennessee River. It is named for Gen. Joseph Wheeler, a Confederate general and a commander of United States forces in the Spanish-American War. It has previously been referred to as Dam No. 3. President Roosevelt requested in October 1933 that the Tennessee Valley Authority begin construction of Wheeler Dam. The dam will be 50 feet high, approximately 6,000 feet long, and will provide a reservoir of about 100 square miles in area. This lake will extend up the river about 80 miles to Buck Island, some 5 miles above Guntersville, Ala. Wheeler Dam will provide navigable waters nearly to Guntersville. Between 600,000 and 700,000 cubic yards of concrete will be needed to complete the dam and power house. Cement to the amount of 750,000 to 900,000 barrels will be used. Construction work

started on the navigation locks for Wheeler Dam in January 1933 by the United States Corps of Engineers. Construction of the dam proper by the Tennessee Valley Authority began in November 1933. The estimated cost of the dam, exclusive of the power house, is $20,000,000. The power house eventually will have 10 generators of 43,000 horsepower each. The immediate installation will be one of these generators.

NORRIS DAM

Norris Dam, formerly called the Cove Creek Dam, is located about 25 miles northwest of Knoxville, Tenn., on the Clinch River nearly 80 miles above the point where that tributary joins the Tennessee. It is named for United States Senator George W. Norris, of Nebraska. Norris Dam will be 253 feet high from foundation to roadway, 210 feet thick at the

NORRIS DAM AS IT WILL APPEAR WHEN COMPLETED.

base, and 1,800 feet long at the crest. The elevation of roadway on the crest will be 1,060 feet above mean sea level. The waters impounded by Norris Dam will form an artificial lake of 3,600,000 acre-feet covering some 80 square miles with a shore line of more than 800 miles. The cost of the dam is estimated at about $31,000,000. Two 60,000-horsepower generating units will be installed in the Norris Dam power house.

One million cubic yards of concrete are needed for the dam and power house. The same number of barrels of cement will be used.

Norris Dam is primarily a storage dam. Wilson and Wheeler Dams are what are called run-of-the-river plants. When the river is high much power can be produced at Wilson and Wheeler. When the river is low little power is available. On the other hand, Norris Dam, with its

enormous reservoir, can store a year's rainfall from several thousand square miles. So these and future dams will be connected with transmission lines.

During the wet season, when there is an abundance of power at the run-of-the-river plants, such as Wilson and Wheeler, the Norris plant will be shut down and the water stored. During the dry season that water will be let out. It will develop power at the Norris Dam, and then, as it passes down the river, it will develop power at Wheeler Dam and at Wilson Dam. So, instead of doing its work once, it will do it as many times as there are run-of-the-river plants below. For this reason, an integrated power system embracing the entire watershed may be worth twice as much for a given investment; or, to put it another way, power would cost only half as much in the integrated system as it would in an unorganized group of plants operated individually and without regard for the other plants.

PICKWICK LANDING DAM

Pickwick Landing Dam is located on the Tennessee River about 8 miles upstream from Shiloh battlefield and about 10 miles north of the State line juncture of Mississippi, Alabama, and Tennessee. This dam will have an overall length of 7,710 feet, nearly 1½ miles. This includes 2 earth dam sections, 1 on the north bank 1,035 feet long and 1 on the south bank 4,650 feet long. The remaining middle section will be of concrete. The height of the concrete section from foundation to top will be 103 feet.

The navigation lock, 600 feet long by 110 feet wide, will have the highest single lift in the world, namely 61 feet. The dam will form a lake 76 square miles in area, backing up to the foot of Wilson Dam, approximately 53 miles upstream. With Norris and Wheeler Dams in operation and the completion of Pickwick Landing Dam, a 7-foot navigation channel will be made available from the mouth of the Tennessee at Paducah, Ky., to Guntersville, Ala., a distance of 358 miles.

While this dam is not now needed for power production, it will be so constructed that power installation can be made when needed. The ultimate power development, under an average operating head of 54 feet, will consist of 6 units of 45,000 horsepower capacity each.

The dam without power house is estimated to cost $22,000,000 and probably will be completed within 3 years.

THE POWER PROGRAM

Rates to encourage people to use more electricity and by so doing realize the leisure and comfort envisioned in President Roosevelt's

planned future for the Nation is the basis of the power policy formulated by the Authority. The T.V.A. rate schedule, worked out after a careful study of costs and market factors, constitutes the desired yardstick for fair comparison with private utilities. In fixing the rates every item of cost to which private utilities have been subjected is included.

Under the act creating it, the Authority in allocating its power must give priority to municipalities, cooperatives, and other nonprofit agencies. In turn the Authority retains control over the resale rates to householders and its contracts provide strict T.V.A. supervision over accounting methods and operation of the distributing agency.

In January 1934 the T.V.A entered into an agreement [2] with the Alabama Power Co., Tennessee Electric Power Co., Mississippi Power Co., and the Georgia Power Co., under which the T.V.A. acquired electric facilities in a substantial territory in three States. In addition to providing an immediate market for all Muscle Shoals power, the contract greatly facilitated the extensive rural electrification program of the Authority. It also serves as a demonstration of the Authority's often expressed policy to carry out the mandate of the President and Congress and yet avoid the destruction of prudent investment in privately owned public utilities. By the purchase of private utility property which was found to be useful, at prices which were fair but not more than the properties were reasonably worth, the Authority has avoided the necessity of building duplicating competing facilities with consequent injury to the public investors in existing utility property.

TOWN OF NORRIS

The community of Norris, Tenn., is located about 4 miles from the site of Norris Dam. Norris is a permanent community of economical but attractive small houses, electrically equipped, constructed by the Authority to house the workers on Norris Dam.

---

[2] The contract, which will terminate as soon as power is available from Norris Dam, contains the following major provisions:

1. Purchase by the Authority of approximately $3,000,000 of property from the Alabama Power Co., Mississippi Power Co., and Tennessee Electric Power Co., by which the Authority obtains immediate urban and rural markets in Mississippi, Tennessee, and Alabama.

2. Sale of distributing systems in the Mississippi counties affected to the Authority.

3. Sale of distributing systems in the Alabama counties affected to the municipalities by the Alabama Power Co.

4. Option is granted the Authority to purchase distributing systems in Tennessee counties affected.

5. An agreement to reduce electric rates by the Tennessee Electric Power Co. to the level recently established by the Georgia Power Co.

In addition to these provisions, the contract stipulates further agreement as to power market areas, power interchange points and rates between the Authority and the power companies, and arrangements for sale of electric appliances through Electric Home & Farm Authority, Inc., appliance subsidiary of the Authority.

WHAT TVA RATES MEAN IN HOME USE

While electric rate schedules are often complicated and confusing to the average user of electricity, the bill received at the end of each month's service is a simple and understandable statement of the cost of this service. Here are some typical examples of what average households pay for electricity in municipalities which purchase TVA power at wholesale:

1. In a home where electricity is used for lighting and a few small appliances only, the consumption would be from 30 to 50 kilowatt-hours. Under basic TVA rates this is 90 cents to $1.50 for the month.

2. If, in addition to lighting and a few small appliances, is added an electric refrigerator, the consumption would be about 90 kilowatt-hours. This is $2.30 for the month.

3. If an electric range is added to the refrigerator, lighting and small appliances, the consumption would be about 255 kilowatt-hours. This is $5.05.

4. With the addition of continuous hot-water service by an automatic electric water heater, the consumption would be about 555 kilowatt-hours. Under TVA rates this would be $7.12 for the month.

The Basic Rates for Residential and Farm Use in TVA Contracts

3 cents per kilowatt-hour for the first 50 kilowatt-hours per month.

2 cents per kilowatt-hour for the next 150 kilowatt-hours per month.

1 cent per kilowatt-hour for the next 200 kilowatt-hours per month.

4 mills per kilowatt-hour for the next 1,000 kilowatt-hours per month.

7½ mills per kilowatt-hour for all over 1,400 kilowatt-hours per month.

COMPLAINANTS' EXHIBIT No. 189 (Excluded)

A STATEMENT OF FACTS CONCERNING THE TVA ELECTRICITY RATES

[Reprinted from the Congressional Record]

The Tennessee Valley Authority announced the wholesale and retail rates at which it would dispose of surplus power from Wilson Dam, in September 1933. These rates were set up on the principle that consumers of electricity must pay all the costs of furnishing that electricity without any contribution from taxpayers. It is these rates which have been described as a "yardstick" with which to measure and compare the rates charged by private utilities.

THE COST OF GENERATING ELECTRICITY IS SMALL

The cost of furnishing electricity to citizens may be divided, for the purpose of such comparisons, into two parts—namely, (1) the cost of generating and transmitting the power to the city-gate, (2) the cost of distributing the electricity within the city to the consumer. With the first item of cost there appears to be only small differences between the rates charged by private utilities and by the TVA.

The Mississippi Power Company has contracted to furnish the municipal plant at West Point, Miss., wholesale power at a flat rate of 7 mills per kilowatt-hour.

The Alabama Power Company sells power at wholesale to Birmingham Electric Company at the city-gate for as low as 5.8 mills per kilowatt-hour.

TVA rates for similar service average approximately 6 mills per kilowatt-hour.

THE LEGITIMATE COST OF ELECTRICITY IN THE HOME

From this it would appear that the differences in cost of generation and transmission of electricity is not very great, even with the further reduction in generating costs which TVA will be able to make when an integrated development of the river has been accomplished. But this portion of the yardstick is only a small fraction of the cost of electricity to citizens. The average rate paid by residential consumers in the United States is 5.2 *cents* per kilowatt-hour. On the basis of delivering power at a city's gate at six-tenths of a cent per kilowatt-hour and distributing it to the consumer at an average of 5.2 cents per kilowatt-hour, it is evident that the cost of generation and transmissions of electricity by private utilities accounts for less than one-eighth of the cost to the consumer. More than seven-eighths of the yardstick involves the distribution of the power from the city's gates to the residential consumer. The cost of the generation and transmission of electricity is by far the smallest factor of cost—the yardstick has its chief importance in disclosing the legitimate cost of bringing the electricity from the city-gate into the consumer's home. And here the figures are startling.

COMPLAINANTS' EXHIBIT No. 189 (Excluded)

TVA CITIES SERVE CONSUMERS AT ONE-HALF—MAKE LARGE PROFITS

Residential consumers being served by municipalities distributing TVA electricity pay an average of approximately 2.2 *cents* a kilowatt-hour—less than one-half the national average charged by private utilities. How have these municipalities fared in buying TVA power at about 6 mills and reselling it at yardstick rates which reduce the cost of electricity to their citizens from 40 to 60 percent? They have been able to meet all the costs of operation, taxes, amortization, depreciation, interest on investment, in fact every legitimate charge faced by a private utility and still return from 20 to 25 percent of all gross revenue to surplus. This has been true of all municipalities distributing TVA power. As an example we may take Tupelo, Miss. At the end of the first year of operation this city* had met all charges including a large tax payment and still was able to show a profit of $24,875, or almost 20 percent net profit on the investment in property and plant. In Alcorn County, Miss., including the city of Corinth, where TVA power is retailed by a nonprofit county-wide cooperative association, a surplus, after all charges, is accumulating at a rate that will permit this association to retire the entire cost of its original distributing facilities within a period of less than 4 years.

NO "WATER" IN VALUATION OF TVA PLANTS

Municipalities and associations distributing TVA power must agree by contract to set aside, among other items, a sum to cover local, State, and county taxes; and carry their plants on their books at *actual* values. The significance of this latter provision in the yardstick becomes apparent when it is recalled the Federal Trade Commission reported to the United States Senate on February 5, 1935, that as a result of its 6-year investigation in the public utilities field it had found write-ups amounting to *one billion four hundred million dollars in top-holding, subholding, and operating companies.*

So, by comparison with wholesale rates of private utilities it appears that the TVA wholesale rate is not too low, and by *actual experience* in cities reselling this power at TVA retail rates the yardstick is found to be a full 36 inches in length.

In the face of these results special interests which seek to thwart TVA's program and prevent the American public from learning the true cost of furnishing electric service have sought to becloud the issue with arguments concerning the generation of power at Wilson Dam. The cost of generating electricity, as is well known, accounts for a very small fraction of the total price charged residential consumers. The allegation is made that private utilities could sell electricity to consumers as cheaply, if not cheaper, than TVA if they were granted the same "subsidies" and "privileges" that TVA enjoys. Let us examine some of these charges.

THE ACTUAL VALUE OF WILSON DAM

Spokesmen for utility interests have said that the cost of Wilson Dam (TVA's present source of electricity) was $60,000,000 and that TVA has written this down to $19,000,000.

Wilson Dam at Muscle Shoals was begun during the World War as a

* Statement of income and expense of Tupelo electricity department on page 7.

war measure. Twelve separate appropriations were made before the work was finished, which was not until 1925. Several major interruptions of construction with attendant disbanding of personnel occurred. Engineers have estimated that at least $10,000,000 could have been saved had the construction been carried out as a single operation.

The historical cost of Wilson Dam is a little under $47,000,000, not $60,000,000. Eliminating the waste which occurred in construction and allowing a fair amount for depreciation since date of completion, the present worth of the dam is $33,000,000.

To apportion the value of Wilson Dam among navigation, national defense, and power, the Authority first set aside those parts of the structure which are of exclusive use to one or another purpose: the locks to navigation, the power house to power, certain buildings and roads (not otherwise useful) to national defense. The remainder (chiefly the long spillway section in the middle) was divided between navigation and power.

The result was to allocate approximately $10,000,000 to navigation, $22,000,000 to power, and $1,500,000 to national defense. These figures are tentative as the study of costs ordered by Congress is not yet completed. All private bids for the plant have been far below this valuation.

Allocation of cost of dams on the Tennessee River to navigation, flood control, national defense, and power, provided for by law, is not an advantage claimed by TVA, but is a definite national policy which has been made available to private utilities. The Congress in 1930, under a previous administration, authorized that $75,000,000, estimated as the cost of low dams for providing a 9-foot navigation channel on the Tennessee River to Knoxville, should be contributed to States, municipalities, or private corporations if they constructed high dams (such as the TVA is doing). In another Rivers and Harbors Act of Congress a very large contribution—some $12,000,000 of Government funds—was provided to be paid to a private utility planning a high dam at Aurora Landing on the Tennessee River. This was a national appropriation to a private agency made because the power dam it proposed to construct would aid navigation to the extent of this sum.

The simple fact, then, is that, as required by law, the Tennessee Valley Authority has placed the value of Wilson Dam for power purposes at its actual "present value."

TVA SETS ASIDE FUNDS COVERING TAXES

The TVA act requires that 5 percent of gross sales of power be paid to the State where TVA power is generated as a compensation for loss of tax revenue. This figure was set up by Congress, subject to change should it prove, in practice, either too high or too low.

To keep the "yardstick" absolutely fair, however, the TVA sets aside an additional 7½ percent of its gross revenue making a total of 12½ percent from the generation and transmission of power in lieu of taxes. For utility operations in the United States as a whole, the taxes amounted to 12.7 percent of gross revenue in 1933, when the TVA rates were established. The taxes paid by the four utilities operating in the Tennessee Valley region

averaged 11.8 percent of gross revenue at that time.

This 12.5 percent which TVA carries is on generation and transmission. The taxes on properties used for distribution of TVA power are borne, as stated previously, by municipal distribution systems.

TVA figures its tax equivalent upon the basis of percent of gross revenue in order to establish comparison with the various tax systems in use throughout the country. No matter whether taxes are levied against income, property valuation, or volume of business, they can all be reduced to the common denominator of a percentage of gross revenue. The percentage of income TVA set up as an equivalent of taxes paid conformed to the national average for utilities when the rates were fixed and was higher than the average at that time of the four companies operating in the TVA region.

TVA INTEREST RATES IN LINE WITH THOSE OF PRIVATE UTILITIES

In computing electric rates, TVA figures an interest rate of 3½ percent on its investment. This is higher than the actual cost of money to the Government, including fiscal expense of the Treasury, and it is not out of line with the rates at which some private utilities are now carrying out refunding operations. Whatever slight advantage accrues to TVA on interest rates is more than offset by the costs of services of a public character which TVA is glad to assume and which are not assumed by private corporations.

Among these may be considered wage rates for both skilled and unskilled labor. These average from 50 to 75 percent higher than those paid by public utilities on similar construction in this area. Likewise, in areas where TVA has purchased electric systems from private utilities, the employees were found to be receiving wages from 10 to 30 percent below those which TVA pays for similar work.

Some of the other advantages ascribed to TVA by special interests are pure fiction. The TVA does not use its franking privilege in sending out electricity bills; TVA does not purchase materials unless the seller agrees to comply with the NRA code; it pays all other governmental departments for services rendered and foots the bill of defending litigation brought by public utilities and others, which has held up the sale of surplus power from Wilson Dam and delayed the time when TVA can begin paying back to the Government the costs of Wilson Dam and thus salvage a war-time investment.

ONE ADVANTAGE SAVES A DIME IN A LIFETIME

Seeking to obscure the real issues, special interests have made much ado over the fact that the Tennessee Valley Authority receives a reduction in freight rates on some of its hauling. Land-grant railroads in consideration of the land originally given them, grant a 33⅓ percent reduction on all Government hauling. The TVA receives this reduction on that part of the equipment and materials used in dam construction, which travels over land-grant railroads.

Of the total cost of a dam, however, the freight charges play so small a part that a one-third reduction amounts to three ten-thousandths of a cent per kilowatt-hour of power generated. This means a saving of 1 cent for every 3,300 kilowatt-hours used, or, turning this around, the average residential consumer saves 1 cent every 5½ years as a result of reduced freight rates granted TVA.

COMPLAINANTS' EXHIBIT No. 189 (Excluded)

He would have to pay power bills for more than 50 years to net himself a dime.

WHY TVA ELECTRIC RATES ARE LOW

The TVA in its electric operations submits to all legitimate charges to which a private utility would be subjected. Its success in making available cheap electricity lies in the cost assumed by some private utilities which TVA does not pay. A few of these may be mentioned: The attempt to pay dividends on the $1,400,000,000 of write-ups exposed by the Federal Trade Commission; expensive campaigns to influence legislation; excessive fees to affiliated engineering and management companies, as well as the tremendous salaries paid to officers of both the holding companies and the operating companies.

RURAL ELECTRIFICATION

One of the most important phases of the TVA electricity program is in the field of rural electrification. As an example of what is being done, the history of the Alcorn County Electric Power Association is briefly related.

Alcorn County, in northeastern Mississippi, set up a county-wide cooperative power distribution system in June 1934. The step followed the purchase by TVA of the distribution facilities of the Mississippi Power Company in nine counties in the northeastern corner of the State.

The significant contribution of Alcorn County's cooperative is its policy of supplying power to farmers at rates identical with those charged the urban residents of the county. Standard TVA retail rates are charged: 3 cents per kilowatt-hour for the first 50 kilowatt-hours, 2 cents for the next 150 kilowatt-hours, 1 cent for the next 200 kilowatt-hours, 4 mills for the next 1,000 kilowatt-hours, and 7½ mills for excess over 1,400 kilowatt-hours used per month. Commercial rates work out at proportionately the same percentage of reduction from the former charge.

In addition to these rates, members of the cooperative pay a surcharge which is intended to amortize the cost of the system in from 8 to 10 years. The surcharge takes the form of a membership fee of $100 which may be paid either as $80 in cash or as $10 down and 1 cent per kilowatt-hour consumed, up to a maximum of $1 per customer per month. These membership payments are turned over to the Tennessee Valley Authority until the system is paid for.

Under the present rates a surplus fund will be built up. After the system has been paid for the surplus can be used to reduce rates still further and to pay back the original membership fees. Present indications are that Alcorn will have its present system paid for in 4 years. The Association pays all city, county, and State taxes which a private corporation would have to pay.

With rates down approximately 50 percent, residential consumption in Alcorn County climbed from an average of 49.4 kilowatt-hours per month to 83.3 kilowatt-hours in the first 6 months. The consumption is still climbing.

Alcorn County's Power Association is blazing a trail in the movement for rural electrification through its recognition of the townman's interest in the promotion of power consumption throughout the trading area. By sharing the cost of electrification with the farmer, the city dweller makes it possible for his country neighbor (and customer) to use electricity in quantities sufficient to raise his standard of living. The philosophy behind this is, of course, exactly parallel to that behind the apportionment of the cost of county roads, or, on a still larger scale, to the philosophy behind rural free delivery.

Development of the TENNESSEE VALLEY

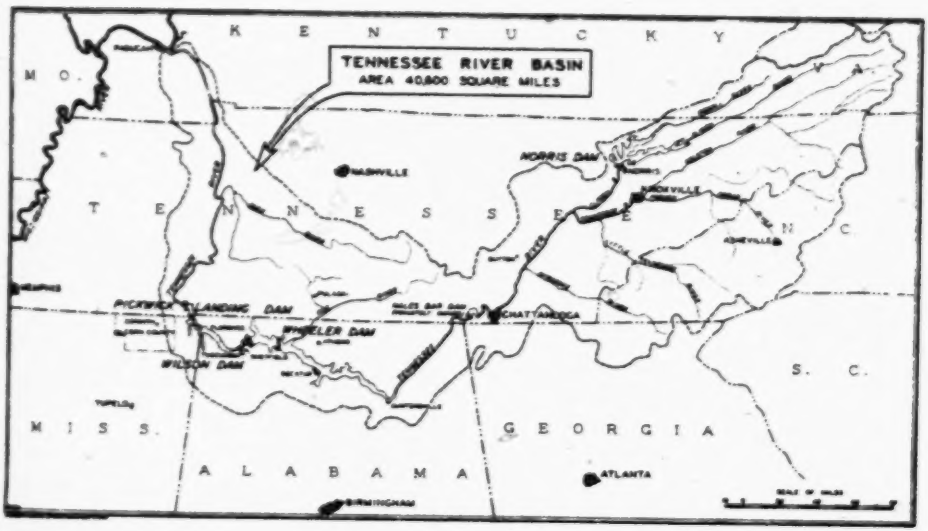
● Uncontrolled, running water means floods, destruction of the soil, loss of human life. Controlled, running water means security, comfort, convenience.

Congress set up the Tennessee Valley Authority as a part of the national conservation program, for the purpose of encouraging the full and well de-



Within the dotted line: The drainage area of the Tennessee River; all tributary streams included

When the flow of a river is disciplined by human ingenuity to conform to human needs, running water is a friend of Man and not a foe. Men have studied and worked with running water until they know how to apply the controls.

signed development of the physical and human resources of the Tennessee River region, and as a major part of that purpose, to apply these controls to the water of the region—to eliminate floods, to aid navigation, to turn the energy contained in running water into light and work through turbines,

electric generators and motors, and to further all those things which are part of such a plan of development.

The Tennessee Valley includes parts of seven states: Virginia, North Carolina, Tennessee, Georgia, Alabama, Mississippi, and Kentucky. It has an area of 40,600 square miles. More than 2,000,000 people live in the Valley. There is a wide diversity of soils, minerals, and climate. Large scale industry is relatively scarce. The Valley already holds an important national investment; Wilson Dam and power house at Muscle Shoals and the two nitrate plants, built as war-time emergency measures but left virtually idle until the creation of the TVA.

. . . . . .

Topsoil leaves the land

● Through this Valley flows the Tennessee, a broad stream marked by sudden floods as rains fall upon the Appalachians where it takes its rise. The river can be of great use to inland water transportation. Properly controlled, the Tennessee will constitute one of the greatest inland waterway systems of the world. The water of this river usually is brown in color because it carries away millions upon millions of tons of fertile topsoil, washed off the steep, plowed hillsides from the rolling lands through which the river flows. This soil washing robs the land of fertility and fills river channels, obstructing navigation. Every foot of the more than 500 feet the river drops between Knoxville, Tennessee, the beginning of the Tennessee proper, and Paducah, Kentucky, where it flows into the Ohio, represents energy flowing to waste.

Problems presented by the Tennessee River region, the diversity which makes the area in many respects representative of the whole country, and the existence of an idle national investment at Muscle Shoals, were among the considerations which led President Roosevelt to ask Congress to create the Tennessee Valley Authority, — in May, 1933. The President wanted a number of test demonstrations which would be of service to the nation.

To the Board of Directors he named Arthur E. Morgan, engineer and educa-

tor, as chairman, and Dr. Harcourt A. Morgan, agriculturist and former President of the University of Tennessee, and David E. Lilienthal, lawyer and Public Service Commissioner of Wisconsin, as directors. At the present time more than 15,000 men and women are employed by the TVA in carrying out the instructions of Congress. In the following pages the outstanding phases of the work will be described briefly.

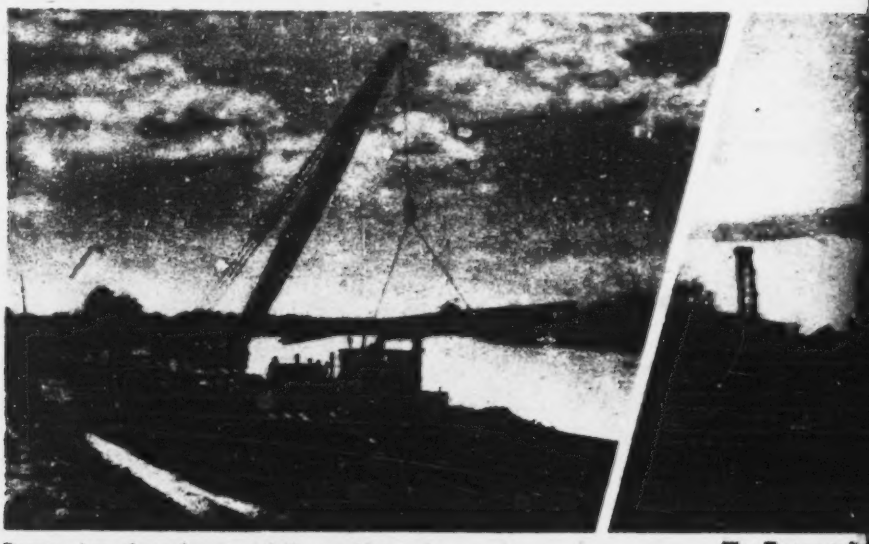
Eroded soil is valueless in agriculture

Erosion blocks river channels—fills reservoirs

First is the effort to develop a clear picture of the resources and needs of the region, and the development of plans and methods by which the region may be guided to an orderly and effective growth. Adequate deposits of minerals and coal may be found. Potentially valuable timber and farmland are here. The task now is to translate these resources into well-being for all the people.

Next is the control of the water resources. A system of storage dams can be built across the major tributaries of the Tennessee to arrest the sudden run-off following heavy rains and to diminish floods. Norris Dam on the Clinch River 26 miles northwest of Knoxville, Tennessee, will be completed in 1936. Similar dams are planned to check the downward rush of destructive rain water on other important arms of the Tennessee. Huge reservoirs will hold and regulate the excess water, preventing those sudden rises in the level of the main river and the resulting loss of life and property.

Terracing and pastures prevent erosion



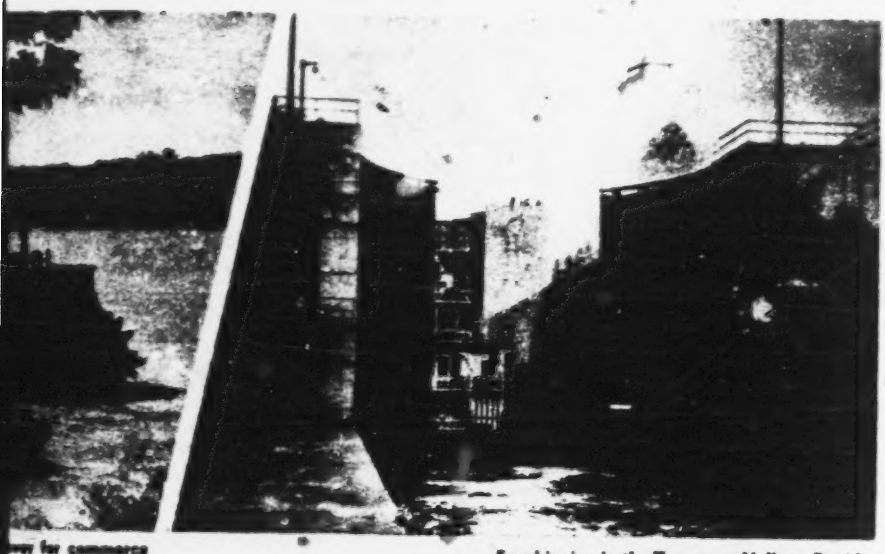
Deeper river channels—one of the services of TVA dams

The Tennessee R

Aid to navigation

● During the dry months the stored water will be released. It will serve a double purpose. Let down gradually, it will aid in retaining the water at a constant depth along the Tennessee, thus aiding navigation, and it will raise the amount of dependable power generated at run-of-river plants. Dams such as Wilson at Muscle Shoals, Wheeler now under construction at the head of Wilson Lake, 15½ miles above the Shoals, and Pickwick Landing Dam near Shiloh Battlefield have very little storage capacity. They are virtually steps over which the river pours on its way to the Ohio. Only by comprehensive upstream regulation can river flow (for navigation) and the power capacity of the downstream dams be kept approximately uniform.

Thus an integrated system of dams converts destructive running water into a willing servant. Controls applied at key points serve a triple purpose: Flood control, navigation, and the capture of



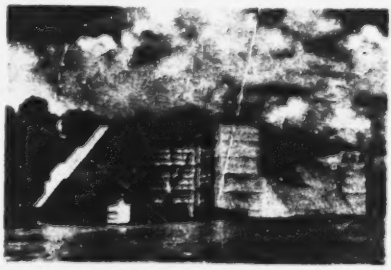
...way for commerce

For shipping in the Tennessee Valley: Double-lift locks at Wilson Dam

otherwise wasted energy.

But the subduing of running water extends far beyond the erection of massive concrete barriers. Rain upon denuded hillsides carries away millions of tons of fertile topsoil. The silt will not settle until the flow of the river ceases. For instance, behind a dam. Then it falls to the bottom. Eventually the reservoir basin would fill with silt, becoming virtually useless as a storage basin.

To prevent this, the fight against destructive running water must be carried back another step. Eroded hillsides are the result of stripping the hills of their natural forest cover and ploughing the slopes for corn or similar crop. They must be restored to their original stability. A new forest cover or grasses



New navigation lock at Wheeler Dam

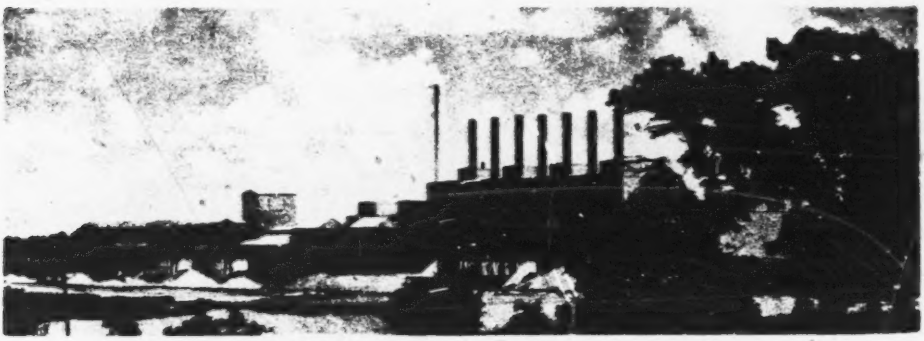
with a tangle of roots to hold the soil causes the rain to sink in, bringing strength to the vegetation and insuring that the rain will finally reach the streams almost clear and free from silt.

The Tennessee Valley Authority, in cooperation with the several states, is engaged in a broad program of erosion control and reforestation. Here, too, activity serves more than one end. Erosion control not only saves reservoirs and does its part in checking flood damage; it aids farmers in escaping from the one-crop system by creating hillside pastures where corn grew before. Livestock can be grazed on the pastures. An increase in southern herds means a better agricultural practice, a better diet and less pellagra and tuberculosis. Milk and green vegetables are the enemies of such diseases.

When new forests are set out to combat erosion, tree crops come into being. These call for care and for harvesting and that means steady employment for some of those who have found it hard to scratch a living from the steep mountain slopes. Tree crops, of course, include not only nuts and fruits but the trees themselves as lumber. Up-to-date lumbering methods improve a stand of timber and insure a continually renewed supply. TVA foresters already have planted over 3,000,000 young trees

Plant food essential

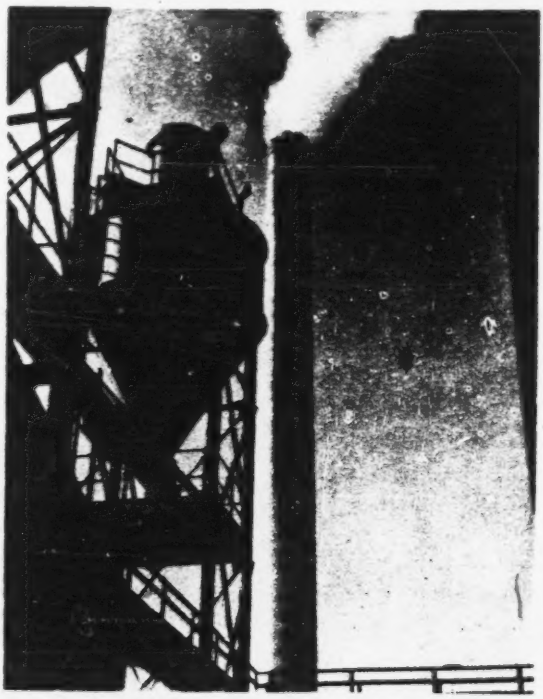
● Much of the steepest land should be reforested. However, there are large areas, now being destroyed by erosion, which if planted to grass crops, can be



TVA demonstration plant for phosphate fertilizers at Wilson Dam

saved for agriculture, especially for dairy products to be used at home.

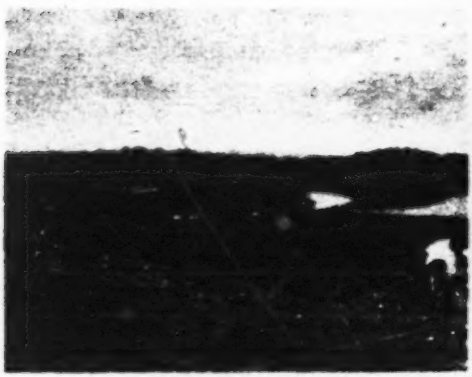
But if vegetation is to grow again on the stripped hillsides, plant food must be supplied. Much of the soil is too far gone to support grass crops without plant food. Commercial plant food has been too expensive for many farmers. Therefore the Tennessee Valley Authority has undertaken experiments and demonstrations looking toward more economical methods of production and distribution of fertilizers, particularly that all-important element—phosphate.



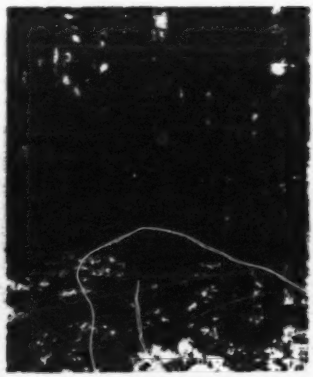
Making richer pastures: TVA phosphate plant

At Nitrate Plant No. 2 at Muscle Shoals a demonstration unit has been built to produce triple super-phosphate from the raw phosphate rock found in central Tennessee. The Tennessee Valley Authority Act states that the national defense aspects of the Muscle Shoals plants must be kept in stand-by condition. This is being done. But wherever possible the equipment is being used to further the peace-time needs of the lands of the nation. Electric power is used extensively in the new process for producing super - phosphate, thus completing a circle of cause and effect. For electric power means dams and dams mean reservoirs, and reservoirs, if they are to remain deep and effective, mean erosion control and erosion control means plant foods, particularly phosphates which are produced with electric power. A higher level of living for everyone concerned can result from this process. The aim is to show the way to newer and more economical methods in the expectation that the savings made will be passed on to farmers.

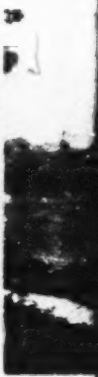
COMPLAINANTS' EXHIBIT No. 190 (Excluded)



Pastures prevent erosion—support diversified farming



Forests save the steeper slopes



The foreground

Extensive land utilization studies

● Introduction of erosion control with its pastures and forests has an immediate effect upon the farming practice of the area. A farmer's failure to conserve his land for future generations is not always due to ignorance. He has not been able to finance the swing from one standard, land-destroying crop to improved methods of rotation and balance.

To make it possible for farmers to help themselves the Authority has undertaken extensive studies of land utilization and is investigating plans to bring agriculture and industry into harmony. The studies have shown that much land of a marginal and submarginal nature is in cultivation, but they have revealed more than that. These studies have made it clear that large numbers of small farmers, struggling along on an annual cash income per family of $100 or less, are not kept busy on their land more than six months of the year. It also has been discovered that large numbers of industrial workers are faced with an annual lay-off during slack seasons. The lay-offs often amount to half a year.

Coordination of industry and agriculture seeks to combine farming and industrial work in such a way that idle industrial workers may use their spare

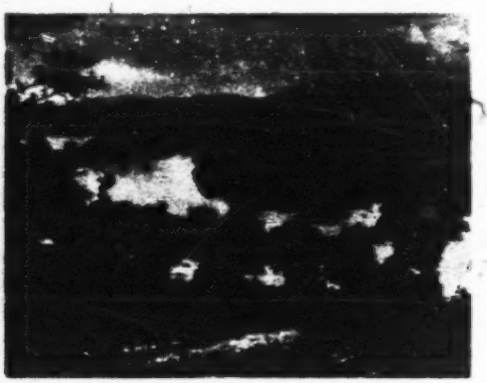
-terraces on hillside

Electric power for industry



The Tennessee River controls prosperity in the Tennessee Valley

time to raise food while the surplus time of farmers may be used to earn some extra cash either in factories or by making some simple articles easily sold. This is no theoretical program. The remarkably thriving city of Kingsport, Tennessee, is largely built on such cooperation. A large part of the inhabitants for twenty miles around spend part of their time in the industries of Kingsport. Other communities are developing in the same way. Rural electrification is an important factor in this program. The effect of such a balancing up of two hard-pressed groups is to raise the income of both to levels where the total purchasing power of this region is increased. An increased purchasing power in the South means not only a higher standard of living for many but a wider market for northern and eastern industries. It also enables farmers effectively to cooperate with each other, with the TVA, and with the States in restoring the land to its original fruitfulness. Restored land means control of running water that it in turn may aid man instead of hindering him in his struggle toward a more abundant life. The above are among the major activities of the Tennessee Valley Authority. While they do not cover all fields in which the Authority is at work they do suggest the scope of the program.

COMPLAINANTS' EXHIBIT No. 190 (Excluded)

Norris Dam

● Located on the Clinch River, 26 miles northwest of Knoxville, Tennessee, and 80 miles above the junction of the Clinch with the Tennessee, Norris Dam will be 1,800 feet long and 265 feet high from the base to the crest of the roadway across the top. The base will be 210 feet thick. One million cubic yards of concrete will be required The reservoir created by Norris Dam will have a surface area of 83 square miles and a shore line of over 800 miles. It will hold 3,600,000 acre feet of water. Approximately 2,000 men are employed on the job, divided into four 5½ hour shifts, with the remaining two hours of the day devoted to maintenance and repair work. A further 1,000 men are engaged in clearing the reservoir area of trees and other obstructions.

The dam was formerly known as Cove Creek Dam but was renamed in honor of Senator George W. Norris. Work started in November 1933. It will be finished in 1936. The cost is estimated at $36,000,000, including two 66,000 horsepower electric generator units.

Wheeler Dam

● Named after General Joe Wheeler, a Confederate hero and a commander of U. S. troops during the Spanish-American War, Wheeler Dam is on the Tennessee River at the head of Wilson Lake 15½ miles above Muscle Shoals, Alabama. It will be more than a mile long, 70 feet from base to crest, and 50 feet thick at the base. Over 600,000 cubic yards of concrete will go into the structure. Locks have been constructed by the U. S. Army Engineers on the north bank of the river, giving access to the future Wheeler Lake which will extend navigation 88 miles upstream to near Guntersville, Alabama. Approximately 1,700 men are employed at Wheeler on the same 5½ hour shifts used at Norris. An additional 3,500 men are engaged in reservoir clearance. Wheeler Dam was authorized in November 1933. It will be finished in 1936. The initial power installation will be a single 47,000 horsepower generator with space available for seven more.

Above: Norris Dam as it looks today, two-thirds complete. Norris Dam is primarily a storage dam—to hold back floods and feed downstream dams in times of low water. On the right: The beginnings of Pickwick Dam, on the lower Tennessee.

COMPLAINANTS' EXHIBIT No. 190 (Excluded)

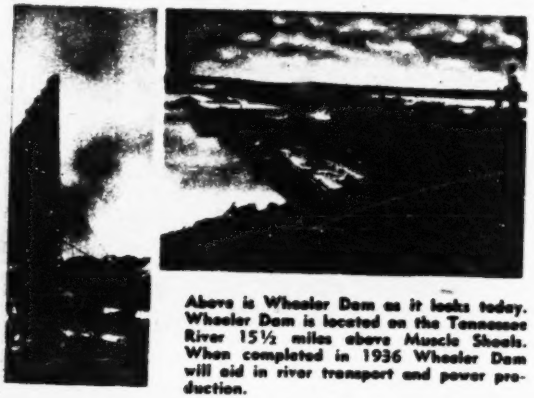
Wilson Dam

● Begun during the World War and left virtually idle until the establishment of the TVA, Wilson Dam is nearly a mile long, 107 feet high and 101 feet thick at the base. It has fifty-eight 38-foot spillways each capable of passing 10,000 cubic feet of water per second. The power plant consists of nine generators with a total capacity of 261,500 horsepower and space available for additional equipment to bring the total up to 613,000 horsepower. It is the source of TVA electricity today.

Pickwick Dam

● Eight miles upstream from Shiloh Battlefield, Tennessee, and 53 miles below Wilson Dam, is the site of Pickwick Landing Dam. Its construction was authorized on November 21, 1934, as the next link in the chain. It will be almost a mile and a half long (7,710 feet) and 103 feet high and will have a navigation lock 600 feet long by 110 feet wide with a lift of 61 feet, greatest single lift in the world. The waters above the dam will back up to the foot of Wilson Dam which means that when Norris, Wheeler, and Pickwick are in operation there will be a 7-foot navigation channel from the mouth of the Tennessee at Paducah, Kentucky, to Pickwick Landing and a 9-foot channel from there to Guntersville, Alabama, a total distance of 358 miles. The dam will also aid in reducing the crest of flood waters.

While no power facilities will be installed at first, the dam will be constructed with intake pipes permitting the addition of a power house later. The dam, without power house, will cost $24,000,000 and will consist of two earth fill sections and a central concrete section 2,025 feet long, equipped with a 1,301 foot spillway section and 26 roller type gates, 40 feet wide by 34 feet high. It is expected to be completed in 1937.



Above is Wheeler Dam as it looks today. Wheeler Dam is located on the Tennessee River 15½ miles above Muscle Shoals. When completed in 1936 Wheeler Dam will aid in river transport and power production.

Town of Norris

● Four miles from Norris Dam the Authority built the permanent town of Norris. The town serves as a construction camp and incidentally as a contribution to America's housing problems. Three hundred individual homes renting from $14.50 to $45.00 per month, 10 duplex dwellings and six 5-family

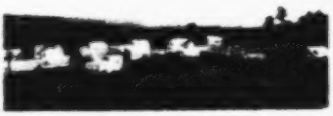
apartment houses at $12 per month comprise the town. The houses are of brick, stone, cinder concrete blocks, and wood. There is one of steel. About half the houses are fully electrified even to heating, and all have current. There is a school building, a general store, a cafeteria, a community house, a 3000-acre park and forest, a belt of farm land where residents may maintain gardens, and utilities such as water supply and sewer system. In the well-equipped shops the workers may secure vocational training. About three-quarters of the force has signed up for one or more courses.

Nitrate Plants

● At Muscle Shoals the two huge nitrate plants, built as war-time emergency measures, have been turned over to the Authority. Plant No. 1 is now obsolete but No. 2, employing the cyanamide process, is kept in stand-by condition for national defense and extended, in accordance with a provision of the TVA Act, for experiments and demonstrations in the development of better and cheaper fertilizers. At present the work is chiefly concerned with phosphates, but experiments are also carried on with combinations of the other plant foods, nitrogen, potash and lime.

Power policy

● In accordance with the provisions of the Act, the TVA is making available the surplus electricity, in excess of the government's needs. The power serves as a "yardstick" to determine the relative cost of publicly and privately generated power, and as a measure of the reasonableness of existing rates. TVA rates include every item of direct and overhead cost such as taxes, interest, depreciation and retirement of investment. In the sale of TVA power the law gives priority to states, counties, municipalities, cooperatives and other non-profit organizations. Corporations, partnerships, and individuals may be served after the needs of these public agencies have been met. Power may also be sold directly to private agencies.



Homes for workers on Norris Dam

Nitrate plants aid national defense

TVA base rates for residential and farm use are:

3 Cents per kilowatt hour for the first 50 kilowatt hours per month.

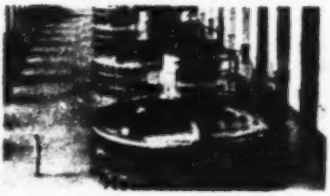
2 Cents per kilowatt hour for the next 150 kilowatt hours per month.

1 Cent per kilowatt hour for the next 200 kilowatt hours per month.

4 Mills per kilowatt hour for the next 1000 kilowatt hours per month.

7½ Mills per kilowatt hour for all over 1400 kilowatt hours per month.

Translated into monthly bills, the average home with lights and one or two small appliances such as a radio or a toaster uses 50 kilowatt hours or less per month which would mean $1.50 under TVA rates. A home using electric refrigeration would find its consumption running over into the second category—the 2¢ block (for refrigerators the average use is about 50 kilowatt hours per month) while the use of an electric range (90 to 125 kilowatt hours per month) puts most meter readings into the third group. With a water heater (200-300 kilowatt hours per month) in addition to those other items a householder usually finds himself in the fourth group with his bill running around $7.00.



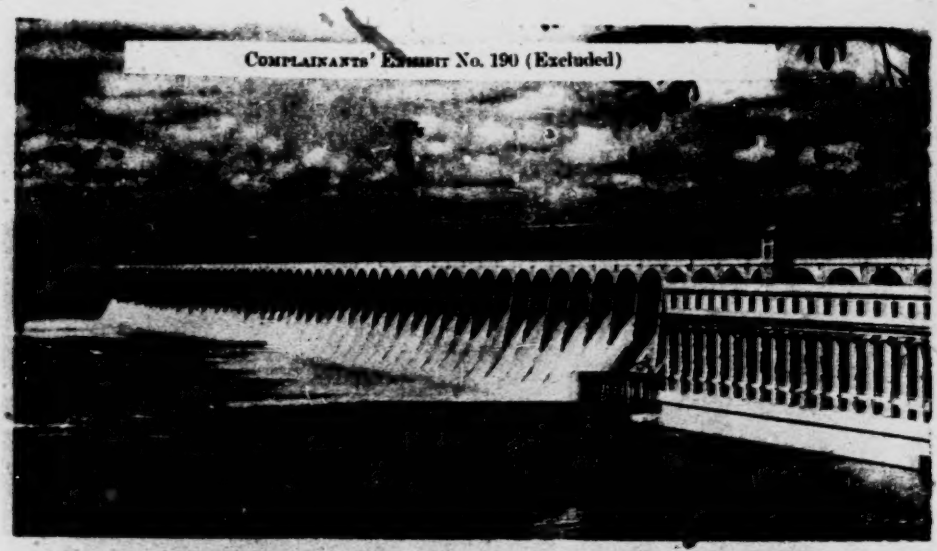
Power house—Wilson Dam

Electricity for farm families

It has already been demonstrated that such low rates stimulate consumption. For example, in Tupelo, Mississippi, the use of power increased 132 per cent in less than a year after TVA rates were introduced. Before TVA power was available the average residential rate was 7½ cents, now it is 2.1 cents. Another significant result of TVA rates is shown in Athens, Alabama, where use at low rates has increased so greatly that even at these low rates the revenue from the sale of power regained its former volume in 7 months. The residential rate had dropped from 5½ cents to 2.1 cents while the commercial rate decreased from 5.1 cents to 2.6 cents.

Rural electrification

● Electrification of farms in the United States has not yet really begun. Five million farm homes are without electricity. After years and years of effort less than 10 farms out of every 100 have current, and only half of these can be regarded as typical farms. In Mississippi, Alabama, Georgia, and Tennessee less than three per cent were electrified according to the 1930 census. The TVA is cooperating with towns and farmer groups interested in furthering rural electrification by using some of the Authority's surplus power



Wilson Dam at Muscle Shoals, Alabama — A Unit in the TVA Program

This pamphlet is necessarily brief. It is intended as an introduction to T V A. For further information on the plans and activities of the Authority write to: Division of Information, Tennessee Valley Authority, New Sprankle Building, Knoxville, Tennessee.

GENTLEMEN:

We hereby give you notice in accordance with the first paragraph of our contract with you dated November 1st 1934, that we wish to terminate this contract six months from the date of this letter. We shall consider the date of expiration as January 10th, 1938.

We have made application to Tennessee Valley Authority for power at our Aday Quarry, our reason being purely economic.

We wish to take this opportunity to express our appreciation for the service rendered by you, especially the personal attention and efforts of Mr. Woltersdorf who has been most cooperative at all times.

Yours very truly, (Sgd.) J. F. Manning, Jr., President..

Subject: In Response Please Quote This Subject: Electric Service Contract

GENTLEMEN:

In accordance with the provisions of the first agreement contained in our contract with you, dated May 1st, 1933, we desire you to accept this as formal notice of our intention to terminate this agreement at the expiration of six months from date. In taking this action we feel that you should know that we are prompted by economical reasons solely.

Our relations with your company, extending over a great number of years, have been entirely satisfactory and pleasant. At times you have gone to extremes to serve us and we have had nothing but the best of cooperation from both your Decatur and Huntsville Offices.

We especially want to commend Mr. Pride and Mr. Woltersdorff. They have been helpful to us many many times. In the event that our present plans for any reason do not materialize we shall no doubt withdraw this notice of termination.

Yours very truly, Decatur Iron & Steel Company,
(Sgd.) H. R. Davis, President.

[fol. 2539] COMPLAINANTS' EXHIBIT No. 196

Power Contract Between TVA and Alcorn County (Mississippi) Electric Power Association, Dated June 30, 1937

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as the power contract between TVA and Pontotoc County Electric Power Association (Complainants' Exhibit No. 118) except:

1. The maximum amount of power which TVA shall be obligated to deliver is 5,000 kw. unless notice of increase is given as provided for therein.

COMPLAINANTS' EXHIBIT No. 196

2. The point of delivery is at the outgoing side of the main switch on the low tension side of the step-down transformers of TVA located at in the City of Corinth, Mississippi, or at such other points as may be mutually agreed upon.

3. It contains the following provisions:

"7. Repayment of Indebtedness.—Association acknowledges its long term obligation to Authority as of the date of this contract to be Ninety-eight Thousand, Seven Hundred Dollars and Eighty-nine Cents ($98,700.89) with interest thereon at the rate of three and one-half per cent (3½%) per annum payable semi-annually. Association agrees to pay to Authority on account of such long term obligation and any other indebtedness now owing to Authority or hereafter incurred, until such indebtedness shall have been totally repaid,

(a) All membership fees collected by Association, as provided in section 8 of this contract.

(b) The total surplus revenues as defined in section 9 of this contract.

[fol. 2540] All payments due under this agreement shall be made to Authority at its offices at Wilson Dam, Alabama, or at such other place as Authority may from time to time designate. The amount so paid shall be credited to any outstanding accounts of Association in Authority's discretion. Failure to make such payments shall constitute a default under the aforesaid mortgage, and Authority may forthwith at its option declare this contract terminated, and/or exercise all rights and powers granted Authority on the failure of Association to perform its obligations and promises to Authority.

* * * * * * *

"14. Construction of Additional Facilities.—Authority will construct for Association such additional rural transmission and distribution lines in and adjacent to Alcorn County, Mississippi, as Authority and Association may from time to time agree upon and designate. Said lines will be constructed by Authority for and on behalf of Association as Association's agent. Association agrees to pay Au-

thority therefor the actual cost to Authority of constructing such lines, including overheads, with interest on unpaid balances at the rate of three and one-half per cent (3½%) per annum, payable semi-annually. Such obligations shall be considered as a part of the total long term obligation of Association to Authority, and payment shall be secured by the mortgage executed to Authority on even date herewith.

• • • • • • •

"19. Rescission of Power Contract.—The power contract and the Sale, Lease, Trust, and Security Contract between Authority, Association, and United States of America, then and now acting through its legal agent, Authority, both executed and dated June 1, 1934, are hereby cancelled, annulled, and rescinded, without prejudice, however, to any rights or obligations of the parties hereto or of the United States of America which may have accrued thereunder by reason of any breach thereof by the parties thereto prior to the date hereof. Neither this agreement nor the Quitclaim Deed nor Mortgage mentioned hereinbefore and executed simultaneously herewith shall be deemed to effect in any way certain other agreements between the parties, being a so-called Sale and Assignment Contract among the parties hereto and the Pickwick Electric Membership Corporation, dated April 21, 1936, a so-called Interchange Agreement between the parties, dated April 21, 1936, together with a supplement thereto dated August 26, 1936, and a so-called Emergency Operation Contract between the parties, dated April 1, 1937; but the same shall continue in full force and effect."

CITY OF ALBERTVILLE

CONTINGENT POWER CONTRACT

for

Residential, Commercial, Industrial, Consumers.

For, and in consideration of, One ($1.00) Dollar in hand paid by A. B. Hooper, Jr., Mayor of Albertville, Alabama, on behalf of the said City, the receipt whereof is hereby acknowledged, and in further consideration of the opportunity to secure lower electric rates for myself, and for the benefits that will accrue to me as a citizen of said City by reason of the net revenue which will be earned by the City from the municipal operation of its own electrical distribution system, it is hereby agreed as follows:

1. That when, and if, the City of Albertville, Alabama, has electrical energy of the required voltage for sale at the premises of the undersigned, so long as he is a purchaser of electrical energy in the territory served by the City's municipal distribution system, will purchase his entire requirements of electrical energy from the City, for a period of ten (10) years, beginning as soon as the service is available. The said City on its part also agrees to make every reasonable effort to provide the necessary facilities for the sale of electrical energy at the premises of the undersigned purchaser prior to December 1, 1938.

2. It is further agreed that the rates to be charged by the City and paid by the undersigned, shall be the published municipal re-sale rates proposed by the Tennessee Valley Authority for residential, commercial, industrial, consumers.

3. In order that the operation of the municipal electric distribution system may be completely divorced from political control after its construction, the City agrees that upon petition signed by five percent of the total number of qualified electors in said City that an election will be called submitting to a vote of the qualified electors in said City the following questions: "Shall the citizens of said City of Albertville be incorporated by the name of 'The Improvement Authority of Albertville' for the purpose of engaging in the enterprise of furnishing to such City and its inhabitants for public and private uses the following service: electric heat, light or power service, commodities or facilities", and that if at such election a majority of the electors vote in favor of such incorporation a Board of Trustees consisting of three members will then be appointed by the City Council to govern such authority, as provided in House Bill 128 passed by the Legislature

(Letterhead of City of Columbus, Columbus, Miss.)

November 24, 1933.

The Mississippi Power Company, Columbus, Mississippi,

Attention Mr. Joe Street, Columbus, Mr. L. P. Sweatt, Gulfport

GENTLEMEN:

The Mayor and City Council, in regular adjourned session last night, directed me to write you as follows in regard to your rate structure:

That the one object of this letter is to obtain lower power and light rates for this city and territory.

The Mayor and City Council have three propositions before it, one of which, it is determined, must be realized:

First. Will the Mississippi Power Company put into effect in this city and territory the same rates which are to be inaugurated through the TVA at Tupelo, Mississippi, at the expiration of our present contract—February 1, 1934?

Second. Will the Mississippi Power Company sell its distribution system in the city to the City of Columbus—at an appraised and agreed price—to be arrived at fairly and legally, in comparison to what a new distribution system would cost?

Third. If neither of the two proposals is accepted by the Mississippi Power Company, the City will construct its own distribution system and purchase power from the TVA.

The Mayor and City Council prefers not to go into the power business, hence the First and Second propositions.

COMPLAINANTS' EXHIBIT No. 200 (Excluded)

But a decision on these points is imperative, and at once. The Mayor and City Council will not prolong negotiations indefinitely on these questions, as an immediate decision on your part to these matters is necessary.

Very truly yours, (Sgd.) T. W. Lewis, Jr., City Attorney.

[fol. 2545] (Letterhead of City of Columbus, Columbus, Miss.)

July 31, 1937.

Mr. Barney Eaton, President, Mississippi Power Company, Gulfport, Mississippi,

DEAR MR. EATON:

I am authorized by the City Council to write you with reference to the purchase by the City of your distribution system here, including the adjacent suburbs, but not including the substation or transmission lines from here to West Point.

The people of this city expressed themselves in 1934 overwhelmingly for the municipal ownership of the distribution system on the TVA rate basis. As you know, we had a valuation made of this system, in 1936.

The Council would like to know, now, if you will sell your distribution system, on what terms and at what price.

The Council realizes that there are many features involved in the sale of the system which, no doubt, will be taken up in the course of time, but we would appreciate a reply at the earliest possible date.

Very truly yours, (Sgd.) T. W. Harris, Mayor.

TWH:twl.

[fol. 2546] (Letterhead of City of Columbus, Columbus, Miss.)

November 17, 1937.

Mr. Barney Eaton, Chattanooga, Tenn.,

DEAR MR. EATON:

The City Council has thought, for some time, that it would be possible, before the end of this month, to have a heart to heart talk with you over the proposal of purchasing the Power Company's distribution system here. With your

presence required in Chattanooga for probably several weeks, we are very much discouraged on the question of such a conference. If you can give us a definite appointment within the next ten days, we shall greatly appreciate it.

The Council is determined to go ahead with the preliminary steps toward securing a system in order to receive TVA power. I might say that the Council is waxing impatient in that it has been two months since an election was held here and which resulted so overwhelmingly for the issuance of the bonds. With a majority of the users here under contract to take power from the city, it is most desirable that some decision be reached without undue delay. A purchase of the Power Company's system is preferable to the Council, and it is not clear to these gentlemen why an offer and acceptance or refusal has not taken place.

We are without any information from your source, except from the local manager, and we could not, of course proceed for consideration thereof unless it came officially and from your office. We are without authority to do anything except deal with you for the purchase of the distribution system in this city and the adjacent suburbs. If, as we are unofficially informed, no trade will be considered unless it involves the sale of other systems in this district, we are still powerless to move except as an intermediary between your company and the other towns involved.

We are without authority from you to approach the Tennessee Valley Authority with a view of the purchase by it of transmission and/or distribution systems in this district. We have not broached the subject with the TVA and cannot, until and if your company authorizes and requests this city or some other agency to do so.

Permit me to repeat,—an early conference with you is imperative, under the present temper of the Council and interested citizens. We prefer to reach an agreement with you for the sale of the Columbus distribution system than to enter in a competitive field; however, we are prepared to do this if you are not interested in the disposal of your system in this district.

May I have the honor of your prompt and frank reply to these items?

Very truly yours, (Sgd.) T. W. Harris, Mayor.

TWH:l.

[fol. 2547] COMPLAINANTS' EXHIBIT No. 201 (Excluded)

(Letterhead of D. W. Houston, Sr. & Jr., Aberdeen, Mississippi)

29 November, 1933.

Re Negotiations—City of Aberdeen—Mississippi Power Co.

Mr. L. P. Sweatt, Jr., V. P. and General Manager, Mississippi Power Co., Gulfport, Miss.

DEAR MR. SWEATT:

We have your favor of the 28th re above subject.

We are sure it will be perfectly agreeable with our Committee that you be given a reasonable time for the investigations and studies you desire to make before we have a conference; but when you have finished with these investigations and studies within that time, we are sure that you would not hestitate to give us the benefit of your conclusions and the results of these investigations and studies, with a listing of your properties, so that the Committee may in turn take these matters up with an engineer of its own selection to determine the sound valuation of the physical properties owned by you, and which would be considered as passing to the City in the event it was decided to take over these properties rather than establishing its own new distributing system.

We want to assure you that it is not the purpose of the City to do other than to enter into an amicable adjustment of this matter with you, as there appears to have been a splendid co-operation between your Company and the City in the past, and we want this relationship to continue. The City's only desire is to invoke the first law of nature—"Self Preservation" to it and its citizens.

Taking the wide spread in the wholesale rates and the retail rates offered through the TVA, speaking generally, we are wondering if there is some way that your company and the City could get together and the City and its citizens get the benefit of the retail rates and let your company get the spread, and still continue the very pleasant relations existing between the two. This is merely a tentative suggestion, without any authority from the Committee to bind them.

[fol. 2548] If some such basis of settlement or adjustment could be arrived at, this would probably obviate the

necessity of the incident expenses both to your company and the city in making the investigations and studies you suggest.

We would be pleased to hear from you further on this subject, and if you think some such result could be reached, let's try to have an early meeting.

Thanking you for your prompt handling, and with every good wish, we remain,

Very sincerely, D. W. Houston, Sr. & Jr., City Attorneys, (Sgd.) by D. W. Houston, Jr.

Re Negotiations—Distribution System Mississippi Power Co.—Aberdeen

Mr. L. P. Sweatt, Jr., V. P. and General Manager, Mississippi Co., Gulfport, Miss.

DEAR MR. SWEATT:

The Board of Alderman feel that you have had ample time to give the necessary study to the matters referred to in recent communication regarding above subject, since December 4th the date of your last letter and in which you promised to let us head from you within a reasonable time.

Our Board has never given up the idea of securing cheaper electrical energy in line with the TVA rates, and if there is going to be anything done towards the City purchasing your distribution system if you can not give the TVA rates, our people would like to know it, so that they may govern their actions accordingly, as to be perfectly frank with you it is the purpose of the City to go right along with plans to secure cheaper current and energy, although all of us feel that we should get together if possible in view of the past mutual friendly relations.

Awaiting a very prompt reply, and with every good wish, we remain,

Very truly yours, D. W. Houston, Sr. & Jr., City Attorneys, (Sgd.) by D. W. Houston, Jr.

DHWJr.-w.

4 April, 1934.

Re Negotiations—Distribution System, Mississippi Power Co.—Aberdeen

Mr. L. P. Sweatt, Jr., V. P. and General Manager, Mississippi Power Co., Gulfport, Miss.

DEAR MR. SWEATT:

Your letter 9th. ultimo., submitted by us to our Board to-day.

We regret that we can not strike a deal with you on a fair valuation of your physical properties here for the purpose of the City purchasing your Distribution System, and that you have seen fit by your letter to decline consideration of the city's overtures to this end.

In view of this fact, the Board to-day passed a resolution requesting that the TVA make an estimate of the costs of a new distribution system for Aberdeen, which will be followed up by a bond issue when the estimate is made to construct the same.

A further meeting of the Board will be held on April 16th. at 3 p. m.

As a courtesy to you and your company, we are sending you copy of a letter this day directed to Hon. Guy W. Thaxton, District Engineer, TVA, Tupelo, Miss., asking for a survey of the City and an estimate of the costs of this project, which letter is self explanatory and conveys to you the purpose of the City in this regard.

We regret that we have come to a parting of the ways; but our people feel that they are entitled to every benefit that other cities in the TVA area will enjoy and are going to do everything possible to secure these benefits.

Very truly yours, D. W. Houston, Sr. & Jr., City Attorneys, (Sgd.) by D. W. Houston, Jr.

DWHJr-w.

COMPLAINANTS' EXHIBIT No. 201 (Excluded)

[fol. 2551] 4 April, 1934.

Hon. Guy W. Thaxton, District Engineer, TVA, Tupelo, Miss.

DEAR MR. THAXTON:

The Mayor and Board of Aldermen of the City of Aberdeen at their Regular April Meeting here to-day passed a resolution making request of your Department to make an immediate survey of said City for the purpose of furnishing an estimate of the costs of the construction of a new electric distribution system in and for said City for the purpose of serving those desiring electrical current and energy in Aberdeen and contiguous thereto with such electrical current and energy; and in addition thereto a further estimate of the costs of the construction of a high power transmission line to connect with the nearest point of the TVA high lines to Aberdeen over and through which said electrical current and energy can be transmitted into the newly constructed distribution system.

You, of course, know that there is now a distribution system in Aberdeen, which is owned by the Mississippi Power Co. and is serving the people of Aberdeen; and it is contemplated that the new construction will not in anywise impede, impair, retard, obstruct or interfere with the Mississippi Power Co. in the free use and enjoyment of its property or franchise in said City, or create any hazards to it or the public generally as a result of the duplication of an electrical distribution system in said city, and the estimate of the costs of this new construction should take into consideration these factors.

It is highly desired that this survey be made at the earliest possible moment and that a report be made to the Board of your findings, if possible, not later than April 16th. at 3 p. m.

Thanking you for your cooperation in this matter, and with every good wish, we remain,

Very truly yours, D. W. Houston, Sr. & Jr., City Attorneys, (Sgd.) by D. W. Houston, Jr.

DWHJr-w.

(Letterhead—Mayor's Office—City of Starkville, Starkville, Miss.)

January 24, 1934.

Mr. B. Eaton, President, Miss. Power Company, Gulfport, Miss.

DEAR SIR:

Since you state that you do not desire to sell the distribution system of the Mississippi Power Company in the City of Starkville, I desire to inform you that the City authorities will make you an offer for your distribution system and for a flat rate for power similar to that Tupelo is at present getting, until we can get power from the T. V. A. direct.

If we cannot agree, we declare our intention to put in our own distribution system at such time, and as soon as possible, to be in readiness for power from the T. V. A.; or to acquire our own method of generating electricity for our own use.

Yours very truly, (Sgd.) Joseph S. Rice.

COMPLAINANTS' EXHIBIT NO. 203 (EXCLUDED)

BINDER CONTRACT

To Take Light and Power From The City of Columbus, Mississippi

STATE OF MISSISSIPPI
Lowndes County
City of Columbus

THIS CONTRACT, made and entered into this ..... day of 1937,

by and between the City of Columbus, Mississippi, party of the first part and .....

..... part..... of the second part,

WITNESSETH, THAT WHEREAS, the party of the first part has been authorized, by an election held on the 14th day of September, 1937, to issue bonds of said city in the maximum sum of $281,000.00 with which to acquire the present electric power and light distribution system or to construct its own distribution system for electric power and light; and

WHEREAS, the party of the first part, proceeding under the authority of said election, must either acquire the existing electric power and light distribution system or construct a distribution system of its own, in order to place itself in a position to receive cheap electrical energy from the Tennessee Valley Authority. The party of the first part therefore contracts, on its part, to employ all lawful means to acquire or construct a distribution system and to deliver to the party of the second part Tennessee Valley Authority electrical energy at Tennessee Valley Authority rates, and

WHEREAS, the acquisition of said electric light and power distribution system or the construction of its own system involves the expenditure of a large sum of money, which expenditure can result in direct unlimited ad valorem taxation to liquidate the same in the event the revenues collected from said system are not sufficient, and in further consideration of the benefits to be derived from the use of power and light at the low rates fixed by the Tennessee Valley Authority, I, we, expressly bind myself, (ourselves) to receive light and power from no other source than through the distribution system of the party of the first part. It is also understood and agreed that the procedure necessary and incidental to the acquisition of a distribution system may involve an indeterminate period of time, but that this contract shall be subject to a reasonable and liberal interpretation as to time.

by and between the City of Columbus, Mississippi, party of the first part and .....

..... part..... of the second part,

WITNESSETH, THAT WHEREAS, the party of the first part has been authorized, by an election held on the 14th day of September, 1937, to issue bonds of said city in the maximum sum of $281,000.00 with which to acquire the present electric power and light distribution system or to construct its own distribution system for electric power and light; and

WHEREAS, the party of the first part, proceeding under the authority of said election, must either acquire the existing electric power and light distribution system or construct a distribution system of its own, in order to place itself in a position to receive cheap electrical energy from the Tennessee Valley Authority. The party of the first part therefore contracts, on its part, to employ all lawful means to acquire or construct a distribution system and to deliver to the party of the second part Tennessee Valley Authority electrical energy at Tennessee Valley Authority rates, and

WHEREAS, the acquisition of said electric light and power distribution system or the construction of its own system involves the expenditure of a large sum of money, which expenditure can result in direct unlimited ad valorem taxation to liquidate the same in the event the revenues collected from said system are not sufficient, and in further consideration of the benefits to be derived from the use of power and light at the low rates fixed by the Tennessee Valley Authority, I, we, expressly bind myself, (ourselves) to receive light and power from no other source than through the distribution system of the party of the first part. It is also understood and agreed that the procedure necessary and incidental to the acquisition of a distribution system may involve an indeterminate period of time, but that this contract shall be subject to a reasonable and liberal interpretation as to time.

In witness whereof the parties have hereunto set their hands on the date first above written.

Thompson Baking Company,

Jackson, Tenn.

Nov. 2, 1937.

Mr. John Wisdom, West Tennessee Power & Light Co., Jackson, Tenn.

DEAR MR. WISDOM:

Your kind letter of the 1st received and I wish to thank you very much for same. In regard to your service on electricity, I would like to say that we have never had a minutes trouble with your service except when we knew that it could not be avoided. We would also like to say that we were treated with every consideration by your employees.

In regard to our discontinuance of your electric service, I would like to explain to you that we could not afford to pass up the saving that we will make by using T V A power. Last month we paid you $127.09 for power and light and the same amount of electricity from T. V. A. would have cost us about $48.00 or a saving of about $80.00.

I would like to say that it was not my wish to take this business away from you but I also want you to understand my position in the matter and that the saving was so great that I could do nothing else.

We are still doing business with your company in that we are paying you approximately $40.00 per month for gas for our oven and up until now the service has been entirely satisfactory.

Again wishing to express to you my appreciation for all kindnesses rendered by your company, I am,

Respectfully yours, Thompson Baking Co., (Sg.) Charles A. Thompson.

CAT/Enc.

[fol. 2566] COMPLAINANTS' EXHIBIT No. 213

Tennessee Valley Authority,

Department of Electricity.

Jackson, Tennessee.

To All Applicants for TVA Electricity in Madison County, Tennessee:

Engineering surveys and the work of obtaining right-of-way easements have progressed to a point where we can definitely advise you to proceed with having your house wired and complete contracts for your electrical appliances. It is expected that we will be ready to start construction on your line within the very near future and, in order that you may receive electricity at the very earliest date possible, we now advise you to proceed with your wiring.

Our construction crews will run the wire from the pole to your house and install the meter in the meter receptacle. It will be necessary for your wiring contractor to install proper-sized switch, meter receptacle, and entrance cable. The meter receptacles may be obtained at the following address by your electrical contractor:

Division Headquarters,
Tennessee Valley Authority,
215 Holland Building,
Jackson, Tennessee.

Before electricity is turned on, your wiring must be inspected. Therefore, it will be necessary for you to have the electrician who wires your house notify us that he has completed the wiring and that it is ready for inspection. Inspection of house wiring will be made by a representative from this office and, again, we wish to caution you of the importance of having your wiring installed in accordance with requirements of the National Board of Fire Underwriters.

If you have complied with the above requirements at the time your lines are constructed, the construction crews will extend the wire from the pole to the house, install the meter, and complete all necessary arrangements for supplying the service when the lines are energized. If you are not ready for service at the time construction crews reach your premises, it will be necessary to wait until a future date when the construction crews can come back and run the service wires

COMPLAINANTS' EXHIBIT No. 213

and install the meters. This may delay you in securing electric service.

Yours very truly, Tennessee Valley Authority,
(Signed) Earle R. Wall, Division Manager.

[fol. 2567] COMPLAINANTS' EXHIBIT No. 214

Electric Franchise Granted by the Court of County Commissioners of Colbert County, Alabama, to TVA.

Be it Resolved by the Court of County Commissioners of Colbert County, Alabama:

That, whereas, Tennessee Valley Authority, a corporation created and existing under the "Tennessee Valley Authority Act of 1933" has acquired certain transmission and other lines, substations and other appliances, facilities and property for the transmission and distribution of electrical energy in certain parts of Colbert County, Alabama, some of which lines and appliances are located along and across the public highways in said county; and

Whereas said Tennessee Valley Authority may desire hereafter to extend said lines or construct new ones in, along or across such highways, and this Court deems it in the public interest that said Tennessee Valley Authority be given the right and franchise to use the public places and highways of this County in connection with the transmission and distribution of electrical energy in said County;

Now, therefore, be it Resolved That said Tennessee Valley Authority, its successors and assigns, be and they are hereby given and granted the right and franchise to construct, repair, maintain, operate and conduct in said County a system of poles, towers, conduits, cables, conductors, transforming stations, fittings and all appliances or appurtenances in, over, under, along, upon and across all public highways, roads, alleys, lanes, bridges, viaducts and other public ways and places in said county as they now exist or may hereafter be laid out or extended, to the extent the said Tennessee Valley Authority may deem necessary or desirable to the transmission within, into, through, over and beyond the county and furnishing, supplying, and distributing to the county and to the inhabitants and corporations, both within and beyond the limits thereof, electric energy for lighting, heating, power and all other purposes for

which electric energy may be used now or hereafter and for the purpose of extending its lines and furnishing electric current beyond the limits of the county.

This right and franchise is made upon the following conditions:

1. The poles, towers, conduits, cables, conductors, transforming stations, fittings, appliances, and appurtenances shall be so constructed as not unreasonably to interfere with [fol. 2568] the proper use of the public highways, roads, alleys, bridges, viaducts, and other public ways and places in the county and shall be maintained in a reasonably good condition and repair.

2. Whenever the Tennessee Valley Authority shall cause any opening or alteration to be made in any of the public highways, roads, alleys, lanes, bridges, viaducts and other public ways and places in the county for the purpose of installing, maintaining, operating, or repairing any poles, towers, conduits, cables, and other appliances, the work shall be completed within a reasonable time and the Tennessee Valley Authority shall upon the completion of such work restore such portion of the public highways, roads, alleys, lanes, bridges, viaducts and other public ways and places to as good condition as it was before the opening or alteration was so made.

3. The Tennessee Valley Authority shall hold the county harmless from any and all liability or damages resulting from the negligence of the Tennessee Valley Authority in the construction, maintenance or operation of its poles, towers, conduits, wires, cables and other appliances.

4. The invalidity of any sentence, clause, or provision hereof shall not affect the validity of any of the remaining provisions hereof.

5. The consideration hereof is the expenditure by said Tennessee Valley Authority of the funds necessary for the construction of said transmission and/or distribution lines and the proper maintenance thereof.

Adopted August 10th, 1936.

R. E. Sherrill, S. E. Kimbrough, Rad Thompson, Commissioners.

Monday, January 6th, 1936.

Resolution in re-TVA Poles and Wires

The following Resolution was read to the Court, by W. A. Brown, County Judge:

Resolution:

Whereas, an application has been duly made to the County Court of Anderson County Tennessee by the Tennessee Valley Authority for permission to erect and maintain poles, lines, wires, insulators, transformers, irons and braces to suspend wires over, across, above, through and upon public

highways, lanes, bridges, viaducts and other public ways and places in said County (but outside the corporate limits of any Incorporated city or town) for the purpose of conducting electricity over said wires and

Whereas, said County Court having duly convened and heard such application, a Quorum being present, and concluded that the Grant thereof would be advantageous to the County and its inhabitants,

Now, Therefore, on motion duly made and carried,

Resolved, that said Tennessee Valley Authority (hereinafter called the "Authority") is hereby given and vested with the permission, right, authority, easement, privilege and franchise to construct, erect, suspend, install, renew, repair, maintain, operate and conduct in the County of Anderson a system of poles, towers, conduits, cables, conductors, transforming stations, fittings and all appliances or appurtenances necessary or desirable to the transmission, distribution, or sale of electric current for all purposes whatsoever in, over, under, along, upon, across and above all public highways, lanes, bridges, viaducts and other public ways and places in said County (but outside the corporate limits of any incorporated city or town) as they now exist or may hereafter be laid out or extended together with the further right, privilege and franchise to construct, erect, suspend, install, renew, repair, maintain and operate such poles, towers, conduits, cables, wires, conductors, transforming stations, fittings and all appliances and appurtenances necessary or desirable to the transmission within, into, through, over, across and beyond the County and furnishing, supplying and distributing to the County and to the [fol. 2574] inhabitants and corporations, both within and beyond the limits thereof (but outside the corporate limits of any incorporated city or town), electric energy for lighting, heating power and all other purposes for which electric energy may be used now or hereafter and for the purpose of extending its lines and furnishing electric current beyond the limits of the County.

This permission, grant, and privilege is made upon the following terms:

1. The poles, towers, conduits, cables, conductors, transforming stations, fittings, appliances, and appurtenances shall be so constructed as not unreasonably to interfere with

the proper use of the public highways, lanes, bridges, viaducts, and other public ways and places in the County, and shall be maintained in a reasonably good condition and repair.

2. Whenever the Authority shall cause any opening or alteration to be made in any of the public highways, lanes, bridges, viaducts and other public ways and places in the County for the purpose of installing, maintaining, operating, or repairing any poles, towers, conduits, cables and other appliances, the work shall be completed within a reasonable time and the Authority shall upon the completion of such work restore such portion of the public highways, lanes, bridges, viaducts and other public ways and places to as good condition as it was before the opening or alteration so made.

3. The Authority may, with the consent of any landowner having any interest therein, trim any trees which may come into contact with said wires, poles, or appurtenances.

4. The Authority shall hold the County harmless from any and all liability or damages resulting from the negligence of the Authority in the construction, maintenance or operation of its poles, towers, conduits, wires, cables and other appliances, and the Authority shall so place their poles, towers, and other appliances in such a manner as not to interfere with the public roads and ditches, and if it should become necessary to widen or change the location of any of said roads the Authority upon notice from the County Highway Superintendent or the person having charge of the said road to remove the same out of the way, so as not to obstruct the free usage and passage of said roads and ditches.

5. The rights hereby granted shall become effective upon the passage of this resolution and shall continue for a period of ninety-nine (99) years thereafter.

6. The invalidity of any sentence, clause, or provision hereof shall not affect the validity of any of the remaining provisions hereof.

[fol. 2575] 7. The consideration hereof is the expenditure by said Authority of the funds necessary for the construc-

COMPLAINANTS' EXHIBIT No. 225

tion of said transmission and/or distribution lines and the proper maintenance thereof.

In Witness Whereof, said County Court of said County of Anderson, has caused this instrument to be subscribed to by its members this 6th day of January, 1936.

A motion was made by Esq. Wm. Tuttle, and seconded by Esq. L. W. Stark, that said Resolution be adopted. The vote was taken which resulted in a unanimous vote.

Whereupon W. A. Brown, County Judge, declared said Resolution duly and legally adopted.

[fol. 2594] COMPLAINANTS' EXHIBIT No. 265

Electric Franchise Granted by the City of Fayetteville, Tennessee, to TVA, on June 9, 1937

Ordinance

Whereas, the Tennessee Valley Authority (hereinafter called Authority) is constructing a certain rural electric distribution system in Lincoln County, Tennessee, for the Lincoln County Electric Membership Corporation (hereinafter called Corporation) and Corporation is to own and operate said system for the retail distribution of electricity to its members at cost and without profit; and

Whereas, pursuant to an agreement between Authority and Corporation, Authority is operating such rural lines as have been completed for Corporation until the distribution system has been completed as a unit and may be transferred to Corporation for maintenance and operation; and

Whereas, the L. N. Gross Company proposes to construct a plant within the limits of the Town of Fayetteville and Corporation desires to admit said company to membership in Corporation and supply its electricity requirements; and

Whereas, Corporation has requested the Town of Fayetteville to grant to Authority a franchise to construct an electric distribution line within the limits of said town and

to serve the L. N. Gross Company with electricity and to place, the poles, lines, wires, insulators, transformers, irons, and braces, and to suspend the wires of said lines over, through, and upon the public streets, alleys, lanes, bridges, and other public ways and places in said town; and

Whereas, the Board of Mayor and Aldermen of the Town of Fayetteville, having duly convened and heard such application, a quorum being present, has concluded that the grant of such franchise would be advantageous to the Town of Fayetteville and to its inhabitants;

Now, Therefore, on motion duly made and carried,

Be It Ordained, that Authority, its successors and assigns, is hereby given and vested with the permission, right, authority, easement, privilege, and franchise to construct, erect, suspend, install, renew, repair, maintain, operate, and conduct in the Town of Fayetteville a line of poles, towers, conduits, cables, conductors, transforming stations, fittings and all appliances or appurtenances necessary or de- [fol. 2595] sirable for transmitting, distributing, and selling electric current to the L. N. Gross Company, and said facilities may be constructed, maintained, and operated in, over, under, along, upon and across the public streets, alleys, lanes, bridges, viaducts, and other public ways and places in said town as they now exist or may hereafter be laid out or extended.

This permission, grant, and privilege is made upon the following terms:

1. The poles, towers, conduits, cables, conductors, transforming stations, fittings, appliances, and appurtenances shall be so constructed as not unreasonably to interfere with the proper use of the public streets, alleys, bridges, viaducts, and other public ways and places in the town and shall be maintained in a reasonably good condition and repair.

2. Whenever Authority or assigns shall cause any opening or alteration to be made in any of the public streets, alleys, lanes, bridges, viaducts, and other public ways and places in the town for the purpose of installing, maintaining, operating, or repairing any poles, towers, conduits, cables, and other appliances, the work shall be completed within a reasonable time Authority or assigns shall upon the completion of such work restore such portion of the

public streets, alleys, lanes, bridges, viaducts, and other public ways, and places to as good condition as it was before the opening or alteration was so made.

3. Authority or assigns may, with the consent of any landowner having any interest therein, trim any trees which may come into contact with said wires, poles, or appurtenances.

4. Authority or assigns shall hold the town harmless from any and all liability or damages resulting from the negligence of Authority or assigns in the construction, maintenance, or operation of its poles, towers, conduits, wires, cables, and other appliances.

5. Upon the transfer from Authority to Corporation of the rural electric distribution system which Authority has constructed and is constructing for Corporation, this franchise shall be assigned by Authority to Corporation. Thereafter, the rights herein granted shall be exercised solely by Corporation, and Corporation, rather than Authority, shall be subject to the obligations herein imposed, as fully as if this franchise has been revoked at that time and a new franchise granted directly to Corporation.

6. If at any time subsequent to the construction of said distribution line within the limits of the Town of Fayetteville for service to the L. N. Gross Company, the Town of Fayetteville shall acquire an electric distribution system and shall desire to acquire the distribution line constructed pursuant to this franchise, said town may purchase the same from the then owner thereof at a price corresponding to its value at the time such option is exercised. In deter- [fol. 2596] mining the price to be paid by the town for said line its value shall be deemed to be the cost of constructing the same, less depreciation from the date of construction to the date on which the option is exercised. If the town elects to exercise such option, it shall purchase the entire portion of the line erected to serve the L. N. Gross Company from the present distribution lines, both within and without the City limits, and the town shall thereafter have the privilege of serving the L. N. Gross Company, if that company shall consent thereto.

COMPLAINANTS' EXHIBIT No. 265

7. The rights hereby granted shall become effective upon the passage of this Ordinance and shall continue for a period of ninety-nine (99) years thereafter.

8. The invalidity of any sentence, clause, or provision hereof shall not affect the validity of any of the remaining provisions hereof.

9. The consideration hereof is the expenditure by Authority and/or Corporation of the funds necessary for the construction of said transmission and/or distribution lines and the proper maintenance thereof.

10. In Witness Whereof, said Board of Mayor and Aldermen of said Town of Fayetteville has caused this instrument to be subscribed by its Mayor, this 9th day of June, 1937.

Frank D. Rambo, Acting Mayor. H. W. Moyers, City Clerk.

(Original Exhibit)

[fol. 2598] COMPLAINANTS' EXHIBIT No. 267

In the Name and by the Authority of the State of Alabama

Office of Secretary of State

Whereas, E. V. Ellis, J. D. Lindsey, T. A. Young, M. H. Copeland, G. H. Jordan, Eric Moseley, and J. F. Hannah, resident citizens of Cherokee County, Alabama, desiring to form themselves into an electric membership corporation, under Act No. 45, H. 133, approved February 7, 1935, and Act No. 168, H. 469, approved July 8, 1935, and

Whereas, the said members have filed in the office of Secretary of State for the State of Alabama, a certificate of incorporation, in accordance with Section 5 of said Act No. 45 under the name of Cherokee County Electric Mem-

bership Corporation which certificate of incorporation has been filed and recorded as of this date.

Now, Therefore, I, Howell Turner, Secretary of State for the State of Alabama, do hereby certify that the above named members are duly organized as an electric membership corporation, under the name of Cherokee County Electric Membership Corporation, for the purposes set forth in said certificate of incorporation and Act No. 45, approved February 7, 1935, also Act No. 168, approved July 8, 1935, and are fully authorized as a body corporate, having the capacity and powers conferred by law, in such cases made and provided.

I further certify that I have forwarded to Hon. T. R. Snead, Judge of Probate of the County of Cherokee, a certified copy of the certificate of incorporation.

In Testimony Whereof, I have hereunto set my hand and affixed the Great Seal of State, at the Capitol, in the City of Montgomery, this 11th day of February, 1937.

Howell Turner, Secretary of State. (Seal.)

[fol. 2599] Certificate of Incorporation of Cherokee County Electric Membership Corporation

We, the undersigned, E. V. Ellis, J. D. Lindsey, T. A. Young, M. H. Copeland, G. H. Jordan, Eric Moseley, and J. F. Hannah, being natural persons and resident citizens of Cherokee County, Alabama, the territory in which the operations of the Corporation are principally to be conducted, and being desirous of using electric energy to be furnished by the Corporation, and being desirous to promote and encourage the fullest possible use of electric energy, hereby execute this Certificate of Incorporation, as the incorporators of Cherokee County Electric Membership Corporation, as is provided by House Bill 133, Legislature of 1935, and approved on February 7, 1935, General Acts of Alabama, Regular Session, 1935, Page 100, and as amended by House Bill 469, Legislature of 1935, and approved on July 8, 1935, General Acts of Alabama, Regular Session, 1935, Page 229.

First

Name: The Name of the Corporation shall be Cherokee County Electric Membership Corporation.

COMPLAINANTS' EXHIBIT No. 267

Second

Territory: The operations of the Corporation shall be principally conducted in Cherokee County, Alabama.

Third

Principal Office: The Location of the principal office and the post office address thereof shall be Centre, Cherokee County.

Fourth

Number of Directors: The number of directors shall be determined as provided in the by-laws. This number shall not exceed twenty (20) and shall not be less than three (3).

Fifth

Directors for First Year: The names and addresses of the Directors who are to manage the affairs of the Corporation for the first year, or until their successors are chosen in the manner provided in the by-laws, are:

E. V. Ellis, Centre, Alabama, Route 1,
J. D. Lindsey, Centre, Alabama, Route 2,
T. A. Young, Centre, Alabama, Route 2,
G. H. Jordan, Centre, Alabama, Route 1,
[fol. 2600] Eric Moseley, Lyerly, Georgia, Route 2,
M. H. Copeland, Round Mountain, Alabama, Route 1,
J. F. Hannah, Leesburg, Alabama, Route 1.

Sixth

Duration: The duration of the corporation shall be perpetual.

Seventh

Membership: The terms and conditions upon which future members of the corporation shall be admitted to membership herein are as follows:

A person desiring to become a member of this corporation shall make application to the Board of Directors in writing for membership, and upon approval by the Board of Directors, or by any officer or officers of the corporation as may be designated by the Board of Directors, shall become a member of the corporation, provided, such person

resides in the territory in which the operations of such corporation are to be conducted, and are desirous of using electric energy to be furnished by the corporation and provided such person shall agree to abide by the By-Laws and the provisions of the Certificate of Incorporation, of the corporation, and shall agree to take and pay for such electric energy as may be furnished by said corporation to said person, as such person may have need of, or may consume for residential or other purposes. No person shall become or remain a member of the corporation, unless such person shall use electric energy supplied by the corporation and shall have complied with the provisions of this Certificate of Incorporation and the By-Laws and shall have agreed to abide thereby, and by any amendment thereto, and unless such person shall have paid a membership fee, to be fixed by the By-Laws of the corporation, but not to exceed Ten Dollars ($10.00).

Any person who shall agree to use energy supplied by the corporation from an existing line, or from a line, the construction of which has been authorized or commenced by the corporation, may be admitted to membership in the corporation upon complying with the other terms and conditions with respect to membership contained in this Certificate of Incorporation or in the By-Laws.

The Board of Directors shall have power to determine in what circumstances and under what conditions more than one membership may, or must, be held by one person. However, the interest of each member shall be equal to that of every other member, and no member of this corporation shall have any greater voice, vote, or privilege in this corporation than any other member, irrespective of the inequality of the numbers of memberships held by the different members of this corporation.

[fol. 2601] Eighth

Purposes: The purposes of the corporation shall be to render service to its members, and by so doing, promote and encourage the fullest possible use of electric energy in the State of Alabama, by making electric energy available to the members hereof at the lowest cost consistent with sound economy and prudent management of this business

of the corporation, and shall include all purposes required and authorized by the Electric Membership Corporation Act of the State of Alabama, and subsequent amendments thereto.

Without in any manner restricting or limiting the foregoing the corporation shall have the following purposes, viz:

To generate, manufacture, purchase, acquire and accumulate electric energy for its members and to transmit, distribute, furnish, sell and dispose of such electric energy to its members, and to such other customers as may validly be served by the corporation pursuant to the said Electric Membership Corporation Act, and subsequent amendments thereto, and by which is provided the conditions and obligations to serve other customers. This service to such other customers being to the class as is provided in this Certificate of Incorporation under the Ninth item, hereof, headed "Powers" and in order to carry out and accomplish any or all of such purposes, to construct, erect, purchase, lease, and in any manner acquire, own, hold, maintain, operate, sell, dispose of, lease, exchange and mortgage plants, buildings, works, machinery, equipment, and supplies and electrical transmission and distribution lines or systems, and to generally do and perform any and all things necessary and convenient in connection with, and in the conduction of, the business of a corporation, including, but not limited to the general powers, hereinafter set out, to the end that the purposes may be carried out by the corporation to the mutual benefit of the members.

Ninth

Powers: The Board of Directors shall constitute the governing Board, or Body, of the corporation, and shall be elected at such time as is provided in the By-Laws and shall be elected annually by the members entitled to vote therefor. All Directors, other than those named in this Certificate of Incorporation, shall be members of the corporation, and shall not be entitled to compensation, but shall be entitled to reimbursement for expenses incurred by them in the performance of their duties, as shall be provided in the By-Laws of this corporation. The Board of

Directors shall have power to do all things necessary or convenient in conducting the business of said corporation, including, but not limited to: (a) The power to adopt and amend By-Laws for the management and regulation of the affairs of the corporation. (b) To appoint, hire, or employ agents and employees, and to fix their compensation, (c) To appoint, select, hire, or employ officers of the corporation and to fix their compensation. (d) To execute [fol. 2602] instruments, (e) To delegate to one, or more, of the agents, employees or the officers of the corporation such powers and duties as they may deem proper, (f) To make its own rules and regulations as to procedure. The corporation shall possess powers to do all things necessary or convenient in conducting the business of the corporation to carry out the purposes for which it was organized. It shall be possessed of, and be authorized to, the exercise and enjoyment of all of the powers, rights, and privileges granted to or conferred upon corporations by the laws of the State of Alabama, now, or hereinafter in force, including, but not limited to the powers granted the corporation under the Electric Membership Corporation Act of Alabama, of 1935, and the subsequent amendments thereto, including, but not limited to the following, viz:

To acquire, own, hold, exercise, and, to the extent permitted by law, to mortgage, pledge, hypothecate and in any manner dispose of franchises, rights, privileges, licenses and easements necessary, useful, or convenient for carrying out and accomplishing of any of the purposes of the corporation;

To purchase, lease, and in any manner acquire, own, hold, maintain, sell, lease, exchange, mortgage, pledge, and in any manner dispose of any and all real and personal property which may be necessary, useful or convenient for the carrying out and accomplishing of any of the purposes of the corporation;

To assist its members to wire their premises and install therein electrical and plumbing appliances, fixtures, machinery, supplies, apparatus, and equipment of any and all kinds and character, and in connection therewith, and for such purposes, to purchase, acquire, lease, sell, distribute, install and repair electrical and plumbing appliances, fixtures, machinery, supplies, apparatus and equipment of

any and all kind and character and to receive, acquire, endorse, pledge, hypothecate and dispose of notes, and any other evidences of indebtedness;

To, in the same manner, furnish electrical energy and such supplies to certain non-member customers, provided the corporation should acquire any electric facilities already dedicated to, or devoted to, the public use, the corporation may, for the purpose of continuing existing service and avoiding hardship, continue to serve the persons directly served from such facilities at the time of such acquisition without requiring that such persons become members in the corporation. However, in no event shall the number of such non-members served exceed forty-nine Percentum (49%) of the total number of persons served by the corporation. Such non-members shall have the right to become members of the corporation upon non-discriminatory terms. The rate for service to such non-members shall be on a cost basis and may exceed the rates to members, but by only such amounts as may be necessary to meet the full actual cost of service to such non-members.

To borrow money, to make and issue notes, bills of exchange, bonds, debentures and other evidences of indebtedness secured or unsecured for moneys borrowed, or in payment for property acquired or for any of the other purposes of the corporation, to secure the payment of such bonds, debentures, notes, or any other evidences of indebtedness by mortgage or mortgages, or deed or deeds of trust, upon, or by the pledge or of any other lien upon any or [fol. 2603] all of the property, rights, privileges or franchises of the corporation, whatsoever, and wheresoever situated, acquired, or to be acquired;

To make available electrical generating manufacturings and transmission facilities to other corporations organized for similar purposes under the Statutes of the State of Alabama, or of any other state in the United States;

And to generally do, and perform all such acts, and things as may be useful, necessary, or convenient for the accomplishment of the purposes for which this corporation is organized, not to be limited to the powers above expressed, as the only limitation on the power of this corporation is that all of the operations of the corporation shall

COMPLAINANTS' EXHIBIT No. 267

ever be on a cooperative basis, not for profit, and for the mutual benefit of, and service to, its members, as such, and such limitation of power as is placed on corporations by the Statutes of the State of Alabama.

In witness whereof, we have hereunto set our hands and seals, as such incorporators aforesaid, on this the 2nd day of February, A. D. 1937.

(Signed) E. V. Ellis. (L. S.) (Signed) J. D. Lindsey. (L. S.) (Signed) T. A. Young. (L. S.) (Signed) Hoyt G. Jordan. (L. S.) (Signed) Eric Moseley. (L. S.) (Signed) M. H. Copeland. (L. S.) (Signed) J. F. Hannah. (L. S.)

STATE OF ALABAMA,
Cherokee County:

I, Hugh Reed, Jr., a Notary Public, in and for Cherokee County, State of Alabama, hereby certify that E. V. Ellis, J. D. Lindsey, T. A. Young, G. H. Jordan, Eric Moseley, M. H. Copeland, and J. F. Hannah, whose names are signed to the foregoing Certificate of Incorporation, and who are known to me, acknowledged before me on this day that, being informed of the contents of the said Certificate of Incorporation, each executed the same voluntarily on the day the same bears date.

Given under my hand and seal of office, this the 2nd day of February, A. D. 1937.

(Signed) Hugh Reed, Jr., Notary Public.

[fol. 2607] COMPLAINANTS' EXHIBIT No. 275

Electric Franchise Granted by the County Court of Bedford County, Tennessee, on January 6, 1936, to Bedford County Electric Membership Corporation

"Whereas, the United States Gov. through the agency of the Tennessee Valley Authority has made available certain funds for the purpose of bringing to the citizens, rural and urban, residing in the Tennessee Valley, electric power when their conditions have been complied with; and

"Whereas, to comply with said conditions certain citizens of Bedford County have bargained themselves into a body corporate under the name of Bedford County Electric Membership Corporation, and it is their purpose to furnish electric lights and power to rural citizens of this County, who have heretofore been unable to obtain such service and others, and to furnish it at such a cheap rate that any citizen of the county may avail himself of this service; and in order to furnish said service to the citizens of this county it is necessary that said Bedford County Electric Member-

COMPLAINANTS' EXHIBIT No. 275

ship Corporation be granted a franchise or easement with authority to erect its poles and lines over the roads of the county to reach the citizens who have contracted for said lights and power.

Therefore, on motion of Jno. B. Hall, seconded by John Coop, be it resolved by the County Court of Bedford County that said Bedford County Electric Membership Corporation be granted a franchise or easement over the roads and highways of Bedford County to erect its poles and construct its electric lines and maintain the same; and in consideration of the low cost of said service to the citizens of this County, no charge will be made for said easement."

[fol. 2609] COMPLAINANTS' EXHIBIT No. 277

Electric Franchise Granted by the County Court of Bradley County, Tennessee, on August 30, 1937, to Meigs County Electric Membership Corporation

* * * * * * *

"Be It Further Resolved, That the said Meigs County Electric Membership Corporation, its successors and assigns, be and it is hereby given, granted and conveyed the right, privilege and authority, forever, to erect, construct, maintain and operate electric transmission and distribution line or lines, including poles, towers, wires, insulators, transformers, arms, braces and other necessary or usual attachments and appliances along, across over and under the public roads and highways of this County, for the purpose of transmitting and distributing electricity of light, power, heat or any other purpose whatever.

"Be It Further Resolved, that the said Meigs County Electric Membership Corporation, its successors and as-

signs, is hereby granted and extended the right and privilege of selling electricity for light, heat, power or any other purpose whatever to any person or persons, firm or corporation within said County; Provided only, that nothing herein shall be construed to relieve or excuse said Corporation, its successors or assigns for the payment of any license or tax on the business engaged in, lawfully assessed, now in effect or hereafter to be enacted.

"Be It Further Resolved, that the above and foregoing right, authority and privileges are given and granted with the express stipulation and provisions that whenever State or County authorities change the width, grade or location of any road or highway that said Corporation will, at its own expense, whenever necessary, remove and re-set its poles, towers, guide wires, braces and attachments to conform to such new grade, width or location of said road or highway; and the County reserves the right to have all or any part of the work incident to the erection and construction of said transmision line or lines carried on under the reasonable direction and supervision of such person or persons to whom the County Court may delegate such authority.

"Be It Further Resolved, that said rights and privileges are granted and given with the express conditions and stipulations that none of said poles, towers, guide wires, braces or other apparatus or appliances are to be erected, used or maintained in such manner as to block, obstruct, interfere or impede travel on any of the roads or highways of Bradley County.

"Be It Further Resolved, that nothing herein shall be construed to grant or give to said Corporation, its successors or assigns any exclusive rights, privileges or franchises."

Electric Franchise Granted by the County Court of Carroll County, Tennessee, on October 5, 1936, to Gibson County Electric Membership Corporation

* * * * * * * *

"Therefore, Be It Resolved by this County Court of Carroll County that Gibson County Electric Membership Corporation, its successor and assigns, is hereby granted the right and privilege to construct, erect, maintain and operate electric transmission lines, including poles, lines, wires, insulators, transformers, arms, braces and all other necessary or usual attachments and appurtenances along, across, over, under and on the streets, lanes, highways, public roads and other public places in said County, and to construct, erect, maintain and operate electric transmission and distribution lines, wires, insulators, transformers, arms, braces and all other necessary or usual attachments and appurtenances anywhere in said County.

After hearing said resolution R. McNatt made a motion which was duly seconded that the matter be referred to a committee and that they report at 1 o'clock P. M.

COMPLAINANTS' EXHIBIT No. 280

Thereupon, Judge Enochs named W. G. Bullock, A. H. Jones and L. E. Smith to investigate and report their findings.

Said Committee reported favorable and recommended its adoption. Thereupon the said Resolution was unanimously adopted, a lawful Court present and voting for same."

A Resolution amending resolution granting franchise to TVA in Madison County was presented to the Court as follows:

"Whereas, the Quarterly County Court of Madison County, Tennessee, at its October Term 1936, by resolution,

COMPLAINANTS' EXHIBIT No. 301-C

granted the Southwest Tennessee Electric Membership Corporation the right and privilege to construct, erect, maintain and operate electric transmission and distribution lines along, across, over, under, and on the streets, lanes, highways, public roads and other public places in said County, but said right and privileges so granted did not extend to or run in favor of the successors and assigns of Southwest Tennessee Electric Membership Corporation.

Whereas, it is essential to the United States Government and to the Southwest Tennessee Electric Membership Corporation that said right and privilege run in favor of the successors and assigns of Southwest Tennessee Electric Membership Corporation.

Now, therefore, be it resolved that this Quarterly County Court of Madison County, Tenn., at its April Term, 1937, that the Resolution heretofore adopted granting the aforesaid right and privilege to Southwest Tennessee Electric Membership Corporation be and the same hereby is amended so as to make the right and privilege heretofore granted to Southwest Tennessee Electric Membership Corporation extend to and run in favor of said Southwest Tennessee Electric Membership Corporation, its successors and assigns.

Motion made by Esquire R. L. Ozier, seconded by J. S. Matthews, that the same be accepted.

Motion carried by a vote of 26 to nothing.

[fol. 2625] COMPLAINANTS' EXHIBIT No. 309

Electric Franchise Granted by the County Court of Rhea County, Tennessee

"TVA Transmission Lines to be Erected on Rights-of-Way

Motion was made by Esq. Boles, duly seconded by Sanborn that the County Court permit the TVA to erect transmission lines on the Rights of way of Rhea County to the extent that they do not interfere with traffic.

Resolution as follows:

Resolution

For the support of the rural electrification program in Rhea County.

Whereas, the rural people of Rhea County are anxious to obtain electric power distributed by the Tennessee Valley Authority and are interested in formulating a set-up whereby said electricity may be distributed cooperatively and,

Whereas, the Rhea County Quarterly Court desires to cooperate with the TVA and the proposed Electrification program,

Therefore, Be It Resolved, that an association that may be set up to distribute this power is authorized to use the County Rights-of-way for the erection of its transmission lines whenever such Rights of way can be used to advantage, such authorization to be used with discretion so as not to interfere with maintenance and public use of such Rights of way.

Passed, This the 1st day of April, 1935.

Attest: Floyd Knight, County Judge. Ralph Porter, County Clerk.

COMPLAINANTS' EXHIBIT No. 309

Upon roll call the following Justices voted "Aye" for the motion. Baber, Boles, Bower, Caldwell, Chattin, Kemmer, Odom, Sanborn, Smith, Spence, Taylor, Washburn.

Absent: Barton, Conner, Morgan, Vaughn.

Motion carried and so ordered."

[fol. 2626] COMPLAINANTS' EXHIBIT No. 309-A

Resolution by County Court of Rhea County, Tennessee

Rural Electrification Resolution Amendment

"Be it resolved by the Quarterly County Court of Rhea County, that the resolution adopted by the Court on Monday, October 7, 1935, recorded in current Minute Book, pages 272 and 273, granting to City of Dayton a franchise for use of public roads of Rhea County for erection of electric transmission lines be and same is hereby amended by adding name of Meigs County Electric Membership Corporation and granting same rights to said Meigs County Electric Membership Corporation as are granted therein to City of Dayton to use public roads in the first and second districts of Rhea County with same rights and privileges and under same conditions as granted in said original resolution to City of Dayton. This amended resolution does not grant an exclusive franchise on any road covered by it.

Motion was made by esquire Sanborn duly seconded by esquire Chattin to pass the foregoing resolution.

Upon roll call the following justices voted "aye" for the motion:

Baber, Boles, Chattin, Kemmer, Morgan, Odom, Sanborn, Smith, Spence, Taylor, Vaughn and Washburn.

Those absent: Barton, Caldwell and Conner.

The Judge declared the motion carried and so ordered."

[fol. 2628] COMPLAINANTS' EXHIBIT No. 313

Electric Franchise Granted by the County Court of Rutherford County to Bedford County Electric Membership Corporation

"In re Bedford County Electric Membership Corporation

"Esq. A. A. Gobelet offered the following resolution and moved its adoption:

"Whereas, the United States Government, through the agency of the Tennessee Valley Authority, has made available certain funds for the purpose of bringing to the citizens rural and urban, residing in the Tennessee Valley,

COMPLAINANTS' EXHIBIT No. 313

electric power when their conditions have been complied with; and

"Whereas, to comply with said conditions certain citizens of Bedford County have organized themselves into a body corporate under the name of Bedford County Electric Membership Corporation, and it is further their purpose to furnish electric lights and power to rural citizens of this county, who have heretofore been unable to obtain such service and others, and to furnish it at such a cheap rate that any citizen of the County may avail himself of this service; and in order to furnish said service to the citizens of this County it is necessary that said Bedford County Electric Membership Corporation be granted a franchise or easement with authority to erect its poles and lines over the roads of the county to reach the citizens who have contracted for said lights and power:

"Therefore on motion of J. C. Couch, seconded by C. E. Robinson, be it resolved by the County Court of Rutherford County that said Bedford County Electric Membership Corporation be granted a franchise or easement over the roads and highways of Rutherford County to erect its poles and construct its electric lines and maintain the same, and in consideration of the low cost of said services to the citizens of this county, no charge will be made for said easement."

Industrial Power Contract

This Contract, made this 5 day of April, 1937 by and between Name: Yates Bleachery Company; Address: Flintstone, Georgia, Hereinafter called the "Customer", and the North Ga. Elect. Membership Corporation hereinafter called the "Distributor": with office at Dalton, Georgia.

Witnesseth:

Whereas, Customer has applied to Distributor for electricity for the operation of a bleachery, at Flintstone, Georgia.

Now, Therefore, in consideration of the mutual covenants and agreements hereinafter set forth, the parties mutually agree as follows:

1. The Distributor will supply and the Customer will take and pay for all the electricity required for the operation of a bleachery at Flintstone, Georgia up to a maximum demand of 175 kw., in accordance with the terms hereof and the schedule of Rules and Regulations attached hereto and made a part hereof.

2. The minimum quantity of electricity contracted for hereunder and to be paid for by the Customer shall be a minimum demand of — kw.

3. Attached hereto and hereby made a part hereof is a [fol. 2653] rate schedule designated Rate Schedule B-3, and the electricity sold hereunder shall be purchased and paid for by the Customer according to the provisions of said Rate Schedule B-3, except as modified by this agreement, including a surcharge of 10% and an amortization charge of 1¢ per kwh. for the first 100 kwh. per month, the minimum amortization charge to be $0.25 and the maximum $1.00 per month.

4. The electricity furnished hereunder shall be in the form of 3-phase, alternating current, at approximately 60 cycles and 2300 volts.

5. The Point of Delivery for the electricity supplied hereunder shall be at the bleachery and maintenance by Distributor of approximately the above stated voltage and frequency at said Point of Delivery shall constitute delivery of electricity for the purposes of this contract. The electricity

to be supplied Customer hereunder shall be metered at the low tension side of the step-down transformer bank or banks of a substation to be constructed, owned, and operated by Distributor, and Distributor will install only such protective devices as in its opinion are necessary for the protection of its transformer bank or banks and/or the transmission line or transmission lines supplying power to such sub-station. Customer shall furnish Distributor gratis with a suitable substation site for the period hereof, the transformer banks and other equipment installed thereon to [fol. 2654] be considered the personal property of Distributor. Distributor shall have free right of ingress and egress on said site, and Customer shall supply a right-of-way over Customer's property to such site.

6. The term of this contract shall be 5 years. This contract shall begin on the date of the delivery of electricity hereunder is actually begun, which it is estimated will be approximately on or about May 15, 1937, and shall be considered renewed for a year from the expiration of said term, and from year to year thereafter, unless a written notice to the contrary is given by either party to the other at least three months prior to the expiration of the term of the contract or any then existing renewal thereof.

7. This contract shall inure to the benefit of and be binding upon the respective heirs, legal representatoves, successors and assigns of the parties hereto, but it is not assignable by Customer without written consent of Distributor.

In Witness Whereof the parties hereto have caused this contract to be duly executed in duplicate the day and year first above written.

—— ——, Distributor, by —— ——.

—— ——, Customer, By —— ——, ——, Official Capacity.

[fol. 2655] Schedule of Terms and Conditions

1. Measurement of Demand, Energy and Power Factor.—Demand energy measurements shall be made by suitable instruments at the point or points of delivery or may, at the option of Authority, be made at some other point or points

where housing facilities are available or may be made available and/or operation simplified; Provided, however, that in the event the metering is effected at some other location than at the point of delivery, suitable correction shall be made by Authority of the amounts determined at such location so that the adjusted amounts will so far as possible reflect the exact quantities delivered at the actual point or points of delivery.

Authority will, at its own expense, install and maintain the necessary meters for measuring the maximum demand and the amount of energy furnished Customer, Provided, that should these meters fail or be found inaccurate the maximum demand and amount of energy delivered will be estimated by Authority from the best information available. Authority may also, at its option, from time to time measure power factor. Customer shall permit the use of its housing facilities, ducts and supports for Authority's metering equipment.

2. Meter Tests.—Authority will, at its own expense, and in the presence of representatives of Customer, make periodical tests and inspections of its meters in order to maintain a high standard of accuracy. Authority will make [fol. 2656] additional tests or inspection of its meters at the request of Customer, and in the presence of representatives of Customer. If such additional tests show that the meter is accurate within 2%, slow or fast, no adjustment will be made in Customer's bill and the cost of making test will be paid by Customer. In case the tests show the meter to be in excess of 2%, fast or slow, an adjustment shall be made in Customer's bill over a period of not over thirty (30) days prior to date of such test, and cost of making test shall be borne by Authority.

3. Customer's Lines and Equipment—Ownership.—All lines and substations from Point of Delivery (as defined in the contract of which these terms and conditions are a part,) and all electrical equipment, except the metering equipment of Authority, located on Customer's side of such Point of Delivery, shall be furnished and maintained by Customer.

4. Inspections.—Authority shall have the right, but shall not be obligated, to inspect any installation before elec-

tricity is introduced or at any later time, and reserves the right to reject any wiring or equipment not in accordance with Authority's reasonable standards; but such inspection, or failure to inspect, or to reject, shall not render Authority liable or responsible for any loss, damage, or accident resulting from defects in the installation of any electrical equipment, or from violation of the contract of which these [fol. 2657] terms and conditions are a part.

5. Customer's Responsibility for Authority's Property.—All meters, service conditions, and other equipment furnished by Authority shall be, and remain, the property of Authority. Customer shall exercise proper care to protect the property of Authority on Customer's premises, and in the event of loss or damage to Authority's property, arising from neglect of Customer to care for same, the cost of necessary repairs or replacement shall be paid by Customer.

6. Rights of Access.—Authority's identified employees shall have access to Customer's premises at all reasonable times, for the purpose of reading meters, and for testing, repairing, renewing or exchanging any or all equipment belonging to Authority.

7. Additional Load.—The service connection, transformers, meters, and equipment supplied by Authority for Customer have definite capacity and no addition to Customer's equipment or load connected thereto, in excess of such capacity, shall be made except after reasonable notice to Authority. Failure to give such notice of additions or changes in load shall render Customer liable for any damage to Authority's lines or equipment caused by the additional or changed installation.

8. Customer's Lines and Equipment—Standards.—All lines and equipment of Customer must conform to accepted modern practice, as exemplified by the requirements of the [fol. 2658] National Electrical Safety Code and the National Electric Code.

9. Billing.—Bills will be rendered monthly and shall be paid within ten (10) days from date of bill at the office of Authority. Failure to receive bill will not release Customer from payment obligation. Should bills not be paid as above,

Authority may at any time thereafter, upon five (5) days' written notice to Customer, discontinue service. Discontinuance of supply under this section shall not relieve Customer of its liability for the agreed minimum monthly payment during the time the supply of energy is so discontinued. Bills paid on or before the final date of payment shall be payable at the net rates, but thereafter the gross rates shall apply. Should the final date for payment of the bill at the net rates fall on a Sunday or holiday, the business day next following the final date will be held as a day of grace for delivery of payment. Net rate remittance received by mail after the time limit for payment of said net rates will be accepted by Authority, if the incoming envelope bears United States Post Office date stamp of the final date for payment of the net amount, or any date prior thereto.

10. Interruption of Service.—Authority will furnish energy as agreed upon continuously so far as reasonable diligence will permit; but Authority, its officers, agents or employees shall not be liable for damages when, for any reason, suspensions of the operation of the generation and [fol. 2659] transmission system serving Customer, or any part thereof, interfere with the delivery of electric energy to Customer nor shall such an interruption constitute a breach of this contract on the part of Authority, but Authority shall make appropriate adjustment of the demand charge in the event of an interruption.

11. Voltage Fluctuations Caused by Customer.—Electric service must not be used in such a manner as to cause unusual fluctuations or disturbances to Authority's system. Authority may require Customer at its own expense to install suitable apparatus to reasonably limit such fluctuations.

12. Balancing of Loads.—Customer shall at all times rake and use energy in such manner that the load will be balanced between phases to within 10%. In the event of unbalanced polyphase loads, Authority reserves the right to require Customer at its own expense to make the necessary changes to correct this condition, or to compute the balancing demand on the assumption that the load of each phase is equal to that on the greatest phase.

COMPLAINANTS' EXHIBIT No. 341

13. Notice of Trouble.—Customer shall notify Authority immediately should the service be unsatisfactory for any reason, or should there be any defects, trouble, or accidents affecting the supply of electricity. Such notices, if verbal, should be confirmed in writing.

[fol. 2660] 14. Single Point Delivery.—Unless otherwise specifically provided in this contract, if service is rendered from more than one substation, or through more than one transformation at the same substation, Authority will bill Customer for energy (but not demand) at each substation or additional transformation separately.

15. Submetering or resale.—Except as otherwise specifically provided, the energy supplied hereunder is for the use of Customer only, and shall not be submetered or resold, except at reasonable rates, for domestic and commercial uses to the extent incident to Customer's industrial operations.

16. Conflict.—In case of conflict between any express contractural provision or any provision of the Rate Schedule and these Terms and Conditions, the Contract or Rate Schedule shall apply.

[fol. 2661] Tennessee Valley Authority

Department of Electricity

Basic Industrial Rate

Schedule B-3

Availability

Available to all industrial and all large non-residential light, heat, and power customers having demands greater than 20 kw. and/or customers whose average monthly usage exceeds 4,000 kwh. Customers with demands not greater than 20 kw. and using on the average not in excess of 4,000 kwh. per month will be billed according to the Basic Commercial Rate, Schedule B-2.

Character of Service.

Alternating current, three-phase, sixty cycles. Voltage supplied will be at the discretion of Contractor and will be

determined by the voltage available from distribution lines in the vicinity and/or other conditions.

Rate

Demand Charge:

First 1,000 kw. of demand per month @ $1.00 per kw.
Excess over 1,000 kw. of demand per month @ $0.90 per kw.

Energy Charge:

First	10,000 kwh.	consumed	per	month	@	10	mills	per	kwh.
Next	25,000 kwh.	"	"	"	@	6	"	"	"
Next	65,000 kwh.	"	"	"	@	4	"	"	"
Next	400,000 kwh.	"	"	"	@	3	"	"	"
Next	1,500,000 kwh.	"	"	"	@	2.5	"	"	"
Excess over	2,000,000 kwh.	"	"	"	@	2	"	"	"

Charge for energy in excess of 360 times the demand shall be subject to a reduction of 0.5 mills per kwh. from the otherwise applicable rate.

[fol. 2662] Determination of Demand.

Demand measurement shall be made by suitable instruments at the point of delivery, except, at the option of the Contractor, demand may be determined by inspection or test. Demand for any month shall be defined as the highest integrated load during any thirty (30) minute period during the month for which determination is made.

Adjustment of Demand Charge for Power Factor

Demand charge may be adjusted, if and when Contractor deems necessary, to correct for power factors lower than eighty-five per cent (85%). Such adjustments will be made in such manner as to bring the demand charge to the equivalent of eighty-five per cent (85%) power factor.

Minimum Annual Charge

Customers taking service under this schedule shall pay a minimum annual charge, including demand and energy, of six dollars ($6.00) per kilowatt of the highest measured demand occurring during any month of each year of service.

For annual customers, the excess, if any, of the minimum annual charge over the total amount billed to and paid by customer shall be determined and collected at the end of each year of service.

For seasonal customers taking service for less than one full year, the minimum charge will be collected in equal in-
[fol. 2663] stallments during the first four consecutive months of service, and will be adjusted at the end of the service period, at which time customer shall pay the excess, if any, of the minimum charge over the total amount previously billed to and paid by customer. Seasonal customers shall pay in addition the actual costs of cut-ins and cut-outs in excess of one *of one* of each per year.

Surcharge

Rate and minimum charge are subject to a surcharge as provided for in Schedule of Terms and Conditions.

Payment

Above rates including surcharge are not, the gross rates being ten per cent (10%) higher. In the event the current monthly bill is not paid within ten (10) days from date of bill, the gross rates shall apply.

Single Point Delivery

The above rates are based upon the supply of service to the entire premises through a single delivery and metering point, and at a single voltage. Separate supply for the same customer at other points of consumption, or at different voltage, shall be separately metered and billed.

Service under this classification is subject to Rules and Regulations of Contractor.

[fol. 2664] Tennessee Valley Authority

Department of Electricity

Standard Residential Rate

Schedule B-1

Availability

Available for domestic use to all residential customers served from local alternating current distribution systems. Service under the Standard Residential Rate shall apply only to electric service in a single private dwelling and its appurtenances, the major use of which is for lighting and

household appliances, for the personal comfort and convenience of those residing therein. Private dwellings in which space is occasionally used for the conduct of business by a person residing therein will be served under the Standard Residential Rate. Where premises have mixed use the classification shall be determined by predominating use of floor space. The Residential Rate shall not apply to service to institutions such as clubs, fraternities, orphanages or homes; recognized rooming or boarding houses; the space in an apartment or other residential building primarily devoted to use as an office or studio for professional or other gainful purposes.

Character of Service

A. C. service at approximately 60 cycles, 110 or 220 volts, either single-phase, two-wire or three-wire; or, three-phase, three-wire or four-wire, as may be required by Contractor.

[fol. 2665]

Rate

									(In (pencil
First	50	kwh.	consumed	per	month	@ 3¢	per	kwh.	(1.50
Next	150	"	"	"	"	@ 2¢	"	"	(3.00
Next	200	"	"	"	"	@ 1¢	"	"	(2.00
Next	1,000	"	"	"	"	@ 0.4¢	"	"	(4.00
Excess over	1,400	"	"	"	"	@ 0.75¢	"	"	(10.50
									(1.00
						(1,400			11.50)

Minimum Monthly Bill

$0.75 per Meter.

Payment

Above rates are net, the gross rates being ten per cent (10%) higher. In the event that the current monthly bill is not paid within ten (10) days from date of bill, the gross rates shall apply.

Single Point Delivery

The above rates are based upon the supply of service to the entire premises through a single delivery and metering point, and at a single voltage. Separate supply for the same customer at other points of consumption, or at a different voltage, shall be separately metered and billed.

[fol. 2678] COMPLAINANTS' EXHIBIT No. 363

Rufus W. Putnam,
20 North Wacker Drive,
Chicago, Illinois

Chattanooga, Tenn.,
Dec. 2, 1937.

Memorandum:

By reference to my working papers the following summarizes the situation as to my estimates of cost of transportation by land and by water of Tennessee River traffic:

Existing Traffic

Estimated transportation cost by land—1,750,000 tons @ $1,532	$2,682,169
Estimated transportation cost by water—1,750,000 tons @ $0.364	637,288
Estimated savings—1,750,000 tons @ $1.168	$2,044,881

Future Traffic

Estimated transportation cost by land—5,023,238 tons @ $1.813	$9,107,010
Estimated transportation cost by water—5,023,238 tons @ $1.180	5,927,401
Estimated savings—5,023,238 tons @ $0.633	$3,179,609

[fol. 2679] EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 364 FOR IDENTIFICATION, BEING "HEARINGS BEFORE THE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, HOUSE OF REPRESENTATIVES, 74TH CONGRESS, 1ST SESSION, (Excluded)

Page 1947

Mr. Lilienthal: Mr. Chairman and gentlemen of the committee, my name is David E. Lilienthal. I am a member of the board of directors of the Tennessee Valley Authority. I am appearing before your committee in response to the request of the committee directed to the board of the Authority.

Page 1952

Mr. Cooper (interposing): I believe you made the statement——

Mr. Lilienthal (interposing): The question I have directed my attention to in these items——

Mr. Cooper (interposing): You just stated that the Tennessee Valley Authority was going to pay taxes just the same as any private utility company would have to pay.

Mr. Lilienthal: The matter has been met in this way: Congress has said that 5 per cent of the gross proceeds received by the Board shall be paid to the State, but in order to remove any question about the fairness of it; in addition to that, 7½ per cent of the gross revenue has been set up, or a total of 7½; and the 5 per cent, which is 12½ per cent, which is the national average of gross revenue paid by private utility companies as taxes.

Just let me complete this, if I may. These rates were fixed, the present rates were fixed for the year 1932, and the figure at that time was 12½ per cent of the gross revenue as a national average.

Mr. Cooper: The tax paid by private utilities is 13 per cent of their earnings. It seems to me, according to the figures that I have here, that the private companies would have to pay nine times more taxes than your set-up.

Mr. Lilienthal: No.

Mr. Cooper: The statement you made a moment ago, if I understood you correctly, was that the T. V. A. would be expected to pay the same taxes as those now assessed against private utility industry.

Mr. Lilienthal: The average national tax, and the average at the time this was made up—and, of course, it may

have varied some, and naturally the national average would vary from year to year—but this was 12½ per cent of the gross revenue at the time this figure was made up.

Pages 1953-4

Mr. Cooper: Now private utilities have to pay a great many taxes, do they not?

Mr. Lilienthal: Yes.

Mr. Cooper: Which amounts to about 15 per cent of their gross business so I am told.

[fol. 2680] Mr. Lilienthal: Well, it varies; but I gave you the national average.

Mr. Cooper: Well, I have been told that it ranged from 13 per cent, varied up to as high as 15 per cent. Now, do you mean to tell this committee that the Tennessee Valley Authority is going to pay that much?

Mr. Lilienthal: That much will be paid by users of T. V. A. power. The Federal Government, in addition to the 5 per cent which is paid to the State, will get another sum for distribution in whatever manner Congress may decide, another 7½ per cent from the Tennessee Valley Authority, which is the difference between the amount set in the act and the national average, or 7½ per cent of the gross revenue, payable by private utilities.

Mr. Cooper: Do you pay any real estate taxes?

Mr. Lilienthal: No.

Mr. Cooper: Any income taxes?

Mr. Lilienthal: Yes; the gross-revenue tax referred to.

Mr. Cooper: Neither Federal nor State?

Mr. Lilienthal: The amount I spoke of, the 12½ per cent——

Mr. Cooper (interposing): And no municipal taxes?

Mr. Lilienthal: If the Tennessee Valley Authority were to own a distributing system in a municipality, it would pay the equivalent of the local taxes to the municipality that the private utility paid.

Mr. Cooper: Does the Tennessee Valley Authority pay any insurance charges?

Mr. Lilienthal: No; the Federal Government does not deem it necessary to carry insurance.

EXCERPTS FROM COMPLAINANTS' EXHIBIT [redacted] 364 FOR IDENTIFICATION (Excluded)

Mr. Cooper: And you say you pay no real-estate taxes?
Mr. Lilienthal: No.
Mr. Cooper: No automobile taxes?
Mr. Lilienthal: No.
Mr. Cooper: No gasoline taxes?
Mr. Lilienthal: No.
Mr. Cooper: No 3 per cent special Federal tax?
Mr. Lilienthal: No.
Mr. Cooper: And you get a rebate, do you not, for everything that is hauled over the railroad, both passenger and freight service?
Mr. Lilienthal: A rebate?
Mr. Cooper: Yes.
Mr. Lilienthal: Under the railroad Land Grant Act, you mean? Yes.

Page 1954

Mr. Cooper: You have no workmen's compensation tax to pay to the States in which you operate?
Mr. Lilienthal: There is the Federal Workmen's Compensation Act.
Mr. Cooper: Yes; but does the Tennessee Valley Authority pay any tax to workmen's compensation?
Mr. Lilienthal: I am not familiar with how that is worked out; I assume that the contribution must come out of an appropriation to the Tennessee Valley Authority for that [fol. 2681] purpose, but I am not familiar with that.
Mr. Cooper: And you have services which are contributed to you by the governmental departments, do you not, such as legal services, for which you do not pay?
Mr. Lilienthal: We have our own legal staff which furnishes that service.
Mr. Cooper: Do you not have the franking privilege?
Mr. Lilienthal: Yes.

Page 1955

Mr. Cooper: But you have the franking privilege in sending out bills, and you also have the free use of Government buildings for offices for your clerical force.
Mr. Lilienthal: We use stamps on bills. We have free use of Government buildings, but we pay rent on many private buildings we occupy.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 364 FOR IDENTIFICATION (Excluded)

Mr. Cooper: And you also are furnished free legal advice, and you also have advice on accounting, and for other purposes?

Mr. Lilienthal: We have our own legal staff, paid for out of T. V. A. funds. In regard to accounting, we have our accounts audited by the Comptroller General's Office, and it is not free by any means; the expense was something around $35,000.

Mr. Cooper: The reason I am mentioning these things to you, Mr. Lilienthal, is because you said that the Tennessee Valley Authority was going to pay the same taxes and assessments that private industry does.

Mr. Lilienthal: Yes; I am coming to that.

Mr. Cooper: And I understood you to say that you were going to pay the same kind of taxes the private utility pays.

Mr. Lilienthal: Here is what I said, if you will give me an opportunity.

Mr. Cooper: Just one other question. You stated the Tennessee Valley Authority would bring revenue to the Federal Government. Did you not operate at a loss last year of $442,000?

Mr. Lilienthal: What is the figure?

Mr. Cooper: Your revenue earned was $308,000 and your cost amounted to $750,000.

Mr. Lilienthal: If that is the figure——

Mr. Cooper (interposing): Showing an operating loss of around $442,000 in 1934.

Mr. Lilienthal: Those figures may well be accurate; I am unable to carry them in mind.

. . . . . .

Mr. Wadsworth: Referring again to the tax matter. I understood you to say that 7 per cent of the total of 12 per cent would go to the Federal Government?

Mr. Lilienthal: Yes; the difference between 12½ per cent and 5 per cent which the act provides.

Mr. Wadsworth: But you are the Government, are you not?

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 364 FOR IDENTIFICATION (Excluded)

[fol. 2682] Mr. Lilienthal: The Authority is a special agency of the Government. It is a part of the Government, if you look at it in that way.

Mr. Wadsworth: This development was financed by the United States Treasury?

Mr. Lilienthal: Yes. The point I am making, Mr. Wadsworth, is simply this: That under the provisions of the act this additional reserve for taxes may go back into the Treasury if it is not used for other purposes. It is not clear that Congress has taken express action on how that reserve should be treated.

Pages 1956-7

Mr. Lilienthal: There is no suggestion, Mr. Cooper, that any form of comparison shall be rigid. There seems to have been a notion, with regard to comparisons, that there shall be no allowance made for different circumstances. There is no such suggestion, as far as I know—certainly nothing official—that the Tennessee Valley Authority, in the rate that it may charge, shall attempt to set up a rate which, without change, by reason of difference in certain circumstances throughout the country, by reason of geographical differences, and many other differences which exist in the country, shall be applied inflexibly everywhere. It is the same process that an industry uses when it goes about determining whether it shall take power from a private utility or whether it shall set up its own plant. The manager of such an industry sits down with his engineers, takes all of the facts into consideration, and determines whether it will be cheaper to develop its own electricity in its own independent plant or to secure it from a public utility. The manager in this way sets up a kind of "yardstick."

Now, the figures will vary, of course, in different localities, due to different costs of production.

Pages 1962-3

Mr. Lilienthal: It is obvious that unless we can dispose of the power, there is not going to be any income from that power, whereas the expenses continue, and losses are inevitable as long as we are not permitted to collect revenues.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 364 FOR IDENTIFICATION (Excluded)

It is obvious that the plant capable of producing power, and without a market, will continue to run at a loss as long as it is prevented from selling that power, and as long as that continues the Government cannot make anything out of it.

Mr. Bulwinkle: Where do you obtain that market?

Mr. Lilienthal: Where would it be obtained if T. V. A. were permitted to sell this power?

Mr. Bulwinkle: Yes; where would it be obtained?

Mr. Lilienthal: The only possible outlet would be——

Mr. Bulwinkle (interposing): North Carolina, South Carolina, Georgia, Alabama, and Mississippi?

[fol. 2683] Mr. Lilienthal: It would be mostly in Alabama, Tennessee, and Mississippi.

Mr. Bulwinkle: All of those communities are served now by private utilities, are they not?

Mr. Lilienthal: A large part of them; some of them have their own municipal plants, generating power by coal, steam.

Mr. Bulwinkle (interposing): The greater part of them are served by companies, by private utilities now?

Mr. Lilienthal: Yes.

Mr. Bulwinkle: And so if you attempt to sell this electric energy, produced by this plant, it would come in competition with those companies, would it not?

Mr. Lilienthal: Yes; in the sense you use the term "competition." If the municipalities changed from buying from the private companies and bought their supply of energy from the Tennessee Valley Authority, then in that sense and to that extent there would be competition, for it would take that much of the market which the private companies now supply.

Mr. Bulwinkle: Have you estimated how much it would take away from private utilities?

Mr. Lilienthal: How much of what it would take away?

Mr. Bulwinkle: How much money, value, kilowatt-hours, or however you want to put it.

Mr. Lilienthal: I am sure that those figures could be worked out. I do not happen to have them in mind.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 364 FOR IDENTIFICATION (Excluded)

Mr. Bulwinkle: It would be a considerable amount, would it not?

Mr. Lilienthal: It would be a substantial amount.

Page 1964

Mr. Wolverton: Let us see just how much difference there is between us. This is a very vital question, not only to Mr. Cooper but to many others. I understood you to say there were communities being served. Am I right in that statement?

Mr. Lilienthal: Yes.

Mr. Wolverton: Then, the Government came into those districts already being served; is that right?

Mr. Lilienthal: Yes.

Mr. Wolverton: And you have the business now and they do not have it?

Mr. Lilienthal: Yes.

Mr. Wolverton: Is that the situation?

Mr. Lilienthal: They purchased the power from us.

Mr. Wolverton: Well, the Tennessee Valley Authority is now furnishing the power to communities that were formerly served by other companies.

Mr. Lilienthal: Yes; and they have got the money for their facilities.

Mr. Wolverton: And there is no competition there now?

Mr. Lilienthal: No.

Mr. Wolverton: Then you eliminated competition by taking over the field?

[fol. 2684] Mr. Lilienthal: Yes; if you want to interpret competition to mean purchase. These utility companies have sold their facilities and received the money for them.

Mr. Wolverton: Is that not a reasonable interpretation of competition?

Mr. Lilienthal: I am perfectly willing to say that is.

Page 1976

Mr. Bulwinkle: In getting the benefit back into the Treasury, have you gentlemen considered this board of the Tennessee Valley Authority—is it your idea to sell to your limit eventually?

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 364 FOR IDENTIFICATION (Excluded)

Mr. Lilienthal: We do not intend to let any public property go to waste.

Mr. Bulwinkle: It is either a "yes" or "no" question.

Mr. Lilienthal: Yes.

Page 1980

Mr. Lilienthal: We think it is a very important part of our public duties to furnish information about this project to the public generally, especially in view of the fact that there is such a tremendous interest in the program.

Pages 1981-2

Mr. Cooper: Well, I want to ask you this question. I hold here in my hand a reprint from the Journal of the National Education Association, and there is an article in here of 15 pages by Mr. W. E. Myers. Now, we have heard a lot about propaganda, and I have said all along that there are always two sides to that. Here is a 15-page article dealing with the TVA. Was Mr. Myers paid by the TVA for writing that propaganda?

Mr. Lilienthal: Mr. Myers was an employee of the Authority when he wrote the article; yes.

Mr. Cooper: Did the Tennessee Valley Authority buy 50,000 copies at public expense of this article for distribution?

Mr. Lilienthal: Yes.

Mr. Cooper: And it met with the approval of the TVA?

Mr. Lilienthal: Yes.

Mr. Cooper: All right, let me refer you to the last page——

Mr. Lilienthal (interposing): That last page is not a part of the article; that is an editorial note; that is a note that was furnished, written, not by Mr. Myers, but by the editor of the National Educational Association, Dr. J. E. Morgan. [fol. 2685] Mr. Cooper: It is in the same issue that was sent out, the 50,000 copies.

Mr. Lilienthal: Yes.

Mr. Cooper: By the TVA. The article does not show it was written by a paid employee of the TVA.

Mr. Lilienthal: I should like, Mr. Chairman, to make a brief explanation in regard to this pamphlet.

EXCERPTS FROM COMPLAINANTS' EXHIBIT NO. 364 FOR IDENTIFICATION (Excluded)

We have received a flood of requests from school teachers and from students asking for information, just as every other Government department in Washington receives requests for information concerning its activities—the Department of Commerce, Bureau of Fisheries, and so forth.

A great many of these requests for information have come to TVA from teachers or students who say that they have had the subject of TVA assigned as a topic for debate, or some of them had to write a thesis and wanted to secure more information about the Tennessee Valley Authority project. So it seemed almost imperative, because it was impossible to cover these requests by letter, to have some definite information given out in the form of a pamphlet that could be used in sending out our replies to these requests for information.

We asked one of the editors of this magazine if he could tell us someone who could write such an article, one which would be useful in answering these requests, and Dr. J. E. Morgan suggested that Mr. Myers write it, and he was employed for that purpose. The article is very clear; it deals with several topics, and shows the source of the information. Now, we think it is a perfectly legitimate and necessary part of our governmental activities to give out this information.

Page 1982

Mr. Cooper: You have made speeches, have you not, in behalf of it?

Mr. Lilienthal: I have made some; yes.

Mr. Cooper: And you have spoken in behalf of the TVA?

Mr. Lilienthal: Yes.

Mr. Cooper: Now, what is the difference between propaganda of that character and the propaganda of the utilities?

Mr. Lilienthal: The difference between the propaganda that you referred to, which I think is very properly criticized, and the activities of the TVA is the difference between a public activity and a private activity. We are doing a public job, just as many of the other agencies of the Government are, just as the Department of Commerce, which has sent men abroad, through the Foreign and Domestic Commerce Division, to furnish information, and just as the Department of Agriculture does in answering many requests

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 364 FOR IDENTIFICATION (Excluded)

that come in for information about agricultural projects. [fol. 2686] It is the duty of those agencies to furnish that information, just as it has been our duty in this case to supply the public with information about TVA activities.

The public asks about the Tennessee Valley Authority project, and it is our business to furnish information.

Page 1990

Mr. Merritt: But you did have a tremendous leverage on the Alabama Power Co., or any other power company that had transmission lines in existence, did you not?

Mr. Lilienthal: Well, the Congress did not leave us in an impossible position in which we would have no way of negotiating a contract that would be fair to the Government.

Mr. Merritt: You did not propose to pay, as you would if you were condemning land, a price awarded as fair by a legally appointed commission, did you?

Mr. Lilienthal: No.

Page 1992

Mr. Huddleston: Under the system you now have, what is your cost of production?

Mr. Lilienthal: You mean per kilowatt-hour?

Mr. Huddleston: Yes.

Mr. Lilienthal: It is very hard to put it on a kilowatt-hour basis because of the effect upon unit cost of changes in volume. At full load the cost is under 3 mills. The rate ranges from 1.5 mills to 4 mills, with certain demand charges in addition.

Mr. Huddleston: Is your rate based upon the cost of production?

Mr. Lilienthal: Yes.

Mr. Huddleston: And you do not know what your cost of production is?

Mr. Lilienthal: Yes; I can give it to you in the total.

Mr. Huddleston: I thought as you had your kilowatt-hour prices based on cost, you would know what it cost you to produce it.

Mr. Lilienthal: I can give you the total and then the calculations can be made.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 364 FOR IDENTIFICATION (Excluded)

Mr. Huddleston: Would it be as low as 2 mills?

Mr. Lilienthal: I think the cost for firm power is approximately 3 mills.

Pages 2018-19

Mr. Lilienthal: No. The citizens of two counties in northeast Mississippi have themselves organized associations under the laws of the State of Mississippi, private [fol. 2687] corporations, but which are not organized for profit. They are not real cooperative associations, but corporations of a similar character. Those associations are set up by the people themselves and purchase power at wholesale from the Tennessee Valley Authority which they themselves distribute to their members.

One of the rules of the corporations is that those people who have become members of the association, and have thereby taken on the burden of paying membership fees which go to the reduction of the debts of the association, or corporation, shall receive an electricity rate which is different from the rates of people who have not made that contribution. It takes care of the differential between the responsibilities of member and nonmember consumers. I think that is probably what you have in mind.

Mr. Cooper: They are served by the Tennessee Valley Authority with power?

Mr. Lilienthal: The association has a wholesale contract with the Tennessee Valley Authority to supply it with power; yes.

Mr. Cooper: And does the TVA have anything at all to do with that?

Mr. Lilienthal: We have a contract with the association.

Mr. Cooper: Well, is it true that if the users of electric energy do not go into this corporation or organization, or whatever it might be, that they have to pay the rate that was formerly charged by the Mississippi Valley Power Co., or some other power company down there?

Mr. Lilienthal: Yes.

Mr. Cooper: In other words, that is a club to get the people to use Tennessee Valley Authority power?

Mr. Lilienthal: No; they all use the same power. Any person may become a member of the association by paying

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 364 FOR IDENTIFICATION (Excluded)

$80. If a consumer does not, then because he has not made such a contribution he will pay a higher rate for his electricity than that paid by the man who has made such a contribution. It is, I suppose, a very appropriate method of providing an incentive for complete membership. As a matter of fact, most of the people in those counties who use electricity have taken out membership.

Page 2022

Mr. Pettengill: On this matter of publicity, Mr. Lilienthal, would you be good enough to tell the committee the function of Mr. Henle, who draws a salary of $4,000; what does he do?

Mr. Lilienthal: Mr. Henle is in the department of information as far as I recall. I know the general setup of the department, but I do not know how the employees are allocated within the department.

Mr. Pettengill: The official register of the United States for the year 1934, has a chapter dealing with the Tennessee [fol. 2688] Valley Authority. One of the positions listed is that of press representative.

Am I correct in assuming that the press representative means what it ordinarily means in everyday language?

Mr. Lilienthal: May I tell you what the department does?

The department of information has several functions. It prepares information in form desired by the press, and it may well be that is his particular function. And in addition to that, that department is responsible for the replies to the thousands of letters of general inquiry about the activities of the Authority that come from all parts of the country.

It is also responsible for making arrangements for the nearly half a million visitors who come down to see the project—that many came last year. It is the responsibility of that division to see that the thousands of people who are interested, those who make official visits, and others will find someone on hand who can answer the questions which occur to them. Those are the three principal functions.

Mr. Pettengill: In other words, as I understand you, he prepares the newspaper releases covering the publicity for the Tennessee Valley Authority?

EXCERPTS FROM COMPLAINANTS' EXHIBIT NO. 364 FOR IDENTIFICATION (Excluded)

Mr. Lilienthal: One of the things the department with which he is connected is responsible for is the preparation of information in the form of press releases.

Page 2023

Mr. Pettengill: Are you familiar with the statute of October 22, 1913, of the United States Statutes at Large, providing that "no money appropriated by any act shall be used to pay for publicity experts unless specifically appropriated for the purpose?"

That has been the law of the United States since October 22, 1913. I was wondering how, in the face of the wording of that statute, you found authority for hiring a press representative.

Mr. Lilienthal: My recollection is that that statute has been construed by the Comptroller General so as not to exclude the kind of activity you have just referred to as being carried on by the Authority, and by virtually every other agency of the Government for many years.

The Chairman: That is true; practically every department of the Government has a division or a publicity bureau.

Mr. Lilienthal: Yes; and I think it is their duty to have.

[fol. 2689] Pages 2027-29

Mr. Lilienthal: Furthermore, while it is not required by law, we have set up in addition to the 5 per cent, the difference between that 5 per cent and the average of the gross revenue paid in taxes by the private utilities of the country. At the time it was determined that that average was 12½ per cent according to Edison Electric Institute data. In addition to the 5 per cent paid, therefore, a reserve of 7½ per cent was set up in computing the cost of generated power.

Mr. Pettengill (interposing): It will be set up?

Mr. Lilienthal: The policy has been adopted.

Mr. Pettengill: And will be set up?

Mr. Lilienthal: The policy has been adopted and an additional 7½ per cent of the total gross will be set aside so that there is a total of 12½ per cent of the gross revenue for taxes, or the equivalent of taxes. That is the method.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 364 FOR IDENTIFICATION (Excluded)

Mr. Pettengill: As to the 5 per cent, does the State of Alabama have a 5 per cent gross income tax?

Mr. Lilienthal: I believe not.

Mr. Pettengill: Does Tennessee?

Mr. Lilienthal: No; I believe not.

Mr. Pettengill: In other words, the provision of the statute is not the equivalent of the tax levied by the State, is it?

Mr. Lilienthal: The 5 per cent?

Mr. Pettengill: Yes.

Mr. Lilienthal: I beg your pardon, the equivalent?

Mr. Pettengill: In other words, the 5-per cent clause has no reference to the State tax?

Mr. Lilienthal: Well, I do not believe there is a tax of that kind in the State.

Mr. Reece: If I may interject there, Mr. Pettengill.

Mr. Pettengill: Yes; Mr. Reece.

Mr. Reece: I recall, when that statute was enacted that provision was put in more or less as a contribution to the States for the purpose of compensating those States for the losses in tax values, particularly for property taken by the Federal Government and thereby exempted from taxation.

Mr. Pettengill: In other words, there is no direction in the statute, is there—we will all agree on that—directing the Tennessee Valley Authority to pay State taxes.

Mr. Lilienthal: In addition to 5 per cent?

Mr. Pettengill: No. You have said there is no 5 per cent tax. This is something intended to be the equivalent of a tax. I am saying there is not anything in the statute that requires the Tennessee Valley Authority to pay a State tax.

Mr. Lilienthal: To conform to the State tax, is that your meaning?

Mr. Pettengill: In other words, if there were an ad valorem tax, you are not required to pay it, are you?

Mr. Lilienthal: No.

Mr. Pettengill: Or to pay to the State or the county or the municipality?

[fol. 2690] Mr. Lilienthal: That is right.

Mr. Pettengill: You are not required to pay it?

Mr. Lilienthal: No.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 364 FOR IDENTIFICATION (Excluded)

Mr. Pettengill: All that you have been paying, thus far, is 5 per cent under a gross revenue?

Mr. Lilienthal: That is substantially true. There is one exception to that, but it is not important.

Mr. Pettengill: Do you think that is a fair basis of comparison with the taxes paid by private utilities operating in the same field?

Mr. Lilienthal: The 5 per cent does not equal the total taxes paid by the utilities; no, sir.

Mr. Pettengill: It does not?

Mr. Lilienthal: No, sir.

Mr. Pettengill: It does not anywhere near approach it, does it?

Mr. Lilienthal: The 12½ per cent would more nearly approximate private utility tax ratios.

Now, of course, that varies from year to year and from one section of the country to another, but that is near the national average.

Mr. Pettengill: Has this additional 7½ per cent been set up as a deferred expense against your operations since you have been engaged in the business of selling electric energy?

Mr. Lilienthal: The policy has been made clear in the contracts——

Mr. Pettengill: Has been set up as an expense; has that been laid down as a policy to follow in the future; has it been done?

Mr. Lilienthal: Yes.

Mr. Pettengill: Has it been done?

Mr. Lilienthal: I am confident that it has.

Mr. Pettengill: Was it done for the fiscal year ended June 30, 1934?

Mr. Lilienthal: I do not know what the accounting technique is, but there is a segregation of that amount of money.

Mr. Pettengill: Well, assuming that there is, nevertheless, that 7½ per cent is not paid out of your treasury, is it?

Mr. Lilienthal: No, but it is available. That is the idea I was trying to make the other day. It is available for distribution by act of the Congress, or otherwise, as a surplus, as a part of the surplus.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 364 FOR IDENTIFICATION (Excluded)

Mr. Pettengill: It does not make any contribution to the tax revenues of the municipalities, counties, or States in which your projects are located, does it?

Mr. Lilienthal: No.

Mr. Pettengill: Well, do you not think Mr. Lilienthal, to make the Tennessee Valley a fair yardstick of the cost of producing electric energy and also to be fair to the communities down there, which are deprived of taxation at the present time, that you should pay State, county, and municipal taxes to the same extent on all of your properties dedicated to the production of electrical energy for sale to the public?

Mr. Lilienthal: The question is pretty inclusive, but my general answer would be that I think that the consumers [fol. 2691] of electricity purchased from a Government plant should make a contribution to the cost of government which will bear their full share of the cost of government. Yes; I think that is a sound principle.

Mr. Pettengill: Because at the present time, even if you set up an item of 7½ per cent as an operating expense, but it is not actually paid into the county, or the city, or the State treasury, then the burden of tax upon the other people living there necessarily has to be that much higher, does it not?

Mr. Lilienthal: Someone has to pay the taxes.

Mr. Pettengill: Somebody has to make it up, do they not?

Mr. Lilienthal: Oh, yes.

Mr. Pettengill: And again, is it not unfair to your consumer, to charge him a rate that will earn a return upon the 7½ per cent, if the 7½ per cent does not actually go to support the schools and roads and bridges of the community in which that consumer lives?

Mr. Lilienthal: The principle you have laid down, I agree with, entirely.

Page 2030

Mr. Pettengill: My idea is that the Tennessee Valley Act should be amended to require the Tennessee Valley Authority to pay all State, county and municipal taxes based upon ad valorem or gross income, or whatever other taxes that a private utility would be compelled to pay if located

in the same community insofar as your property is dedicated or allocated to the production of electric energy and fertilizer for sale to the public; not for the operation of locks on navigable streams, and so forth. Would you have any objection to that as an individual?

Mr. Lilienthal: Well, yes; in that form, I would.

Page 2037

Mr. Pettengill: There is just one more observation I want to make with reference to Mr. Monaghan's statement that if you set up the 7½ per cent, even though you do not pay it, it makes a fair yardstick. My criticism of that is that if you set up an item of 7½ per cent of your revenues, and do not pay it, you have it to use for new construction and the money does not cost you anything, whereas a private utility if it pays the 7½ per cent into State and municipal treasuries does not have it in its own treasury and has to go out and borrow new money at 5 or 6 per cent.

[fol. 2692] Pages 2062-63

Mr. Cooper: Were State regulations supplemented when Congress passed the Tennessee Valley Authority Act?

Do you believe that when Congress passed the Tennessee Valley Authority Act that it was intended that State commissions should be supplemented by Federal regulation?

Mr. Lilienthal: Well, answering your first question, I am sure it was not intended that the passing of the act would supplant the State commissions, but I expressed the personal opinion then, and I still think it is true, one of the considerations in the mind of many of the Members of Congress was that the disposition of power under these circumstances would furnish an alternative method of inducing the best possible rates under all of the circumstances. To that extent, it would assist the State commissions. I think it has. The data even at this early stage has been helpful to many commissions, and some of them have called on us and have found that they could use some of the information in State regulation.

Mr. Cooper: Are you ready to say that the State commissions have fallen down in the regulation of the State utilities?

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 364 FOR IDENTIFICATION (Excluded)

Mr. Lilienthal: Some of them have.

Mr. Cooper: Did your commission fall down in Wisconsin?

Mr. Lilienthal: I do not think we did a 100 per cent job by any means. We tried hard. We had many advantages other States do not have. We had funds available for an adequate staff. Many States with all of the best intentions in the world, have been unable to carry on because of inadequate funds for the job.

Mr. Cooper: Don't you believe it is casting quite a reflection on the State and its utility commission, when you say that the public utilities have come in and regulated the commission instead of the commission regulating them?

Mr. Lilienthal: I intended it as a reflection; yes sir.

Mr. Cooper: Well, the State commissioners were here a few days ago, and I think if you had been here and listened to them why, probably you would not have thought they were such a bad lot.

Mr. Lilienthal: I know a number of those men and I have high regard for them. I was referring, however, to certain instances which I am sure are fresh in your mind, and not to all State commissions, and I so stated.

Mr. Cooper: Well, it is quite an indictment to make.

Mr. Lilienthal: I said "some" States.

Mr. Cooper: Continuing against the commissions.

Mr. Lilienthal: I did not make a general indictment.

Mr. Cooper: You said you intended to say it.

Mr. Lilienthal: I intended to state that in some States that had occurred, and it has, as everyone knows.

[fol. 2693] COMPLAINANTS' EXHIBIT No. 364 (Excluded)

Hearings before the Committee on Interstate and Foreign Commerce, House of Representatives, 74th Congress, 1st Session.

(Original Exhibit)

[fol. 2694] EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 365 FOR IDENTIFICATION, BEING "HEARINGS BEFORE THE COMMITTEE ON MILITARY AFFAIRS, HOUSE OF REPRESENTATIVES, 74TH CONGRESS, 1ST SESSION" (Excluded)

P. 7

The Chairman Mr. Lilienthal, will you proceed to a discussion of H. R. 6793, in any way you see fit?

Mr. Lilienthal: The Tennessee Valley Authority is appearing here through members of its board in support of H. R. 6793.

P. 24

Mr. Lilienthal: • • •

In the first place, the law under which we operate puts upon us a duty to market this power; not only to generate it but to dispose of it. This waste is not to continue.

Mr. Hill: It is so declared to be the policy, in the basic act.

Mr. Lilienthal: It is; and the promotion of a wider and more economical use of power is another policy. That is the tenor of the entire act so far as it relates to electricity.

P. 25

Mr. Lilienthal: • • •

The Congress has written into this law, as Representative Hill has pointed out, a policy which the Authority is bound by, to promote wider and more economical distribution of electricity, particularly in rural areas. And in this law is a second policy which is mandatory and clearly within the power of Congress by which, in the disposition of this power, we are required to give preference, to give priority, to public, nonprofit agencies, whether they be municipalities or associations of farmers or other comparable public agencies.

With those duties and those policies written into the act, the Tennessee Valley Authority has worked out a method of attempting to carry these policies into effect. And we have been able to carry them into effect—in a relatively small area, it is true.

Pp. 26 & 27

Mr. Lilienthal: Instead of accepting payment in cash, which would be impossible, or taking bonds, which would be cumbersome, it was agreed in this transfer to the local asso-

ciation that the Federal Government would be repaid its investment through surplus revenues.

[fol. 2695] Following the transfer of properties the Tennessee Valley Authority sells power to these local associations at wholesale, and this is what the McSwain amendment, in section 12 (a), beginning on page 7, provides in considerable detail.

We thoroughly believe, and have been so advised, that the statute already permits that kind of operation, and the policies in the act require it, but since that has been challenged, and since more detailed directions would be useful, we heartily commend and urge the adoption of section 12 (a), which sets out the policy under which the amendment is made, and the plan which I have just described.

P. 28

Mr. Thomason: What was the reduction in cost to the urban user, to the man who had electricity at first?

Mr. Lilienthal: About 50 per cent.

Mr. Maverick: It has been much more than 50 per cent in some of those places.

Mr. Lilienthal: In this particular county, the urban user was paying about twice the present rate, but that rate, however, did not include any item for the retirement of investment which the present rate does.

Mr. Thomason: In the country, did the farmer have to pay to build the line from the main transmission line to his own house?

Mr. Lilienthal: My recollection is that there was a line extension—a rule to that effect.

P. 29

Mr. Wilcox: What is the rate per kilowatt-hour charged to the rural user?

Mr. Lilienthal: The basic Tennessee Valley Authority rate which is charged in the situation that I have described is 3 cents for the first 50 kilowatt-hours, 2 cents for the next 150 kilowatt-hours, 1 cent for the next 200 kilowatt-hours, and 4 mills in excess of 400 kilowatt-hours.

Mr. Wilcox: The basic rate is 3 cents?

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 365 FOR IDENTIFICATION (Excluded)

Mr. Lilienthal: It is a simple block rate, the maximum per kilowatt rate is 3 cents.

Mr. Wilcox: The maximum rate is 3 cents?

Mr. Lilienthal: Yes, sir.

Mr. Wilcox: You deliver the power to the house, having provided the lines to bring it to his house, and your maxi- [fol. 2696] mum rate is 3 cents for the first block of kilowatt-hours, which includes amortization and the cost of the extension line, and depreciation on equipment?

Mr. Lilienthal: No; the amortization is set up separately in this Alcorn County arrangement.

Mr. Wilcox: Where do you get the money to amortize the cost of that?

Mr. Lilienthal: Every member of the association, every consumer, in addition to this basic rate, which provides for the cost of electricity, pays 1 cent per kilowatt-hour for not to exceed 100 kilowatt-hours, a maximum of $1 a month, as a means of quickly amortizing the investment.

In comprising these rates with those previously charged, I can furnish typical bills to certain kinds of users.

That 1 cent has been included, which is really not a payment for current, but a partial payment for property.

Mr. Wilcox: In other words, you simply finance the extension and he pays it back on the basis of the power that he uses?

Mr. Lilienthal: That would be one way to explain it.

P. 32

Mr. Lilienthal: We believe that this plan in Alcorn County carries out the policies that Congress has laid down. It provides for the disposal of power to nonprofit agencies. It provides for cheap rates, and for extensive rural electrification under local control and local initiative. It is based upon what the President called when he was down there, "Community of rugged individualism", and at the same time it provides for the fair treatment of investors.

Mr. Lilienthal: * * *

Furthermore, the legislatures of the States, particularly Tennessee and Alabama, and the Governors of those States have cooperated with these applicant communities, desiring to take advantage of this public power, by the passage of

laws permitting municipalities or power districts to engage in the distribution of TVA electricity, and have appointed special commissions to work with the Authority in this and other problems with which we are concerned.

Now, there should be no mistake made about this. These individual communities, like Knoxville, Memphis, Chatta- [fol. 2697] nooga, and hundreds of smaller communities, are going to go ahead. They have the legal authority. They have bonding power. Many of them have voted bonds. They are going to go ahead and take advantage of this public property in the purchase of which the Congress has, it seems to me, properly given them a preference.

Pp. 33-34

Mr. May: You just stated that one-third of the gross revenues of the entire system of the Tennessee Electric Power Co. were in Knoxville.

Mr. Lilienthal: Chattanooga.

Mr. May: And you are planning to take that over?

Mr. Lilienthal: We are not planning a thing; no, sir. We are under a mandate by Congress to supply that community with power, if it desires to insist on its right to purchase it.

Mr. May: If you take over that city, and take over one-third of the entire gross receipts of the Tennessee Electric Power Co., will that not seriously injure that company?

Mr. Lilienthal: Let me say first, that we have no idea of "taking over that city" in the sense of your question. If Chattanooga builds its plant, as its voters have determined, it would injure the company. And that is the situation that I think Representative McSwain's proposed amendment would meet.

Mr. May: Your idea is that the TVA will produce the electricity and sell it wholesale to the Tennessee Electric Power Co., to furnish to the city?

Mr. Lilienthal: No; that is not the proposal.

Mr. May: What is the proposal?

Mr. Lilienthal: The proposal, as set out in this amend- ment, is that the Tennessee Valley Authority be authorized

to buy, where a company is willing to sell, at a price that is satisfactory——

Mr. May: If you buy principally in that city, do you not mean that you are taking it over?

Mr. Lilienthal: May I finish the sentence that will answer your question?

The proposal is that the Tennessee Valley Authority buy distribution facilities and interconnecting transmission lines, and properties incident to those transmission lines, and distribution facilities, in a unit or area. That would [fol. 2698] take care of every problem that the Tennessee Electric Power Co. presents in Chattanooga, to which you refer. If I understand your position it is that it would be unfair and destructive of the Tennessee Electric Power Co. for the city of Chattanooga, having the statutory authority to do it, after a vote of 2½ to 1 requiring it, to purchase or construct a separate plant in Chattanooga. It seems to be your point that the effect of that would be to take away from the Tennessee Electric Power Co. a very large portion of its revenues and cause disaster to the rest of the company. In addition to that, it would physically dismember a system —I believe that that is the Representative's point.

Mr. May: That is what I was asking about. How will you take it over without doing that?

Mr. Lilienthal: The proposal in this amendment is that an entire unit, a unit large enough so that compensation for that unit will not cause the financial havoc that such a dismemberment of an individual community would have——

Mr. May: But if Chattanooga affords one-third of the gross revenues to the Tennessee Electric Power Co., and its capitalization would be $100,000,000, and you paid them for the Chattanooga plant $33,333,333, your idea is that it would be made good to the extent that you took away from them; is that correct?

Mr. Lilienthal: The proportion of total revenues to capitalization has no necessary relation to the value of the property in Chattanooga.

P. 35

Mr. Lilienthal: * * *

* * * In view of the policies of Congress, and in the light of these circumstances, it is appropriate for the Congress to

say that the Tennessee Valley Authority shall have power to buy not merely a piece, but the whole, and then to resell it under the plan that was utilized in northeast Mississippi, sell it back to these individual communities that have expressed their desire to own their own distribution systems, they to pay it back out of the surplus of revenues over expenses.

That, if it please the Representative, is the proposal, and with that is a proposal that $100,000,000 in bonds of the United States be available with which to buy these properties.

P. 36

Mr. May: In other words, instead of following the cus-
[fol. 2699] tomary processes of law, condemnation of private property and the fixing of the value of it in court, you propose by this amendment to vest that authority in the Federal Power Commission?

Mr. Lilienthal: That is not quite an accurate statement.

Mr. May: Is not that what it is?

Mr. Lilienthal: No. The Tennessee Valley Authority does not desire to take the companies' facilities if the companies do not wish to sell, and, of course, when you condemn you take property against the will of the owner. Nothing is further from our intention. We are supporting this procedure because we believe it will be a way of aiding the companies to avoid property losses and safeguard actual investment in useful property. Otherwise these losses are sure to happen.

Mr. May: Why will it happen?

Mr. Lilienthal: Because these communities are communities in which the majority of the electorate control the public policies of the cities. The cities have statutory authority to go ahead, and they are apparently determined to go ahead to build their own plants, if they cannot buy.

Pp. 36-37

Mr. May: How much was paid?

Mr. Lilienthal: My recollection is $850,000.

Mr. May: How did you arrive at the price?

Mr. Lilienthal: The company presented its inventory, a

EXCERPTS FROM COMPLAINANTS' EXHIBIT NO. 365 FOR IDENTIFICATION (Excluded)

customary practice in such negotiations, and the engineers went over the property and estimates were made as to the replacement value. We took the company's replacement value and depreciated it.

Mr. May: To what extent?

Mr. Lilienthal: To the extent of 50 per cent of the cost of reproduction.

P. 37

Mr. Lilienthal: That is part of the duties that are imposed upon us in this act. One of our duties is to supply power to applicant public agencies.

[fol. 2700] Mr. May: You stated that you regarded it as your duty to sell and distribute power.

Mr. Lilienthal: Exactly.

Mr. May: And that was the purpose that you had in acquiring these plants?

Mr. Lilienthal: Yes, sir; that is one of them.

P. 38

Mr. Lilienthal: The Knoxville purchase by T. V. A. has not been consummated. And yesterday a chancel-or, in one of the lower courts in the Knoxville district, temporarily enjoined the city from proceeding further with the construction of its plant.

P. 39

Mr. May: Your company is not interested today, and has not been, as I understand you, in any way, in soliciting the people of these various communities to become interested?

Mr. Lilienthal: It is a fundamental purpose of the T. V. A. not to solicit what you might describe as power business. It is purely an independent enterprise for the benefit of the people themselves, and the people take the initiative.

Mr. May: Have not you gentlemen who are members of the board, and other persons connected with it, been visiting various towns in Tennessee, delivering addresses and pointing out the benefits to be acquired by T. V. A. power?

Mr. Lilienthal: In the first place, those speeches are only made on invitation, and, I may say, many invitations. In

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 365 FOR IDENTIFICATION (Excluded)

the second place, it is certainly our duty, and we believe it is a part of our qualification, to believe in the wisdom and feasibility of this act, and the three directors are firm in that position, and therefore are not hiding their lights under a bushel in that respect.

Mr. May: In other words, you do have a plan now for a meeting in Johnson City for the next month?

Mr. Lilienthal: I have no such plans.

Mr. May: Do you know about that?

Mr. Lilienthal: No; but I do know of a meeting in west Tennessee, to which the T. V. A. has been requested, for some 4½ months, to send a representative. The interest in west Tennessee has been increasing for over a year, on the initiative of the people themselves. If one of our rep- [fol. 2701] resentatives goes down there, he will find that it is not necessary for any spokesmen of the T. V. A. to make speeches. The people of the United States are stirred up about electricity, all over the United States, but especially on the Tennessee Valley.

Mr. May: And the Tennessee Valley Authority has not stirred up the people in this matter?

Mr. Lilienthal: I do not doubt that the Tennessee Valley Authority has increased the conviction of people that electricity should be widely available.

P. 40

Mr. Lilienthal: We believe that the law as it now stands adequately gives us the authority that we have exercised, but we believe that these amendments would remove any question of doubt or ambiguity on the matter of authority.

Of course, the question of the authority under the Constitution is not a matter that can be cleared up by this legislation.

Pp. 47-48

Mr. May: But you are willing to tell this committee that the Tennessee Valley is not overproduced at the present time?

Mr. Lilienthal: There is a surplus at the present time.

Mr. May: What percentage?

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 365 FOR IDENTIFICATION (Excluded)

Mr. Lilienthal: About 18 per cent. That is not too much to have on the shelf under all the circumstances, especially since we have obligations with respect to national defense which may overnight change the picture.

Pp. 48-49

Mr. May: You were organized at what time—the T. V. A.?

Mr. Lilienthal: The incorporation meeting was on the 16th of June in 1933.

Mr. May: And you gave out your first rate schedule in September 1933?

Mr. Lilienthal: Yes, sir.

Mr. May: How did you arrive at that rate schedule without any developed capacity, or without the Norris or Wheeler Dams, or anything except the Muscle Shoals Dam, the Wilson Dam?

[fol. 2702] Mr. Lilienthal: You mean, how was the estimated rate computed? The way almost any agency would. We based it upon estimates, including all the elements that go into making up a price—estimates of market and estimates of what we had available to dispose of; estimate of firm power, estimate of operating expenses, estimate of depreciation, actual figures of taxes plus an additional computation as to interest, and all the other elements that go into making up an operation of that kind.

Pp. 49-50

Mr. May: You make these rates and schedules; in making them, at what price or what valuation did you take into consideration Wilson Dam?

Mr. Lilienthal: The value of the Wilson Dam was computed at what a prudent business man would pay if he were determining upon a question of building or buying a new power plant at Wilson Dam. That figure was about $20,000,000.

Mr. May: As a matter of fact, it cost the Government about sixty millions, did it not?

Mr. Lilienthal: No.

Mr. May: $47,000,000?

EXCERPTS FROM COMPLAINANTS' EXHIBIT NO. 365 FOR IDENTIFICATION (Excluded)

P. 50

Mr. May: And that has been written down to $21,000,000?

Mr. Lilienthal: No. Those figures are not comparable. The Authority has not adopted a final figure, as required by one of the sections of this act for recommendation to the President. The study is continuing, but the final computations will show a substantial loss which must be charged to the defense of the country at the time this project was initiated.

P. 55

Mr. Maverick: I want to ask just one more question. Has there not been a general decrease in rates charged by public utilities since the establishment of the TVA?

Mr. Lilienthal: In the Tennessee Valley area there have been decreases in rates resulting in annual savings of about $7,000,000 for the States affected.

Mr. Merritt: Those are all privately owned companies?

Mr. Lilienthal: Yes.

[fol. 2703]

P. 60

Mr. Montet: Before we enter on that, Mr. Lilienthal, I want to ask you a question about one provision in the McSwain bill. When the TVA sells power, say to Tupelo, does it not in its contract control the resale price of that power?

Mr. Lilienthal: Yes. The resale price is agreed upon.

P. 61

Mr. Montet: Do you consider the TVA an experiment for the benefit of the various States, or a yardstick, which it has been called here for 15 years?

Mr. Lilienthal: It has been described in those terms.

Mr. Montet: As an experiment or yardstick of measurement for the balance of the country, to ascertain what would be a fair rate for electricity?

Mr. Lilienthal: It has very useful purposes in that connection.

* * * * * * *

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 365 FOR IDENTIFICATION (Excluded)

Mr. Montet: Mr. Lilienthal, if you came down in Alabama and established a distributive system down there and controlled resale rates in all of these towns, and they could get power from you, of what avail would the Alabama Public Service Commission be if you wanted to control the rates? What good would all of this information be to the Public Service Commission of that State, if you are going to control the rates?

Mr. Lilienthal: We do not control the rates, except as they are fixed in contracts with particular communities. There is only one community in the whole State of Alabama at the moment that has its rates fixed in a contract with the TVA.

Mr. Montet: But you have your eyes on the balance of the State?

Mr. Lilienthal: The companies serving the balance of the State are regulated by the Alabama Public Service Commission, and suggestions from many other regulatory bodies have indicated that, for the purpose of determining what is a fair rate, this is information of a useful character.

P. 77

Mr. May: Are there any instances where you aided the community in taking over the privately owned distributing system in a town?

[fol. 2704] Mr. Lilienthal: Yes.

* * * * * * *

Mr. May: Now, I am conceding all that you say about the lack of value and all that, but you have frequently told those fellows, have you not, that public funds were available through the Public Works Administration and the Tennessee Valley Authority to aid the city in putting up a plant in competition with them?

Mr. Lilienthal: It was not necessary to tell them. The availability of PWA funds for power projects was known to the utility representatives.

Page 591

Mr. McLean: Is it not proper to say that the activities of the Electric Home and Farm Authority are incidentally part of and connected with the Tennessee Valley Authority?

Dr. Morgan: They are, and they are more than that.

Mr. McLean: I say that they are, and that is all.

Dr. Morgan: They are, but they are more than that.

Page 594

Mr. McLean: Let us assume that that is all perfectly all right, and everything you have done is justified, and that you are going to get an appropriation from Congress to finish up your work. Then what are you going to do next? That is what I want to know.

Dr. Morgan: We plan on working out with other departments of the Government plans for rural electrification.

Mr. McLean: Let us get back into the Tennessee River.

Dr. Morgan: You mean by pro ,ram——

Mr. McLean: Money expend d; $30,000,000; $20,000,000; $50,000,000. What is the next $20,000,000 going to be spent for, and where are you going to get it?

Dr. Morgan: I am trying to answer your question.

Mr. McLean: I know all about the rural electrification.

Dr. Morgan: That is part of the program.

Mr. McLean: I want to know how many millions more the American people have got to put into your hands to be spilled down the Tennessee River. What is the next thing you are going to do, after you s-end this $101,000,000?

EXCERPTS FROM COMPLAINANTS' EXHIBIT NO. 366 FOR IDENTIFICATION (Excluded)

Dr. Morgan: I am trying to tell you. We expect to proceed with that program of rural electrification, of promoting that as far as we can.

Page 595

Mr. McLean: Who is going to promote rural electrification, Doctor?

Dr. Morgan: The Tennessee Valley Authority and the States cooperating, and local organizations.

Page 833

Mr. Wilcox: There is one other question, Mr. Chairman. Have there been any reductions in rates charged by private utilities in this same territory as the result of the competition afforded by the TVA?

Mr. Lilienthal: What the reasons were I am not certain. But the fact is that in the States in that area, of which there are 8, that would be directly affected, there were 30 companies that during this period reduced electric rates, totaling $7,067,000.

[fol. 2707] Mr. Wilcox: In this territory since the TVA began its operations?

Mr. Lilienthal: Yes.

Page 834

Mr. Wilcox: Have there been rate reductions by private utilities in the Tennessee Valley area since TVA was organized?

Mr. Lilienthal: Yes.

Mr. Wilcox: How much have these savings amounted to in dollars?

Mr. Lilienthal: More than $7,000,000 for Valley States from June 1933, to date.

Mr. Wilcox: Suppose TVA rates were put into effect throughout the United States. What would be the savings in rates to consumers?

Mr. Lilienthal: About $791,000,000 yearly as compared with 1932 utility rates. Since then there have been many reductions.

EXCERPTS FROM COMPLAINANTS' EXHIBIT NO. 366 FOR IDENTIFICATION (Excluded)

Pages 834-36

Mr. May: Mr. Chairman, I just have a question or two. Mr. Lilienthal, under the provisions of the McSwain bill, the bond authority that you have provides that the bonds shall not be sold at an interest rate in excess of 3½ per cent.

It has been very clearly established in this record that the average cost of money to private utilities is 5½ per cent. So that you have there a difference of 2 per cent in the cost of money for operation purposes.

Would that be taken into account by you in fixing your schedule of rates, or was it?

Mr. Lilienthal: Yes; that was taken into account. There is no occasion for taking the highest cost of money to utilities. Five and a half per cent is high. Of course, a badly capitalized utility, with some unfortunate financial practices to live with, for example, would probably have to pay 5½ or perhaps more than that. But it did not seem fair to assume that kind of a case.

As a matter of fact, at the present time, refunding operations are going on at less than 4 per cent.

Mr. May: But that is in territory where they do not have this Government competition that you are giving to the Commonwealth & Southern and the Alabama Power Co. They cannot even finance the 5½ per cent, can they?

Mr. Lilienthal: I do not know about that. They have no refinancing presently necessary, that I know of.

Mr. May: What interest rate does their preferred stock carry?

Mr. Lilienthal: I imagine 6, 6½, and 7 per cent. That is customary.

Mr. May: You do not pay any insurance, do you?

Mr. Lilienthal: We provide for insurance. I suppose we [fol. 2708] do not buy it. I do not imagine any Federal agency buys insurance.

Mr. May: You do not, in fact, pay any insurance premium, and you do not put any charge for insurance in your operating expenses?

Mr. Lilienthal: It must be taken into account in some fashion. But it would not be by the payment of insurance premium, I am confident of that.

EXCERPTS FROM COMPLAINANTS' EXHIBIT NO. 366 FOR IDENTIFICATION (Excluded)

Mr. May: You have not included that in your rate base, have you?

Mr. Lilienthal: The cost is included in operations, but not as insurance premiums. It would be a very small item, relatively. I do not know just how it is handled. There will be some provision for insurance against destruction of property.

Mr. May: Do you have anything on workmen's compensation insurance?

Mr. Lilienthal: I am confident that no Federal agency takes insurance of that kind.

Mr. May: That is not taken into consideration. Do you take into consideration the fact that you do not have any cost of financing?

Mr. Lilienthal: Yes; in determining the interest rate, something between one-fourth and one-eighth of 1 per cent was estimated as the fiscal expense of the Treasury in the raising of Federal funds. This 3½ per cent at the present time is high, of course, for a Federal investment.

Mr. May: How much does it cost the Treasury?

Mr. Lilienthal. One-fourth to one-eighth of 1 per cent for fiscal expense.

Mr. May: One-fourth to one-eighth of 1 per cent?

Mr. Lilienthal: Yes, sir.

Mr. May: You have a preference also on freight rates in shipping to and from the territory, do you not?

Mr. Lilienthal: Yes.

Mr. May: Have you allowed for that?

Mr. Lilienthal: The Federal Government receives a reduction of one-third on shipments made over land-grant railroads. That is an infinitesimal advantage. The total advantage that that would be has been computed. A good deal has been made of this so-called "advantage." Of the total cost of a dam, the freight charges play so small a part that one-third reduction amounts to three ten-thousandths of a cent per kilowatt-hour. It would save 1 cent for every 1,000 kilowatt-hours used. The average residential consumer would save 1 cent every 5½ years as a result of these savings, or about 10 cents in lifetime. It is trivial.

EXCERPTS FROM COMPLAINANTS' EXHIBIT No. 366 FOR IDENTIFICATION (Excluded)

Mr. May: Of course, the Tennessee Valley Authority has no dividends to pay, or interest to stockholders. Have you allowed for that?

Mr. Lilienthal: We have no stock, so, of course, there are no dividends. There is interest, as I suggested to Mr. Wilcox.

Mr. May: You do not figure that in your rate base as between a Government concern that does not pay dividends, and a private concern that must pay dividends.

Mr. Lilienthal: That is the surplus and that is available as a dividend to the United States Treasury, and in that way a dividend to the people of the country.

Mr. May: You did not figure in your rate base the amounts of money that you receive from other Federal agencies, nor the work that was performed by C.W.A. workmen and C.C.C. workmen.

[fol. 2709] Mr. Lilienthal: We have not had any of that work that was related to revenue-producing properties, that I know of, with the possible exception of some C.W.A. pole lines in Alabama, which have been accounted for. The C.C.C. work is not related to power operation.

[fol. 2717] COMPLAINANTS' EXHIBIT No. 373

Resolution adopted by the Council of the City of Knoxville, Tennessee, on February 21, 1933.

Resolution No. 709

Whereas, there are now prospects of development of water power in the vicinity of Knoxville including the proposed Cove Creek and Muscle Shoals developments, and

Whereas, it is believed that plans for future ownership of a power plant should be considered, so as to serve the public in an effort to obtain more reasonable rates for its people.

Now, Therefore, be it Resolved by the Council of the City of Knoxville:

That the Mayor be and he is hereby authorized to appoint a committee for the purpose of studying the questions involved in connection with providing a power plant and distribution system to serve the people of Knoxville, and to determine the advisability and cost of such service.

Be it Further Resolved, That this resolution shall take effect from and after its passage.

(Signed) John T. O'Connor, Presiding Officer of the Council. (Signed) W. H. Stapleton, Recorder.

COMPLAINANTS' EXHIBIT NO. 577 (EXCLUDED)

STATE OF ALABAMA,

CITY OF SCOTTSBORO.

JACKSON COUNTY.

CONTINGENT POWER CONTRACT FOR

RESIDENTIAL CONSUMERS

FOR AND IN CONSIDERATION of One ($1.00) Dollar, in hand paid by J. W. Woodall, Mayor of the City of Scottsboro, Alabama, on behalf of the said city, the receipt whereof is hereby acknowledged, and in further consideration of the opportunity to secure lower electric rates for myself, and of the benefits that will accrue to me as a citizen of said city by reason of the net revenue which will be earned by the city from the municipal operation of its own electrical distribution system, it is hereby agreed as follows:

1. That when and if the City of Scottsboro, Alabama, has electrical energy of the required voltage for sale at the premises of the undersigned, and the city stands ready, and will sell to the undersigned such electrical current, so long as he is a purchaser of electrical current or energy in the territory served by the city's municipal system, the undersigned will purchase his entire requirements of electrical energy from the city, for a period of ten (10) years, beginning as soon as the service is available, but not later than December 31, 1938, it being understood that the said city will make every effort to provide the necessary facilities for the sale of electrical energy at the premises of the undersigned purchaser, prior to Dec. 31, 1938.

2. It is further agreed that the rates to be charged by the city and paid by the undersigned shall be the published municipal resale rates proposed by the Tennessee Valley Authority for residential consumers.

3. It is further agreed that in consideration of the foregoing, the City of Scottsboro will, when petitioned by a majority of the consumers of electrical energy, place the management and operation

[illegible] In Consideration of the [illegible], [illegible]
paid by J. W. Woodall, Mayor of the City of Scottsboro, Alabama, on behalf of the said city, the receipt whereof is hereby acknowledged, and in further consideration of the opportunity to secure lower electric rates for myself, and of the benefits that will accrue to me as a citizen of said city by reason of the net revenue which will be earned by the city from the municipal operation of its own electrical distribution system, it is hereby agreed as follows:

1. That when and if the City of Scottsboro, Alabama, has electrical energy of the required voltage for sale at the premises of the undersigned, and the city stands ready, and will sell to the undersigned such electrical current, so long as he is a purchaser of electrical current or energy in the territory served by the city's municipal system, the undersigned will purchase his entire requirements of electrical energy from the city, for a period of ten (10) years, beginning as soon as the service is available, but not later than December 31, 1938, it being understood that the said city will make every effort to provide the necessary facilities for the sale of electrical energy at the premises of the undersigned purchaser, prior to Dec. 31, 1938.

2. It is further agreed that the rates to be charged by the city and paid by the undersigned shall be the published municipal resale rates proposed by the Tennessee Valley Authority for residential consumers.

3. It is further agreed that in consideration of the foregoing, the City of Scottsboro will, when petitioned by a majority of the consumers of electrical energy, place the management and operation of its power distribution system under the direct control and supervision of a non political power commission.

COMPLAINANTS' EXHIBIT NO. 578

TENNESSEE VALLEY AUTHORITY

Knoxville, Tennessee

February 22, 1936

BOARD OF DIRECTORS
ARTHUR E. MORGAN, CHAIRMAN
HARCOURT A. MORGAN
DAVID E. LILIENTHAL

Mr. Ray McCullough
Editor Sand Mountain Banner
Guntersville, Alabama

My dear Mr. McCullough:

Judge Grubb's injunction, as you will recall, halted the TVA's cooperation with rural electrification activities in Alabama. That injunction will soon be dissolved as a result of the recent decision of the Supreme Court of the United States, upholding the constitutionality of TVA. This means that plans for making TVA electricity available in your area can proceed.

The Authority, as you know, is constructing a high-voltage transmission line from Wheeler Dam to the site near Guntersville. Engineering field surveys have been completed on this line and it is now entering the construction stage. Completion of this line by the end of the summer will supply an adequate source of power from Wilson Dam for rural electrification in this area.

During the past few months, many requests for cooperation in farm electrification programs have come to our field representatives. I can assure you that we are now ready to work with you in your efforts to bring electricity to the farms of your section of Alabama.

I should be glad to hear from you regarding any problems or questions which you and your neighbors have in this connection.

Mr. Ray McCullough
Editor Sand Mountain Banner
Guntersville, Alabama

My dear Mr. McCullough:

Judge Grubb's injunction, as you will recall, halted the TVA's cooperation with rural electrification activities in Alabama. That injunction will soon be dissolved as a result of the recent decision of the Supreme Court of the United States, upholding the constitutionality of TVA. This means that plans for making TVA electricity available in your area can proceed.

The Authority, as you know, is constructing a high-voltage transmission line from Wheeler Dam to the site near Guntersville. Engineering field surveys have been completed on this line and it is now entering the construction stage. Completion of this line by the end of the summer will supply an adequate source of power from Wilson Dam for rural electrification in this area.

During the past few months, many requests for cooperation in farm electrification programs have come to our field representatives. I can assure you that we are now ready to work with you in your efforts to bring electricity to the farms of your section of Alabama.

I should be glad to hear from you regarding any problems or questions which you and your neighbors have in this connection.

Sincerely yours,

David E. Lilienthal

(No exhibit bearing this number.)

[fol. 2743] COMPLAINANTS' EXHIBIT No. 380

Agreement Between Tennessee Valley Authority and Promoters of the North Georgia Electric Membership Corporation

This Agreement, entered into this 6th day of April, 1936, between D. S. Middleton, R. H. Bandy, R. P. Brison, T. W. Colvard, J. C. Johnston, R. C. Fuller, E. P. Hall and R. C. Pittman, being all of the promoters of the North Georgia Electric Membership Corporation (hereinafter called "Promoters"), and the Tennessee Valley Authority, a corporation created by the Tennessee Valley Authority Act of 1933 (hereinafter called "Authority"):

Witnesseth:

Whereas, Authority is empowered by Section 10 of the Tennessee Valley Authority Act to promote and encourage the fullest possible use of electric light and power on farms and in small villages by constructing rural transmission lines thereto; and

Whereas, Promoters, representing numerous farmers and farm organizations in Catoosa, Chattooga, Whitfield, Murray, Walker, Gordon and Dade Counties, State of Georgia, have requested Authority to construct rural trans- [fol. 2744] mission and distribution lines in said Counties and to sell the same to a corporation to be organized by Promoters for purchasing and operating such lines; and

Whereas, Promoters and Authority desire to set forth and define, during the period preceding the completion of the organization of said Corporation, the terms and conditions upon which Authority shall build such lines:

Now, Therefore, for and in consideration of the mutual covenants contained herein, the parties hereto mutually agree as follows:

1. Authority agrees to construct in the above listed Counties for the Corporation to be organized by Promoters such rural transmission and distribution lines as Authority may deem feasible from the standpoint of both Authority and Corporation.

2. Promoters agree to take the necessary steps to procure and complete as early as possible the incorporation under the Laws of the State of Georgia of a Corporation to be known as the North Georgia Electric Membership Corporation, the purpose of which shall be the acquisition and operation of electric transmission and distribution facilities for supplying electric light and power primarily to its own members at the lowest possible cost consistent with sound economy and good business practice, and without profit. Promoters shall be the incorporators of such Corporation and the Directors thereof for the first year after its incorporation or until their successors are elected.

[fol. 2745] 3. Promoters agree that when the organization of such Corporation is complete, Promoters will—

(a) Assign to the Corporation all their rights and obligations under this contract, and, as incorporators, members and directors of the Corporation, accept such assignment on behalf of the Corporation:

(b) Execute, as Incorporators, members and directors of the Corporation, a contract between the Corporation and Authority under which contract the Corporation agrees to accept a transfer from Authority of such rural transmission and distribution lines as Authority shall have constructed or may construct for the Corporation, and agrees to reimburse Authority for the cost to Authority of constructing such lines, including overheads, Corporation to pay such obligation to Authority out of the revenues accruing to Corporation from the operation of such facilities;

(c) Execute, as incorporators, members and directors of the Corporation, a standard power contract with Authority, under which the Corporation agrees to purchase power from Authority at wholesale and distribute the same to its members.

4. Promoters agree to secure at their own expense the easements necessary for the construction of the lines which Authority elects to build for the Corporation hereunder. [fol. 2746] Such easements shall be secured in form acceptable to Authority, shall run to and be the property of Promoters and assigns (or Corporation and assigns, if secured

COMPLAINANTS' EXHIBIT No. 380

after the Corporation is organized), and shall be assigned by Promoters to Corporation without charge as soon as Corporation is organized. Provided, however, that in Catoosa County easements shall be secured by Promoters in the name of Authority and assigns, and shall be assigned by Authority to the Corporation, without charge, at the time the lines are transferred to Corporation.

5. Promoters agree to procure, in the name of Promoters of Corporation (except in Catoosa County, where franchises shall be secured in the name of Authority,) all the franchises and consents from the governing bodies of counties and the governing bodies of incorporated towns which may be necessary for the construction and operation by Authority or Corporation of the rural lines herein provided for. If possible, these franchises and consents shall be secured in such form as will permit their assignment by Promoters to Corporation without the necessity for approval of such assignment by said Courts and governing bodies.

[fol. 2747] In Witness Whereof, the parties hereto have set their hands the day and year first above written.

Tennessee Valley Authority, by Arthur E. Morgan, Chairman, Board of Directors.

Attest: Charles E. Hoffman, Assistant Secretary.

(Signed) R. P. Brison, E. P. Hall, Jr., D. S. Middleton, T. W. Colvard, Jr., R. H. Bandy, J. C. Johnston, R. C. Fuller, R. C. Pittman, Promoters of the North Georgia Electric Membership Corporation.

Identified as form of agreement submitted to the meeting of the Board of Directors and of the Stockholders of North Georgia Electric Membership Corporation held at Bank of Dalton Bldg., Dalton, Georgia, on June 15, 1936.

Assignment Contract between North Georgia Electric Membership Corporation and Promoters of North Georgia Electric Membership Corporation

Whereas, D. S. Middleton, R. H. Bandy, R. P. Brison, T. W. Colvard, J. C. Johnston, R. C. Fuller, E. P. Hall, and R. C. Pittman, Promoters of the North Georgia Electric Membership Corporation, executed an agreement with the Tennessee Valley Authority on April 6, 1936, whereby Authority agreed to construct certain rural electric lines for the North Georgia Electric Membership Corporation, and to sell and convey such lines to said Corporation when the organization of the Corporation should have been perfected and the rural electric lines completed, and

Whereas, Promoters agreed that as incorporators and directors of said Corporation they would accept the conveyance of such lines on behalf of the Corporation, and agree on behalf of the Corporation to pay Authority therefor the actual cost to Authority of constructing the same, and

Whereas, said contract of April 6, 1936, contained various other agreements and provided that the rights and obliga-[fol. 2750] tions of the Promoters thereunder should be assigned to and accepted by Corporation when the organization of the Corporation should have been perfected, and

Whereas, the North Georgia Electric Membership Corporation has been duly incorporated and organized under the laws of the State of Georgia and the parties hereto desire to effect the assignment provided for in said contract of April 6, 1936:

Now, Therefore, in consideration of the mutual covenants contained herein, the parties hereto do mutually agree as follows:

1. D. S. Middleton, R. H. Bandy, R. P. Brison, T. W. Colvard, J. C. Johnston, R. C. Fuller, E. P. Hall, and R. C.

COMPLAINANTS' EXHIBIT No. 383

Pittman, Promoters of the North Georgia Electric Membership Corporation, do hereby assign, transfer and release all their rights and obligations under that contract entitled "Agreement between Tennessee Valley Authority and Promoters of the North Georgia Electric Membership Corporation", executed on April 6, 1936, to the North Georgia Electric Membership Corporation.

2. The North Georgia Electric Membership Corporation hereby accepts the assignment and transfer of all the rights and privileges contained in said contract of April 6, 1936, and assumes and undertakes to fully discharge all the obligations incurred by the Promoters of the Corporation in said contract.

[fol. 2751] In Witness Whereof, the parties hereto set their hands this 16 day of June, 1936.

North Georgia Electric Membership Corporation, by R. H. Bandy, President.

Attest: J. C. Johnston, Secretary.

By-Laws of North Georgia Electric Membership Corporation

Article 1

Certificate of Incorporation

Section 1. The name, duration, location of principal office, place of business and purposes of the Corporation shall be as set forth in the Certificate of Incorporation.

Article II

Capital Stock

Section 1. The Board of Directors of the Corporation (hereinafter called "Board") shall have the power to issue or authorize the issuance of the common stock of the Corporation in an amount not to exceed Forty Thousand Dollars ($40,000.00), consisting of shares with a par value of Ten Dollars ($10.00) per share.

Section 2. The Secretary of the Corporation shall keep a book showing the number of shares of stock which have

been issued by the Corporation, the purchasers thereof, and any assignments, repurchases or cancellations made thereof.

Section 3. Shares of stock may be issued upon the pay-
[fol. 2755] ment of Ten Dollars ($10.00) in cash for each share, or upon the payment of Five Dollars ($5.00) in cash for each share, together with five (5) promissory notes for One Dollar ($1.00) each payable on the first day of each of the five (5) months succeeding the day on which the share was issued.

Section 4. After July 30, 1936, no person other than the Corporation itself shall be permitted to purchase, own, or hold more than five per cent (5%) in value of the shares of stock of the Corporation, outstanding at any one time. Any shares of stock held by any person in excess of five per cent (5%) shall be canceled by the Board unless those shares of stock in excess of five per cent (5%) shall be properly disposed of within ten (10) days after notice is given by the Board.

Section 5. No person shall be permitted to purchase, receive or hold a share of stock in the Corporation unless he has signed the Corporation's application for membership, agreeing to abide by the Charter and By-Laws of the Corporation, and agreeing to take service from the Corporation at premises owned or occupied by him.

Section 6. In order to receive service from the Corporation, it shall be necessary to purchase a share of stock of the Corporation. One share of stock must be purchased and held in connection with each separate or non-contiguous property for which service is taken, and for each different
[fol. 2756] class of service desired. However, commercial and residential service may be secured upon one share of stock if the commercial activity is carried on in the residence of the owner.

Section 7. The shareholders of the Corporation shall be the members thereof, as that term is used and intended hereinafter.

COMPLAINANTS' EXHIBIT No. 387

Article III

Rights and Obligations of Members

Section 1. Every member of the Corporation taking service therefrom shall have one vote at the general or special meetings of the members, but no person shall have more than one vote at such meetings regardless of the number of shares of stock owned by him.

Section 2. If it is called to the attention of the Corporation that there are defects in the wiring of the premises of an applicant for or user of power the Board may refuse to render service or discontinue the same until the owner of the premises presents a certificate of a reputable electrician to the effect that the wiring of his premises is safe and satisfactory. However, neither failure to inspect, nor the requirement or waiver of inspection by an independent electrician, shall subject the Corporation to liability to any member or other person for any damages or injuries sus- [fol. 2757] tained by reason of defects actually existing in the wiring of such premises.

Section 3. Before any member shall use power for any purposes other than those stated in his application for membership, or supply any other persons or premises with power, he shall first secure the approval of the Superintendent of the Corporation.

Section 4. If any member shall move his residence or place of business from one place to another within the service area of the Corporation, he shall be entitled to receive service at the new residence or place of business if (a) he notifies the Board of his change of location, and (b) the Board considers it feasible from the standpoint of the Corporation to serve the new location. The Board, however, may impose a reasonable connection charge.

Section 5. When any member shall move his residence or place of business from the territory served by the Corporation, the Corporation shall not be obligated to repurchase any share or shares of stock held by him, but the Board may repurchase such share or shares of stock if it considers such to be warranted by the financial condition of the Corporation. Such shares shall be considered Treasury shares

and shall not be voted unless resold to a member. The Board may provide for the disposition of Treasury shares upon non-discriminatory terms.

Section 6. When any member shall dispose of any prem- [fol. 2758] ises within the service area of the Corporation for the service of which he has purchased and holds a share or shares of stock, or when any member of the Corporation for other reasons desires to sell or transfer his share or shares of stock to any other person owning or occupying real property within the service area of the Corporation, the owner of such share or shares may assign the same according to the following procedure:

(a) the assignor and assignee shall fill out the assignment blank which the Secretary shall make available, showing the location of the premises which have been served in connection with the share of stock, the character and approximate amount of service which has been taken, the location of the premises for which the assignee desires service, and the type of service and approximate amount thereof which is desired: (b) the assignor and assignee shall make satisfactory arrangements with the Board for the payment to the Corporation of any obligations of the assignor to the Corporation, and for the making of any repairs or replacements which are required on the meter boxes or other facilities owned by the Corporation and used in service to the premises in question; (c) the sum of fifty cents (50¢) shall be paid to the Treasurer of the Corporation to cover the expenses of each assignment; (d) the Board shall determine whether or not it is feasible for the Corporation to extend service to the proposed assignee. Upon the assignment of [fol. 2759] any share of stock the assignor shall endorse such certificate on the back of the same and the assignment shall be recorded by the Secretary on the books of the Corporation.

Section 7. When the payment for a share or shares of stock does not in the judgment of the Board constitute sufficient security for the payment of the bills of the holder thereof, the Board shall require such member to post a deposit with the Corporation in an amount sufficient to secure such payment.

COMPLAINANTS' EXHIBIT No. 387

Section 8. Members of the Corporation shall without charge to the Corporation grant easements over rural land owned by them for the construction and maintenance of the transmission and distribution lines of the Corporation, and the Board may require any applicant for a share of stock in the Corporation to repay to the Corporation any sums previously secured from the Corporation for the granting of such easements.

Section 9. If any member shall neglect or refuse to discharge any obligation to the Corporation arising from the purchase of stock, electricity, equipment, accessories, or otherwise, or shall violate any other provision of the Charter, By-Laws, or Rules and Regulations of the Corporation, the Secretary shall send a written notice to his address as given on the books of the Corporation, demanding that such obligation be met or such violation be ceased or re-
[fol. 2760] paired. If such demand is not complied with within ten (10) days after such notice is mailed, the Board shall have power to discontinue service to such member, disconnect his service extension from the lines of the Corporation, and/or expel him from membership and cancel any share or shares of stock held by him. In such event the Corporation shall retain any payments made by such member on his share or shares of stock as liquidated damages for the breach of his obligations to the Corporation.

Section 11. The Board shall have power to reinstate any member who has been expelled from the Corporation for non-payment of his obligations to the Corporation or violation of its Charter, By-laws, or Rules and Regulations, upon the payment of his obligations to the Corporation plus interest thereon at not to exceed six per cent (6%) per annum, or upon the cessation of his violations of such Charter, By-Laws or Rules and Regulations.

Article IV

Disposition of Revenues

Section 1. The purpose of the Corporation shall be to supply its members with electricity and incidental services and equipment at the lowest cost consistent with the sound management of the Corporation's business and without

profit. No dividends shall be paid upon any share of stock [fol. 2761] in the Corporation, and no earnings of the Corporation shall be distributed to its members except upon dissolution of the Corporation.

Section 2. The gross receipts of the Corporation shall be devoted to the following purposes in the order named: (a) operating expenses and payment of interest and principal currently due upon obligations of the Corporation; (b) the setting up of such reserves for depreciation, new construction, and contingencies as may be reasonably prescribed by the Board; (c) the anticipation of the obligations of the Corporation not then due; (d) the reduction and elimination of surcharges and amortization fees; and (e) the reduction of rates.

Article V

Meetings of Members

Section 1. The annual meeting of the members of the Corporation shall be held on the first Tuesday in May of each year for the purpose of electing a Board of Directors and for general corporate action. Such meetings shall be held in the City of Dalton, in Whitfield County, Georgia, at such place as may be designated by the Board.

Section 2. Special meetings of the members may be called by the order of the President of the Corporation and shall be called whenever forty per cent (40%) of the directors so request in writing, but the business transacted at such spe- [fol. 2762] cial meeting shall be confined to the general objects set forth in the call.

Section 3. Notice of the time and place of each annual or special meeting of members (unless such notice shall be waived in writing) shall be mailed to each member at least three (3) days before the date set for such meeting, addressed to him at his place of residence or business as that appears on the books of the Corporation.

Section 4. At every meeting of the members each member present shall be entitled to only one vote, regardless of the number of shares of stock held. Delinquent and inactive members shall not be entitled to vote at any corporate

meeting. Each member shall vote in person. Proxies will not be recognized. A duly authorized officer or any firm, corporation, partnership, association, municipal corporation, political body or subdivision may, upon satisfactory proof of his authority, vote the membership of such organization or subdivision.

Section 5. Five per cent (5%) of the members shall constitute a quorum for the transaction of business at membership meetings. If less than five per cent (5%) of the members are present at a meeting, it may be adjourned by those present to a future date, provided that notice of such adjournment be mailed by the Secretary to each member [fol. 2763] at least three (3) days before the date to which the meeting is adjourned, addressed to his place of business or residence as the same appears on the books of the Corporation.

Article VI

Board of Directors

Section 1. The general management of the affairs of the Corporation shall be vested in a Board of Directors (hereinafter called Board), each of whom must be a member of the Corporation, taking service therefrom.

Section 2. During the first year of the Corporation's existence the Board shall be composed of one director from each of the following counties of the State of Georgia: Catoosa, Dade, Walker, Chattooga, Gordon, Murray Whitfield and Floyd. Thereafter the Board shall be composed of one director from each county in which at least two hundred (200) members of the Corporation reside.

Section 3. The members of the Corporation shall elect the directors at the regular annual meeting of the members, beginning with the annual meeting held on the first Tuesday of May, 1937. The directors shall have terms of one year and shall hold office until their successors are elected. Voting shall be by secret ballot on forms furnished by the Secretary of the Corporation. In the event of a tie between any nominees, the Board of the preceding year shall cast the deciding vote.

COMPLAINANTS' EXHIBIT No. 387

[fol. 2764] Section 4. Within seven (7) days after the annual meeting of the members of the Corporation, the new Board shall hold its annual meeting at the offices of the Corporation for the purpose of electing officers of the Corporation, adopting by-laws and transacting such other business as may be advisable.

Section 5. The Board shall hold regular meetings on the first Tuesday of each month.

Section 6. Special meetings of the Board may be called at the office of the Corporation or at a place designated by the Board or by the President and set forth in the notice of such meeting. Special meetings may be called at any time by the President of the Corporation, and shall be called whenever forty per cent (40%) of the directors file a written notice with the President, requesting such meeting.

Section 7. Written notice of the time, place, and general objects of any annual or special meeting of the Board shall be mailed to the address of each director at least twenty-four (24) hours before the time set for such meeting, but such notice for any particular meeting may be waived by the directors.

Section 8. Fifty per cent (50%) of the members of the Board shall constitute a quorum. Business shall be transacted at any meeting by a majority vote of those present.

Section 9. The Board shall have the general management [fol. 2765] and control of all the property, business, and affairs of the Corporation, including, but without limitation, the power to adopt, rescind, and amend by-laws; define and limit the powers and duties of all commitees, officers, agents, and employees of the Corporation not otherwise provided for by these by-laws; employ and dismiss the officers and employees of the Corporation and fix their salaries and wages, and require such bonds as may be deemed proper. The Board shall fix the price at which electric power shall be sold to members of the Corporation, or may contract in the name and on behalf of the Corporation with respect to such rates. The Board shall fix the price at which any equipment or material offered for sale by the Corporation shall be sold.

Section 10. The Board shall have power to sell or otherwise dispose of any of the property of the Corporation provided such property is, in the judgment of the Board, no longer necessary or needed in operating and maintaining the Corporation's system, and does not in any one year exceed ten per cent (10%) in value of all the property of the Corporation. The limitations, imposed by this Section shall not be construed to apply to the sale of merchandise or power.

In case the Corporation disposes of facilities which are necessary for the service of any of the members of the Corporation, such members shall be notified of such disposition [fol. 2766] two (2) months in advance thereof and shall be entitled to have their shares of stock repurchased by the Corporation at the price at which it was issued.

Section 11. The Board shall file a complete report with the members at the annual meeting of the members covering the business of the Corporation during their term of office, and including a list of the employees of the Corporation, their salaries and wages, and a statement of the financial condition of the Corporation.

Section 12. Any member of the Board may be removed therefrom by a majority of the members present at any special meeting of the members of the Corporation called for that purpose. Vacancies in the Board caused by resignation, removal, or otherwise shall be filled by the Board at its next meeting after such vacancy occurs. The new director shall be a resident of the county which the preceding director represented and shall be appointed for only the unexpired term of his predecessor.

Section 13. The Board shall keep a permanent record of its proceedings.

Article VII

Officers

Section 1. The officers of the Corporation shall be a [fol. 2767] president, a vice-president, a secretary and treasurer, or a secretary and a treasurer. The Board shall determine whether or not the offices of secretary and treas-

urer shall be combined. The Board may create such other offices of the Corporation as it deems advisable and fix the qualifications thereof.

Section 2. The officers of the Corporation shall, in so far as practicable, be elected at the annual meeting of the Board.

Section 3. The President and the Vice-President of the Corporation must be members of the Corporation, taking service therefrom.

Section 4. The President shall sign all certificates of stock, countersign all checks, and sign or countersign all bonds, notes, or other evidences of indebtedness issued by the Corporation. He shall, on behalf of the Corporation, sign all contracts. However, the Board may authorize some other officer to sign evidences of indebtedness and contracts on behalf of the Corporation where the amount involved is Three Hundred Dollars ($300.00) or less.

Section 5. In case of the absence or disability of the President, the Vice-President shall perform his duties. The Vice-President shall also perform such additional duties as may be prescribed by the Board.

Section 6. The Secretary shall be ex officio secretary [fol. 2768] of all members' meetings, meetings of the Board, and shall keep all records of the Corporation and be custodian of the same. He shall give all notices of meetings and perform such duties as may be assigned to him by the Board. In case of his absence or disability the Board may appoint a secretary pro tem to perform his duties. The Secretary shall have charge of the books of the Corporation and the corporate seal. He shall, in the course of the business of the Corporation, affix said seal to all b[illegible]s and certificates of stock issued; and when authorized by the Board, shall also affix said seal to contracts and other instruments. The Secretary shall also perform such other duties as are commonly exercised by secretaries of corporations.

Section 7. The Treasurer shall have the custody of all moneys belonging to the Corporation and shall keep the same deposited to the credit and in the name of the Corporation in such place or places as the Board may from time to time designate, and shall disburse the funds of the Cor-

poration under the direction of the Board. He shall keep accurate books of account, showing all receipts and disbursements of the Corporation, which shall at all times be open to the inspection of the Board. He shall sign or countersign all checks, drafts, orders for money, notes, and other evidences of indebtedness of the Corporation. He shall, whenever called upon, render to the Board a report in [fol. 2769] writing of the financial condition of the Corporation and perform such other duties and have such other powers as from time to time may be prescribed by the Board.

Section 8. The Board shall appoint a superintendent to have general oversight, care, and management of the property and business of the Corporation. The superintendent shall have the power to employ and dismiss all his assistants and technical workers, subject always to the direction and approval of the Board. The Board shall require a written report from the superintendent to the members at each annual meeting, showing the general business condition of the Corporation. Such report shall first be submitted to the Board for its approval.

Section 9. All personnel selected by the Board shall be chosen on a merit basis and shall conform to such personnel standards as the Board may prescribe.

Article VIII

Accounts

The accounts of the Corporation shall be kept in such form as the Board may prescribe.

Article IX

Seal

[fol. 2770] The Corporate Seal of the Corporation shall, subject to alteration by the Board of Directors, consist of a flat-faced circular die with the words "Seal" together with the name of the Corporation thereon.

Article X

Amendment of By-laws

The By-Laws of the Corporation may be amended by a two-thirds (2/3) vote of the members of the Board of

COMPLAINANTS' EXHIBIT No. 387

Directors present at a meeting and voting affirmatively thereon. Provided, however, that it shall be necessary that such proposed amendment be read at a regular or special meeting of the Board held at least three days (Sunday and holidays excluded) before the meeting at which the amendment is adopted.

JLF:WTM:ml.

[fol. 2771] COMPLAINANTS' EXHIBIT No. 388

Here are the Answers

1. What is the North Georgia Electric Membership Corporation? It is a corporation organized for the purpose of obtaining electric power from T. V. A. at wholesale and retailing it to stockholders without gain or profit.

2. Who furnishes the money to build the distribution system? The Rural Electrification Administration of Washington, D. C., furnishes the money at 3% interest over above one-fourth of a century and takes a mortgage on the lines to secure the loan.

3. What must a person do to get cheap electricity from the corporation? Buy one $10 share of stock, which may be resold by the holder if he no longer desires power. The $10. insures payment of the electric bill to the corporation the same as a "deposit".

4. Is there any contingent liability, assessment, or "catch" in it? Certainly not. All lawyers know that a stockholder in a corporation, other than a bank, can lose nothing more than the value of his stock.

5. Who will pay for that "Dead mule" that worries some people? The insurance company carrying liability insur-
[fol. 2772] ance on the "N. G. E. M. C."

6. What are the rates to be charged by the N. G. E. M. C.? The rates are to be the standard T. V. A. rates which cannot be increased under the contract with T. V. A. They are:

3	cents	per	kwh	for	first	50	kwh.
2	"	"	"	"	next	150	"
1	cent	"	"	"	"	200	"
4	"	"	"	"	"	1000	"

Minimum bill $1 per month for which 25 kwh is given. There is an amortization charge of 1 cent per kwh for the first 100 kwh, but none above first 100 kwh. This charge cannot exceed $1 and is to pay R. E. A. the money borrowed, and ends when the loan is repaid.

7. How do these rates compare with power company rates? As follows:

Monthly Kwh.	N.G.E.M.C. Cost	Rates Amor.Chg.	Net Bill	Power Co. Rates Net Bills	Saving
25	75	.25	1.00	1.63	38%
80	2.10	.80	2.90	3.98	27%
230	4.80	1.00	5.80	8.03	28%
480	6.83	1.00	7.82	11.78	31%
1,400	10.50	1.00	11.50	21.33	46%

(Over)

8. Can money be borrowed from Federal Housing Administration to finance wiring houses? Yes.

[fol. 2773] 9. May customers purchase electric appliances on installment plan and pay with light bill? Yes.

10. Will TVA furnish trained men and women for advice and demonstration work in your home? Yes. Gladly.

11. What will electricity cost the N.G.E.M.C.? From 4 mills per kwh. down to 2 mills per kwh., plus a "demand charge" that varies.

12. What becomes of the money earned above wholesale rates? It pays for overhead expenses, maintaining and servicing lines, collecting bills and other necessary expenses. Surplus may be applied to R. E. A. debt.

13. Who operates the corporation and utility? Officers and board of directors that you elect to serve without pay, and a general manager with expert technical knowledge on salary.

14. Is it necessary to have rich, high-salaried executives to operate utilities? No. The cities of Dalton, Cartersville, LaFayette and others have successfully bought wholesale and sold at retail at a profit for years, and ordinary citizens elect the officials.

COMPLAINANTS' EXHIBIT No. 388

15. Do you have to "sign up for 20 years" in order to get service from the corporation? No. You do not have to sign up any length of time. You can reject service at any time without liability except for your unpaid bill.

[fol. 2774] 16. Do you have to maintain any part of the line? Certainly not.

17. After R. E. A. debt is paid, will rates be reduced? Yes, amortization charge will be discounted and rates reduced.

18. Where may one get reliable information about TVA power and North Georgia Electric Membership Corporation matters? From officers of the Company and from the Company at Dalton.

R. H. Bandy, Pres. N. G. E. M. C. / J. C. Johnston, Sec.-Treas., N. G. E. M. C.

[fol. 2775] COMPLAINANTS' EXHIBIT No. 389

March 31, 1937.

Mr. T. R. Hunnicutt, Division Manager, TVA, Chattanooga, Tenn.

DEAR MR. HUNNICUTT:

The North Georgia Electric Membership Corporation has had many requests for information leading to negotiations for furnishing power to industrial customers throughout northwest Georgia. We do not have the facilities to serve all of the industrial customers who have indicated that they are now or will soon desire our service.

Some of the prospective customers have based their approach thus far upon a desire to get comparative cost estimates between our facilities and the facilities now serving them. Due to our organization being new and still in its formative stage we are not in position to discuss with clarity some of the problems that some of the prospective customers present. For that reason we desire that you contact them at our request and discuss with them the possibility of service through the North Georgia Electric Membership Corporation to the particular industries.

COMPLAINANTS' EXHIBIT No. 389

We have had an inquiry from the Jewel textile interest of Chickamauga who, we are informed, are about to take [fol. 2776] over the old consolidated textile properties in LaFayette. If they do take over the LaFayette properties they will at that point be a new and unserved customer.

We would also like for you to contact the following prospective customers for the purposes above stated:

(1) The Water, Light & Sinking Fund Commission of the City of Dalton for power to operate the city's pumping station.

(2) The Real Silk Hosiery Mills of Indianapolis, Ind., who are operating a large hosiery mill in the City of Dalton.

(3) The American Thread Mill with a plant in Dalton.

(4) The Echota Mills owned by northern capital but under the supervision and management of Mr. H. F. Jones of Calhoun.

(5) The Yates Bleachery at Flintstone, Georgia. (The Flintstone mill is an isolated plant now manufacturing its own energy.)

(6) The Trion Cotton Mills, Trion, Georgia.

Some representative of the North Georgia Electric Membership Corporation will be glad to accompany any of your representatives to any discussions with these various prospective customers.

Yours very truly, R. Carter Pittman, Attorney for North Georgia Electric Membership Corporation.

RCP:H.

Copies to: Mr. H. W. Derry TVA, Chattanooga, Tenn.; North Georgia Elec. Membership Corp., Dalton, Georgia.

[fol. 2777] COMPLAINANTS' EXHIBIT No. 390 (Excluded)

Cullman County Cooperative Association and Tennessee Valley Authority Meeting, Held in Cullman, County Seat of Cullman County, Alabama, Wednesday Night, May 6, 1936

This was a meeting of the recently organized Cullman County Cooperative Association, which has for its purpose the rural electrification of Cullman County. The meeting was presided over by Mr. Clement and was held in the Court House and was attended by approximately 350 people. Mr. Clement's opening address contained the following remarks:

Mr. Clement: This is a rural electrification company. We want it understood from the outset that we are not antagonistic towards any interest whatever. We ask that all of our friends that wish come in with us—we will be glad to have you—we do not want to antagonize any interest, anybody at all. We hope to work in unity throughout the whole county. At this time, we are going to present Mr. Beauchamp, an engineer from Wilson Dam. He is a home man. He will be with us. He can tell you the intricate parts—he will bring a message we can all get.

Mr. Beauchamp: Ladies and gentlemen, it is with great regret that Mr. Lilienthal could not be here this evening. Mr. Lilienthal had accepted the invitation but at the last minute he was called to Washington by our President for a conference. He is there now, but before leaving, he expressed regret he could not be with you this evening.

This is the second time I have addressed the majority of [fol. 2778] you folks. About the middle of last December, I addressed a meeting in this room of the Farm Bureau organization. TVA in carrying out its rural electrification program has been constantly impeded and restricted by court orders and injunctions brought about by its enemies, but that has now all been settled and we can go ahead. It is only in the last few weeks that we have eliminated these legal obstructio' s and we can now go ahead with our rural electrification program—a program that will help the farmers of Alabama and the Tennessee Valley. Within the last few days, the contract has been made with Alabama Power Company for certain transmission lines. This contract has been negotiated over two years and has just been consum-

mated in the last few days. We now own transmission lines in Cullman County. The nearest line at this time is at Fairview, about eight miles northeast of Cullman, so we are really making progress now after long delay. Those who follow me will explain in detail some of the plan and some of the further details of the electrification program. I hope it will be my privilege to carry my plans through to completion and be present from time to time to assist you in working out the various details and problems that may arise, and I hope to be present when power is made available to farmers all over Cullman County. It will require an immense amount of work on our part and your part too. The proposition I refer to advances our program one step nearer to our plan to electrify farms in this area. The TVA program is one of cooperation—we do not seek to impose it on anybody unless they want it. It is your plan—the TVA [fol. 2779] is a part of the U. S. Government. Its aim is to be helpful. That is our only purpose. The Cullman County project, if it is carried out, will involve several hundred miles of rural lines. I hope that it will be possible to build those lines, for we want to extend lines any place in the county where it will be economically feasible. Those that follow me will elaborate on the details of the plan.

Mr. Clement: As Mr. Beauchamp says, he is a home man, and his purpose is to work with us. We will now hear from Mr. Nichol from the Electrical Department at Chattanooga. He will discuss other features in connection with what Mr. Beauchamp has told you.

Mr. Nichol: I know that it is a disappointment to you not to hear Mr. Lilienthal and I can tell you for him that is a disappointment to him not to be here. You can console yourselves with this—when he found that he had to go to Washington—he wasn't planning on just coming here to make a speech—he said to me: "I want you to go down to Cullman, find out what they want and find out what they want us to do to help them." I'm glad he said that for that is the way I feel too. Rural electrification has been talked about but nothing has been done about it. In North Alabama people have that feeling more than anyone else, but the lines aren't there. I think the most helpful thing I can tell you is what has been going on elsewhere where those restrictions do not prevail. While perhaps it is un-

fortunate that you have had this long delay, perhaps you can profit by the experience of those in Georgia, Tennessee, [fol. 2780] and Mississippi. We can begin to catch up a little bit now that we have the benefit of the experience in other places. There is a very real relationship between the town and country. It is not an easy problem—if it had been, it would have been solved long ago. There is an answer. Perhaps the best way would be to tell you about some of the places where current has been brought out to the farmers. Start first with Dayton, Tennessee, where they had the famous monkey trial. We are bringing electricity to every farmer in that section. The town owned its own municipal plant. It wasn't very long before other people came in and said we want some of that power too. The town knew that its merchants would profit, that their plants would handle products of the farmers, so they worked up a project serving 250 customers at the outset. They submitted their program and obtained funds from the R.E.A. Now move over into Middle Tennessee—to the City of Pulaski. They also have municipal power. Again, the farmers came in, so they turned to TVA, and the TVA constructed lines for the city. In West Tennessee, the town of Somerville with a municipal plant signed up for TVA power. In Mississippi, we were able to work out an agreement with the private power company for serving farmers and city. The TVA constructed additional lines. Electric Cooperative Associations were formed and additional funds borrowed for the extension of rural lines. There is still another way—in areas where it is still possible to work out rural distribution systems operated independently of the municipality. They are doing this in Lincoln County, Ten- [fol. 2781] nessee. Lines are now under construction in Bedford, Tennessee. Since the power company was either unable or unwilling to serve rural area and since a number of the farmers were in real need of power, we were able to work out projects there. Funds can be obtained from the TVA or the Rural Electrification Authority. I submit that your County and your Cooperative should consider local circumstances and decide which pattern best fits this area. The next step is to find out how many lines you are justified in building. This is a very real and important part of it. As you know, TVA was set up by Congress to help liquidate

the cost of dams on a business basis. It means two things—that many rural projects must be self-supporting and self-liquidating. It will pay operating expense but must pay off its debt. Before we ask for rural lines for Cullman County, or anywhere else, we must be able to say that so many people in Cullman on so many miles of line want electric power and that revenue from these people will amount to such and such. It must be enough to pay salaries and interest on the debt. It is pretty hard to know where to begin. We know from previous experience that one of the chief hindrances has been knowledge as to how to proceed. We have a very simple plan—it indicates where to begin—it is called the Neighborhood Plan, whereby country people by themselves and for themselves can survey their own requirements at a minimum amount of time and expense—they can find out just what their requirements are. With those facts before us [fol. 2782] we can put them altogether and see what we can do. This plan is summarized in the yellow sheets given you. I understand that your committee is ready to act now. I believe the stage is set—we can begin to go places. You have your Cooperative—it has a charter—your officers have been elected. The second step is the source of supply. We have completed the transaction whereby TVA has lines leading right to the border of your county. Third, what you need is money. Mr. L. A. Sears will explain to you more about this phase. The yellow sheet tells in general what the plan is. You have an Association. Through the Association it will be possible to appoint a Canvassing Committee. That committee can be as large or as small as you think best. We think it should be large, particularly at this time of the year, so you can break it down into small groups and not make it a burden on any one group. I understand your Association is making plans to select such a committee. Mr. Beauchamp is planning to meet with that committee and stay with that committee until the survey is completed. This committee should be ready in about a week—probably next Thursday or Friday. You can be thinking and talking about this amongst yourselves so you can answer their questions easily. What they want to know is in general how much electricity you intend to use, and we feel that is the proper way to put it. We feel that it is not worth all the time and money to get electricity on the farm unless the

people are going to use it. Electricity doesn't begin to become a profitable investment on the farm until you put it to [fol. 2783] work. In this county, I understand there are many interested in the poultry business. Electricity can make this business more profitable. So rather than talk of electricity in terms of dollars, we talk of it in kilowatt hours. We are not asking you to guarantee a certain amount of money every month, but we want to ask you to give a gentleman's agreement that you on your part will install enough equipment—and we do not insist that you use it—we have enough confidence to know that you will use it. We simply want to be able to assure our board and REA that farmers of Cullman County want electricity enough to use it. To determine this, no one should put down more that you can afford to use. Your committee then brings this information back and turns it over to our checkers. We get all the information about what you will use and divide this by the number of miles covered. The general guide we follow is 662 kwh. per mile of line. This is based on previous experience, for we feel that if farmers will use that much it will justify our constructing the line. There will be a lot of questions. The best thing for you is to look through this yellow folder which covers most of these points you will probably ask. I see no reason why Cullman county should not lead Alabama in this Rural Electrification movement. All of us will be very much disappointed if out of this meeting and the meeting next week we can't work out something. I hope that the next time I come back it will be for a celebration. Six months ago there were twenty counties re- [fol. 2784] ceiving power. Right now, upon completion of programs, thirty-two counties will have power. Thank you very much.

Mr. Clement: We will now hear from Mr. Sears, representing the Rural Electrification Authority. He will bring us the plan by which this project may be financed.

Mr. Sears: You all have heard a great deal of TVA and in this area I know you are well acquainted with it. I doubt if you are as well acquainted with REA so I will give you a brief resume of it. It has been just nearly a year ago—May 11th—when this particular branch was organized for the purpose of bringing electric service to unserved rural areas all over the country. This was done because less

than 10% of the farms were receiving electric service. Recognizing again that the rural areas are the fundamental backbone of the national wealth and resources, it was felt that this was not a representative service. On May 11th last year, our organization, known as REA, was established. We were established for the purpose of making loans to cooperatives, not to individuals, for the purpose of building generating, distribution and transmission systems to bring electric energy into unserved rural areas. We were given a good sized allocation of funds. We are a temporary organization at the moment, although there has been a bill passed through Congress which will give us a ten-year organization at least. We have been rather slow in getting started, due primarily to the fact that as a lending agency there are many matters of policy which have to be settled. We have definitely determined that our whole policy is from the standpoint of the consumer. We are empowered to make loans to five different types of corpo- [fol. 2785] rate entities: cooperatives, municipalities, private utilities, public utilities, and state authorities. Of those five, the majority of loans have gone to cooperatives such as you have organized here in Cullman County. To those we have loaned several million dollars, and incidentally, we have no fear of any delinquency of any one of those loans. Second, we are interested primarily in rural electrification not merely from the standpoint of service—that is not what the term means—if rural electrification is going to mean anything, it must mean that they must have service at a reasonable cost and that is the fundamental basis of our organization. Towards that end, we are empowered to make loans to the full amount of the construction cost, such funds being at 3% interest and on a twenty-year repayment plan. We again require that those loans be made to corporate entities—we make no loans to individuals—there is no individual liability. In the construction of these lines, there are various types of securities. The Security which we are accepting in practically 100% of the cases are first mortgages on lines we finance. We have the utmost confidence in these lines. The second thing, we are not here to make any sales. As a matter of fact, we look on the whole matter of electrification in the sense that you are here to sell us. We are acting as the banker

from whom you are requesting a loan. The only thing we ask is that we have reasonable assurance that the use to which you are going to put this money and this electric service will liquidate that loan. We have attempted to [fol. 2786] make our methods as simple and direct as possible. In the first instance, after you have formed an organization, most of our dealings will be directly with your Board as a corporate entity according to your State laws. There is a certain amount of field work which Mr. Nichol has covered. After that has been prepared, it will be analyzed. We have established an office in this territory in order that we may work more directly with you. We will make that examination in this area and forward that information to Washington. In Washington, it is scanned by our legal staff and engineering department and approved for allocation of funds. Then the contract is entered into—it is a simple document—nothing complicated about it at all. At the same time, the security for the lines that are to be constructed will be arranged. We are ready then to get plans for construction. What we are attempting to do is to cut off as many days as possible from now on. You are particularly fortunate here in that one of your major difficulties is already established; that is, in the getting of electric service to your home there are two things involved—first, the source of supply, and second, distribution facilities to bring it to you. We are going on the theory that we would rather, if possible, take advantage of existing generating facilities. Your wholesale situation is established. You have wholesale energy available at a reasonable figure. We are in a position and anxious to be of service in furnishing funds for you to construct and put in [fol. 2787] service this distribution facility so that you may bring it to your door and have the use of it. TVA and REA are forming a liaison in order that we may both be of all possible assistance to you—in your organization and the preparation of the documents you may require and anything at all we may be of service to you. It is up to you people to come to us for service—we are not trying to serve you.

Mr. Clement: Introduced Dr. Edward Falk, Rate Engineer at Chattanooga.

COMPLAINANTS' EXHIBIT No. 390 (Excluded)

Dr. Falk: I have been wondering tonight what you think of TVA—what it is—what is the *R*VA idea, and I wonder sometimes myself. TVA is not something people are paid to work for. TVA employees aren't so smart and brilliant, but they are doing one thing that is of mutual good—they have been working across the table with you people here. We have the Mayor of Athens with us tonight. I worked at Wilson Dam in 1933, and Mr. Richardson kept coming over and wanting TVA power. We did not have a contract, but we sat down and worked one out. It wasn't very long until we worked this contract out and we both signed it and TVA power was in Athens in 1934. This was due equally to the spirit of the people in Athens and to the hard work of city officials and city leaders there. The same thing is happening all over the countryside. You can call TVA something that extends throughout all these states and is part of all these people. This meeting is gratifying. These people are in a sense part of the TVA—they are making TVA a better kind of proposition. I hope that goes [fol. 2788] on. I know you want to know something about rates—these are given on the yellow sheet you have:

3 cents for the first 50 kwh.
2 cents for the next 150 kwh.
1 cent for the next 200 kwh. used by a customer during the month.

On top of that there would be added 1¢ per kwh. for the first kwh. a month, this charge to be not less than 25¢ nor more than $1.00 a month. Suppose you are building a system for $100,000—the Association will owe $100,000. That does not mean that members of the Association will have any liability—it means that the Association will go ahead and collect 1¢ per kwh. until the REA is paid out. After that, the 1¢ comes off and you own the property. The members of the Association will own the property—there will not be any more interest or principal to pay on it. While they are paying such debt, they will get electricity for maybe $1.00 to $5.00 per month cheaper than almost anywhere else in the United States—that is a wonderful scheme and people are eating it up. TVA is not the only one that is doing the same thing—other utilities are doing the same thing. The consumption in Alabama is leading

the nation. Why is that? Because we have sat down with people and made these rates and it became clear that the only way people would completely electrify was when it would become cheap. It is not a money losing proposition—it is a money making proposition. When you say extend lines down the highway—some folks say that it is making [fol. 2789] electricity available, except for one thing, and that is the rate. It does some good to put lines down the highway but before the people can really use it in the house, the rate has to be right. TVA is a business-like proposition and in that sense right. We all hope that rate and that plan of service will be made available here for locally operated and locally owned County Power Association. Everything I say about TVA is all to the good. I want you to hear what Mr. Richardson will tell you about power service in Athens.

Mayor Richardson: Mr. Falk has taken a little undue advantage of me. I did not expect to be on the program. I am vitally interested in what you men are interested in. We in Limestone County are interested in rural electrification—we are not only interested—we are working to electrify Limestone County. We expect to handle this through the City. I know one of the perplexing questions you have here is financing. That is one of the most perplexing problems I had. It has gone far beyond our expectations. On the first of June, we will have operated on TVA power two years. Furthermore, I would like to say that the people have enjoyed this power. Last year, 1935, averaged about $55,000 worth of electrical appliances sold in that town. The people are enjoying cheap electricity—just what you people in Cullman County are going to do. I feel that you out in the country are entitled to these benefits just as we are in town, and we are going to have them up our way. The operation from the financial side of it has gone far beyond our expectation. I do not feel that this cooperative [fol. 2790] association should have any fear whatever to go into the financing of this rural line. I have no fear for Limestone County. We have taken in more money today from our electric light system than we did from our water and electric systems combined two years ago. We expect to go into this and hope to have it before the summer is

over. You had better hurry or we are going to beat you—we are going to light it up.

Mr. Clement: The meeting will not be turned over to the audience. Are there any questions?

Question. How many more users of electricity in Athens since you took on TVA power?

Mr. Richardson: 275. Practically every home in Athens has electricity. That number, 275, would apply to new users.

Question. What is the difference in receipts?

Mr. Richardson: Our receipts are more.

Question. What is the difference in ordinary bill of the home in Athens now and before you got TVA power?

Mr. Richardson: 45% lower.

Question. Are the electrical appliances sold at cost?

Mr. Nichol: The prices which are given in the yellow sheet are regular retail prices. The Associations usually work through electrical dealers. In some places, the cooperatives have joined together and got appliances at cost. They are normally sold at retail through established dealers. This is up to the Association to handle as they want to. The sale of appliances is handled independently of TVA. We [fol. 2791] do not sell appliances—these are to be handled by dealers or the association.

Mr. Clement: We want to discuss proceedings of the organization. These committees—the men who are to be selected to make these surveys—will be ready to go to work possibly next week.

Question. Take Table B on this yellow sheet—about how much does one have to have installed to use that?

Answer. Minimum bill is normally 30 kwh. This is enough to operate lights, radio, fan, flat iron, few more very small appliances. 30 kwh. would cost $1.20.

Question. Does the wiring and appliances have to be bought before construction is begun?

Answer. We want your agreement to do it—we appreciate that it is sometimes impossible to make all the investment at once. Therefore, in making this survey, and this is something the forms do provide for purposely, put down what you agree to take. Naturally, your house would have to be wired before you can take service. Then over and above that, indicate those you are prepared to buy now—the additional appliances you can put them down with the

statement that they will be bought within the next year. Then we can say, well, it will be so much, but we have definite assurance that by the end of twelve months it will be so much more.

Question. That is purely a gentlemen's agreement?

Answer. The agreement says that you will execute a valid contract. We will build the line if the survey warrants it. The REA has agreed to finance if you execute a contract for [fol. 2792] the equipment you have agreed to buy. If the agreements are fulfilled, the lines are constructed. At no point are you bound and at no point are we bound—you can retract or we can retract. You start and we start. The EFHA helps you buy appliances. The payment on appliances will be rendered on your bills. You may be able to get a cooperative payment plan. In other states the credit association plan has worked very nicely.

Question. Will you explain the number of subscribers per mile that is required for service?

Answer. The average is four per mile, but it does not have to be that. It may be more or less, but as a general rule, I would say four per mile. That is the beauty of the 662 business, for even if there are just two on a mile of line, they will put the line there if these two use enough power to justify it. As a general rule, to justify the association, you ought to have the minimum number of customers—say 400 or 500 customers on 100 miles of line. You should not be discouraged, for there are a lot of combinations. A line may go through a swamp where there are no customers, but at the end of that line there are four or five customers. Then again, frequently going down the road, the road will have lots of turns and take in a lot of mileage, but the line does not have to follow the road—our engineers can cut across country with a smaller amount of mileage. Mr. Beauchamp's men are going to help you out on this.

Question. You have refrigeration listed at 50 kwh. Speaking from experience, last month my consumption for every- [fol. 2793] thing was 54 kwh. Maybe mine was low.

Answer. We purposely set thers- figures high. We have not gotton into the summer season yet. Then we had rather set the consumption high and have you come under that than to set it too low and have you come back at us. I want to advertise one thing that will go a long way. A small

COMPLAINANTS' EXHIBIT No. 390 (Excluded)

refrigerator isn't big enough for all uses, and a big refrigerator will cost $250.00. If you want to spend $250.00, in the laboratory at the University of Tennessee they have designed a box that will hold six hogs and is large enough for any use, so I say if you want to spend $250.00 for a box, I would have one of those made to order.

Question. How expensive is the operation of a 15 h. p. motor on a grist mill or saw mill?

Answer. It will cost approximately 3¢ per h. p. hour operated at full capacity.

At this point, a discussion arose, when a customer, who said his bill last month, based on a consumption of 54 kwh., and including a water bill of $1.57, was $6.44, leaving $4.87 for the electric bill. He was told that a bill for 54 kwh. on the TVA rates would be $1.58, plus 54¢ surcharge. The customer was then told by Mr. Kramer, City Clerk of Cullman, that a bill for 54 kwh. should be $3.28. There was some discussion between the customer and Mr. Kramer about this.

TVA 211 DE. Serial No. —

Tennessee Valley Authority, Chattanooga, Tennessee.

GENTLEMEN:

I wish to take advantage of the new cooperative house wiring plan offered by the Tennessee Valley Authority. Under this plan the Tennessee Valley Authority will pay $15.00 towards the cost of house wiring for each electric range installed or electric hot water heater installed, or $30.00 in case two of these appliances are installed.

I wish to advise that I have purchased and will install — with the understanding that the TVA will pay $— to the wiring contractor which I have selected, after installment of equipment is made and thoroughly checked by representatives of the TVA to verify the installation and valid purchase of same, this sum of $— to be credited to my total bill for house wiring by the contractor, who is —— ——,

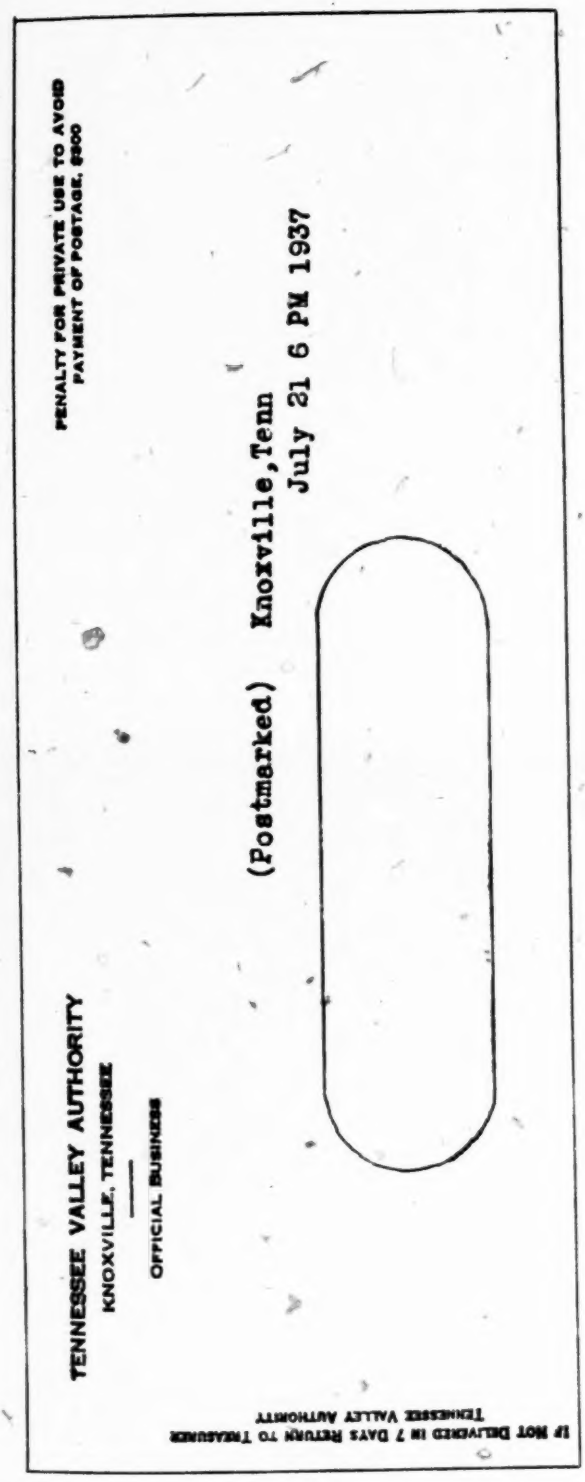
COMPLAINANTS' EXHIBIT NO. 397



[fol. 2800] COMPLAINANTS' EXHIBIT No. 398

Minutes of the Middle Tennessee Electric Membership Corporation, June 24, 1936, at 8 O'Clock P. M. at the James K. Polk Hotel

At a specially called meeting all members of the Board of Directors and incorporators were present, with one exception. Mr. C. F. Holt being unable to attend on account of illness sent in his resignation as secretary of the corporation and as a member of the Board of Directors. Motion was made by Mr. J. C. Couch and seconded by Dr. S. B. Smith to accept Mr. Holt's resignation. The motion was carried.

Mrs. Frank Travis was duly elected temporary secretary of the meeting.

Mr. Ramsey Snell was duly elected a member of the Board of Directors to replace Mr. Holt.

Motion was made by Mr. Couch and seconded by Dr. Smith that seven Wilson County men be accepted as members of the Board of Directors of the Middle Tennessee Electric Membership Corporation. The motion was carried, and,

Homer Hancock, Lebanon, Tennessee,
Noel B. Nokes, Mt. Juliet, Tennessee,
J. C. Bradshaw, R. #1, Lebanon, Tennessee,
J. J. McFarland, R. #4, Lebanon, Tennessee,
J. G. Harris, R. #2, Lebanon, Tennessee,
E. W. Weatherly, Norene, Tennessee,
Lon P. MacFarland, Lebanon, Tennessee,

[fol. 2801] were welcomed into the organization, by the President, as members of the Board of Directors.

Election of officers followed in which the following officers were duly elected:

Mr. K. T. Hutchinson, President,
Mr. Homer Hancock, Vice President,
Mr. E. W. Carmack, temporary secretary.

It was the decision of the Board of Directors to elect a temporary secretary because at a later date they expected to elect a person who could devote their entire time to the position of Secretary-Treasurer.

A draft of by-laws was presented to the meeting by Mr. K. Wilde Blackburn of REA. After full consideration the

following resolutions were unanimously adopted, having first been regularly moved and seconded.

Resolved, that the proposed by-laws of the Corporation as presented to this meeting be and the same hereby are approved and adopted as the permanent by-laws of the Corporation, and be it further

Resolved, that the Secretary of this meeting be directed to affix the by-laws as adopted at this meeting to the minutes of the meeting and to identify said by-laws as by-laws presented and approved at this meeting.

Mr. Lon P. MacFarland made motion that the Corporation present the names of two banks in Lebanon and two banks in Murfreesboro to REA for approval to deposit funds for use during the construction work in the counties. The [fol. 2802] Lebanon Bank & Trust Company and the Commerce Union Bank of Murfreesboro and the Murfreesboro Bank and Trust Company are the banks to be submitted.

Mr. Blackburn suggested that the corporation retain counsel, and upon motion duly made and seconded Mr. Lon P. MacFarland was elected general counsel for the Corporation. In a general discussion Mr. MacFarland stated that it would be satisfactory with him for his fee as counsel to be presented and passed on by the Board.

It was moved and seconded that a letter be sent Mr. Holt thanking him for his spendid corporation and expressing the regret of the Corporation in his resignation.

There being no further business, upon motion duly made and seconded, the meeting adjourned.

Mrs. Frank Travis, Acting Secretary of the Middle Tennessee Electric Membership Corporation.

Waiver of Notice

The undersigned, being all of the Incorporators and members of the Board of Directors of the Middle Tennessee Electric Membership Corporation, hereby assent and agree that a special meeting of the Board of Directors of said Corporation shall be held on June 24, 1936, at 8 o'clock P. M., at the James K. Polk Hotel, Murfreesboro, Tennessee, for the purpose of transacting any and all business which may be brought before said meeting and any and all adjourn- [fol. 2803] ments thereof, including, but without limiting the generality of the foregoing, the following purposes:

COMPLAINANTS' EXHIBIT No. 398

1. To consider and approve, adopt, ratify, and confirm the minutes of the meeting of incorporators and members of the Board of Directors of the Middle Tennessee Electric Membership Corporation held May 11, 1936, including each and every step taken and act performed at said meeting.

2. To adopt permanent by-laws for the Corporation.

3. To elect officers for the Corporation.

By signing this Waiver of Notice, we and each of us do hereby expressly waive the giving to us and to each of us notice of this meeting, and we do agree that all business transacted at the said meeting shall be as valid and effective as though said meeting had been held upon notice duly given.

J. C. Couch. S. B. Smith. S. E. McElroy. K. T. Hutchinson. E. W. Carmack. M. H. Jones. C. F. Holt.

Lascassas, Tennessee, June 24, 1936.

The Board of Directors of The Middle Tennessee Electric Membership Corporation, Murfreesboro, Tennessee.

[fol. 2804] Attention Dr. K. T. Hutchinson, President

GENTLEMEN:

I, C. F. Holt, hereby tender my resignation as a member of the Board of Directors in the Middle Tennessee Electric Membership Corporation, and also as a member of said Corporation.

I request that this tender of resignation be accepted for the reason that I am unable to serve in the said capacity.

Yours truly, C. F. Holt, Secretary.

Witness to Signature, Mrs. Frank Travis.

CFH:MET.

By-Laws of Middle Tennessee Electric Membership Corporation

Article I

Certificate of Incorporation

The name, duration, location of principal office and purpose of the Corporation shall be as set forth in the Certificate of Incorporation as from time to time amended.

COMPLAINANTS' EXHIBIT No. 398

Article II

Membership

[fol. 2805] Section 1. The members of this Corporation shall be the incorporators thereof and all persons subsequently admitted to membership therein. "Person" as used in these By-laws shall mean and include natural persons, firms, associations, corporations, business trusts, partnerships, and bodies politic.

Section 2. Each member shall pay a membership fee of Ten Dollars ($10).

Section 3. A membership certificate shall be issued to each member of the Corporation for each membership held by him. One (1) membership must be held in connection with each separate or non-contiguous property for which service is taken and for each different class of service desired. Commercial and residential service may, however, be secured upon one (1) membership if the commercial activity is carried on in the residence property of the owner.

Section 4. Service to any member may, in the discretion of the Board of directors, be conditioned upon such members furnishing to the Corporation a certificate of a reputable electrician stating that the wiring on the premises served or to be served complies with all local regulations and is in accordance with the latest rules and regulations of the National Board of Fire Underwriters, for the installing of electric wiring, apparatus and appliances. The requirement or waiver of such certificate, or the supplying of service on the bases thereof, shall not subject the Corporation to liability to any member or other person, or any damages or injuries sustained by reason of defects existing in the wiring of such premises.

[fol. 2806] Section 5. No member shall use energy supplied by the Corporation except for the purposes stated in his application for membership, nor shall he supply any other premises or families without first obtaining a permit from the Board of Directors or from an officer designated by the Board of Directors.

Section 6. A Membership in the Corporation may be transferred by any member to any successor in occupancy

or ownership of premises occupied or owned by him and served by the Corporation, but no transfer shall be effective until the transferee shall have complied with all the conditions in respect to membership contained in the Certificate of Incorporation and these by-laws and shall have assumed the payment of all debts owed to the Corporation by the transferee in connection with such premises.

Section 7. If any member shall neglect or refuse to pay any bill or debt owed by him to the Corporation, the Secretary shall mail a written demand therefor to him at his address as shown on the books of the Corporation, and if the entire amount due and payable to the Corporation by such member is not paid in ten (10) days, the Board of Directors may declare all his rights and privileges to be forfeited and expel him from the Corporation, or it may discontinue service to him. The Board of Directors may expel any member for failure to comply with the Certificate of Incorporation or the By-laws. If a member is expelled, all sums previously paid by him to the Corporation shall be considered to be liquidated damages to cover the expense of making electric service available to him up to that time and such sums may be retained by the Corporation.

[fol. 2807] Section 8. The Board of Directors may reinstate expelled members upon payment in full of all amounts due to the Corporation and, if the Board of Directors shall so determine, of interest at not to exceed six per centum (6%) per annum, or if arrangements satisfactory to it are made for the payment thereof.

Section 9. Any person who ceases to be a member because of failure to use energy supplied by the Corporation shall, if he is subsequently readmitted to membership, and if he has not transferred his membership, be obligated to pay only that portion, if any, of his membership fee which was unpaid at the time he ceased to be a member.

Section 10. Members shall, without charge to the Corporation, grant easements over land owned by them for the transmission and distribution lines of the Corporation, and the Board of Directors may require from applicants for membership the repayment of sums previously paid to them for such easements.

Section 11. If any member shall move his residence or place of business from one place to another within the service area of the Corporation, he shall be entitled to receive service at the new residence or place of business if (a) he notifies the Board of Directors of his change of location, and (b) the Board of Directors considers it feasible from the standpoint of the Corporation to serve the new location. The Board of Directors however, may impose a reasonable connection charge.

Section 12. When any member shall cease to take service by reason of removal from the premises served by the Cor- [fol. 2808] poration, the Corporation shall not be obligated to repurchase any membership held by him but the Board of Directors may repurchase such membership or memberships, if it considers such repurchase to be warranted by the financial condition of the Corporation.

Section 13. When any member shall dispose of any premises within the service area of the Corporation for the service of which he has purchased and holds a membership, or when any member of the Corporation for other reasons desire to sell or transfer his membership to any other person owning or occupying real property within the service area of the Corporation, the owner of such membership may assign the same according to the following procedure; (a) the assignor and assignee shall fill out an assignment blank, which the Secretary shall make available, showing the location of the premises which have been served in connection with the membership, the character and approximate amount of service which has been taken, the location of the premises for which the assignee desires service and the type of and approximate amount thereof which is desired: (b) The assignor and assignee shall make satisfactory arrangements with the Board of Directors for the payment to the Corporation of any obligations of the assignor to the Corporation and for the making of any repairs or replacements which are required on the meter boxes or other facilities owned by the Corporation and used in service to the premises in question; (c) the sum of Fifty Cents (50¢) shall be paid to the Treasurer of the Corporation to cover the expenses of each assignment; and (d) the Board of Directors shall determine whether or not it is feasible for the Corpo-

[fol. 2809] ration to extend service to the proposed assignee. Upon the assignment of any membership the assignor shall endorse such certificate on the back of the same and the assignment shall be recorded by the Secretary in the records of the Corporation.

Section 14. When the payment for a membership or memberships does not in the judgment of the Board of Directors constitute sufficient security for the payment of the bills of the holder thereof, the Board of Directors shall require such member to post a deposit with the Corporation in an amount sufficient to secure such payment.

Article III

Meetings

Section 1. The annual meeting of the members shall be held at the principal office of the Corporation at Murfreesboro, Tennessee, on the second Thursday of August, beginning with the second Thursday of August, 1937, purposes for which an annual meeting is to be held in addition to those prescribed by law, by the Certificate of Incorporation and by these by-laws may be specified by the Board of Directors, or by a writing signed by the President, or by a majority of the Directors, or by ten per centum (10%) or more of the members. If such annual meeting is omitted on the date herein provided therefor, a special meeting may be held in place thereof, and any business transacted or elections held at such meeting shall have the same effect as if transacted or held at the annual meeting.

Section 2. Special meetings of the members may be called by the President or by a majority of the Directors, and shall be called by the Secretary, or, in case of the death, ab-[fol. 2810] sence, incapacity or refusal of the Secretary, by any other officer, upon written application of ten per centum (10%) or more of the members. Such call shall state the time, place and purpose of the meeting.

Section 3. A written notice of each meeting of the members stating the place, day and hour thereof and the purpose for which the meeting is called, shall be given by the Secretary at least seven (7) days before the meeting to each mem-

ber, by leaving such notice with him or at his residence or usual place of business or by mailing it, postage prepaid and addressed to such member at his address as it appears upon the books of the Corporation. In case of the death, absence, incapacity or refusal of the Secretary, such notice may be given by any other officer or by a person designated either by the Secretary or by the Board of Directors. Any member may waive notice of any meeting. The attendance of a member at any meeting shall constitute a waiver of notice of such meeting, unless he shall attend such meeting for the express purpose of objecting to the transaction of any business because the meeting shall not have been properly called or convened.

Section 4. At any meeting, twenty per centum (20%) of the members shall constitute a quorum for the transaction of business, but a less number may adjourn any meeting from time to time, and the meeting may be held as adjourned without further notice. When a quorum is present at any meeting a majority of the members present thereat and entitled to vote shall, except where a larger vote is required by law, by the Certificate of Incorporation or by these By-[fol. 2811] laws decide any question brought before such meeting.

Section 5. Each member shall be entitled to one (1) vote regardless of the number of memberships held by him. A duly authorized officer of any firm, association, corporation, business trust, partnership or body politic may, upon satisfactory approval of his authority, vote the membership of such firm, association, corporation, business trust, partnership or body politic.

Article IV

Board of Directors

Section 1. Until the next annual meeting of the members of the Corporation to be held on the second Thursday in August, 1937, and until new directors are elected and qualified, the Board of Directors of the Corporation shall consist of fourteen (14) directors, seven (7) of whom shall be the present seven (7) directors of the Corporation, and the remaining seven (7) who shall be residents of Wilson County,

elected by the present Board of Directors at the same meeting at which these by-laws are adopted, or at any subsequent meeting, from among persons agreeing to use electric energy to be supplied by the Corporation.

Section 2. At the expiration of the terms of the directors elected for the first year, the Board of Directors shall be composed of a number of persons from each of the counties in the service area of the Corporation allocated to the various counties on the basis of one (1) director for each 100 members (as distinguished from memberships) or fraction of such 100 members served by the Corporation in said county on the day before the date of such election. Said [fol. 2812] Directors shall be chosen by ballot at the annual meeting of the members or at the special meeting held in place thereof by such members as have the right to vote. Each Director must be a member of the Corporation. Subject to law, the Certificate of Incorporation and to the other provisions of these by-laws, each Director shall hold office until the next annual meeting and until his successor is chosen and qualified.

Section 3. Regular meetings of the Board of Directors may be held without call or formal notice at such places and at such times as the Board of Directors may by vote from time to time determine. A regular meeting of the Board of Directors may be held without call or formal notice immediately after and at the same place as the annual meeting of the members, or the special meeting of the members held in place of such annual meeting.

Section 4. Special meetings of the Board of Directors may be held at any time and at any place when called by the President or two or more Directors, notice thereof being given to each Director by the Secretary, as hereinafter provided, or, in case of the death, absence, incapacity or refusal of the Secretary, by the officer or Directors calling the meeting. In any case it shall be deemed sufficient notice to a Director to send notice by mail at least forty-eight (48) hours, or by telegram at least twenty-four (24) hours, before the meeting, addressed to him at his address as it appears on the books of the Corporation. Any Director may waive notice of any meeting. The attendance of a Director

at any meeting shall constitute a waiver of notice of such [fol. 2813] meeting, unless he shall attend such meeting for the express purpose of objecting to the transaction of any business because the meeting shall not have been properly called or convened.

Section 5. A majority of the Board of Directors shall constitute a quorum for the transaction of business, but a less number may adjourn any meeting from time to time and the meeting may be held as adjourned without further notice. When a quorum is present at any meeting a majority of the directors in attendance thereat shall, except where a larger vote is required by law, by the Certificate of Incorporation or by these By-laws, decide any question brought before such meeting.

Section 6. The Board of Directors shall have the general management and control of all the property, business, and affairs of the Corporation, including, but without limitation, the power to adopt, rescind, and amend by-laws; define and limit the powers and duties of all committees, officers, agents, and employees of the Corporation not otherwise provided for by these By-laws; employ and dismiss the officers and employees of the Corporation and fix their salaries and wages, and require such bonds as may be deemed proper. The Board of Directors shall fix the price at which electric power shall be sold to members of the Corporation, or may contract in the name and on behalf of the Corporation with respect to such rates. The Board of Directors shall fix the price at which any equipment or material offered for sale by the Corporation shall be sold.

Article V

Officers

[fol. 2814] Section 1. The officers shall be a President, a Vice-President, a Secretary, a Treasurer, and such other officers as the Board of Directors may in their discretion appoint. The President, Vice-President, Secretary and Treasurer shall be elected annually by the Board of Directors. The President, and Vice-President must be Directors. So far as is permitted by law, any two or more offices may be filled by the same person. Subject to law, to the Certificate of Incorporation and to the other provisions of these By-

laws, each officer shall hold office for one (1) year and until his successor is chosen and qualified. Each officer shall, subject to these By-laws and in addition to the duties and powers herein set forth, perform such duties and powers as are commonly incident to his office, and such duties and powers as the Board of Directors shall from time to time designate.

Section 2. The President shall be the chief executive officer of the Corporation. Except as otherwise voted by the Board of Directors, he shall preside at all meetings of the members and of the Board of Directors. The President shall have custody of the Treasurer's bond.

Section 3. The Secretary shall keep a true record of all meetings of members and the Board of Directors. In the absence of the Secretary at any meeting, a temporary Secretary shall be chosen who shall record the proceedings of such meeting. The Secretary shall also keep or cause to be kept a membership book containing a complete list of all members and their addresses.

Section 4. The Treasurer shall, subject to the direction [fol. 2815] and under the supervision of the Board of Directors, have general charge of the financial concerns of the Corporation, except his own bond, and he shall have power to endorse for deposit or collection all notes, checks, drafts and other obligations for the payment of money, payable to the Corporation or its order, and to accept drafts on behalf of the Corporation. He shall keep or cause to be kept accurate books of accounts which shall be the property of the Corporation. If required by the Board of Directors, he shall, give bond for the faithful performance of his duties in such form, in such sum, and with such sureties as the Board of Directors shall require.

Section 5. The Board of Directors shall appoint a superintendent to have general oversight, care, and management of the property and business of the Corporation. The superintendent shall have the power to employ and dismiss all his assistants and technical workers, subject always to the direction and approval of the Board of Directors. The Board of Directors shall require a written report from the superintendent to the members at each annual meeting, showing the general business condition of the Corporation.

Such report shall first be submitted to the Board of Directors for its approval.

Section 6. All personnel selected by the Board of Directors or by the Superintendent shall be chosen on a merit basis and shall conform to such personnel standards as the Board of Directors may prescribe.

Article VI

Accounts

[fol. 2816] The accounts of the Corporation shall be kept in such form as the Board of Directors may prescribe.

Article VII

Removals

A majority of the members present at any meeting called for the purpose may remove from office the President, the Vice-President, the Treasurer, Secretary or any Director. The Board of Directors may likewise, by vote of a majority of their entire number, remove from office any officer or agent of the Corporation.

Article VIII

Vacancies

If the office of any director or of any officer or agent, becomes vacant by reason of death, resignation, removal, disqualification or otherwise, a majority of the remaining directors, though less than a quorum, may unless such vacancy, if in the office of director, shall have been filled by the members, choose by a majority vote of their entire number a successor or successors who shall hold office for the unexpired term, subject to the provisions of Article VII.

Article IX

Seal

The seal of the Corporation shall, subject to alteration by the Board of Directors, consist of a flat faced circular die with the words "CORPORATE SEAL", together with the name of the Corporation, cut or engraved thereon.

COMPLAINANTS' EXHIBIT No. 398

Article X

Execution of Papers

Except as the Board of Directors may generally or in particular cases authorize the execution thereof in some [fol. 2817] other manner, all deeds, leases, transfers, contracts, bonds, notes, checks, drafts, and other instruments made, accepted or endorsed by the Corporation shall be signed by the President.

Article XI

Fiscal Year

Except as from time to time otherwise provided by the Board of Directors, the fiscal year of the Corporation shall end June thirtieth.

Article XII

Amendments

These By-laws may be altered, amended or repealed at any regular meeting of the Board of Directors, or at any special meeting called for the purpose. Before any amendment may be declared adopted, it must receive a two-thirds vote of all the Directors present at the meeting.

KWB:MC.

Identified as the form of proposed permanent by-laws submitted to and offered by the meeting of incorporators and Board of Directors of the Middle Tennessee Electric Membership Corporation held at the James K. Polk Hotel, Murfreesboro, Tennessee, June 24, 1936.

Mrs. Frank Travis, Acting Secretary of the Middle Tennessee Electric Membership Corporation.

[fol. 2818] COMPLAINANTS' EXHIBIT No. 399

Minutes of a Special Meeting of the Board of Directors of the Middle Tennessee Electric Membership Corporation of Wednesday, November 4th, 1936, at 6:30 P. M.

The meeting was held pursuant to a call by the President and waiver of notice signed by all members of the Board of

COMPLAINANTS' EXHIBIT No. 399

Directors, and pursuant to the certificate of incorporation, and the by-laws of the corporation, and pursuant to the laws of the State of Tennessee.

The meeting was called to order by the President, K. T. Hutchinson, who presided, and E. W. Carmack, Secretary of the Corporation acting as secretary of the meeting. The secretary thereupon called the roll and reported the following present in person:

Lon P. MacFarland, J. C. Couch,
R. E. Snell, E. W. Carmack,
S. B. Smith, S. E. McElroy,
J. C. Bradshaw, Homer Hancock,
K. T. Hutchinson,

being a quorum.

The secretary then presented to the meeting the call and waiver of notice to which the meeting was called.

Then the President called on Mr. J. M. Peavey for recommendations in regard to a superintendent and assistant superintendent to be named by the corporation. Mr. Peavey stated that TVA personnel division had made a thorough investigation into the qualifications of a number of appli- [fol. 2819] cants for the positions and that he was prepared to recommend to the Board Mr. T. E. Steele, of Griffin, Georgia, as superintendent and Mr. M. C. Morgan, of Chattanooga, as assistant superintendent and maintenance linesman. Mr. Peavey discussed the qualifications of each of the above men. The members of the Board asked questions in regard to their qualifications.

Whereupon, upon motion duly made and seconded, and unanimously adopted by the affirmative vote of all of the members present it was resolved,

That Mr. T. E. Steele be selected as superintendent at a salary of between $1620 and $1800 per year, and that Mr. M. C. Morgan be selected as assistant superintendent and maintenance linesman at a salary of between $1260 and $1620, and it was further

Resolved that the President and Secretary of the Corporation be authorized to negotiate and enter into a contract with Mr. T. E. Steele and Mr. Morgan for their employment for the above positions.

COMPLAINANTS' EXHIBIT No. 399

The President then called for a discussion in regard to requirements necessary of members before the corporation connected and gave service to them, and in regard to the installation of appliances signed for before the corporation gave service to the members.

Whereupon, upon motion duly made and seconded it was Resolved that the superintendent be directed to connect members only when the members have purchased the equipment signed for on the customer list, or equipment the estimated consumption of which is equal to the amount of [fol. 2820] equipment signed for and have the same on the premises ready for installation, or have a valid contract for the purchase of said equipment, or that part thereof not already purchased. This contract with an authorized dealer to be for the purchase of said equipment within 90 days from the date of connection. Provided that in any case where the member has purchased, or has valid contract for the purchase, of equipment within 90 days, the estimated consumption of which is 480 kilowatt hours per month; That the superintendent be authorized to and instructed to connect such members, but provided that said members are not to be relieved from the installation of equipment signed for the consumption of which is above this amount of 480 kilowatt hours per month, but will be required to install said equipment later or have other members install additional equipment to compensate for the equipment which the member failed to install.

Thereupon, upon motion duly made and seconded, the President was called upon to appoint a committee of three to investigate and report to the Board of Directors on the requirements to be made and the time in which members would be required to install equipment for which they had signed. The President thereupon appointed J. C. Couch and R. E. Snell to assist him in this.

There being no further business, on motion duly made and seconded by all of the directors present the meeting was adjourned.

E. W. Carmack, Secretary.

Approved: K. T. Hutchinson, President.

[fol. 2821] COMPLAINANTS' EXHIBIT No. 400

Minutes of Special Meeting of the Board of Directors of the Middle Tennessee Electric Membership Corporation of Friday November 13, 1936

A special meeting of the Board of Directors of the Middle Tennessee Electric Membership Corporation was held in the Chamber of Commerce Building in Lebanon, Tennessee, Friday November 13th, 1936, at 7 o'clock P. M. pursuant to a call by the president and a notice sent to all of the members of the Board of Directors as required by the by-laws.

The meeting was held pursuant to the certificate of incorporation and the by-laws of the corporation and of the laws of the State of Tennessee.

The meeting was called to order by K. T. Hutchinson, President of the corporation, who presided, and the secretary being absent on motion duly made and seconded, which motion was unanimously carried, Mrs. Margarette Travis was elected temporary secretary for this meeting, and authorized to report the minutes. The secretary thereupon called the roll and reported the following directors were present in person:

J. G. Harris,	E. W. Weatherly,
Noel B. Nokes,	M. H. Jones,
J. J. McFarland,	K. T. Hutchinson,
Homer Hancock,	J. C. Bradshaw,
S. B. Smith,	S. E. McElroy,
R. E. Snell,	J. C. Couch,

Lon P. MacFarland

[fol. 2822] Said members being a quorum of the Board of Directors.

The President then introduced to the Board of Directors Mr. T. E. Steele and Mr. M. C. Morgan, superintendent and assistant superintendent.

The President thereupon called on Mr. MacFarland, counsel for the corporation to present and discuss the rental contract for the rental of an office building in Murfreesboro. Mr. MacFarland presented the contract as drawn with Mr. A. B. Smith as lessor and with Beesleys of Murfreesboro, owners of the building and discussed the same. Thereupon, upon motion duly made and seconded and unanimously adopted by all of the members present it was

Resolved that the president and secretary be authorized to enter into and execute contract as prepared by counsel for the rental of the building for a period of two years and three months.

The President then called upon Mr. MacFarland for a discussion in regard to insurance to meet the requirement of the Construction Loan Contract with REA. Mr. MacFarland stated that application for the necessary insurance had been made to cover public liability in the amount of $25,000 for injury to one person and a maximum of $50,000 to more than one person. For property damage in the amount of $10,000, and also to cover the truck to be purchased by the corporation in the amount of $10,000; public liability for the injury to one person and in the maximum amount of $20,000, and property damage in the amount of $5,000. The President then called for a discussion in regard to the insurance. Workman's compensation insurance [fol. 2823] to cover employees of the corporation was also discussed and it was stated that the necessary insurance would cost approximately $450 per year. A discussion was had and thereupon, upon motion duly made and seconded, which motion was unanimously adopted by the affirmative vote of all of the members present, it was

Resolved, That the President and counsel for the corporation be authorized to purchase the necessary insurance for the corporation and to have it become effective as soon as possible.

The President then called for a discussion in regard to the salary of the superintendent. Mr. Steel stated that the salary of $1620 was agreeable to him and requested that a contract be drawn for a six month period. Thereupon, upon motion duly made and seconded and unanimously adopted by the affirmative vote of all the members present it was

Resolved, That the President and Secretary be authorized to execute the contract with Mr. T. E. Steele for his employment as superintendent at the rate of $1620 a year. And that the counsel for the corporation is hereby instructed to prepare the necessary contract for the execution by the President and Secretary on behalf of the corporation and Mr. Steele.

COMPLAINANTS' EXHIBIT No. 400

The President then called for discussion on the salary and contract for Mr. M. C. Morgan as assistant superintendent and linesman. Mr. Morgan stated that he would accept employment for this position at a salary of $1260. The counsel was then instructed by the President to prepare the necessary contract. Thereupon, upon motion duly made [fol. 2824] and seconded and adopted by the affirmative vote of all of the members present it was

Resolved, That the President and Secretary be authorized and directed to enter into a contract for the employment of Mr. M. C. Morgan as assistant superintendent and linesman at a salary at the rate of $1260 per year. This contract to be for a six month period and to be as prepared by counsel,

The President then called for discussion in regard to the salary of Mrs. Travis, on motion duly made and seconded and adopted by the affirmative vote of all members present, the President was authorized to appoint a committee to make recommendation to the next meeting of the Board of Directors in regard to the salary and contract with Mrs. Travis as stenographer and cashier. The President then appointed Mr. Homer Hancock, Mr. S. E. McElroy, and Mr. J. C. Couch, and requested that they go into this and report to the next meeting.

Mr. MacFarland, counsel for the corporation, then suggested that Judge W. R. Chambers of Lebanon be named associate counsel for the corporation to do some work and associate him as counsel in preparing an opinion on the validity of the organization of the corporation as requested by REA Loan Contract. Thereupon, upon motion duly made and seconded and unanimously adopted by all the members present it was

Resolved, That Judge W. R. Chambers of Lebanon be named associate counsel for the corporation, and that his name be submitted by the general counsel to the REA.

The President then stated that it was necessary to have [fol. 2825] a service truck for the superintendent and assistant superintendent and called for discussion in regard to a suitable truck. It was decided that a one-half ton truck was suitable. Thereupon, upon motion duly made and seconded by the affirmative vote of all members present it was

resolved that the president be authorized to appoint a committee, and that this committee be empowered to purchase a one-half ton truck suitable for the needs of the corporation at the lowest figure obtainable and that this committee be directed to purchase the truck on a suitable long term payment plan. The President then directed Mr. Steele, the superintendent, to go with this committee, and named himself, Mr. R. E. Snell and Mr. M. H. Jones as a committee. The committee was then directed to purchase the truck as soon as possible.

The President then called upon Mr. J. M. Peavey to discuss the operating problems of the association. Mr. Peavey discussed various problems and suggested that an executive or advisory committee be named in both Wilson and Rutherford Counties to meet with the superintendent and assistant superintendent at regular intervals to advise with them. Thereupon, upon motion duly made and seconded, which motion was unanimously adopted by all of the members present it was

Resolved, That the President be authorized to name these committees in each county.

The President then named Mr. MacFarland, Mr. J. G. Harris and Mr. Homer Hancock for Wilson County and Mr. S. R. McElroy, Mr. J. C. Couch to work with the President in Rutherford County.

A discussion was then had in regard to the authority and responsibility of the superintendent. It was decided the [fol. 2826] superintendent would be directly responsible to the Board of Directors and all employees would in turn be responsible and under the direction of the superintendent.

A discussion was then had in regard to mail and correspondence of the corporation. Upon motion duly made and seconded, which motion was unanimously adopted by the affirmative vote of all members present it was

Resolved, That all correspondence in regard to the operation of the property of the corporation go out by and over the signature of Mr. T. E. Steele, and that three copies be made of all correspondence; one copy to be sent to Mr. J. M. Peavey, at Shelbyville; and one copy be sent to Mr. T. R. Hunnicutt, TVA, Chattanooga, and one copy be retained for the files of the corporation.

COMPLAINANTS' EXHIBIT No. 400

On motion duly made and seconded and unanimously adopted by the affirmative vote of all members present it was

Resolved, That the superintendent be authorized and directed to have membership certificates, as drawn and approved by the counsel, printed in an amount of 2000 at the earliest possible date.

A discussion was then had in regard to the collection of membership fees. Upon motion duly made and seconded and unanimously adopted by all of the members present it was

Resolved, That the membership fees be collected only at the office of the corporation and not in the field, except in cases of extreme emergencies. And that Mrs. Margarette Travis be elected temporary cashier and Treasurer with authority to collect membership fees.

[fol. 2827] The president then appointed a committee composed of Lon P. MacFarland, E. W. Weatherly and J. G. Harris to have proper bond made for Mrs. Travis.

On motion duly made Mr. Hancock recommended that Mrs. Prentice Majors, of Wilson County be included and connected at the time that the line is energized in her neighborhood, as she had granted easement of a considerable length of line, had signed for considerable equipment and had been inadvertently left off of the customers list. This motion was duly seconded and unanimously adopted and the superintendent was ordered to connect Mrs. Majors.

A discussion was had on the collection of membership fees and an office for Wilson County. The President appointed Mr. MacFarland and Mr. Hancock as a committee to investigate and report at the next meeting of the Board of Directors.

There being no other or further business, upon motion duly made and seconded the meeting was adjourned.

Margarette Travis, Temporary Secretary.

Approved: K. T. Hutchinson, President.

[fol. 2828] COMPLAINANTS' EXHIBIT No. 401

Minutes of Special Meeting of the Board of Directors of the Middle Tennessee Electric Membership Corporation

A special meeting of the Board of Directors of the Middle Tennessee Electric Membership Corporation was held in the Chamber of Commerce Building in Lebanon, Tennessee, Thursday, March 4th, 1937, at 7 P. M., pursuant to a call by the President, and pursuant to notice to all of the members and pursuant to the certificate of incorporation and the by-laws of the corporation, and pursuant to the laws of Tennessee.

The meeting was called to order by the President, K. T. Hutchinson, who presided. In the absence of the Secretary Mr. H. C. Morgan was elected acting secretary of the meeting. The roll was called by the acting secretary, who reported the following directors present:

K. T. Hutchinson,	Homer Hancock,
J. C. Couch,	R. E. Snell,
J. C. Bradshaw,	J. G. Harris,
M. H. Jones,	Lon P. MacFarland,
S. E. McElroy,	S. B. Smith,

E. W. Weatherly.

Said members being a quorum of the Board.

On motion, the reading of the minutes of the last meeting was waived. Mr. Ira Vance requested the Board of Directors to exempt him from installing a refrigerator, which he had signed up for on his farm, stating that at the time [fol. 2829] he had planned to live on his farm, but at the present time could not move there. Upon motion it was decided that the matter be referred to Mr. Steele, and that he act on it in the near future.

The President then called upon Mr. Steele, the superintendent, for his regular monthly report. Mr. Steele reported as follows:

"Since the advisory committee has explained that they were very much in favor of the rules and regulations drawn up by Mr. Hunnicutt, I have tried to follow out the outline of these in making a summary of the different points for discussion.

The cash on hand at present is $1,510.96.
Total number of memberships, 407.

COMPLAINANTS' EXHIBIT No. 401

Number of meter orders 349.
Amount of monthly bills we owe this month is $488.92.
Bills due from residential consumers, $445.93.
Bills due from commercial consumers, $72.14.
Amount of current bills, $518.07.
Number of customers billed this month, 268.
Number of minimum bills, 60.
Number of part month bills, 32.

We, Mr. Morgan and I, meet once monthly with the men from Lincoln and Bedford Counties to discuss safety methods in handling hot wires and operation of system in case of outage. If our system goes off, we will have to operate different switches on our system and after each operation, it will be necessary to call in to report the switch open so that a test may be put on the section of line between the [fol. 2830] switch and substation.

To facilitate calling and save time, I have made arrangements whereby I can use the Bell System with a test set. I can buy a used test set for $20.00. The cost of a new one being $34.

I'm working on a list of tools and equipment to be used on our work. I'm cutting this list to as low a figure as to think it would be wise to advocate. At the next executive committee meeting, I shall hope to be able to quote the exact figures.

Routes 6 and 6A were energized on 2-20-27. This line is on the Halls Hill Pike and leads in to and to the right of Poterfield.

On 3-2-37, we energized Route 7. This leads from Poterfield to the Wilson County line, north of Milton.

The construction department is operating 3 air compressors and in about 2 weeks, Routes 10, 10A and 14 will be ready to energize. Holes are dug on 19. Poles are set on Route 18. These lines will be practically finished in 3 weeks. At the last of next week the construction department hope to begin on Routes 12 and 13. The work will be carried on very rapidly because all the forces will be focused on these 2 routes."

Mr. Steel then presented the monthly bills recommended for payment as follows:

COMPLAINANTS' EXHIBIT No. 401

R. T. Groom, Agt.	$100.00
Ed Smith and E. C. Todd	13.50
Lon P. MacFarland	3.00
Southern Bell Tel. & Tel. Co.	11.80
Annie B. Williams, Register	3.00
[fol. 2831] Bell Bros. Co.	32.16
Southern Bell Tel. & Tel.	2.90
General Electric Supply Co.	2.67
Chas. L. Briley	1.95
Beauvais Carbon Co.	3.00
A. B. Smith	45.00
Tennessee Elec. Power Co.	1.00
McCord & Harris	3.60
Mullins-Osborn Co.	8.75
Spence-Smotherman Sign Service	4.00
Paul Harris	13.00
Firestone Service Stores	39.74
Murfreesboro Water Department	1.15
Tennessee Valley Authority	173.27

Upon motion duly made and seconded it was resolved that the Board of Directors authorize the payment of the bills as presented.

It was duly moved and seconded and passed that the purchase of the test set for $20.00 be included in the payment of the monthly bills.

Upon motion duly made and seconded it was resolved that the Board of Directors recommend the cutting off of the following sections of lines: on Route 24 from P. A. Taylor and Westward; on Route 14 from Tuckers Cross Roads to Less McDonalds; on Route 15 from Commerce to Simpson. Upon motion duly made and seconded it was resolved that future action in cutting off sections of line be referred to the executive committee and said executive committee be authorized to act on same.

Mr. Steele suggested that the Board act on Mr. Hunni- [fol. 2832] cutts recommendation of rules and recommendations. This was discussed but it was decided that since all members of the Board of Directors had not received a copy of these that this be delayed until the next meeting of the Board. Mr. Steele was instructed to send a copy of these recommendations of Mr. Hunnicutt to each member.

COMPLAINANTS' EXHIBIT No. 401

Mr. Couch invited the entire Board to be guests at dinner in Murfreesboro at the next board meeting, in April.

A discussion of the Treasurer's bond was had. Upon motion duly made and seconded it was resolved that the treasurer's bond be fixed at $10,000.00. It was further resolved that all checks on the construction loan fund be signed by the Treasurer and countersigned by the Secretary and Vice-President.

Upon motion duly made and seconded it was resolved that the Board of Directors affirm the action of the special committee appointed to set the salary of Mrs. Margarette Travis, cashier. It was further resolved that the President be authorized to pay to Mrs. Travis a salary of $75.00 per month, beginning January 1, 1937.

Upon motion duly made and seconded the meeting was adjourned.

H. C. Morgan, Acting Secretary. E. W. Carmack, Secretary.

Attest: K. T. Hutchinson, President.

[fol. 2833] COMPLAINANTS' EXHIBIT No. 402

March 18, 1937.

DEAR SIR:

You are hereby notified that a special meeting of the Board of Directors of The Middle Tennessee Electric Membership Corporation has been called by the President and will be held at the office of the Corporation, at 125 N. Church Street, at 7:00 P. M., on the 19th day of March, 1937.

The purpose of this meeting is (1) to discuss and authorize the building and determining where, 15 miles of lines shall be built.

This 15 miles of the original mil-age that was cut off and is to be applied on some other extension already submitted.

(2) To discuss and act upon any other general business that may properly come before the Board of Directors.

E. W. Carmack, Secretary.

COMPLAINANTS' EXHIBIT No. 402

To E. W. Carmack, Secretary of the Middle Tennessee Electric Membership Corporation:

In accordance with the authority vested in me by the By-laws of this corporation, I hereby call a special meeting of the Board of Directors, to be held in the office of the Corporation at 7:00 o'clock P. M., on the 19th day of March, 1937, for the purpose of acting upon and authorizing the building of 15 miles of line and where it shall be [fol. 2834] built, and

For the transaction of any other business in general that may properly come before the Board of Directors, and you are hereby instructed to send out notices of said meeting.

Witness my hand, this the 17th day of March, 1937.

K. T. Hutchinson, President.

Minutes of Special Meeting of the Middle Tennessee Electric Membership Corporation of March 19th, 1937

A special meeting of the Board of Directors of The Middle Tennessee Electric Membership Corporation was held in the office of the Corporation in Murfreesboro, Tennessee, Friday, March 19th, 1937, at 7 P. M., pursuant to a call by the President and pursuant to notice to all of the members, and pursuant to the certificate of incorporation and the by-laws of the corporation, *and pursuant to the certificate of incorporation and the by-laws of the corporation,* and pursuant to the laws of Tennessee.

The meeting was called to order by the President, K. T. Hutchinson, who presided. In the absence of the Secretary Mrs. Margarette Travis was elected acting secretary of the meeting. Upon the roll call by the acting secretary the following were reported present:

[fol. 2835]

J. C. Couch,
J. C. Bradshaw,
M. H. Jones,
Homer Hancock,
K. T. Hutchinson,
J. J. McFarland,
Lon P. MacFarland,
E. W. Weatherly,
S. B. Smith,

All of which members constitute a quorum of the Board of Directors.

Upon motion duly made and seconded, and discussions were had on same, the reading of the minutes of the last meeting was waived.

Mr. J. M. Peavey was present and the president called upon him for a discussion and recommendations of 15 miles of lines to be build by the corporation, taking the place of other lines cut off of the original project, which was not considered feasible.

Mr. Peavey urged the corporation to take the advise of TVA in building their lines and from now on, never to build a line with less than a three to one ratio. Ratio was then discussed and Mr. Peavey then suggested a minimum of $16.00 per mile revenue before the building of lines. It was his suggestion, also, to concentrate on line load rather than building new extensions. He added, however, if any were as good as six to one to pass it.

Mr. MacFarland made motion that all extensions with a ratio over six to one be approved for immediate construction. Mr. Couch moved that the entire 13.01 miles be approved. After general discussions Mr. MacFarland amended his motion as follows:

[fol. 2836] Resolved that immediate construction of R# ME5-1, .26; 1A-1, .7; Me 1D-1, 1 mile; ME10B-1, 2.5; Me14-1, 2; ME 21A-1, .35; R #21-1, 5 miles; Me 23-1, 3 miles, a total of 13.01, be approved, and in addition thereto I move you that if there are other projects to take up the balance of two miles that this mileage be included to make up the 15 miles.

Mr. E. W. Weatherly further moved the approval of construction of any additional project up to eight miles if the ratio figured as much as six. The motions were seconded by Mr. Hancock and were carried by a una-imous vote.

Mr. J. J. McFarland brought before the board the cases of Mr. Moore, and, Mr. Thompson, who wanted to change their appliances or be turned on without them, because of the fact that they did not actually sign for them. Because of the discrepancy motion was made by Mr. Couch to let the gentlemen have service. After discussion it was decided it might not be well understood by other members and they would let the cases float under the direction and discretion of Mr. Steele. Mr. Couch's motion was then amended to

COMPLAINANTS' EXHIBIT No. 402

instruct Mr. Steele to tie them on at a reasonable time, and to float them a reasonable time, but with the assurance that he not lose them as customers. The motion was duly seconded and unanimously carried.

Upon motion being duly made and carried the meeting was adjourned.

Mrs. Frank Travis, Acting Secretary. E. W. Carmack, Secretary.

Attest: K. T. Hutchinson, President.

[fol. 2837] COMPLAINANTS' EXHIBIT No. 403

To E. W. Carmack, Secretary of the Middle Tennessee Electric Membership Corporation:

In accordance with the authority vested in me by the By-laws of this corporation, I hereby call a special meeting of the Board of Directors, to be held in the office of the Corporation at 7:00 o'clock P. M., on the 2nd day of April, 1937, for the purpose of approving the payment of monthly bills, and to transact other routine business, and,

To consider and act on any other matters that may be properly brought before the Board.

Witness my hand, this the 1st day of April, 1937.

K. T. Hutchinson, President.

April 2, 1937.

DEAR SIR:

You are hereby notified that a meeting of the Board of Directors of The Middle Tennessee Electric Membership Corporation has been called by the President and will be held at the office of the Corporation, at 125 N. Church Street, at 7 o'clock P. M., on the 6th day of April, 1937.

The purpose of this meeting is (1) to approve the payment of monthly bills, and to transact other routine business.

(2) To consider and act on any other matters that may be properly brought before the board.

[fol. 2838] E. W. Carmack, Secretary.

P. S.—The Board members will go directly from the office to the City Cafe for dinner. After that the Board will be

called to order for the regular monthly meeting. If you should be late come on to the City Cafe and join the group.

Minutes of a Special Meeting of the Board of Directors of the Middle Tennessee Electric Membership Corporation

A special meeting of the Board of Directors of the Middle Tennessee Electric Membership Corporation was held in the office of the corporation, 125 N. Church St., April 6th, 1937, at 8 P. M. pursuant to a call by the President and notice to all of the Directors and pursuant to the certificate of incorporation and the by-laws and the laws of the State of Tennessee.

The Rutherford County members entertained the Wilson County members at a dinner at the City Cafe before the regular meeting.

Mr. T. R. Hunnicutt, of TVA, Mr. Burton, TVA, Mr. Peavey of TVA and Mr. C. F. Holt, former member of the Board were guests.

The regular meeting was called to order by the President at the office at 8 o'clock, and on motion duly made and seconded Mrs. Frank Travis was elected temporary secretary of this meeting and directed to report the same. Upon roll call the secretary reported the following directors present:

[fol. 2839]

M. H. Jones,	J. J. McFarland,
E. W. Weatherly,	K. T. Hutchinson,
J. C. Couch,	R. E. Snell,
Homer Hancock,	J. G. Harris,
S. B. Smith,	Lon P. MacFarland,
J. C. Bradshaw,	S. E. McElroy.

The President then called upon the guests each of whom made a short talk.

Mr. Steele was then called on for his report, which follows:

Unpaid vouchers for the month:

Robert Groom	$139.20
Southern Bell Tel. & Tel. Co.	12.95
Wilson Co. Register	10.00

COMPLAINANTS' EXHIBIT No. 403

General Electric	$1.86
Line Material Co.	25.15
Firestone Service Stores	38.86
Water Department	1.15
Modern Ad. Co.	8.50
Ambrose Printing Co.	42.00
Tennessee Electric Power Co.	2.11
McCord & Harris	.70
Mullins-Osborne Co.	2.70
A. B. Smith	45.00
Murfreesboro Printing Co.	22.00
Tennessee Valley Authority	213.76
Social Security Tax	3.15
Petty Cash reimbursement	44.61
	$568.99

[fol. 2840] Metered revenue for the month, $719.77.
Number of meter orders issued, 450.
Number of memberships issued, 498.
Number of bills sent this month, 422.
Number of minimum bills, 125.
Number of bills for part month, 65.
Cash on hand end of month, $1,755.97.

Line report:

Total 3-phase pole line miles	56.86
Total single phase pole line miles	216.13
Total pole line miles as staked	272.99

Total primary line miles, 240.52.
Total number of original customers to be served by lines as staked out, 839.
Pole line miles energized as of 4-1-37, 203.53.
Total customers on lines energized as of 4-1-37, 634.
Total number of customers now being served on energized lines, 440.
69 per cent of customers on energized lines are receiving service.

72 customers now receiving service were not among original signers. (These are among the 440 now being served.)

Mr. Safely of the Baird Safely Hardware Company has agreed for the present to collect our bills at his store in Lebanon. This was done for the convenience of those members living in Wilson County who carry no checking account. Mr. MacFarland, will this be agreeable with REA since Mr. Safely is not bonded?

[fol. 2841] On March 19, 1937, I energized Route 14 and second section of Route 10. This includes a part of 3 phase line and the single phase leading east of Lebanon through Tuckers Cross Roads into Grant.

On March 20, 1937, I energized 10 B which is south and parallel to Routes 10 and 14 and leads out through Bethany.

On April 2, 1937, I energized Routes 15 and 15A, this line branches off of Route 14 and extends south into the Commerce and Saulbury community.

Our next routes to make hot will be 16-17-17A and 17B. It is not official but our plans are to energize these routes next Thursday, the eighth. Then on the next week we will energize 18 and 19.

"Mr. McElroy is possibly more familiar with the details of a condition that exists in his section which has been brought to my attention: that of Mr. Allen. Mr. Allen paid his membership sometime ago and wired his house but didn't buy a refrigerator for which he was signed. Mr. Woodruff, one of our members, who lives near Mr. Allen told me that some of the Power Company men had a form or an affidavit that they wanted Mr. Allen to sign and told Mr. Allen that they would make it worth his while, besides he would get current within a short time without having to buy a refrigerator. And in the meantime to ask for his ten dollars membership back and regardless of whether it was refunded or not, he would receive current. I felt that I should bring this to the attention of the Board."

Upon motion duly made and seconded it was resolved that the bills as set out in Mr. Steele's report be paid. The [fol. 2842] question of turning Mr. Allen, a prospective customer, on was discussed. Mr. Hunnicutt was called on to discuss it. He stated that this question was a serious one; that relieving customers of their original sign-up would create loss through discrimination but that there were some

cases where exceptions had to be made. The question of connecting Mr. Reed; Mr. Lillars and others were also discussed. Upon motion duly made and seconded it was Resolved, that Mr. Steele connect Mr. Allen upon condition that he sign a contract to purchase his equipment within 12 months.

Mr. Harris then discussed the case of Mr. Talley, stating that Mr. Talley has signed for a range instead of a water-heater on his contract. It was stated that it was a mistake of the TVA's solicitor rather than Mr. Talley's mistake. Upon motion duly made and seconded it was Resolved, that Mr. Talley be connected.

Upon motion duly made and seconded it was Resolved, that Kilowatt hours be swapped instead of equipment.

Dr. Smith moved that action on individual cases and changing of contracts be delayed for six months. This motion was lost.

Mr. Weatherly brought up the case of Mr. J. E. Belcher of Wilson County. This case was discussed and upon motion duly made and seconded it was Resolved, that, Mr. Belcher's case be delayed for further investigation.

Mr. Couch brought up the discussion of the payment of installations on ranges and water heaters for the customers. Mr. Steele was instructed to get up information upon the total number of these cases.

[fol. 2843] The President discussed the date of payment of customers bills. After general discussion decision on this matter was postponed for Mr. Steele to work out a better plan with the adjustment of penalties.

Mr. MacFarland requested that each member contract their Representative and Senator to get their support in the passage of the REA bill in the State Legislature.

The President asked for a report on all extensions that were approved at the last meeting. Mr. Peavey stated that a survey crew was working on the extensions at the present time and that there were about 68 more miles of the original project to be built before the substitutes could be begun. He also stated that TVA would have a representative to make a house to house canvass to ascertain whether or not prospective customers of originally signed contracts who were on the existing lines were or were not going to connect on. He stated, also that Mr. Bridges and Mrs.

COMPLAINANTS' EXHIBIT No. 403

Davis would be sent back to this territory for additional work.

The superintendent asked the Board for authority to use $600.00 for buying of maintenance tools. On motion duly made and seconded it was resolved that this $600.00 be allotted for this purpose.

Upon motion duly made and seconded, the meeting was adjourned.

Mrs. Frank Travis, Acting Secretary. E. W. Carmack, Secretary.

Approved: K. T. Hutchinson, President.

[fol. 2844] COMPLAINANTS' EXHIBIT No. 404

To E. W. Carmack, Secretary of the Middle Tennessee Electric Membership Corporation:

In accordance with the authority vested in me by the Bylaws of this Corporation, I hereby call a meeting of the Board of Directors of The Middle Tennessee Electric Membership Corporation, to be held in the office of the Corporation, 125 N. Church Street, Murfreesboro, Tennessee, at 7:30 P. M. on the 4th day of June, 1937, for the purpose of considering the undertaking of expansion programs, and to consider and approve current bills and other business that might properly come before the Board.

Witness my hand on this the 31st day of May, 1937.

K. T. Hutchinson, President.

May 31, 1937.

DEAR SIR:

You are hereby notified that a meeting of the Board of Directors of The Middle Tennessee Electric Membership Corporation has been called by the President, and will be held at the office of the Corporation, at 125 North Church Street, Murfreesboro, Tennessee, at 7:30 P. M., on the 4th day of June, 1937.

The purpose of this meeting is (1) to consider the undertaking of an expansion program.

(2) To consider and approve current bills.

[fol. 2845] (3) To consider and act upon any other business that may properly come before the Board.

E. W. Carmack, Secretary.

Minutes of Monthly Meeting of the Board of Directors of The Middle Tennessee Electric Membership Corporation of June 4, 1937

A meeting of the Board of Directors of the Middle Tennessee Electric Membership Corporation was held at the Corporation office at Murfreesboro, Tennessee, on June 4th, 1937, at 8 o'clock P. M., pursuant to a call by the President and notice to all of the directors and pursuant to the certificate of Incorporation, to the by-laws and to the laws of the State of Tennessee.

The meeting was called to order by the President at 8 o'clock P. M.

Mr. Terry Eatherly, a new director from Wilson County, elected instead of Noel B. Nokes, who had resigned, was introduced to the Board. Mr. Eatherly stated that he was glad to be a member of the Board of Directors and would try to cooperate in every way to the success of the corporation.

The President stated that Mr. Hunnicutt of the TVA was not ready yet to discuss the extensions; that he had been advised by Mr. Hunnicutt that everything possible was being done in Washington to secure the Veteran's Hospitals as a customer, and that he had further been advised that [fol. 2846] there was a 44,000 volt line being planned by the TVA to be built through the territory.

Mr. E. L. Williams and wife, appeared before the Board and asked that they be given service. The Board discussed the problem with Mr. Williams and assured him that effort would be made to serve him, and requested that he try to obtain a right-of-way to his property so that a line could be built. The matter of the present easement held by the corporation was referred to Mr. MacFarland, counsel, to report on.

The President then called on Mr. Steele, superintendent, for his monthly report, which is as follows:

COMPLAINANTS' EXHIBIT No. 404

"Vouchers to be paid for the month:

A. B. Smith	$45.00
Firestone Auto Supply Stores	88.92
Tennessee Valley Authority	346.68
Aluminum Company of America	53.85
Tennessee Electric Power Co.	3.02
Social Security	6.30
Daily-news journal	10.50
Chas. L. Briley	1.30
Murfreesboro Water Dept.	2.22
Sangamo Electric Co.	45.84
Southern Bell Tel. & Tel.	15.55
Line Material Co.	145.33
Tafel Electric Co.	13.83
Petty Cash	43.84
E. H. F. A.	297.36
	$1,119.54

[fol. 2847] Metered Revenue, $1,008.48.
Amortization, 309.21.
Balance Cash on hand, $3,210.44.
Number of Min bills, 222.
Number billed for month, 670.
Number part month bills, 33.
Average bill, 1.96.
Number memberships issued for mo., 43.
Kilowatt hours sold, 35,440.
Kilowatt hours bought, 52,800.
Memberships to date, 706.
Customers to date, 697."

Upon motion duly made and seconded it was resolved: That the bills and report, as presented by Mr. Steele, be approved, and that the bills included in said report be paid. Mr. Steele then asked that he be given permission to buy a second hand filing cabinet and desk for the office. He was granted this permission by the Board.

Mr. Peavey, district manager of TVA, was present and extended an invitation to attend a Barbecue at Shelbyville on June 19th.

Mr. Hancock was called on to discuss problems of electric farms and did discuss the program being promoted by the

extension service. He stated that it would be necessary to purchase metering equipment and that would be the only expense of the corporation.

Upon motion duly made and seconded it was resolved: That the corporation purchase metering equipment for ten [fol. 2848] farms.

Upon motion duly made and seconded the President was instructed to appoint a committee to call on and discuss with the State Public Utilities Commission problems of the corporation, and discuss with them rates in regard to the hospital. The President appointed Mr. Hancock, Mr. Carmack and Mr. MacFarland.

Upon motion duly made and seconded it was resolved: That an application be prepared and submitted to the REA for additional money up to $300,000.00 for the building of new extensions, as soon as the extensions could be worked into feasible projects. The counsel for the corporation was instructed to prepare the application.

Upon motion duly made the meeting was adjourned.

E. W. Carmack, Secretary.

Attest: K. T. Hutchinson, President.

The Middle Tennessee Electric Membership Corporation

Minutes of Special Meeting of Board of Directors

A special meeting of the Board of Directors of the Middle Tennessee Electric Membership Corporation was held at the office of the Corporation, in the City of Murfreesboro, State of Tennessee, at 7:00 o'clock P. M., on the 16th day of June, 1937, pursuant to call and to waiver of notice of all of the directors of the Corporation.

The meeting was called to order by K. T. Hutchinson, President of the Corporation, who presided, and E. W. Carmack, Secretary of the Corporation, acted as Secretary of the meeting and kept the minutes thereof.

Upon calling the roll the Secretary reported that the following were present:

Lon P. MacFarland,	M. H. Jones,
S. E. McElroy,	Homer Hancock,

COMPLAINANTS' EXHIBIT No. 405

J. C. Couch,	T. H. Eatherly,
E. W. Carmack,	E. W. Weatherly,
J. G. Harris,	J. C. Bradshaw,
S. B. Smith,	R. E. Snell,
J. J. MacFarland,	K. T. Hutchinson,

said persons being all of the directors of the Corporation.

The Secretary then presented and read the call signed by the President and the waiver of notice of the meeting signed by all of the directors of the Corporation, said call and said waiver of notice being as follows:

[fol. 2850] We, the undersigned directors of The Middle Tennessee Electric Membership Corporation (hereinafter called the "Corporation"), do hereby waive all notice of the time, place and purpose of a special meeting of the Board of Directors of the Corporation and we do hereby fix The Corporation Office, in the City of Murfreesboro, State of Tennessee, as the place and the 16th day of June, 1937, at 7:00 o'clock, P. M. as the time for the holding of said meeting of the Board of Directors for the following purposes:

1. To authorize the construction, operation and maintenance of electric transmission, distribution and service lines or system in the Counties of Rutherford, Wilson, Smith, Cannon and Davidson, State of Tennessee, by the Corporation;

2. To authorize the execution and delivery of an Amendment to the Construction Loan Contract between the Corporation and the Government, acting through the Rural Electrification Administration, with respect to the terms of the loan by the Government to the Corporation of not to exceed $254,000, and of an additional loan by the Government to the Corporation of not to exceed $6,000, and specifying the requirements incident thereto;

3. To authorize the execution and delivery of an additional Mortgage Bond by the Corporation to the Government in the principal amount of $6,000 providing for interest at the rate of 2.77 per centum per annum, payable monthly and providing for the payment of principal in monthly in-

stallments calculated to pay and discharge the indebtedness [fol. 2851] evidenced by said Mortgage Bond in twenty (20) year ;

4. To authorize the execution and delivery of a Supplemental Mortgage and Deed of Trust of all the property and assets of the Corporation, now owned or hereafter acquired, to secure, with the original Mortgage and Deed of Trust heretofore executed and delivered, equally and ratably, said Mortgage Bond and any any all additional bonds which have been or may be issued in the manner and upon the terms and conditions and for the purposes set forth in such Mortgage and Deed of Trust and Supplemental Mortgage and Deed of Trust, and any and all bonds which may be issued in renewal of or substitution for the Mortgage Bond or any additional bond or bonds so executed and delivered, the aggregate principal amount of which Mortgage Bond, additional bonds and such renewal and substituted bonds shall not at any time exceed $500,000;

5. To authorize and to approve and ratify the execution of various contracts for, relating to, or in connection with, the construction of said proposed lines or system including without limiting the generality of the foregoing, a contract or contracts for the purchase of electric energy for use in connection with the operation of said proposed lines or system;

6. To amend the by-laws of the Corporation;

7. To approve, adopt, ratify and confirm all action taken at all prior meetings or assemblages of the Incorporators [fol. 2852] and of the Directors and of the Members of the Corporation and all steps taken and acts performed in connection therewith or pursuant thereto;

8. To take any and all action and to transact any and all business which may be necessary, convenient or desirable in connection with any of the foregoing at said meeting or at any adjournment or adjournments thereof;

and for the transaction of such other and further business as may come before said meeting or any adjournment or adjournments thereof.

In Witness Whereof, we have hereunto set our hands this 15th day of June, 1937.

S. E. McElroy, J. C. Couch, E. W. Carmack, S. B. Smith, M. H. Jones, R. E. Snell, K. T. Hutchinson, C. F. Holt, Lon P. MacFarland, J. G. Harris, J. J. McFarland, Homer Hancock, T. H. Eeatherly, J. C. Bradshaw, E. W. Weatherly, N. B. Nokes, being all of the directors of the Middle Tennessee Electric Membership Corporation.

The Secretary then presented to the meeting the Minutes of all prior meetings of the Members and of the Board of Directors and of the Incorporators of the Corporation, and such Minutes were lawfully examined by all of the Directors. Therefore, on motion duly made and seconded and unani- [fol. 2853] mously carried by the affirmative vote of all the Directors it was:

Resolved, that the Board of Directors of the Corporation hereby affirms, adopts, ratifies and confirms all action taken at all prior meetings of the Incorporators and of the Members and of the Board of Directors of the Corporation, and all steps taken and acts performed in connection therewith or pursuant thereto, including, though not by way of limitation, the adoption of by-laws; the election of officers, including K. T. Hutchinson as President and E. W. Carmack as Secretary; and the adoption of a corporate seal.

The Chairman then outlined in general terms the program whereby the Corporation has constructed and will construct and operate electric transmission, distribution and service lines or system in rural areas in the Counties of Rutherford, Wilson, Cannon, Smith, and Davidson, State of Tennessee. financed and to be financed by a loan from the United States of America, through the Rural Electrification Administration. He also outlined the necessity and desirability of an additional loan for this purpose and presented to the meeting a form of proposed Amendment to Construction Loan Contract prepared for execution between the Corporation and the United States of America, acting through the Administrator of the Rural Electrification Administration, providing for an additional loan from the United States of America to the Corporation in an amount not to exceed $6,000 and prescribing the terms and conditions for the construc-

tion of the proposed electric transmission, distribution and [fol. 2854] service lines or system by the Corporation and for the administrative expense and overheads involved and relating to such construction.

The Chairman called attention to the form of form of Supplemental Mortgage and deed of trust annexed to the proposed Construction Loan Contract as Exhibit A and stated that, pursuant to the proposed Construction Loan Contract, the Corporation would be required to execute and deliver an additional mortgage Bond in the amount of the loan, bearing interest at the rate of 2.77 per centum per annual payable monthly, and providing for monthly payments on account of principal calculated to pay and discharge the principal indebtedness within twenty (20) years after the date of the additional Mortgage Bond. The Chairman further stated that the Second Bond would be required to be secured by the Mortgage and Deed of Trust heretofore authorized, executed and delivered, as supplemental and amended by a Supplemental Mortgage and Deed of Trust executed by the Corporation and delivered to the Lebanon Bank and Trust Company as Trustee substantially in the form of the Supplemental Mortgage and Deed of Trust set forth in said Exhibit A of the Construction Loan Contract, covering all of the property and assets of the Corporation, now owned or hereafter acquired. The Chairman also called attention to the provisions of the existing Mortgage and Deed of Trust and of the proposed Supplemental Mortgage and Deed of Trust which provide that in addition to the Mortgage Bond heretofore authorized, executed and delivered in the amount of $254,000, and the Second Bond in the amount of $6,000 proposed to be presently issued, addi- [fol. 2855] tional bonds may be executed and delivered by the Corporation to the United States of America in the manner and upon the terms and conditions and for the purposes set forth in the Mortgage and Deed of Trust as supplemented and amended, the aggregate principal amount of which additional bonds, together with the principal amount of the First and Second Bonds and any and all bonds which may be issued in renewal of or substitution for the First and Second Bonds or any such additional notes, shall not at any time exceed $500,000, and that the First and Second Bonds, such additional bonds and renewal and substituted bonds

shall be equally and ratably secured thereby without preference, priority or distinction and irrespective of the dates of execution and delivery of the First and Second Bonds, any such additional bonds and any such renewal or substituted bonds.

The Chairman stated that the proposed Amendment to Construction Loan Contract and the form of proposed Supplemental Mortgage and Deed of Trust had been approved by counsel for the Corporation. The Secretary of the meeting then read the form of proposed Amendment to Construction Loan Contract, including the form Supplemental Mortgage and Deed of Trust, attached thereto as Exhibit A.

After discussion of the proposed Amendment to Construction Loan Contract and the proposed Supplemental Mortgage and Deed of Trust, the form of proposed Amendment to Construction Loan Contract was ordered to be identified by the Secretary and annexed to the minutes of this meeting and thereupon, on motion duly made and seconded, the following resolutions were unanimously adopted:

[fol. 2856] Resolved, That the Board of Directors of the Corporation hereby approves the construction of the rural electrification project pursuant to the Construction Loan Contract dated October 16, 1936, between the United States of America and the Corporation, submitted to this meeting, such project consisting of electric distribution lines in rural areas in the Counties of Rutherford, Wilson, Smith, Cannon and Davidson, in the State of Tennessee, together with substations, secondaries, transformers, meters and all other appurtenances necessary for the efficient operation thereof; and

Resolved, That the Board of Directors of the Corporation hereby approves, ratifies and confirms all acts and things done by or on behalf of the Corporation by its directors, officers or members in connection with the construction of the rural electrification project as hereinabove in the preceding resolution specified and described; and

Resolved, That the Board of Directors of the Corporation hereby approves and authorizes the construction and operation by the Corporation of electric transmission distribution and service lines or system in the Counties of Rutherford, Wilson, Cannon, Smith and Davidson, in the State of Tennessee, approximately — miles in length, together with

substations, secondaries, transformers, meters and all other necessary appurtenances, equipment and apparatus for the efficient operation thereof along such routes as the President and Secretary of the Corporation in their discretion shall determine and as shall be approved by the Adminis-
[fol. 2857] trator of the Rural Electrification Administration; and

Resolved, That the Corporation, for its corporate purposes and in order to finance the construction of the aforesaid lines or system for the transmission and distribution of electric energy, and for administrative expenses and overheads in connection with such construction, borrow an additional sum not to exceed $6000 from the United States of America, through the Administrator of the Rural Electrification Administration; and

Resolved, That the Board of Directors of the Corporation hereby approves the form and substance of the amendment to Construction Loan Contract proposed to be entered into by the Corporation and the United States of America, acting through the Administrator of the Rural Electrification Administration, including the form and substance of the Supplemental Mortgage and Deed of Trust, attached thereto as Exhibit A submitted to this meeting; and

Resolved, That the President and Secretary of the Corporation are hereby authorized, empowered and directed, for and on behalf of the Corporation and in its name, forthwith to sign, execute and deliver as many counterparts as shall seem to them necessary or desirable of an Amendment to Construction Loan Contract between the United States of America and the Corporation substantially in the form of the proposed Amendment to Construction Loan Contract approved at this meeting, under the seal of the Corporation,
[fol. 2858] which the Secretary of the Corporation is hereby directed to affix and attest, with such insertions, changes or variations therein as the President of the Corporation shall in his discretion deem necessary or expedient; and

Resolved, That the President, Secretary and Treasurer of the Corporation, and each of them (with full power to act without the others) to be, and they hereby are, authorized, empowered and directed, for an- on behalf of the Corporation and in its name, to sign, seal execute and deliver any

REA Project

Tennessee 19 Rutherford

The following specifications will be used on the rural lines in the above project which will be constructed by the Tennessee Valley Authority in Rutherford and Wilson Counties, Tennessee.

Tennessee Valley Authority, Chattanooga, Tennessee, (Signed) A. H. Sullivan.

and all contracts and other instruments, and generally to do and perform any any all acts or things, which they, or any one of them, shall deem necessary or advisable, fully to perform the terms, covenants and conditions required to be performed by the Corporation pursuant to the Construction Loan Contract heretofore executed and pursuant to the Amendment to Construction Loan Contract between the United States of America and the Corporation approved at this meeting when the same shall become effective, and to procure the construction and operation of the lines or system for the transmission and distribution of electric energy contemplated to be constructed pursuant to such Construction Loan Contract and said Amendment to Construction Loan Contract, and

Resolved, That the President and Secretary of the Corporation be, and they hereby are authorized, empowered and directed, for and on behalf of the corporation and in its name, forthwith to make, execute and deliver a Second Bond [fol. 2859] payable to the United States of America in the principal amount of $6,000 with interest thereon at the rate of 2.77 per centum per annum payable monthly and providing for monthly payments on account of the principal calculated to pay and discharge the indebtedness evidenced thereby within twenty (20) years after the date thereof, substantially in the form of the Mortgage Bond provided for in the Mortgage and Deed of Trust heretofore executed and on the proposed Supplemental Mortgage and Deed of Trust, under the seal of the Corporation, which the Secretary of the Corporation is hereby directed to affix and attest, with such insertions, changes and variations therein as the president of the Corporation shall, in his discretion, deem necessary or expedient; and

Resolved, That the President and Secretary of the Corporation be, and they hereby are authorized, empowered and directed, for and on behalf of the Corporation and in its name, forthwith to sign, execute and deliver as many counterparts as shall seem to him necessary or advisable of a Supplemental Mortgage and Deed of Trust of all of the property and assets of the Corporation, now owned or hereafter acquired, to the Lebanon Bank and Trust Company as Trustee, substantially in the form of the Supplemental Mortgage and Deed of Trust approved at this meeting, un-

der the seal of the Corporation, which the Secretary is hereby directed to affix and attest, to secure, equally and ratable, the First Mortgage Bond in the amount of $254,000, heretofore authorized, executed and delivered and the [fol. 2860] Second Bond, heretofore at this meeting authorized to be executed and delivered, and any and all additional bonds which may be executed and delivered in the manner and upon the terms and conditions and for the purposes set forth in said Mortgage and Deed of Trust as Supplemented and amended and any and all bonds which may be issued in renewal of or substitution for the First and Second Bonds or any such additional bond or bonds, the aggregate principal amount of which additional bonds and renewal and substituted bonds, together with the principal amount of First and Second Mortgages Bonds shall not at any time exceed $500,000, with such insertions, changes and variations in said form of Supplemental Mortgage and Deed of Trust as the President of the Corporation shall, in his discretion, deem necessary or expedient; and

Resolved, That the President, Secretary and Treasurer of the Corporation and each of them (with full power to act without the others) be, and they hereby are, authorized, empowered and directed, for and on behalf of the Corporation, to file record, refile and record the Mortgage and Deed of Trust heretofore authorized, executed and delivered and the Supplemental Mortgage and Deed of Trust, heretofore at this meeting authorized to be signed, sealed, executed and delivered by and on behalf of the Corporation, and to sign, seal execute and deliver such supplemental mortgages and deeds of trust and generally to do and perform any and all acts and to execute and deliver any and all instruments which they, or any one of them, shall deem necessary or ad- [fol. 2861] visable fully to perform the terms, covenants and provisions of the Mortgage and Deed of Trust as supplemented and amended, when the same shall be executed and delivered, and to consummate and carry out the purposes and intent of these resolutions; provided, however, that no additional bond or bonds nor any renewal or substituted bond or bonds, shall be made, executed or delivered unless and until the same shall be expressly authorized by a resolution or resolutions adopted by the Board of Directors of the Corporation and except in the manner and upon

the terms and conditions and for the purposes set forth in the Mortgage and Deed of Trust as supplemented and amended.

The form of the Construction Loan Contract with Exhibits A therein referred to attached, was ordered to be identified by the Secretary as having been presented to and acted upon at this meeting of the Board of Directors and to be annexed to the minutes of this meeting.

The President called on Mr. Hunnicutt, Division Manager of the TVA to discuss an expansion program and to discuss problems in connection with connecting customers along the line and increasing service to the customers who desire service. Mr. Hunnicutt and Mr. Peavey discussed it and Mr. Blackburn of the REA discussed the availibility of funds.

The President then requested that Mr. Hunnicutt give the Board the exact sum that had been spent by the TVA on the construction of the lines that have been finished. Mr. Hunnicutt stated the Accounting Department had not finished getting up these figures but that from the date [fol. 2862] available it appeared that the construction cost would run over the original estimate Ten or Twelve Thousand Dollars. Mr. Hunnicutt promised to get the figures for the Board of Directors within the next few days. The question of a membership meeting was discussed, upon motion duly made and seconded it was resolved; that Article IV of Section IV of the by-laws be changed to read as follows:

"That any meeting 20 per cent of the members present either by proxy or in person shall constitute a quorum for the transaction of business."

Upon motion duly made and seconded it was resolved, that Article IV, Section V of the by-laws be changed to read as follows:

"Each member shall be entitled to one (1) vote regardless of the number of memberships held by him. Each member shall be entitled to one vote regardless of memberships voting by proxy is hereby expressly authorized."

The President then discussed the request extension of Service. Upon motion duly made and seconded it was re-

solved, that a committee be appointed to work out the policies of the Corporation in regard to extension and increasing in existing services; that the Superintendent be made a member of the Committee, and that the committee be authorized to employ if necessary, additional personnel to work on this program. The President then appointed the following committee;

Mr. MacFarland
Mr. Hancock
Mr. Carmack
Mr. Weatherly
Mr. Jones
Mr. T. E. Steele

[fol. 2863] Meeting to be held Friday night at 7:30 o'clock P. M.

There being no further business to come before the meeting, upon motion duly made, seconded and unanimously carried, the meeting adjourned.

E. W. Carmack, Secretary.

Approved: K. T. Hutchinson, President.

We, the undersigned directors of ——, do hereby approve, ratify and confirm in all respects the above and foregoing minutes of the special meeting of the Board of Directors of —— —, 193—, and each and every step taken and act performed thereat.

[fol. 2864] COMPLAINANTS' EXHIBIT No. 406

To E. W. Carmack, Secretary of the Middle Tennessee Electric Membership Corporation:

In accordance with the authority vested in me by the by-laws of this Corporation, I hereby call a meeting of the Board of Directors, to be held in the office of Lon P. MacFarland, Lebanon, Tennessee, at 7:30 P. M. on 6th day of July, 1937, for the purpose of considering the undertaking of expansion programs, and to consider and approve current bills and any other business that might properly come before the Board.

Witness my hand on this the 2nd day of July, 1937.

K. T. Hutchinson, President.

COMPLAINANTS' EXHIBIT No. 406

July 2, 1937.

DEAR SIR:

You are hereby notified that a meeting of the Board of Directors of The Middle Tennessee Electric Membership Corporation has been called by the President and will be held at the office of the Corporation, at Lebanon, Tenn., at 7 o'clock P. M., on the 6th day of July, 1937.

The purpose of this meeting is (1) to approve the payment of monthly bills, and to transact other routine business.

(2) To consider and act on any other matters that may be properly brought before the Board.

E. W. Carmack, Secretary.

[fol. 2865] Minutes of Monthly Meeting of the Board of Directors of the Middle Tennessee Electric Membership Corporation of July 6, 1937

A meeting of the Board of Directors of the Middle Tennessee Electric Membership Corporation was held at the office of Mr. Lon P. MacFarland at Lebanon, Tennessee, on July 6, 1937, at 8 o'clock P. M. pursuant to a call by the President and notice to all of the directors and pursuant to the certificate of incorporation, to the by-laws and to the laws of the State of Tennessee.

The meeting was called to order by the President K. T. Hutchinson who presided. In the absence of the Secretary and upon motion duly made and seconded Miss Ann McFerrin was elected temporary secretary and instructed to report the meeting. The roll was called by the temporary secretary who reported the following directors were present:

K. T. Hutchinson,	S. B. Smith,
S. E. McElroy,	Lon P. MacFarland,
Homer Hancock,	Dr. J. J. McFarland,
J. G. Harris,	J. C. Bradshaw,
E. W. Weatherly,	T. H. Eatherly,

said members being a quorum of the Board.

The President then reported that Mrs. Travis, cashier, had tende-d her resignation to be effective July 1, 1937.

Upon motion duly made and seconded this resignation was accepted.

The President then called for a discussion on extensions and a report by the policy committee. Mr. Harris and Mr. Terry of Trousdale County appeared before the board asking the cooperation of the Board in getting lines built into [fol. 2866] Trousdale County. They reported that they had already began work upon getting applications for service from residents of Trousdale County south of the river and that there was according to their estimate sixteen and sevententh- (16.7) miles, where prospective customers did not have electric service and wanted the Corporation to build lines. They requested that Mr. Steele, Superintendent, attend meetings they were holding to get applications for service. It was reported to the Board that a section of Smith County had applied for service. The Board offered full cooperation.

The President then called on Mr. Steele, Superintendent, for his monthly report.

The bad meters on hand will be sent to Wilson Dam to be reworked.

Two meetings have been held recently in Cannon County in an effort to promote the working up of a feasible project in Cannon County and adjoining Counties. Men were selected to work certain sections and as soon as they have finished they will make a report to me at Murfreesboro. I am expected to hear the latter part of the week.

Upon request of Mr. Steele, Mr. Lawson the TVA auditor interviewed all probable applicants to fill the vacancy left by Mrs. Travis. After careful consideration Mr. Steele and Mr. Lawson decided upon Miss Ann McFerrin. Miss McFerrin had previously worked for a gas company which made her familiar with utility bookkeeping, billing, and general routine work. Miss Nell Rion, who works for the Tennessee Matag Corporation has been a great help to the office during her spare time. Mr. Steele recommended that Miss Ann McFerrin be employed at sixty dollars ($60) per month [fol. 2868] and that Miss Nell Rion be paid twenty dollars ($20) per month for the work she does during her spare time.

Upon motion duly made and seconded the report of the Superintendent was accepted.

The case of H. R. Bryan and Dr. J. W. Graves were discussed. These were original signers who had not taken service. After discussion of the cases and upon motion duly made and seconded it was resolved that the Superintendent be instructed to tie on these parties upon their signing a contract to purchase equipment originally signed for by them and not yet installed, within six months.

It was reported to the Board that the County Court of Wilson County had appropriated funds to wire twenty seven school houses on the existing lines. The Superintendent was instructed to make a survey of these and get them connected up as soon as they were wired.

The President reported that the EHFA auditor had interviewed him and stated that he was well pleased with the way the EHFA accounts were being kept and that the accounts were in good shape; Mr. Lawson was at present checking the Corporation books and indicated that they were in good shape and that Mr. Lawson had set up a Special Construction Account in the books.

Upon motion duly made and seconded the Board approved the action of Mr. Steele, Superintendent, in naming Miss Ann McFerrin bookkeeper at a salary of sixty dollars ($60) per month and Miss Nell Rion assistant at a salary of twenty dollars ($20) per month.

[fol. 2869] The extension program was discussed and the Superintendent was instructed to set up a file on extensions in the office.

Upon motion duly made and seconded the Superintendent was authorized to purchase another truck, International one and a half ton (1½), same type as original. The question of improving the service for Wilson County was discussed. Upon motion duly made and seconded it was resolved that the Superintendent be instructed to move Mr. Morgan, linesman, to Lebanon to take care of service calls. The President stated that a truck would be purchased at a wholesale price.

The Superintendent discussed on increase in his and Mr. Morgan's salary. The President appointed the following committee to study the financial condition of the Corporation and to report to the next meeting on this matter:

Mr. Hancock, Mr. McElroy,
Mr. Weatherly, Mr. McFarland,
Dr. Smith.

Upon motion duly made and seconded it was resolved that the Charter be amended to include Trousdale County in the service territory and that the application to the County Court of Trousdale County for a franchise be approved.

Upon motion duly made and seconded the President was authorized to advance to Mr. E. W. Hood one hundred twenty-three dollars and fifty cents ($123.50) and Mr. T. O. Majors seventy-five dollars and no cents ($75.) the balance due them for easement work, this to be advanced out [fol. 2870] of the General Fund and repaid to the General

COMPLAINANTS' EXHIBIT No. 406

Fund out of the Special Construction Account when the next requisition is made and the funds paid over to the Corporation.

There being no further business to come before the meeting upon motion duly made and seconded the meeting was adjourned.

Ann McFerrin, Temporary Secretary. E. W. Carmack, Secretary.

Tennessee Valley Authority

Proposed Rural Electrical Development

Rutherford-Wilson Project

Chattanooga, Tennessee, August 1, 1936.

[fol. 2873] Introduction

This report and accompanying data is the result of a commercial survey recently completed in the counties of Rutherford and Wilson in Middle Tennessee, which counties have combined as a unit legally chartered as the Middle Tennessee Electric Membership Corporation to secure rural electric service from the Tennessee Valley Authority. This survey was conducted according to the TVA "Neighborhood Plan."

The proposed project includes the construction of approximately 53½ miles of 3-phase 11,000 volt rural electric lines, and approximately 207½ miles of 6,900 volt single phase lines, together with necessary transformers, meters, services, secondary lines, etc., in accordance approximately

with the routes and locations as shown by the accompanying maps, at an initial estimated cost of $254,180.00.

The project is proposed to be served from a TVA 11 kv. transmission line that is to run from the substation at Columbia, Tennessee, into Bedford County for the immediate purpose of serving Bedford and Lincoln Counties, connecting with an 11 kv. 3-phase line extending from the substation at Ardmore, Tennessee. The 11 kv. transmission line to serve this project will connect with the above mentioned line at or near Midland in Rutherford County and run north through Rutherford to a point in Wilson County east of the City of Lebanon.

This system would serve initially approximately 1,000 domestic and commercial rural customers, using approximately 1,700,000 kwh. annually, with an estimated annual gross revenue of $38,000.00.

The area proposed to be developed under this program comprises approximately 1229 square miles in the blue grass area of Tennessee, which is highly adapted to diversified agriculture due to native fertility of soil and equable climate.

A total of approximately 8,000 farms, averaging 80.3 acres each with a rural population of approximately 38,000, now without electric service in this area can be served by completing such a program. It is conservatively estimated that 1,500 rural customers will be receiving electric service from this system within three years.

The principal revenue producing crops, ranking in the order named, are: corn, cotton, wheat, and tobacco, with potatoes and dairy products closely following.

Lebanon, the county seat of Wilson County, has a population of approximately 5,000. Here is located Cumberland University, with an average enrollment of 600, and also Castle Heights Military Academy with an average enrollment of 250. The Lebanon Woolen Mills has an invested capital of $500,000.00 and has an average of 250 employees. The Gulf Red Cedar Company has an invested capital of $125,000.00 with 100 employees. There are also three mill- [fol. 2874] ing companies with a combined investment of $125,000.00 with 100 employees. In addition, there is a casket manufacturing company and a handle factory. This town has its own electrical distribution system and is pur-

chasing power from the Tennessee Electric Power Company.

Murfreesboro, the county seat of Rutherford County, has a population of approximately 10,000 and here is located the Middle Tennessee Teachers' College with an enrollment of approximately 1,000, also the Tennessee College for Women with an enrollment of approximately 300.

The Rural Resettlement Administration has under option approximately 9,000 acres in the most fertile section of Wilson County, adjacent to one of the present proposed lines, and it is understood that as soon as titles have been acquired it is proposed to divide this acreage into small unit farms. It is planned that each farm is to be complete as to buildings and all modern conveniences similar to the Cumberland Homesteads Project in Eastern Tennessee, which is now in the process of being electrified through TVA. This project would add at least 250 additional customers to the present program.

Proposed Rural Electrical Development

Rutherford-Wilson County Project

General Summary

First Year

1. Total Annual Revenue	$37,968.84
2. Total Investment	$254,180.00
3. Investment Ratio	6.69
4. Total Number Customers (Signed)	918
5. Total Number Potential Customers (Signed and undersigned	1,250
6. Total Miles Pole Line	261
7. Total Annual kwh.—Sold	1,511,880
8. Total Annual kwh.—Purchased	1,778,688
9. Monthly kw. Demand	508
10. Monthly kwh. Per Mile Line	504
11. Monthly kwh. Per Customer—Residential	151
12. Monthly kwh. Per Customer—Total	143
13. Investment Per Customer	$276.88
14. Investment Per Mile Line	973.87
15. Annual Revenue Per Customer	41.36
16. Number Customers Per Mile Line (Signed)	3.52
17. Number Potential Customers Per Mile Line (Signed & Unsigned)	4.79

Tennessee Valley Authority,

Knoxville, Tennessee

September 8, 1937.

Honorable J. F. Burleson, Mayor, City of Haleyville, Haleyville, Alabama.

MY DEAR MAYOR BURLESON:

Thank you for your inquiry of September 4, asking that the Authority send an engineer to make a survey of the

city of Haleyville with a view to determine the feasibility of electric service by the Authority.

You understand that the Authority sells power to municipalities at wholesale only. If and when your community is in position to purchase at wholesale and desires to do so, we shall be glad to consider the question of service, dependent on considerations of the financial feasibility of the construction by the Authority of the necessary transmission and substation facilities.

We assume that you have in mind an engineering survey to determine the feasibility of municipal operations by the town. We regret that the Authority does not have engineers available for this purpose.

Should you decide to employ an independent engineer, we shall be very glad to cooperate with him in the determination of mutual problems.

It is our desire to cooperate with you in any way possible, and to that end we will be glad to meet with you or your engineer at any convenient time in Knoxville, or, if you prefer, Mr. F. F. Beauchamp, Alabama Division Engineer at Wilson Dam, will be glad to talk with you whenever you drop in.

Very truly yours, Tennessee Valley Authority, Dr. Martin G. Glaeser, Chief Power Planning Engineer.

Electric Power Board of Review

Subject: Application for loan and grant of the City of Decatur, Alabama (Docket No. 6587) for the purpose of constructing distributing system, including low side of the substation and equipment, in the sum of $371,743.

After review of the Docket, this Board finds:

1. The Engineering Division by its supplemental report made the following conclusion and recommendation:

"It is our opinion that the proposed project is a public necessity and of social desirability; that it will afford needed employment; and that on the above assumptions it is technically and economically sound."

The assumptions referred to are that

(a) "The Municipal plant will receive, in addition to all the municipal load, 60 per cent of all other business in the first year of operation, and 80 per cent at the end of the [fol. 2888] loan interval."

This assumption, in the opinion of this Board, is far below that portion of the total business the municipality will receive, inasmuch as it will offer rates at least 60 per cent less than the present rates being charged by the Alabama Power Company by reason of the contract offered the city by the TVA; and as the Alabama Power Company, the competitor, cannot reduce its rates by anything like 60 per cent of its present rates by reason of its service to the City of Birmingham, and as it would be under the necessity of reducing its rates to other cities served by it in Alabama. If rates required by the TVA contract are charged and the City obtains the same business the Company now has, its income will provide for maintenance and operating costs, interest, amortization and taxes, and a net income over all of $10,525. This appears by the estimate of O. M. Rau attached. This estimate makes no allowance for what may reasonably

be expected in the way of an increase of current sold and of income by reason of the heavy reduction of rates. That a reduction of rates produces larger net income is shown, among other examples, by the experience of the City of Washington under its contract with the Potomac Electric Company covering the years 1925 to 1934. Under this contract the Company is required to apply one-half its surplus to rate reduction. The maximum rate in 1924 was 10¢ per [fol. 2889] kwh. Rates are now, after successive reductions, 3.9¢ for the first 50 kwh., 3.3¢ for the next 50, 2¢ for the next 100 and 1.5¢ for all over 200. In 1924 the Company earned 3.4 times its bonds interest after allowing for depreciation and taxes.

2

In 1932 with rates cut to one-third it earned its interest twelve times. Earnings per share increased from $26.90 in 1924 to $68.08 in 1932. The privately owned electric company in Hartford, Connecticut, has had a like experience. Hence this board finds that the assumption of the Engineering Division on which it bases its conclusion that the project is technically and economically sound is far less favorable to the City than the facts warrant.

The same finding applies to the estimate of Mr. O. M. Rau. This board is of opinion that during the first year after the city begins business it will have at least 75 per cent of the business measured in dollars, and an increase of not less than 10 per cent in each succeeding year. Accordingly it finds that the project is technically, economically and financially sound.

The said finding soundness is supported by the report of the Finance Division dated April 12, 1934. This report was based upon a report of the Engineering Division dated March 6, 1934, a prior report to that referred to above and [fol. 2890] one less favorable to the City. The Finance Division report of April 12 found that on the basis of the division of business estimated by the engineer-examiner "50 per cent of sales the first year and 75 per cent the twentieth year and all municipal business," the project will earn only about 1.05 times the debt service for the first several years with a deficit for the first year. Inasmuch as the estimate of the engineer-examiner referred to has now been modified so that the estimate of division of business is altered to all

the municipal load and 60 per cent instead of 50 the first year, with an increase of 2 per cent each year, it is obvious that the Finance Division would approve the loan on the revised basis. Furthermore, this Board is of opinion as stated above that even the revised estimate upward of the engineer-examiner is too low in view of the heavy reduction of rates proposed. As stated above this board is of opinion that the said reduction will increase the portion of the business obtained by the City and also the net revenue.

2. This Board has further reviewed the conditions attached to the report of the Engineering Division dated March 6, 1934, as follows:

"3a. The applicant shall furnish evidence satisfactory to the Administrator that the Alabama Power Company can be legally required to furnish service on a day to day basis [fol. 2891] until the acquisition by the municipality of the used and usable portions of the existing distribution system."

This condition having been reviewed by this Board is disapproved as impossible of performance; and the following condition substituted:

3

The applicant shall furnish evidence satisfactory to the Administrator that the Alabama Power Company can be legally required to furnish service on a day to day basis until the municipal system is ready for service.

This Board has reviewed the further condition:

"3b. And that thereafter" (the acquisition of the competitive system) "the Power Company will be without authority to sell power within the municipal limits."

This condition is also disapproved for the reason that it prevents any loan being made as such a showing involves a law suit and is probably impossible of performance as the Company has a franchise until October 1, 1949. If the TVA fails to purchase the distribution system of the Company and the municipal system being under the necessity by its contract with TVA of offering rates at least 60 per cent less than existing rates, the Company, being unable to provide an equally low rate, will be unable to continue to compete and [fol. 2892] must withdraw. Hence this condition should be stricken out.

COMPLAINANTS' EXHIBIT No. 418 (Excluded)

This Board has further reviewed condition 4a of the engineer-examiner:

"(a) That no depreciation charges, taxes or any other items of expense, except normal operating expenses and power and lighting extensions shall be charged against the revenues of this project."

It approves this condition.

It has also reviewed condition 4b:

"That all municipally used electric energy shall be paid for at current selling rate schedules annually during the interval of the loan from the general fund into the account of this project."

This Board also approves this condition.

This Board finds also that the Engineering Division omitted to recommend a grant. Its report does not show any reason for this omission.

This Board finds that the applicant is as much entitled to a grant as other applicants to which grants have been allowed.

Resolved, that this Board recommend an allotment to the applicant in the sum of $372,000, of which not to exceed thirty per cent of the cost of the labor and materials employed thereon, estimated at $100,000 shall be a grant.

Henry T. Hunt, Chairman.

COMPLAINANTS' EXHIBIT No. 419

Revised Application to Federal Administration of Public Works for Loan for the Construction of an Electrical Distribution System for the City of Sheffield, Alabama.

The original application for this loan was filed with the Alabama Advisory Board of Public Works, in Montgomery, Alabama, on August 30th, 1933. No action has been taken by that board except as indicated by their letter of September 29th, 1933; a copy of said letter as well as the reply thereto is

(For brevity other portions of this exhibit are omitted.)

[fol. 2895] COMPLAINANTS' EXHIBIT No. 420.

Loan and Grant Agreement, Dated as of Dec. 28, 1934, Between the City of Sheffield, Alabama (Herein Called the "Borrower") and the United States of America (Herein Called the "Government")

Part One.

1. Purpose of Agreement.—Subject to the terms and conditions of this Loan and Grant Agreement (herein called the "Agreement"), the Government will, by loan and grant not exceeding in the aggregate the sum of $230,000, aid the Borrower in financing a project (herein called the "Project") consisting of the construction of an electric transmission line and distribution system, and other necessary appurtenances thereto, all pursuant to the Borrower's application (herein called the "Application"), P. W. A. Docket No. 3124, Title II of the National Industrial Recovery Act (herein called the "Act"), and the Constitution and Statutes of the State of Alabama, including particularly:

Act. No. 107, General and Local Acts of Alabama, Extra Session 1933, page 100.

2. Description of Bonds.—

(a) Designation: Electric System Bond.
(b) Authorized Principal Amount: $187,000.
(c) Type: Special obligation, serial, coupon bonds.
(d) Registration: Registerable at the option of the holder as to principal only.

(e) Date: June 1, 1934.

(f) Interest: At the rate of 4 per cent per annum, payable December 1, 1934, and semi-annually thereafter on June 1 and December 1 in each year.

(g) Maturities: Payable on June 1, in years and amounts as follows:

[fol. 2896]

Year	Amount	Year	Amount
1937	$10,000	1945	$11,000
1938	10,000	1946	12,000
1939	10,000	1947	12,000
1940	10,000	1948	12,000
1941	10,000	1949	12,000
1942	10,000	1950	12,000
1943	10,000	1951	12,000
1944	10,000	1952	12,000
		1953	12,000

(h) Security: Special obligations of the Borrower, payable solely from and secured only by a first pledge of the revenues derived from the operation of the Project, after provision only for the reasonable cost of operation and maintenance thereof.

(i) Place and Medium of Payment: Payable at the office of the City Treasurer, Sheffield, Alabama, or, at the option of the holder, at a bank or trust company in Borough of Manhattan, City and State of New York, in any coin or currency which, on the respective dates of payment of the principal of and interest on the Bonds, is legal tender for public and private debts.

(j) Denomination: $1,000.

Other provisions may be substituted for the provisions of subparagraphs (a), (b), (c), (d), (e), (f), (g), (i), and (j) of this Paragraph by the Borrower if the consent of the Federal Emergency Administrator of Public Works (herein called the "Administrator") to such substitution is obtained.

3. Amount and Method of Making Grant.—The Government will make and the Borrower will accept, whether or

not any or all of the Bonds be sold to a purchaser or purchasers other than the Government, a Grant in an amount equal to thirty per centum of the cost of the labor and materials employed upon the Project. Wherever the expression "cost of labor and materials" is used in this Agreement, such expression shall mean such cost as determined by the Administrator, and his determination thereof shall be final. The Government will make part of the Grant by payment of money and the remainder of the Grant by cancellation of Bonds and/or interest coupons; provided, however, that if all of the Bonds are sold to purchasers other than the [fol. 2897] Government, the Government will make the entire Grant by payment of money.

4. Conditions Precedent to the Government's Obligations.—The Government shall be under no obligation to pay for any of the Bonds or to make any Grant:

(a) Financial Condition and Budget: If, in the judgment of the Administrator, the financial condition of the Borrower shall have changed unfavorably in a material degree from its condition as theretofore represented to the Government, or the Borrower shall have failed to balance its budget satisfactorily or shall have failed to take action reasonably designed to bring the ordinary current expenditures of the Borrower within the prudently estimated revenues thereof;

(b) Cost of Project: If the Administrator shall not be satisfied that the Borrower will be able to complete the Project for the sum of $230,000, being the cost estimated at the time when the Application was approved by the Government, or that the Borrower will be able to obtain, through additional borrowing or otherwise, in a manner satisfactory to the Administrator, any additional funds which the Administrator shall believe to be necessary to complete the Project;

(c) Compliance: If the Borrower shall not have complied, to the satisfaction of the Administrator, with all the provisions contained in this Agreement or in the proceedings authorizing the issuance of the Bonds, theretofore to be complied with by the Borrower;

(d) Legal Matters: If the Administrator shall not be satisfied as to all legal matters and proceedings affecting the [fol. 2898] Bonds, the security therefor or the Project;

(e) Representations: If any representation made by the Borrower in this Agreement or in the Application or in any supplement thereto or amendment thereof, or in any document submitted to the Government by the Borrower shall be found by the Administrator to be incorrect or incomplete in any material respect;

(f) Tennessee Valley Authority Contract: If the Borrower shall not execute a valid contract, satisfactory to the Administrator, between the Borrower and the Tennessee Valley Authority, under the terms of which the Tennessee Valley Authority will supply electrical energy to the Borrower, and will permit the Borrower to charge such rates, in accord with the provisions of the Act and Ordinance authorizing the issuance of the Bonds, as may be reasonably necessary to pay the cost of operation and maintenance of the Project and the principal of and interest upon the Bonds;

(g) Rate and Bond Ordinances: If the ordinance providing for the fixing and maintenance of rates and collection of charges for the facilities and services afforded by the Project and the ordinance providing for the authorization, issuance and sale of the Bonds, and the use of the revenues derived from the operation of the Project, shall not be satisfactory in form and substance to the Administrator.

5. Bond Counsel and Bond Proceedings.—When this Agreement has been executed the Borrower (unless it has already done so) shall promptly:

(a) Retain municipal bond counsel satisfactory to the Administrator to assist the Borrower in the proceedings [fol. 2899] relative to the authorization, issuance and sale of the Bonds and to give legal opinions on such matters relative thereto as may be requested by the Administrator; and

(b) Take all the proceedings necessary for the authorization and issuance of the Bonds.

6. Bond and Grant Requisitions.—From time to time after the execution of this Agreement, the Borrower shall file a requisition with the Government requesting the Government to take up and pay for Bonds or to make a payment on account of the Grant. Each requisition shall be accompanied by such documents as may be requested by the Administrator (a requisition together with such documents being herein collectively called a "Requisition").

7. Bond Purchases.—If a Requisition requesting the Government to take up and pay for Bonds is satisfactory in form and substance to the Administrator, the Government, within a reasonable time after the receipt of such Requisition, will take up and pay for Bonds, having maturities satisfactory to the Administrator, sufficient funds for the construction of the Project for a reasonable period. Payment for such Bonds shall be made at the Birmingham Branch of the Federal Reserve Bank of Atlanta, Birmingham, Alabama (herein called the "Reserve Bank"), or at such other place or places as the Administrator may designate, against delivery by the Borrower of such Bonds, and all unmatured interest coupons appertaining thereto, together with such documents as may be requested by the Administrator. The Government shall be under no obligation to take up and pay for Bonds beyond the amount which in the judgment of the Administrator is needed by the Borrower to complete the project.

8. Grant by Payment of Money.—If a Requisition requesting the Government to make a payment on account of the Grant is satisfactory in form and substance to the Administrator, the Government will pay to the Borrower at the Reserve Bank or at such place or places as the Administrator may designate against delivery by the Borrower of its receipt therefor, a sum of money equal to the difference between the aggregate amount previously paid on [fol. 2900] account of the Grant, and

(a) Twenty-five per centum of the cost of the labor and materials shown in the Requisition to have been employed upon the Project if the Requisition shows that the Project has not been completed; or

(b) Thirty per centum of the cost of such labor and materials if the Requisition shows that the Project has been

completed and that all costs incurred in connection therewith have been determined.

Provided, however, that the part of the Grant made by payment of money to the Borrower shall not be in excess of the difference between $230,000 and the aggregate principal amount of the Bonds purchased by the Government. The Government reserves the right to make any part of the Grant by cancellation of Bonds and/or interest coupons rather than by payment of money if the Borrower does not need the money to pay costs incurred in connection with the construction of the Project.

9. Grant by Cancellation of Bonds.—If the Borrower, within a reasonable time after the completion of the Project, shall have filed a Requisition, satisfactory in form and substance to the Administrator, then the Government will cancel such Bonds and/or interest coupons as may be selected by the Administrator in an aggregate amount equal (as nearly as may be) to the difference between thirty per centum of the cost of the labor and materials employed upon the Project and the part of the Grant made by payment of money. The Government will hold Bonds or interest coupons for such reasonable time in an amount sufficient to permit compliance with provisions of this Paragraph, unless payment of such difference shall have been otherwise provided for by the Government.

10. Grant Advances.—At any time after the execution of this Agreement the Government may, upon request of the Borrower, if, in the judgment of the Administrator, the circumstances warrant, make advances to the Borrower on account of the Grant, but such advances shall not be in excess of thirty per centum of the cost of the labor and ma- [fol. 2901] terials to be employed upon the Project, as estimated by the Administrator.

11. Deposit of Bond Proceeds and Grant; Bond Fund; Special Accounts.—The Borrower shall deposit all accrued interest which it receives from the sale of the Bonds at the time of the payment therefor and any payment on account of the Grant which may be made under the provisions of Paragraph 9, Part One, hereof, into an interest and bond

retirement fund account (hereinafter called the "Bond Fund") promptly upon the receipt of such accrued interest or such payment on account of the Grant. It will deposit the remaining proceeds from the sale of the Bonds (whether such Bonds are sold to the Government or other purchasers) and the part of the Grant made by payment of money under the provisions of Paragraph 8, Part One, hereof, promptly upon the receipt of such proceeds or payments in a separate account or accounts (each of such separate accounts herein called a "Special Account"), in a bank or banks which are members of the Federal Reserve System and of the Federal Deposit Insurance Corporation and which shall be satisfactory at all times to the Administrator. Provided, however, that interest on said Bonds accruing prior to complete construction of the Project shall be paid from the proceeds of said Bonds to the extent such interest is not available from funds received as accrued interest, and, provision shall be made that, upon the delivery of said Bonds and the receipt of the proceeds, a sufficient sum, including the accrued interest received, shall be withdrawn from the proceeds and placed in said Bond Fund to pay said interest.

12. Disbursement of Monies in Special Accounts and Bond Fund.—The Borrower shall expend the monies in a Special Account only for such purposes as shall have been previously specified in Requisitions filed with the Government and approved by the Administrator. Any monies remaining unexpended in any Special Account after the completion of the Project which are not required to meet unpaid obligations incurred in connection with the construction of the Project shall either be paid into the Bond Fund, or said monies shall be used for the purchase of such of the Bonds as are then outstanding at a price not exceeding the principal amount thereof plus accrued interest. Any Bonds so purchased shall be cancelled and no [fol. 2902] additional Bonds shall be issued in lieu thereof. The monies in the Bond Fund shall be used solely for the purpose of paying interest on and principal of the Bonds.

13. Other Financial Aid from the Government.—If the Borrower shall receive any funds directly or indirectly from the Government or any agency or instrumentality

thereof, other than the Loan or Grant, to aid in financing the construction of the Project, to the extent that such funds are so received the Grant shall be reduced, and to the extent that such funds so received exceed the part of the Grant which would otherwise be made by payment of money, the aggregate principal amount of Bonds to be purchased by the Government shall be reduced.

[fol. 2903] Part Two

In Consideration of the Grant, the Borrower Covenants That:

1. Construction Work.—All work on the Project shall be done subject to the rules and regulations adopted by the Administrator to carry out the purposes and control the administration of the Act. The following rules and regulations as set out in Bulletin No. 2, revised on March 3, 1934, entitled, "P. W. A. Requirements as to Bids, Contractor's Bonds, and Contract, Wage, and Labor Provisions and General Instructions as to Applications and Loans and Grants", shall be incorporated verbatim (except that in all places where the term "Borrower" is used the name of the Borrower shall be inserted) in all construction contracts for work on the Project:

"1. (a) Convict Labor.—No convict labor shall be employed on the Project and no materials manufactured or produced by convict labor shall be used on the Project.

"(b) Thirty-hour Week.—Except in executive, administrative, and supervisory positions, so far as practicable and feasible in the judgment of the Government Engineer, no individual directly employed on the Project shall be permitted to work more than eight hours in any one day nor more than thirty hours in any one week: Provided, that this clause shall be construed to permit working time lost because of inclement weather or unavoidable delays in any one week to be made up in the succeeding twenty days.

"(c) No work shall be permitted on Sundays or legal holidays except in cases of emergency.

"2. Wages.—(a) All employees directly employed on this work shall be paid just and reasonable wages which

shall be compensation sufficient to provide, for the hours of labor as limited, a standard of living in decency and comfort. Such wages shall in no event be less than the minimum hourly wage rates for skilled and unskilled labor prescribed by the Administrator for the zone or zones in which the work is to be done, viz.:

[fol. 2904] Skilled labor $1.00
Unskilled labor ..... .40

"(b) In the event that the prevailing hourly rates prescribed under collective agreements or understandings between organized labor and employers in effect on April 30, 1933, shall be above the minimum rates specified above, such agreed wage rates shall apply: Provided, That such agreed wage rates shall be effective for the period of this contract, but not to exceed twelve months from the date of the contract.

"(c) The above designated minimum rates are not to be used in discriminating against assistants, helpers, apprentices, and serving laborers who work and serve skilled journeymen mechanics and who are not to be termed as "unskilled laborers."

"(d) The provisions of this contract relating to hours and minimum wage rates for labor directly employed on the Project shall for the purposes of this contract, to the extent applicable, supersede the terms of any code adopted under Title I of the Act permitting longer hours or lower minimum wage rates.

"(e) All employees shall be paid in full not less often than once each week and in lawful money of the United States, unless otherwise permitted by the Government Engineer, in the full amount accrued to each individual at the time of closing of the pay roll, which shall be at the latest date practicable prior to the date of payment, and there shall be no deductions or rebates on account of goods purchased, rent, or other obligations, but such obligations shall be subject to collection only by legal process: Provided, however, that this clause shall not be construed to prohibit the making of deductions for premiums for compensation and medical aid insurance, in such amounts as

are authorized by the laws of the State of Alabama to be paid by employees, in those cases in which, after the making of the deductions, the wage rates will not be lower than the minimum wage rates herein established.

[fol. 2905] "(f) A clearly legible statement of all wage rates to be paid the several classes of labor employed on the work, together with a statement of the deductions therefrom for premiums for workmen's compensation and/or medical aid insurance authorized by the laws of the State of Alabama, should such deductions be made, shall be posted in a prominent and easily accessible place at the site of the work, and there shall be kept a true and accurate record of the hours worked by and the wages, exclusive of all authorized deductions, paid to each employee, and the Engineer Inspector shall be furnished with a sworn statement thereof on demand.

"(g) The Board of Labor Review (herein called the 'Board') shall hear all labor issues arising under the operation of this contract and such issues as may result from fundamental changes in economic conditions during the life of this contract.

"(h) The minimum wage rates herein established shall be subject to change by the Administrator on recommendation of the Board. In the event that, as a result of fundamental changes in economic conditions, the Administrator, acting on such recommendation, from time to time establishes different minimum wage rates (referred to in Paragraph 2(a), (b) and (c) hereof) all contracts for work on the Project shall be adjusted accordingly by the parties thereto so that the contract price to the contractor under any contract or to any subcontractor under any subcontract shall be increased by an amount equal to any such increased cost, or decreased by an amount equal to any such decreased cost.

"(i) Engineers, architects, and other professional and sub-professional employees engaged on the Project shall receive the prevailing local rates for the various types of service to be rendered, except that in no case shall they receive less than the hourly rates set for the highest paid

[fol. 2906] class of skilled labor directly employed on the Project.

"3. (a) Labor Preferences.—Preferences shall be given, where they are qualified, to ex-service men with dependents, and then in the following order: (1) to citizens of the United States and aliens who have declared their intention of becoming citizens, who are bona fide residents of the City of Sheffield, and/or Colbert County, Alabama, and (2) to citizens of the United States and aliens who have declared their intention of becoming citizens, who are bona fide residents of the State of Alabama: Provided, That these preferences shall apply only where such labor is available and qualified to perform the work to which the employment relates.

"(b) Employment Services.—To the fullest extent possible, labor required for the Project and appropriate to be secured through employment services shall be chosen from the lists of qualified workers submitted by local employment agencies designated by the United States Employment Service: Provided, however, that union labor, skilled and unskilled, shall not be required to register at such local employment agencies but, if such labor is desired by the employer, shall be secured in the customary ways through recognized union locals. In the event, however, that employers who wish to employ union labor are not furnished with qualified union workers by the union locals which are authorized to furnish such labor residing in the locality within 48 hours (Sundays and holidays excluded) after request is filed by the employer, all labor shall be chosen from lists of qualified workers submitted by local agencies designated by the United States Employment Service. In the selection of workers from lists prepared by such employment agencies and union locals, the labor preferences provided in section (a) of this Paragraph 3 shall be observed, and preference shall be given to those unemployed at the date of registration who, at the date of selection have no other available employment.

[fol. 2907] "(c) Compliance with Title I of the Act.—The following section 7 (a) (1) and 7 (a) (2) of Title I of the Act shall be observed:

"(1) That employees shall have the right to organize and bargain collectively through representatives of their own choosing, and shall be free from the interference, restraint, or coercion of employers of labor, or their agents, in the designation of such representatives or in self-organization or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection: (2) that no employee and no one seeking employment shall be required as a condition of employment to join any company union or to refrain from joining, organizing or assisting a labor organization of his own choosing;"

"4. Human Labor.—The maximum of human labor shall be used in lieu of machinery wherever practicable and consistent with sound economic and public advantage; and to the extent that the work may be accomplished at no greater expense by human labor than by the use of machinery, and labor of requisite qualifications is available, such human labor shall be employed.

"5. Compensation Insurance.—Every employer of labor shall provide, if permitted by the laws of the State of Alabama, adequate workmen's compensation insurance for all labor employed by him on the Project who may come within the protection of such laws and shall provide, where practicable, employers' general liability insurance for the benefit of his employees not protected by such compensation laws, and proof of such insurance satisfactory to the Government Engineer shall be given. Where it is not permitted by law that such insurance be provided, some method satisfactory to the Administrator must be provided, by which the employees may, by paying the entire amount of the premium, derive a similar protection.

"6. Persons entitled to benefits of labor provisions.—There shall be extended to every person who performs the work of a laborer or of a mechanic on the Project or on any part thereof the benefits of the labor and wage provisions of this contract, regardless of any contractual relationship between the employer and such laborer or mechanic. There shall be no discrimination in the selection of labor on the ground of race, creed or color.

COMPLAINANTS' EXHIBIT No. 420.

[fol. 2908] "7. Withholding payment.—Under all construction contracts, the Borrower may withhold from the contractor so much of accrued payments as may be necessary to pay to laborers or mechanics employed on the work, the difference between the rate of wages required by this contract to be paid to laborers or mechanics on the work and the rate of wages actually paid to such laborers or mechanics.

"8. Accident prevention.—Reasonable precaution shall at all times be exercised for the safety of employees on the work and applicable provisions of the Federal, State, and municipal safety laws and building and construction codes shall be observed. All machinery and equipment and other physical hazards shall be guarded in accordance with the safety provisions of the "Manual of Accident Prevention in Construction" of the Associated General Contractors of America, unless and to the extent that such provisions are incompatible with Federal, State or municipal laws or regulations.

"9. (a) N. R. A. materials.—So far as articles, materials and supplies produced in the United States are concerned, only articles, materials and supplies produced under codes of fair competition under Title I of the Act, or under the President's Reemployment Agreement, shall be used in the performance of this work, except when the Government Engineer certifies that this requirement is not in the public interest or that the consequent cost is unreasonable.

"(b) Local preference.—So far as practicable, and subject to the provisions of section (a) of this Paragraph 9, preference shall also be given to the use of locally produced materials if such does not involve higher cost, inferior quality, or insufficient quantities, subject to the determination of the Government Engineer; but there shall be no requirement providing price differentials for, or restricting the use of materials to, those produced within the Nation or State.

"10. (a) Inspection of records.—The Administrator, through his authorized agents, shall have the right to inspect [fol. 2909] all work as it progresses, and shall have access to all pay rolls, records of personnel, invoices of materials,

and any and all other data relevant to the performance of this contract. There shall be submitted to the Administrator, through his authorized agents, the names and addresses of all personnel, and such schedules of the costs of labor, costs and quantities of materials, and other items, supported as to correctness by such evidence, as, and in such form as, the Administrator, through his authorized agents, may require. The submission and approval of said schedules, if required, shall be a condition precedent to the making of any payment under the contract.

"(b) There shall be provided for the use of the Engineer Inspector such reasonable facilities as he may request. In case of dispute the Government Engineer shall determine the reasonableness of the request.

"11. Reports.—Every employer of labor on the Project shall report within five days after the close of each calendar month, on forms to be furnished by the United States Department of Labor, the number of persons on their respective pay rolls directly connected with the Project, the aggregate amounts of such pay rolls, and the man-hours worked, wage scales paid to the various classes of labor, and the total expenditures for materials. Two copies of each of such monthly reports are to be furnished to the Government Engineer, and one copy of each to the United States Department of Labor. The contractor under any construction contract shall also furnish to the Borrower, to the Government Engineer, and to the United States Department of Labor the names and addresses of all subcontractors on the work at the earliest date practicable.

"12. There shall be provided all necessary services and all materials, tools, implements and appliances required to perform and complete entirely and in a workmanlike manner the work provided for in this contract. Except as otherwise approved in writing by the Government Engineer, such services shall be paid for in full at least once a month and such materials, tools, implements and appliances shall [fol. 2910] be paid for at least once a month to the extent of 90% of the cost thereof to the contractor, and the remaining 10% shall be paid thirty days after the completion of the part of the work in or on which such materials, tools, implements or appliances are incorporated or used.

"13. Signs.—Signs bearing the legend "Public Works Project No. 3124" shall be erected in appropriate places at the site of the Project.

"14. All reasonable rules and regulations which the Administrator may prescribe toward the effectuation of the matters covered by Paragraphs 1 to 13 inclusive, shall be observed in the performance of the work.

"15. Subcontractors.—(a) Appropriate provisions shall be inserted in all subcontracts relating to this work to insure the fulfillment of all provisions of this contract affecting such contractors, particularly Paragraphs 1 to 14 inclusive.

"(b) No bid shall be received from any subcontractor who has not signed U. S. Government Form No. P. W. A. 61, revised March—1934.

"16. Termination for breach.—In the event that any of the provisions of Paragraphs 1 to 15 inclusive of this contract are violated by the contractor under the construction contract or by any subcontractor under any subcontract on the work, the Borrower may, subject to the approval of the Government Engineer, and upon request of the Administrator shall, terminate the contract by serving written notice upon the contractor of its intention to terminate such contract, and, unless within ten days after the serving of such notice, such violation shall cease, the contract shall, upon the expiration of said ten days, cease and terminate. In the event of any such termination the Borrower may take over the work and prosecute the same to completion or otherwise for the account and at the expense of the contractor and/or subcontractor, and the contractor and his sureties shall be liable to the Borrower for any excess cost occasioned the Borrower in the event of any such termination, and the Borrower may take possession of and utilize [fol. 2911] in completing the work, such materials, appliances, and plant as may be on the site of the work, and necessary therefor. This clause shall not be construed to prevent the termination for other causes provided in the construction contract.

"17. Definition.—The term "Administrator" as used herein refers to the Federal Emergency Administrator of Public Works. The term "Act" as used herein refers to

the National Industrial Recovery Act. The term "Government Engineer" as used herein shall mean the State Engineer (P. W. A.) or his duly authorized representative, or any person designated to perform his duties or functions under this Agreement by the Administrator. The term "Engineer Inspector" as used refers to State Engineer Inspector, Resident and Assistant Resident Engineer Inspectors, and Supervising Engineers, appointed by the Administrator. The term "Materials" as used herein includes, in addition to materials incorporated in the Project or used or to be used in the operation thereof, equipment and other materials used and/or consumed in the performance of the work.

2. Restriction as to Contractors.—The Borrower shall receive no bid from any contractor, nor permit any contractor to receive any bid from any subcontractor, who has not signed U. S. Government Form No. P. W. A. 61, revised March, 1934.

3. Bonds and Insurance.—Construction contracts shall be supported by adequate surety or other bonds or security satisfactory to the Administrator for the protection of the Borrower, of Materialmen, and of labor employed on the Project or any part thereof. The contractor under any construction contract shall be required to provide public liability insurance in an amount satisfactory to the Government Engineer.

4. Force Labor.—If prices in the bids are excessive, the Borrower reserves the right, anything in this Agreement notwithstanding, to apply to the Administrator for permission to do all or any part of the Project by day labor, upon such conditions as the Administrator may impose.

[fol. 2912] Part Three

1. Construction of Project.—Not later than upon the receipt by it of the first Bond payment, the Borrower will promptly commence or cause to be commenced the construction of the Project, and the Borrower will thereafter continue such construction or cause it to be continued to completion with all practicable dispatch, in an efficient and economical manner, at a reasonable cost and in accordance

with the provisions of this Agreement, such engineering supervision and inspection as the Administrator or his representatives may require, and plans, drawings, specifications and construction contracts which shall be satisfactory to the Administrator. Except with the prior written consent of the Administrator, no materials or equipment for the Project shall be purchased by the Borrower subject to any chattel mortgage or any conditional sale or title retention agreement.

2. Information.—During the construction of the Project the Borrower will furnish to the Government all such information and data as the Administrator may request as to the construction cost and progress of the work. The Borrower will furnish to the Government and to any purchaser from the Government of 25 per centum of the Bonds, such financial statements and other information and data relating to the Borrower and the project as the Administrator or any such purchaser may at any time reasonably require.

3. Representations and Warranties.—The Borrower represents and warrants as follows:

(a) Litigation.—No litigation or other proceedings are now pending or threatened which might adversely affect the Bonds, the construction and operation of the Project, or the financial condition of the Borrower;

(b) Financial Condition.—The character of the assets and the financial condition of the Borrower are as favorable as at the date of the Borrower's most recent financial statement, furnished to the Government as a part of the Application, and there have been no changes in the character of [fol. 2913] its assets or in its financial condition except such changes as are necessary and incidental to the ordinary and usual conduct of the Borrower's affairs;

(c) Fees and Commissions.—No fee or commission has been or will be paid by the Borrower or any of its officers, employees, agents or representatives, and no agreement to pay a fee or commission has been or will be entered into by or on behalf of the Borrower, or any of its officers, employees, agents or representatives, in order to secure the loan or Grant hereunder;

(d) Affirmation. — Every statement contained in this Agreement, in the Borrower's Application, and in any supplement thereto or amendment thereof, and in any other document submitted to the Government by or on behalf of the Borrower is correct and complete, and no relevant fact materially affecting the Bonds, the Grant or the Project, or the obligations of the Borrower under this Agreement has been or will be omitted therefrom.

4. Sale of Bonds by the Government.—The Borrower will take all such steps as the Government may reasonably request to aid in the sale by the Government of any or all of the Bonds. Upon request, the Borrower will furnish to the Government or to any purchaser from the Government of 25 per centum of the Bonds, information for the preparation of a bond circular in customary form, signed by the proper official of the Borrower, containing such data as the Government or such purchaser may reasonably request concerning the Borrower and the Project.

5. Expenses.—The Government shall be under no obligation to pay any costs, charges and expenses incident to compliance with any of the duties or obligations of the Borrower under this Agreement, including, without limiting the generality of the foregoing, the cost of preparing, executing or delivering the Bonds or obtaining all legal opinions requested by the Administrator.

6. Waiver.—Any provision of this Agreement may be waived or amended with the consent of the Borrower and the written approval of the Administrator, without the execution of a new or supplemental agreement, if, in the opinion of the Administrator, which shall be conclusive, such waiver or amendment does not substantially vary the terms of this Agreement.

[fol. 2914] 7. Interest of Member of Congress.—No member of or Delegate to the Congress of the United States of America shall be admitted to any share or part of this Agreement, or to any benefit to arise therefrom.

8. Validation.—The Borrower hereby covenants that it will institute, prosecute and carry to completion in so far as it may be within the power of the Borrower, any and all

acts and things to be performed or done to secure the enactment of legislation or to accomplish such other proceedings, judicial or otherwise, as may be necessary, appropriate or advisable to empower the Borrower to issue the Bonds and to remedy any defects, illegalities and irregularities in the proceedings of the Borrower relative to the issuance of the Bonds and to validate the same after the issuance thereof to the Government, if in the judgment of the Administrator such action may be deemed necessary, appropriate or advisable. The Borrower further covenants that it will procure and furnish to the Government, as a condition precedent to the Government's obligations hereunder, a letter from the Governor of the State of Alabama stating that if in the judgment of the Administrator it may be advisable to enact legislation to empower the Borrower to issue the Bonds or to remedy any defects, illegalities or irregularities in the proceedings of the Borrower relative to the issuance thereof or to validate the same, said Governor will recommend and cooperate in the enactment of such legislation.

9. Miscellaneous.—Subject to the limitations herein contained, this Agreement shall be binding upon the parties hereto when a copy thereof, duly executed by the Borrower and the Government, shall have been received by the Borrower. This Agreement shall be governed by and construed in accordance with the laws of the State of Alabama.

10. Naming of Project.—The Project shall not be named except with the written consent of the Administrator.

11. Undue Delay by the Borrower.—If in the opinion of the Administrator, which shall be conclusive, the Borrower shall delay for an unreasonable time in carrying out any of the duties of the obligations to be performed by it under the terms of this Agreement, the Administrator may cancel this Agreement.

[fol. 2915] 12. Nature of Liability.—It is expressly understood and agreed that this Agreement does not constitute an indebtedness of the Borrower within the meaning of any provision or limitation of the Constitution of the State of Alabama, and it is hereby made a condition of this Agreement that the covenants, agreements, representations, and

COMPLAINANTS' EXHIBIT No. 420.

warranties herein contained do not and shall never impose a pecuniary liability upon the Borrower or charge against its general credit.

13. Construction of Agreement.—If any provision of this Agreement shall be invalid in whole or in part, to the extent it is not invalid it shall be valid and effective and no such invalidity shall affect, in whole or in part, the validity and effectiveness of any other provision of this Agreement or the right or obligations of the parties hereto, provided, in the opinion of the Administrator, the Agreement does not then violate the terms of the Act.

In Witness Whereof, the City of Sheffield, Alabama, and the United States of America have respectively caused this Agreement to be duly executed as of the day and year first above written.

City of Sheffield, Alabama, by —— ——. United States of America, by —— ——, Federal Emergency Administrator of Public Works. (Seal.)

Attest: —— ——.

[fol. 2916] COMPLAINANTS' EXHIBIT No. 421

Application by the City of Tuscumbia, Alabama, to the Federal Emergency Administration of Public Works for a loan and grant in the amount of $127,244 for the construction of an Electric distribution system.

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as Complainants' Exhibit No. 419.

COMPLAINANTS' EXHIBIT No. 422

Loan and Grant Agreement in the amount of $130,000 between the City of Tuscumbia, Alabama, and United States of America for the construction of electric transmission lines and distribution system.

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as Complainants' Exhibit No. 420.

[fol. 2917] COMPLAINANTS' EXHIBIT No. 423

Application of Courtland, Alabama, for Loan of $29,255. to Construct Electric Distribution System

IV. The Project

* * * * * * *

"c. Economic and Social value.—The Town of Courtland has been burdened with high rates on electric current since the installation of the present system. Because of these high rates only a few of the more fortunate citizens have been financially able to enjoy the full benefit of having power for purposes other than for lighting their homes.

With the installation of a municipally owned distribution system and cheap power from the lines of the Tennessee Valley Authority it is reasonable to suppose that a majority of the people not now financially able to avail themselves of the full facilities of power in the home will become users of electric ranges, water heaters, electric refrigeration and better lighting in their homes.

We feel, therefore, that the contemplated project is meritorious and of great economic and social value to the inhabitants of Courtland.

Courtland now has on file with the PWA an application for funds with which to construct a complete waterworks, fire protection and sewage disposal system.

d. Relation to general plan.—The project is a part of a plan for municipal ownership of the major utilities in the Town of Courtland.

* * * * * * *

i. Competition.—The project, when completed, will not compete directly or indirectly with any similar enterprise for, though the Town is now being served by the Alabama Power Company, they, the Power Company, have no franchise and if the project is approved, will have no standing in the community.

* * * * * * *

k. Number of men employed.—It is estimated that an average of twenty men will be employed directly on the work for a period of three months, and that employment

COMPLAINANTS' EXHIBIT No. 423

will be given indirectly to about thirty men, for the same period, for the manufacture of equipment and materials.

* * * * * * *

[fol. 2918] r. Unemployment in district involved.—This information is not available at this time but will be supplied later if desired.

* * * * * * *

V. Revenue and Expense

* * * * * * *

e. Schedule of rates.—Rates will be established by the Town Council upon advice from the Tennessee Valley Authority after the system is installed. Rates used in this application have been assumed from rate table published as applying to the City of Tupelo, Mississippi."

* * * * * * *

(For brevity other portions of this exhibit are omitted.)

[fol. 2919] COMPLAINANTS' EXHIBIT No. 424

Loan and Grant contract in the amount of $16,000 between Federal Emergency Administration of Public Works and the Town of Courtland, Alabama, with which to construct an electric distribution system.

(Omitted)

COMPLAINANTS' EXHIBIT No. 425

PWA Form 210, dated July 1, 1936, and entitled "Terms and Conditions".

(Omitted)

[fol. 2920] COMPLAINANTS' EXHIBIT No. 426

December 15, 1933.

Application of Decatur, Alabama, for Loan of $285,000.00 to Construct a Municipal Electric Light and Power Distribution System

IV. The Project

* * * * * * *

(c) Economic and Social Value.—The present electric light and power distribution system is being operated by public utility. The construction of a municipal system would be of great economic and social value to the inhabitants of the community.

In the first place, the construction would put many unemployed men to work.

In the second place, the distribution of cheap power from the Tennessee Valley Authority will cause a large increase in the use of power in the homes and by industry. The larger use of power in the homes will tend to reduce drudgery, increase conveniences and make for a happier home life.

The larger use of power by industry will tend to increase pay rolls, which in turn will increase the demand for business and professional service.

The successful application of the cheap TVA power will tend to reduce electric light and power rates in other communities.

(d) Relation to General Plan.—The project is in line with the National Plan to promote the happiness and prosperity of the people by making available cheap electric power.

(e) City or Regional Planning Board.—There is no city Planning Board. Decatur is in the Tennessee Valley and is within the area to be served by the Tennessee Valley Authority. The Authority has indicated willingness to supply power if the City can secure the funds with which to construct the distribution system.

* * * * * * *

COMPLAINANTS' EXHIBIT No. 426

[fol. 2921] (i) Competition.—The project will compete with a similar enterprise of Alabama Power Company, unless its distribution system should be taken over.

• • • • • • •

(k) Number of Men Employed.—It is estimated that an average of 100 men will be employed directly on the work for a period of eight (8) months and that employment will be given to about 300 men for the same period, for the manufacture of equipment and material.

• • • • • • •

(n) Regenerative Character.—It is expected that the application of cheap TVA electric power rates will cause the purchase and use of electrical appliances for household use, which will stimulate the manufacture and sale of such articles. The low TVA rates will tend to bring in new industries. This of course will call for the employment of both skilled and unskilled labor in construction of plants and housing for employes.

• • • • • • •

V. Revenue and Expense

• • • • • • •

(d) Discussion of Estimated Revenue and Expense.—The financial table indicates a reasonable margin of surplus during the life of the loan. The increases in the revenue shown are in line with the expected development of the area as the Community gets to using TVA cheap power.

(e) Schedule of Rates.—The following are the rates to be charged. These rates may be changed by the Municipality with the approval of Tennessee Valley Authority, provided no rate shall be higher than the rate for similar service authorized by Alabama Public Service Commission for public utility.

TVA Rates are attached.

• • • • • • •

COMPLAINANTS' EXHIBIT No. 426

Details of Energy Cost

The amount of 38,058 for power at wholesale from Tennessee Valley Authority on the application of Decatur, Alabama, is for energy to be purchased at their regular quoted schedule, as follows:

1,810 kw.	demand at .90	$1,629.00
100,000 kwh.	energy at .004	400.00
200,000 "	" at .033	600.00
217,000 "	" at .0025	542.50
517,000	Total per month	$ 3,171.50
	Total per year	38,058.00

• • • • • • •

We are advised by the Tennessee Valley Authority that transmission lines will be run into the City and the main part of the substation supplied by the TVA, including the step down transformers at no cost to the city. They propose to furnish the current and meter on the low side of [fol. 2922] the main transformers at a distribution voltage of approximately 2300 volts.

• • • • • • •

It seems very desirable that the distribution system be constructed at once for several reasons:

1. To put men to work.

2. To cooperate with Tennessee Valley Authority in making available cheap power rates to the residents of the community.

3. Because loans and grants are available from the Federal Emergency Administration of Public Works on liberal terms.

• • • • • • •

(For brevity other portions of this exhibit are omitted.)

[fol. 2923] COMPLAINANTS' EXHIBIT No. 427

Loan and Grant agreement dated December 6, 1934, in the amount of $350,000 between Federal Emergency Administration of Public Works and the City of Decatur, Alabama, for constructing an electric distribution system.

To avoid repetition this exhibit is not set out herein at length. It is substantially the same as Complainants' Exhibit No. 420.

[fol. 2924] COMPLAINANTS' EXHIBIT No. 428 (Excluded)

Tennessee Valley Authority,

Knoxville, Tennessee

April 6, 1934.

Captain R. H. Elliot, Director of Public Works Administration, Washington, D. C.

MY DEAR CAPTAIN ELLIOT:

Your inquiry addressed to Miss Marguerite Owen, our Washington representative, pertaining to the application of the town of Decatur, Alabama, for a PWA loan for the construction of an electrical distribution system, has been transmitted to the Electric Division for reply.

On March 14th a contract was entered into between the Tennessee Valley Authority and the town of Decatur, Alabama, to furnish that municipality with TVA power. This contract is dependent upon the ability of Decatur, Alabama, to construct or acquire a distribution system.

By reason of a contract entered into with the Commonwealth & Southern Corporation and its subsidiary, the Alabama Power Company, for the purchase of certain transmission facilities, the Tennessee Valley Authority is in position to furnish electric current for all of the requirements of Decatur, Alabama, just as soon as the town of Decatur has provided its own distribution system.

It is our understanding that the town of Decatur, Alabama, has made every reasonable effort to purchase the electric distribution system now owned and operated in the town of Decatur by the Alabama Power Company, at a fair price commensurate with the cost of construction of a new distribution system.

COMPLAINANTS' EXHIBIT No. 428 (Excluded)

While it is true the serving of Decatur, Alabama, with TVA power does not involve any additional expenditure by the TVA for labor and materials the construction of a distribution system, which now seems to be the only way in which Decatur, Alabama, can give its citizens the benefit of the low TVA rates, would require the expenditure, by the town of Decatur, Alabama, of $285,000.00 for labor and materials.

The citizens of Decatur, Alabama, have clearly manifested their interest in obtaining the benefits of the [fol. 2925] low rates possible under Decatur's contract with the Tennessee Valley Authority. They feel that these low rates will not only enable them to afford a greater use of the service of electric energy, but would contribute materially to the commercial and industrial development of their community.

In view of the probability of other Alabama cities and towns benefiting from the low TVA rates, leading citizens of Decatur have expressed the firm conviction that TVA power is a public necessity to their community if they are to keep pace industrially, commercially and socially with their neighboring cities and towns.

The President, and the creators of the Tennessee Valley Authority Act of 1933 in the Congress, have indicated their desire that the Tennessee Valley Authority set up a "yardstick" in the Tennessee Valley as a measurement of utility operation. In order that this "yardstick" may be a reality, it is necessary that various cities and towns in the Tennessee Valley desiring to do so, may provide their own distribution systems, and thereby have a part in the establishment and operation of this "yardstick" of electric energy values. By reason of the high standing of Decatur among municipalities in the Valley area in point of industrial, commercial and civic development, the Tennessee Valley Authority regards the serving of Decatur, Alabama, as particularly desirable in its development of the electric utility "yardstick."

If there is any additional information we can furnish you, please feel free to call on us.

Yours sincerely, David E. Lilienthal, Director and General Counsel.

[fol. 2926] COMPLAINANTS' EXHIBIT No. 429 (Excluded)

April 10, 1934.

Mr. David E. Lilienthal, Director and General Counsel, Tennessee Valley Authority, Knoxville, Tennessee.

DEAR MR. LILIENTHAL:

This will acknowledge your letter of April 6, regarding the application of the Town of Decatur, Alabama, Docket No. 6587.

Copies of your letter are being filed with the dockets for the information of our examiners.

Sincerely yours, R. H. Elliott, for the Administrator.

[fol. 2927] COMPLAINANTS' EXHIBIT No. 430

December 20, 1933.

Application of Hartselle, Alabama, for Loan and Grant of $95,500 to Construct an Electrical Distribution System

* * * * * * * *

IV. Project:

a. General Description:

The project under contemplation will consist of a complete and new electric light and power distribution system for a city of about 2500 population. It is proposed that the distribution system be energized from a transformer sub-station located near the center of the city, which sub-station will be furnished by the Tennessee Valley 90020 Feb. 9 '34 and supplied by them with energy from Muscle Shoals and Wheeler Dam.

The distribution system is intended to practically duplicate and supplant a public utility distribution system. The City has secured ten year contracts from practically all the consumers now in the city, which contracts read as follows:

"Contingent Power Contract"

"For and in consideration of One ($1.00) Dollar in hand paid by J. P. Hodges, Mayor of the City of Hartselle, Ala-

bama, on behalf of said City, the receipt whereof is hereby acknowledged, and in further consideration of the opportunity to secure lower electric rates for myself, and of the benefits that will accrue to me as a citizen of or business man of said City by reason of the net revenue which should be earned by the City from the municipal operation of its own electrical distribution system, it is hereby agreed as follows:

1. That when, and if, the City of Hartselle, Ala. has electrical energy of the required voltage and phase available for sale at the premises of the undersigned, the City will supply, and the undersigned, so long as he is a purchaser of electrical energy in the territory served by the City's municipal distribution system, will purchase his entire requirements of electrical energy from the City for a period of ten (10) years beginning as soon as the service is available, but not later than January 1, 1935.

2. It is further agreed that the rates for electricity to be charged by the City and to be paid by the consumer shall be those prescribed by the Tennessee Valley Authority, and that such rates shall be lower than the present public utility rates paid by the undersigned."

The estimates of cost and of earnings are based upon the signed customers. Some of these customers are at present disconnected. Inasmuch, however, as this loan is for a long [fol. 2928] period, these customers will be connected to the system when normal business resumes, and especially when cheap power is offered. It is proposed to construct a new system complete without removing the old system.

It is also proposed to construct a central distributing sub-station near the center of the city, which sub-station will be equipped with transformers furnished by the TVA. Power will be supplied the municipality of 2300 volts, 3 phase, 60 cycle. Power would be supplied by the city to most of the industries at 2300 volts, thus requiring no transformation.

* * * * * * *

The cost estimates are based upon the number of consumers signed up and upon their classification. The loads of the industrial consumers were ascertained by inspectors.

COMPLAINANTS' EXHIBIT No. 430

The consumption of the domestic and commercial consumers is predicated upon a return to normal business conditions and upon the normal stimulation of consumption by the low promotional rates to be put into effect by the TVA.

• • • • • • •

c. The lower rates resulting from this project will stimulate the industrial and commercial development of the city, and with the use of household electrical appliances the drudgery of house-keeping will be greatly relieved, thus improving home life for the residents.

Long Range Development:

d. The project is a part of the program of the Tennessee Valley Authority of establishing better living and social conditions in the regions within transmission distance of the Muscle Shoals power development.

e. The city has no regional planning board.

f. The city is an isolated town about 11 miles South of Decatur, Ala., and is a part of the TVA project.

• • • • • • •

i. The project will not be competitive since practically all of the consumers are signed up for a ten (10) year period.

• • • • • • •

Much of the present industrial load is seasonal, which will have the effect of increasing the kw. demand and decreasing the load factor of the City's purchased power. The TVA power demand rates to municipalities, however, provide for this contingency so that the annual weighted demand will not be greatly increased.

• • • • • • •

(For brevity other portions of this exhibit are omitted.)

[fol. 2929] COMPLAINANTS' EXHIBIT No. 431

(Omitted)

COMPLAINANTS' EXHIBIT No. 432

Loan and Grant contract dated December 4, 1935, in the amount of $60,000, between Federal Emergency Administration of Public Works and the City of Hartselle, Alabama, for constructing an electric distribution system.

[fol. 2930] COMPLAINANTS' EXHIBIT No. 433

Application of Muscle Shoals, Alabama, for Loan of $150,000.00 to Construct Waterworks and Electrification Systems

I. General

This application has been prepared and the data is presented in accordance with Circular No. 2. of the Federal Emergency Administration of Public Works. If additional data is needed it will be promptly furnished by the correspondent upon request.

• • • • • • •

III.

Loan requested:

For Electric Lights	$ 33,000.00
For Water Works	117,000.00
Total	$150,000.00

a. Amount:

• • • • • • •

IV. The Project

• • • • • • •

c. Economic and Social Value:

Muscle Shoals is without adequate Water and Electrical facilities at this time. The Town being the logical location for the housing of employees of the Nitrate Plants and adjacent to the TVA development is sure to grow rapidly in the next few years. It is absolutely necessary for the community to

COMPLAINANTS' EXHIBIT No. 433

have these conveniences to make living conditions bearable. In addition to providing for the future the work at this time will provide a source of income for many needy native families. We do not believe that the economic and social value can be questioned.

• • • • • • •

i. Competition:

The project will not compete directly or indirectly with any general similar enterprise.

• • • • • • •

k. Number of men employed:

It is estimated that an average of 65 men will be employed directly on the work for a period of 8 months and that employment will be given indirectly to about 140 men, for the same period, for the manufacturing of equipment.

• • • • • • •

V. Revenue and Expense

• • • • • • •

Light and Power Rates

To be agreed upon between TVA authorities and the Town with a minimum of $2.00.

(For brevity other portions of this exhibit are omitted.)

Woodward Building,
Birmingham, Alabama.

February 19th, 1934.

(In blue pencil 2-21-34)

Copy 7341

Mr. George J. Davis, Jr., State Engineer, P. W. A., Montgomery, Alabama.

Re: Guntersville, Elec. Dist. System Eng. Ref. No. 171.

DEAR MR. DAVIS:

With further reference to the above application, you will [fol. 2933] please note that in the tabulation of income and

interest and principal payments set forth in our letter of January 10, 1934, in response to your request of December 29, 1933, for additional information, the Grant applied to the interest and principal payments for three years.

We inclosed herewith copy of letter from Mr. V. D. L. Robinson, Administrative Assistant, Tennessee Valley Authority, Knoxville, Tennessee, to Senator Bankhead, from which you will note it is Mr. Robinson's judgment that within two years Norris Dam will be completed, the contract with the Commonwealth and Southern Corporation to stay out of the Guntersville territory will have expired and that the TVA will therefore be in a position to serve the City of Guntersville. We would therefore ask that you pass on the Guntersville application on the assumption that power will be available from the TVA within less than three years from the date of the approval of the loan, and that meanwhile the interest and principal charges will be taken care of by the grant.

We, therefore, see no reason why this should not reinstate Guntersville's application for favorable consideration, and we respectfully request that you give it this consideration and forward same to Washington.

Yours very truly, Lide & Adler, (Signed) Martin J. Lide.

MJL/T.

cc: Mr. Claud D. Scruggs, Attorney-at-Law, Guntersville, Ala.

Tennessee Valley Authority,

Knoxville, Tennessee,

Feb. 8, 1934.

(In pencil Encl. 2-19-34.) (2-21-34.)

Hon. J. H. Bankhead, Senate Office Building, Washington, D. C.

MY DEAR SENATOR BANKHEAD:

Your letter of January 30 addressed to the Board of Directors of the Tennessee Valley Authority has been referred to this office for attention and reply.

Application for power by the cities of Oneonta, Hartselle, Tarrant City, Bessemer, Russellville, Guntersville, and

Cullman, Alabama, have been under consideration for some time and we are all very anxious to do every thing possible to serve these cities. As you will recall, a contract was made by the Tennessee Valley Authority with the Commonwealth and Southern Corporation and its subsidiaries, the Georgia, Alabama, Mississippi and Tennessee Electric Power Companies, whereby we take over certain sections in your State, Mississippi and Tennessee, including certain transmission [fol. 2934] facilities, and in the case of Mississippi several local distribution systems. This contract was made with the view of providing a market for the electric energy produced at Wilson Dam pending the completion of Norris Dam, when our present contract with the Commonwealth and Southern terminates. At the present rate of progress on the construction of Norris Dam, it is quite possible that the dam will be completed within two years.

From present indications, it appears that we will have the desired market for Wilson Dam power in that part of your State in close proximity to Muscle Shoals and in Northeast Mississippi and adjacent to the transmission line between Norris and Wilson dams in Tennessee. We did not include Bessemer and other points in the immediate Birmingham Territory in the present contract, realizing that we would be in better position to serve communities, if this service is desired, after Norris Dam is completed. We will be in position to serve some of those places you have mentioned, particularly Hartselle and Russellville, at the present time, as Hartselle and Russellville are in the territory to be acquired from the Alabama Power Company. There is nothing in the contract with the Commonwealth and Southern which would preclude full consideration of serving many other cities in Alabama after Norris Dam is in production, or in serving any of those points now, providing a transmission line is constructed by the municipalities to connect with our present lines or any of those which we will take over from the Alabama Power Company.

In order that you may have a copy of our contract with the Commonwealth and Southern immediately available for reference purposes, I am enclosing another copy herewith.

If there is any additional information you or any of your constituents desire, we will endeavor to give you such information promptly. In the meantime. Mr. Llewellyn Evans.

COMPLAINANTS' EXHIBIT No. 439

our Chief Electrical Engineer, and his staff are continuing their study of each situation of Alabama municipalities which have made application for TVA power to ascertain just how, if possible, we may be able to serve them even prior to the completion of Norris Dam.

Yours very truly, Tennessee Valley Authority,
(Signed) by V. D. L. Robinson, Administrative Assistant.

COMPLAINANTS' EXHIBIT No. 442

Application and revised application of Tarrant City, Alabama, dated December 20, 1933, to Federal Emergency Administration of Public Works for a loan and grant in the amount of $184,400 to construct an electric distribution system.

To avoid repetition, the original application comprising the first part of this exhibit is not set out herein at length. It is substantially the same as Complainants' Exhibit No. 430:

P. W. A. Docket No. 7512—Revised Application of Tarrant City, Alabama, for a loan from the Federal Emergency Administration of Public Works to construct an electrical distribution system:

COMPLAINANTS' EXHIBIT No. 442

Lide & Adler,

Engineers

Birmingham, Alabama

• • • • • • •

[fol. 2936] Birmingham, Alabama,
August 14, 1935.

Re Docket 7512—Tarrant City, Alabama, Electric Distribution System

Mr. H. S. Geismer, Acting State Director, PWA, Montgomery, Alabama.

DEAR SIR:

On July 13, 1935, Mr. Roy Ingram, Mayor, Tarrant City, received a joint letter from Senators Black and Bankhead dated July 12, 1935, in which they advised the Mayor that the revised application of his city for a loan and grant to construct a steam power plant with which to serve both his city and the City of Bessemer, will not be approved. They advised the Mayor, however, that if he could secure another source of power the application for the loan and grant would probably be approved. The City of Tarrant City therefor desires to amend its application for the second time to provide for a change in the source of power.

Please refer to the following previous correspondence?

a. The original application of the City of Tarrant City, Alabama, filed in December, 1933, original engineering reference No. 173, for a loan and grant of $184,400 for an electrical distribution system.

b. Our letter of January 4, 1934, addressed to Mr. Geo. J. Davis, Jr., State Engineer, O. W. A., Montgomery, Alabama, in response to his letter of January 11, 1934.

It is now desired to amend Docket 7512 for the second time to provide for the purchase of power from the City of Bessemer, Docket 7677, by the City of Tarrant City at TVA wholesale rates, at a sub-station to be located about three miles beyond the city limits of Tarrant City.

COMPLAINANTS' EXHIBIT No. 442

In the revised application of the City of Bessemer it is now proposed that the City of Bessemer shall construct a 22,500 kva. 132/22 kv. sub-station about three miles from Tarrant City, and that it shall also build a double circuit 132 kv. transmission line to the southern border of Morgan County, at which point the transmission line and sub-station will be supplied with power by the TVA.

The applicant also desires to amend Docket 7512 for the construction of a double circuit 22 kv. feeder approximately three miles long from the main sub-station to a city distribution sub-station located in or near the city; to construct a distribution system to supply domestic and commercial consumers within and near the city limits; and to supply industrial consumers both in and without the city limits; power to be sold to customers by the City of Tarrant City at TVA resale rates.

[fol. 2937] Print BA-O-1 incorporated herewith indicates the general plan of transmission and distribution, while print BA-O-2 incorporated herewith shows an enlarged scale plan of the transmission system limited to the Birmingham district.

Section 7 of the contract dated January 5, 1934, between the TVA and the Power Companies provided that during the period prior to the completion of Norris Dam, the Authority will not sell energy Outside of Said Counties (including Morgan County) to municipalities now served by the Power Company. The inclusion of the limitation Outside of Said Counties thus provides that the Authority may sell power to municipalities such as Bessemer at any point within Morgan County. It is therefore proposed in revising the applications of Tarrant City, Docket 7512, and Bessemer, Docket 7677, to provide for the construction of a double circuit, 132 kv., three phase transmission line from the southern border of Morgan County to a step-down transformer sub-station located in the outskirts of Tarrant City, and for the distribution of power at three phase, 22 kv. from this sub-station to Tarrant City and Bessemer. It is proposed that Bessemer shall own and operate both the transmission line and the sub-station, and shall sell three phase, 22 kv. power to Tarrant City at TVA wholesale rates.

COMPLAINANTS' EXHIBIT No. 442

It is also proposed to re-setup both applications on the basis of a 45% grant to the cities.

• • • • • • •

The city of Tarrant City, as stated in previous communications, already has in its possession signed contingent power contracts with approximately 97% of the present small consumers in the city.

• • • • • • •

(For brevity other portions of this exhibit are omitted.)

[fol. 2938] COMPLAINANTS' EXHIBIT No. 443

Loan and Grant contract dated December 11, 1935, in the amount of $329,091, between Federal Emergency Administration of Public Works and Tarrant City, Alabama:

Federal Emergency Administration of Public Works
Washington, D. C.
December 11, 1935.

PWA Docket No. 7512

City of Tarrant City, Jefferson County, Alabama.

1. The United States of America (herein called the "Government") hereby offers to aid in financing the construction of a transmission line from a sub-station to be constructed by the City of Bessemer and a complete distribution system (herein called the "Project") by making a loan and grant to the City of Tarrant City, Alabama (herein called the "Applicant") in an amount not exceeding in the aggregate the sum of $329,091.

2. The Government will purchase, at the principal amount thereof plus accrued interest, from the Applicant, obligations of the description set forth below (or such other description as shall be mutually satisfactory) in the aggregate principal amount of $181,000 less such amount of such

COMPLAINANTS' EXHIBIT No. 443

obligations, if any, as the Applicant may sell to purchasers other than the Government:

(a) Obligor: City of Tarrant City;

• • • • • • •

3. The Government will make the grant in an amount equal to forty-five percent (45%) of the cost of the Project upon completion, but not to exceed, in any event, the sum of $148,091.

• • • • • • •

(For brevity other portions of this exhibit are omitted.)

[fol. 2939] COMPLAINANTS' EXHIBIT No. 444

Application of Bessemer, Ala., for Loan and Grant of $636,000 to Construct an Electrical Distribution System

• • • • • • •

It is proposed to construct a central distributing sub-station near the center of the city, which sub-station will be supplied from transformers furnished by the TVA.

• • • • • • •

Economic and Social Value of the Project:

c. The lower rates resulting from this project will stimulate the industrial and commercial development of the city, and with the use of household electrical appliances the drudgery of house-keeping will be greatly relieved, thus improving home life for the residents.

Long Range Development:

d. The project is a part of the program of the Tennessee Valley Authority of establishing better living and social conditions in the regions within transmission distance of the Muscle Shoals power development.

• • • • • • •

The ratio of residential consumers to population under normal conditions and with the proposed low rates and large industrial population in Bessemer, will conservatively

approximate one-seventh. Since the population of Bessemer for 1930 was 20,721, this will assume 3,000 residential consumers as an average condition over a 30-yr. period, on the assumption that the city will not grow during this period. The present annual consumption per residential consumer in this district, due to the existing rates and the depression, is very low, averaging about 500 kwh. A reasonable expectation over a period of ten years, with return of normal business conditions, and with the low TVA rates, would be 1,000 kwh. per consumer. In Tacoma, Washington, where these rates are in vogue, this figure is 1,500 kwh. at present, and is generally increasing as the use of domestic electrical appliances becomes more general.

Under proposed TVA rates, without any surcharge, the average domestic rate, based on a consumption of 1000 kwh. per year, would approximate 2½¢ per kwh.

• • • • • • •

[fol. 2940] The average rate for an average commercial consumption of 300 kwh. per month on the TVA base rate, without sur-charge, would be approximately 2½¢ per kwh. Under TVA regulations we are required to add the same sur-charge to the commercial consumer as to the industrial consumer. We are therefore increasing the average rate to the commercial consumer to .3125¢ per kwh. as a basis for the proposed financial set-up.

• • • • • • •

P. W. A. Docket No. 7677 Revised Application of Bessemer, Alabama, for a Loan from the Federal Emergency Administration of Public Works to Construct an Electrical Distribution System

Birmingham, Alabama,
August 14, 1935.

Re Docket 7677—Bessemer, Alabama, Electric Distribution System

Mr. H. S. Geismer, Acting State Director, PWA, Montgomery, Alabama.

DEAR SIR:

On July 13, 1935, Mr. Roy Ingram, Mayor, Tarrant City, received a joint letter from Senators Black and

Bankhead dated July 12, 1935, in which they advised the Mayor that the revised application of his city for a loan and grant to construct a steam power plant with which to serve both his city and the City of Bessemer, will not be approved. They advised the Mayor that if he could secure another source of power the application for the loan and grant would probably be approved. A similar letter was received by the City of Bessemer.

Inasmuch as the revised application of the City of Bessemer was made contingent upon the purchase of power from the City of Tarrant City, generated at its proposed steam power plant, the City of Bessemer now desires to amend its application for the second time to provide for the purchase of power from the TVA at the southern border of Morgan County; for the construction of a 132 kv. transmission line therefrom, to a 22,500 kva. sub-station located on the outskirts of Tarrant City; for the construction of a 22,500 kva., 132/22 kv. sub-station on the outskirts of Tarrant City; for the resale of power to the City of Tarrant City at the sub-station at 22 kv.; for the construction of a 22 kv. double circuit line from the sub-station to a distribution sub-station on the outskirts of Bessemer approximately 15 miles in length; and for the construction of a municipal distribution system in the City of Bessemer to supply residential, commercial and industrial consumers.

Please refer to the following correspondence:

[fol. 2941] a. The original application of the City of Bessemer, Alabama, filed in December, 1933, original engineering reference 170, for a loan and grant for an electrical distribution system, $636,000.

b. Our letter of February 22, 1934, addressed to Mr. George J. Davis, Jr., State Engineer, PWA, Montgomery, Alabama, in response to his letter dated January 11, 1934, requesting an early revision of the application to adapt it to a source of power other than the TVA. This request to Mr. Davis was made necessary by virtue of the contract between the TVA and the Commonwealth and Southern Power Corporation whereby the TVA agreed not to build lines in the Birmingham district.

c. Our letter dated March 28, 1935, to Mr. H. S. Geismer, State Engineer, PWA, Montgomery, Alabama, in re. Docket 7677.

d. Our letter to Mr. H. S. Geismer, State Engineer PWA, Montgomery, Alabama, dated April 13, 1935, in re. Docket 7677.

It is now desired to amend Docket No. 7677 for the second time to provide for the purchase of power from the TVA at the southern border of Morgan County, by the City of Bessemer; for the construction of a double circuit 132 kv. transmission line from that point to a step down transformer sub-station located in the outskirts of Tarrant City; for the sale of power at 22 kv. at the sub-station to the City of Tarrant City, Docket No. 7512; and for the transmission of power at 22 kv. from the sub-station to the City of Bessemer.

Section 7 of the contract dated January 5, 1934, between the TVA and the Power Companies provided that during the period prior to the completion of Norris Dam, the Authority will not sell energy Outside of Said Counties (including Morgan County) to municipalities now served by the Power Company. The inclusion of the limitation Outside of Said Counties thus provides that the Authority may sell power to municipalities such as Bessemer at any point within Morgan County. It is therefore proposed in revising the application of Bessemer, Docket 7677, and Tarrant City, Docket 7512, to provide for the construction of a double circuit, 132 kv., three phase transmission line from the southern border of Morgan County to a step down transformer sub-station located in the outskirts of Tarrant City, and for the distribution of power at three phase, 22 kv. from this sub-station to Tarrant City and Bessemer. It is proposed that Bessemer shall own and operate both the transmission line and the sub-station, and shall sell three phase, 22 kv. power to Tarrant City at TVA wholesale rates.

It is also proposed to re-setup both applications on the basis of a 45% grant to the cities.

* * * * * * *

[fol. 2942] Some of these industries, as will be noted on print BA-O-1 and print BA-O-2, are intra-urban and some extra-urban, but all are within transmission range of the proposed distribution system. The aggregate kw. capacity

COMPLAINANTS' EXHIBIT No. 444

of these industries is very greatly in excess of the aggregate kw. on which the earnings statement herewith incorporated is predicated. It is believed that if and when a loan to the City of Bessemer by the PWA, for the purposes herein provided for, is made contingent upon the sale of industrial power there will be no trouble in signing up a large block of industrial power very much in excess of the aggregate kw. demand herein specified. The franchise conditions of the existing electric utility in Bessemer have been discussed at great length in previous letters and communications, and it is not deemed necessary to repeat these previous discussions at this time. Suffice it to say that it is the belief of the City Attorney of Bessemer and of the legal staff of the City of Birmingham, and of disinterested attorneys, that the franchise of the Birmingham Electric Company in the City of Bessemer has expired and that, when properly litigated, the courts will so adjudicate it.

* * * * * * *

(For brevity other portions of this exhibit are omitted.)

[fol. 2943] COMPLAINANTS' EXHIBIT No. 445

Loan and Grant contract dated December 11, 1935, in the amount of $1,238,182, between Federal Emergency Administration of Public Works and the City of Bessemer, for the construction of an electric distribution system:

Federal Emergency Administration of Public Works

Washington, D. C.

December 11, 1935.

PWA Docket No. 7677

CITY OF BESSEMER,
Jefferson County, Alabama:

1. The United States of America (herein called the "Government") hereby offers to aid in financing the construction of a 50 mile 132 kv. transmission line and a substation (herein called "Sub-Project A") and a 15 mile 22 kv. 2-circuit transmission line together with a complete distribution system (herein called "Sub-Project B", Sub-

Project A and Sub-Project B being herein collectively referred to as the "Project") by making a loan and grant to the City of Bessemer, Alabama (herein called the "Applicant") in an amount not exceeding in the aggregate the sum of $1,238,182.

2. The Government will purchase, at the principal amount thereof plus accrued interest, from the Applicant, obligations of the description and in amounts set forth below (or such other description as shall be mutually satisfactory), less such amount of such obligations, if any, as the Applicant may sell to purchasers other than the Government:

As to Sub-Project A—$324,000:

(a) Obligor: City of Bessemer;

* * * * * * *

3. The Government will make the grant for Sub-Project A in an amount equal to forty-five percent (45%) of the cost of Sub-Project A upon completion, but not to exceed, in any event, the sum of $264,182, and for Sub-Project B in an amount equal to forty-five percent (45%) of the cost of Sub-Project B upon completion, but not to exceed, in any event, the sum of $293,000.

[fol. 2944] COMPLAINANTS' EXHIBIT No. 446 (Excluded)

Federal Emergency Administration of Public Works
Electric Power Board of Review

Washington, D. C., August 29, 1934.

Memorandum

To: Mr. Henry T. Hunt.
From: Mr. O. M. Rau.
Subject: Docket #7512—Tarrant City, Alabama;
Docket #7677—Bessemer, Alabama.

The applications for these projects originally proposed the construction and operation of municipal electric sys-

tems consisting of distribution and street lighting systems, purchasing energy from TVA at substations to be installed by TVA in each city.

	Tarrant City	Bessemer
Loan Requested	$184,400	$636,000

It appears that a contract between TVA and the Commonwealth and Southern Corporation, and certain of its subsidiaries including the Alabama Power Company, to acquire certain transmission lines, etc., contain the following conditions:

"During said period (completion of the Norris Dam Power Plant, approximately December 31, 1938) authority will not sell electric energy outside of said counties to any municipality (etc.) which, or the distribution system serving which is now supplied by power companies."

Therefor- during the term of the contract neither Tarrant [fol. 2945] City nor Bessemer may expect to secure a supply of electrical energy for distribution from the TVA.

This situation required the construction of a generating plant from which to obtain originally intended to be purchased from TVA. To meet this situation a second application was filed by the City of Tarrant for a loan to construct and operate a steam generating plant of 15,000 kva. capacity to supply both Tarrant City and Bessemer.

Loan Requested $994,000

It therefor- appears that these three applications must be considered jointly in arriving at a final disposition of the applications for these loans, the total of which is as follows.

Project #7512 Tarrant City Distribution System	$184,400
Project ? Tarrant City Generating Plant	$994,000
Project #7677 Bessemer Distribution System	$636,000
Total—3 Applications	$1,814,400

The construction of additional steam generating capacity in the TVA area should coordinate with the plans of the TVA. The attached maps indicate the existing transmis-

sion lines and power sources from which electric service is available to serve Tarrant City and Bessemer.

[fol. 2946] To obtain energy from the Wilson Dam will require the construction of a transmission line to Tarrant City, a distance of approximately 100 miles, and an extension to Bessemer of approximately 16 miles. At the time of filing the Tarrant and Bessemer applications, it apparently was the intention of TVA to construct a transmission line to Birmingham from which line both Bessemer and Tarrant could have been served with energy from the TVA System.

In considering the approval of a loan to construct a steam generating plant at Tarrant or Bessemer, the plans of TVA regarding the construction of a transmission line to Birmingham should be taken into consideration.

The existing steam generating plants in the immediate vicinity of Birmingham consist of the following important plants:

Gorgas Plant #1—70,000 kw.—Alabama Power Company.

Gorgas Plant #2—60,000 kw.—Alabama Power Company.

Birmingham—13,700 kw.—National Power & Light Company.

Consistent with the policy of the TVA to acquire existing facilities by negotiation, an agreement to use existing steam generating facilities for stand by or emergencies, particularly when such plants are of sufficient capacity to add to the reliability of the entire TVA system, becomes of importance.

The construction of a relatively small steam plant as proposed by the Tarrant City applications would not only be economically unsound but of little value as stand by capacity in case of interruptions from transmission or other trouble should Birmingham, Tarrant, Bessemer and [fol. 2947] surrounding area be served by TVA, the demand of the Birmingham district alone being in excess of 20,000 kw.

The disposition of these three projects so as to coordinate with the plans of the TVA indicates the advisability

of submitting the applications to the TVA for instructions on the principal points involved which appear to be as follows:

A. Was the steam plant with a capacity of 15,000 kw. for which an application for a loan of $994,000 has been proposed by Tarrant City a useful purpose in the plans for the development of the TVA.

B. Are the plans of the TVA in the Birmingham area sufficiently developed to indicate with reasonable assurance when power from Wilson Dam will be available to Tarrant City and Bessemer.

C. Would the approval of these projects have an influence of sufficient importance, by a demonstration of TVA rates in Tarrant City and Bessemer, to favorably effect negotiations for acquiring facilities of existing utilities in this area by TVA.

D. If these projects are approved, would the TVA assume the debt charges on the loan for the steam generating plant, (to be used as stand by capacity) after TVA energy [fol. 2948] was substituted for the power generated by the steam plant.

Recommendation:

Provided the plans of TVA indicate that power from Wilson Dam will be available within a reasonable length of time, these projects exclusive of the steam plant, be approved with a condition that construction work be deferred until power from TVA is available and that the amount of the loan be earmarked for this purpose.

O. M. Rau.

August 31, 1934.

Mr. David E. Lilienthal, Director, Tennessee Valley Authority, Knoxville, Tennessee.

DEAR MR. LILIENTHAL:

I enclose herewith copy of a memorandum (8-29-34) by Mr. Rau regarding the Tarrant City, Alabama (Docket No.

COMPLAINANTS' EXHIBIT No. 447 (Excluded)

7512) and Bessemer, Alabama (Docket No. 7677) electric projects. Before making any final recommendation on the projects, this Board would like to receive your advice regarding their relation to TVA. Please note especially the questions listed by Mr. Rau on page 3 of his memorandum.

Sincerely yours, Henry T. Hunt, Chairman, for the Administrator.

[fol. 2950] COMPLAINANTS' EXHIBIT No. 448 (Excluded).

Board of Directors: Arthur E. Morgan, Chairman; Harcourt A. Morgan, David E. Lilienthal.

Tennessee Valley Authority, Knoxville, Tennessee.

September 11, 1934.

Honorable Henry T. Hunt, Chairman, Federal Emergency Administration, of Public Works, Washington, D. C.

MY DEAR MR. HUNT:

With reference to your letter of August 31, enclosing copy of a memorandum (8-29-34) from Mr. Rau regarding Tarrant City, Alabama, (Docket No. 7512) and Bessemer, Alabama, (Docket No. 7677) electric projects, I feel that it will be advisable to hold this for Mr. Lilienthal's personal attention, particularly as he is expected to return to the United States from a trip abroad on Friday, September 14.

I can assure you that this matter will be brought to Mr. Lilienthal's immediate attention in order that you may have the information required at the earliest moment possible.

Yours very truly, Tennessee Valley Authority, by V. D. L. Robinson, Administrative Assistant.

Board of Directors: Arthur E. Morgan, Chairman; Harcourt A. Morgan, David E. Lilienthal.

Tennessee Valley Authority, Knoxville, Tennessee.

September 22, 1934.

Honorable Henry T. Hunt, Chairman, Electric Power Board of Review, Federal Emergency Administration of Public Works, Washington, D. C.

MY DEAR MR. HUNT:

Upon my return to my desk I find your letter of August 31, with enclosures, relating to Tarrant City, Alabama (Docket No. 7512), and Bessemer, Alabama (Docket No. 7677), Electric Projects.

The Tennessee Valley Authority does not now have available power which could be supplied to Tarrant City and Bessemer. Power will, however, be available in very large blocks upon completion of Norris Dam and Wheeler Dam. These dams are both proceeding ahead of schedule. Our engineers inform us that they have every reason to believe that Norris Dam will be completed and the power installation in operation not later than mid-summer of 1936, less than two years hence. The completion of Wheeler Dam, without the installation of power facilities will add 20,000 kw. to the firm power capacity of Wilson Dam, by providing regulation of Wilson lake. This also should be available in 1936, according to present construction schedules.

The plans of the Tennessee Valley Authority are not sufficiently matured as to the disposition of the additional [fol. 2952] 150,000 to 175,000 kw. available in 1936 to permit of wholly specific answers to the questions incorporated in Mr. Rau's memorandum of August 29. We would be unable to advise whether the proposed steam plant would serve a useful purpose if it were located at Tarrant City.

We are of the opinion that Mr. Rau's recommendation is sound, and believe its adoption by your Board would further the TVA program. That recommendation is that "these projects, exclusive of the steam plant, be approved with a condition that construction work be deferred until

COMPLAINANTS' EXHIBIT No. 449 (Excluded).

power from TVA is available and that the amount of the loan be ear-marked for this purpose."

Very truly yours, Tennessee Valley Authority, by David E. Lilienthal, Director and General Counsel.

[fol. 2958] COMPLAINANTS' EXHIBIT No. 459

Application by the City of Knoxville, Tennessee, dated November 15, 1933, to Federal Emergency Administration of Public Works, for loan and grant in the amount of $3,225,000 to construct an electric distribution system.

To the Hon. William Baxter Lee, Hon. Roane Waring, and Hon. Robert H. Baker, State Board Federal Administration of Public Works, Nashville, Tennessee

GENTLEMEN:

The undersigned, City of Knoxville, Tennessee, a municipal corporation under the laws of the State of Tennessee,

respectfully applies to your Board, and through your Board to the Public Works Administration of the United States, for a loan of $3,225,000 to be loaned to the City of Knoxville pursuant to the Federal Public Works Program if and when it obtains final authority to complete such a loan, for the construction or purchase of a municipally owned electric distribution system.

• • • • • • •

IV. The Project

(a) The project is one for the building, or purchase, of a municipal electric distribution system for the City of Knoxville to furnish light and power to its citizens at a much lower rate than now required to be paid by the citizens to the privately owned Company now furnishing light and power in Knoxville. This project is planned in cooperation with and to take advantage of rates proffered by the Tennessee Valley Authority.

Electric power will be delivered by the Tennessee Valley Authority to the City system at a central substation, located on unused City owned property.

The Tennessee Valley Authority plans to construct two high voltage transmission lines into this substation, thus insuring the city against any interruptions of the power supply from accident to one line, and to install the switching, transformer and metering equipment required to meter and deliver energy to the City substation at 15,200 volts.

• • • • • • •

[fol. 2959] (c & d) The economical and social value of the project is readily shown by the reduction in rates to be made available to citizens of Knoxville upon completion of the municipal distribution system. It is planned to take advantage of rates prof-erred by the Tennessee Valley Authority, whose purposes and plans are well known to the Public Works Administration. For this reason, it is not deemed necessary to here set forth a lengthy statement covering the many phases of the broad, social and economic value of the project.

• • • • • • •

COMPLAINANTS' EXHIBIT No. 459

(i) It is likely that the project will compete with the Tennessee Public Service Company operating a somewhat similar enterprise.

• • • • • • •

V. Revenue and Expenses

• • • • • • •

(e) For proposed rates and schedules see report of Burns & McDonnell, pages 37 to 39. These rates are based on the standard schedules prof-erred by the Tennessee Valley Authority. For comparison with present rates see pages 40 to 44. If other details of the present rates are desired, same will be submitted on request.

The rates of the Tennessee Public Service Company are subject to approval by the Railroad & Public Utilities Commission of Tennessee, and the proposed rates of the municipally operated system will be subject to approval and contract with the Tennessee Valley Authority.

(For brevity other portions of this exhibit are omitted)

[fol. 2960] COMPLAINANTS' EXHIBIT No. 460

Loan Agreement Dated as of April 2, 1934, Between The City of Knoxville, Knox County, Tennessee (Herein Called the "Borrower"), and the United States of America (Herein Called the "Government")

Part One

General Provisions

1. Amount of Loan and Grant, Purchase Price and Purpose.—Subject to the terms and conditions of this Agreement, the Borrower will sell and the Government will purchase $2,000,000 aggregate principal amount of the bond, (herein called the "bonds"), of the Borrower, being part of an authorized issue of $3,225,000, at 100 per centum of the principal amount, thereof, plus accrued interest, and, in addition to the amount of Bonds to be purchased, the Government will make a grant, (herein called the "Grant"),

to the Borrower of not to exceed 30 per centum of the cost of the labor and materials employed upon the Project as herein described, but such Grant together with the aggregate principal amount of the Bonds purchased, and any other funds (herein called "Other Funds"), received directly or indirectly from the Government or any agency or instrumentality thereof to be used to aid in financing the construction of the Project, shall not exceed in aggregate amount the total cost of the Project, and in no event shall such aggregate amount exceed $2,600,000 • • •.

Part Two

• • • • • • •

2. Preliminary Proceedings by Borrower.—When the Agreement has been signed on behalf of the Borrower, the Borrower shall promptly:

(a) Send to the Government three signed counterparts of the Agreement and a certified copy of the resolution adopted by the Borrower pursuant to Paragraph 1, Part Two, hereof, together with certified extracts of the minutes pertaining to its adoption and any papers, certificates and other documents which may be requested by the Administrator;

(b) Retain municipal bond counsel satisfactory to the Administrator to assist the Borrower in the proceedings relative to the authorization, issuance and sale of the Bonds, and to give such legal opinions relative thereto as may be requested by the Administrator;

[fol. 2961] (c) Submit to the Government plans, drawings, specifications and schedule of the work and materials to be employed upon the Project; the latest data as to the expected cost of the Project; a statement as to when and how it is proposed to advertise for bids and to let contracts for the work; a statement as to when and how it is proposed to acquire the necessary lands, easements, franchises, and rights-of-way; an estimate as to the amount of money that will be needed at the time of the sale of the Bonds; and any other details or data that may be requested by the Administrator.

(d) Submit to the Government all such authorizations, permits, licenses and approvals from Federal, State, county, municipal and other authorities as the Administrator may deem advisable then to be obtained in connection with the Project or the Bonds;

(e) Take all the proceedings necessary for the authorization and issuance of the Bonds.

(f) Submit for approval a contract with the Tennessee Valley Authority stipulating that the said Authority will agree to furnish to the Borrower for a period of not less than twenty years, to a point or points adjacent to the limits of the City and previously agreed upon, and the Borrower to accept and pay for a supply of electric energy sufficient in quantity at all times to meet the demands of the residential, commercial, and industrial customers to be served by the System. This contract shall contain such other terms and conditions as may be necessary to insure to the Borrower an adequate supply of electric energy, to insure the charging of rates by the Borrower for resale of electric energy and to provide for the disposition of revenues derived from the operation of the System in a manner satisfactory to the Administrator.

• • • • • • •

4. Conditions Precedent to the Government's Obligations.—The Government shall be under no obligation to pay for any of the Bonds or to make any Grant:

(a) Budget.—If in the judgment of the Administrator the Borrower has failed to balance its budget satisfactorily, or has failed to take satisfactory action which is reasonably designed to bring the ordinary current expenditures of the Borrower within the prudently estimated revenues thereof;

(b) Cost of Project.—If the Administrator shall not be satisfied that the Borrower will be able to construct the Project (p.-18) within the cost estimated at the time when the Application was approved by the Government, such esti- [fol. 2962] mated cost being the amount of $2,600,000, unless in the event that additional funds appear to the Adminis-

trator, to be necessary in order to pay in full the cost of the construction of the Project, the Administrator shall be satisfied that the Borrower will be able to obtain such funds, as needed, through additional borrowing or otherwise, in a manner satisfactory to the Administrator.

(c) Compliance.—If the Borrower shall not have complied, to the satisfaction of the Administrator, with all the provisions contained or referred to in this Agreement and in the proceedings authorizing the issuance of the Bonds, theretofore to be complied with by the Borrower;

(d) Legal Matters.—If the Administrator shall not be satisfied as to all legal matters and proceedings affecting the Bonds, the security therefor of the Project;

(e) Representation.—If any representation made by the Borrower in this Agreement or in the Application or in any supplement thereto, or amendment thereof, or in any document submitted to the Government by the Borrower shall be found by the Administrator to be incorrect or incomplete in any material respect;

(f) Financial Condition.—If, in the judgment of the Administrator, the financial condition of the Borrower shall have changed unfavorably in a material degree from its condition as theretofore represented to the Government;

(g) Tennessee Valley Authority Contract.—If the Borrower shall fail to execute and furnish the Government with two certified copies of a contract between the Borrower and the Tennessee Valley Authority, as provided in Paragraph 2 (f) Part Two hereof, such contract to be satisfactory to the Administrator as to form, sufficiency and substance; as to rates to be charged by the Borrower for resale of electrical energy; and as to disposition of revenues of the System;

Joseph C. Swidler, Esquire, Power Attorney, Tennessee Valley Authority, Knoxville, Tennessee.

DEAR MR. SWIDLER:

Confirming our telephone conversation and my telegram, I have examined the Knoxville Power Contract with respect to its effect on the financial conditions of the loan agreement to be signed between the City of Knoxville and the Public Works Administration. In general, there appears to be no conflict.

Paragraph 9, of your proposed contracts refers to involuntary transfer or assignment of the contract. In the case of Knoxville, I do not believe this provision is requisite as the Government's security will be general obligation bonds of the City and there will be no mortgage on the plant. There is one improbable contingency which should, however, be provided for in my opinion. If the City should accept a loan from the Public Works Administration for construction of a distribution system and having started the construction should then negotiate a purchase of the [fol. 2965] existing system which would render the partly duplicated facilities useless, it does not appear that the

COMPLAINANTS' EXHIBIT No. 462 (Excluded)

provisions for the disposition of revenue by the contractors would specifically protect the bonds which we would hold. I think a proviso should be added to Paragraph 10 (A) of the Schedule of Rules and Regulations which I assume is made a part of your contract with the City covering this matter.

Approval of your contract as far as the rate schedule is concerned is subject to the adoption of a resolution by the Board of Directors of the Tennessee Valley Authority, that the rates will be so modified as to provide the revenues necessary for the various purposes enumerated in Paragraph 10(A) of the Schedule of Rules and Regulations, including an assurance that a surcharge or other increase will be applied to domestic rates if a reasonable increase in industrial and commercial rates fails to produce the necessary revenue or reacts unfavorably on the use of such power.

I feel that some such formal action by the Authority is requisite.

Very sincerely yours, B. W. Thoron, Assistant Finance Director for the Administrator.

Mr. David E. Lilienthal, Tennessee Valley Authority, The Moll Building—9th St., Washington, D. C.

MY DEAR MR. LILIENTHAL:

Referring to our conversation the other day concerning the Knoxville situation:

After I talked with you, I checked up our draft of contract, with Knoxville for this loan. In this draft, we state:

"That we shall be under no obligation to advance any funds to the City for the Construction of the distribution system until we have been satisfied that the City has used without success its best efforts to acquire, upon a basis of value and terms deemed reasonable and satisfactory to us, the existing facilities of the Utility Company for the distribution of electric energy within the territory to be served by the system."

[fol. 2968] In other words, the proposed agreement provides that none of our funds can be used for the acquisition of the existing system.

I drew from our conversation that, in case a satisfactory price can be reached for the purchase of the existing distribution system, Knoxville intends to give them their bonds for the property. If an agreement cannot be reached by the City and the Utility for its purchase, then our loan can be used for the construction of a completing system.

I recall that you mentioned there was a possibility that TVA might purchase the existing distribution system at Knoxville.

If you have any suggestions to make that will assist you in Knoxville in making your trade for the purchase of the Utility other than those outlined above which are in the draft of this agreement—we shall be very glad to have them.

Sincerely yours, H. M. Waite, Deputy Administrator.

Knoxville, Tennessee

June 30, 1936.

Mr. Kenneth Markwell, State Director, Federal Emergency Administration of Public Works, Nashville, Tennessee.

DEAR MR. MARKWELL:

With reference to your letter of June 24, inquiring whether TVA would be in a position to serve the City of Newbern in Dyer County, Tennessee, I am advised by our engineers that a single-phase line is now planned by the West Tennessee Electric Membership Corporation which will reach into Dyer County. This line would probably not be suitable for service to the City of Newbern. However, were the City to take power, it would doubtless be feasible to convert the planned single-phase line to a three-phase line, which would be adequate for serving the load.

Yours very truly, David E. Lilienthal, Director.

Tennessee Valley Authority,
Knoxville, Tennessee

December 20, 1933.

K. S. Wingfield, Esq., Finance Division, Public Works Administration, Room 1112 Interior Building, Washington, D. C.

DEAR MR. WINGFIELD:

This letter will confirm the statements I made to you this afternoon in response to your telephonic inquiry with regard to the power policy of the Tennessee Valley Authority in its dealings with municipalities.

COMPLAINANTS' EXHIBIT No. 480 (Excluded)

The authority has thus far entered into a formal contract only with the City of Tupelo, Mississippi, although there are pending a large number of other applications by municipalities for power. At your request I am enclosing six copies of the Tupelo contract. Subject to a number of minor changes, and to the addition of such provisions as will inevitably be necessary to meet local conditions, the contract may be considered to represent the power policy of the Authority.

The statement has been made by interested parties that the contract is defective, in that (a) it does not permit the charging of rates high enough to permit successful operation and (b) that it does not permit the charging of rates low enough to meet competition. I shall discuss these two objections separately.

The contract is in three parts, the contract proper, a schedule of rates and charges, and a schedule of rules and regulations, both of the schedules being made a part of the contract by reference. Section 6 of the contract requires that the contracting municipality shall not depart from the schedule of re-sale rates fixed by the Authority, without the Authority's consent. However, by reference to the schedule of rates it will be seen that there is a provision in both the commercial and industrial rates for a surcharge, as provided in Section 6 of the Rules and Regulations (page 2 of Rules and Regulations). The surcharge provisions, as a part of the contract, qualify the prohibition against changing re-sale rates without the Authority's consent, since the surcharge is a part of the schedule of rates and charges, and the application of a surcharge would, therefore, not be a departure from the schedule. The surcharge provision authorizes the municipality to fix the amount of the surcharge in its own discretion and to vary such surcharge [fol. 2978] from time to time in the same manner, subject to the two conditions that the surcharge shall be applied uniformly, and that all profits shall be applied to the reduction or elimination of such surcharge. Initially there is no formal control of the amount of the surcharges, although of course informally the Authority will attempt to limit it to actual requirements. As soon as the results of operation under the surcharges can be determined, the contract formally operates to restrict surcharges to such requirements.

It can thus be seen that while the Authority proposes, by every type of cooperation in its power, to make it possible for all municipalities to render profitable service at its standard re-sale rates, municipalities are authorized to increase these basic rates as may be necessary for business-like and economical operation. In the contract with the City of Tupelo no provision was made for surcharging the residential rate, but this was due to the fact that the engineers of the City of Tupelo and of the Authority agreed that such surcharges were not necessary for the profitable operation of the Tupelo plant. The City of Tupelo has a population of about 6000, and has maintained a successful municipal distribution system for many years. Where such surcharges are necessary they will be permitted are, indeed explicitly authorized in the contract, but I am confident that they will not be required except in smaller municipalities. To repeat, however, they are authorized wherever they are necessary.

You will notice that Section 6 of the Rules and Regulations requires that all profits are to be used for the elimination of surcharges. This Section makes liberal provision for the requirements of municipalities before any revenues are considered applicable to the reduction of surcharges or of the basic rates. Municipalities must pay all operating expenses, interest and amortization on the indebtedness, funded or otherwise, set up reserves for new construction and for other contingencies, and pay to the general fund of the municipality an amount in lieu of taxes at rates equivalent to the taxes assessed against other property of a similar nature, and may pay in addition a return on the municipality's equity of not more than six per cent per annum. Thus, reading the contract as a whole, it will be seen that the municipality is authorized to charge such surplus-*es* as may be necessary, not merely for the actual expenses of operation, but also for a return on the municipality's equity, and for payments to its general fund in lieu of taxes. These authorized appropriations take care of every conceivable requirement for successful operation.

With reference to the assertion that the contract does not authorize the charging of rates low enough to meet competitive conditions, it must be pointed out that the City of Tupelo owns its own distributing plant, and is, therefore,

free from competition. In the circumstances it was not necessary to insert in this contract a provision for meeting [fol. 2979] competitive rates. The purpose of Section 6 of the contract, requiring the approval of the Authority for all changes in rates except as they may be increased under the surcharge provision, is to enable the Authority to supervise rate reductions to prevent discrimination between consumers. As you will see from Section 10 (b) of the Rules and Regulations, reductions are not only authorized, but are required when earnings are in excess of the amounts necessary for the specified appropriations. We expect that as low rates increase consumption, many municipalities will be able to reduce their rates substantially below the Authority's basic resale rates. The contract in its present form (Section 6) in a general way covers the requirements of competitive situations in that there is no limitation upon the reductions which can be made with the approval of the Authority, and the Authority has a very deep interest in seeing to it that its municipal customers operate successfully under competition. However, contracts with municipalities subject to competition will doubtless contain a specific provision granting maximum flexibility in competitive operations.

I have read in the public press a statement by a protestant to the application of the City of Knoxville in which it was contended that the reference to surplus power in the preamble to the contract in some way limited the obligation of the Authority. An examination of the contract shows that this statement is utterly without foundation. The preamble adopts the words of the Tennessee Valley Authority Act in its use of the term surplus power, but under the Act all power is "surplus" which is not needed for the operation of the locks at Wilson Dam and for certain other narrowly specified purposes. The terms of the preamble are intended to provide a background for the contract, not to qualify it. In Section 2 of the contract the Authority covenants to supply absolutely firm power, and the Authority is in a position to supply firm power in tremendous quantities. If the Authority should enter into a contract with the City of Knoxville, such contract will provide for firm power in any amount which the City is capable of absorbing.

Federal Emergency Administration of Public Works

Washington, D. C.

Resolution for Special Board

Subject: Docket No. 6587, Decatur, Alabama

Whereas the Electric Power Board of Review and the Deputy Administrator recommend that the project of the city of Decatur, Alabama, for the construction of an electrical distribution system, including the low side of the substation and equipment, be included in the comprehensive program of public works for the reason, among others, that the Tennessee Valley Authority has acquired the necessary transmission lines to serve said distribution system and the financing of said project will aid said Authority in obtaining a market for its electrical energy:

Resolved that said project be included in the comprehensive program and that the sum of $350,000 (of which not to exceed $100,000 shall be a grant) be allotted to finance the accomplishment thereof, subject to the execution of a contract satisfactory to the Administrator and in accord with the recommendations of the Electric Power Board of Review dated June 22, 1934, as amended by its report of July 30, 1934.

Board approval Aug. 15, 1934.

Presidential approval Aug. 16, 1934.

F. C. H.

[fol. 2983] COMPLAINANTS' EXHIBIT No. 484

The attached table showing PWA allotments for electric and gas projects is intended to be a complete record of all of the allotments made by the Public Works Administration from the various appropriations that have been made for such projects. Some of these may have been changed or dropped and officials now state that the "President's Budget Statement," from which extract as to these public works projects was sent you on October 19, represents what the Administration probably will trim its program down to.

The complete record attached is therefore only of value for the items actually given. This does not necessarily mean that the allotment has been or will be taken up by the applicant or that the PWA considers itself obligated to make the allotment regardless of whether it is or is not included in the President's Budget Statement. It is chiefly of value to show the projects in litigation under construction or completed.

CORRECTED TO OCTOBER 1, 1937

TABLE 1

PWA ALLOTMENTS FOR ELECTRIC POWER PROJECTS

AS OF SEPTEMBER 1, 1937

"REA" INDICATES GENERATING PLANT AND/OR DISTRIBUTION SYSTEM WHERE NONE WAS PUBLICLY OWNED AT TIME OF ALLOTMENT.

ASTERISK (*) INDICATES COMBINED PROJECT. PART OF THE FUNDS WILL BE USED FOR IRRIGATION, FLOOD CONTROL, ETC.

ASTERISKS (**) INDICATE SUBSTANTIAL COMPLETION.

[fol. 2994] COMPLAINANTS' EXHIBIT No. 497

Subpoena Duces Tecum.

The President of the United States to Tennessee Valley Authority, Greeting:

You are hereby commanded to appear before the District Court for the Eastern District of Tennessee, Northern Division, in the courtroom of the Federal Building at Chattanooga, Tennessee, on the — day of ——, 1937, at — o'clock a. m., and bring with them the following documents and records, to wit:

Copy of telegram from TVA dated between January 1 and January 15, 1935, to the Governor of Alabama, stating the terms and provisions of a proposed statute to be submitted to the legislature of Alabama,

and fail not under penalty of law.

Witness the Honorable Judge of the United States District Court for the Eastern District of Tennessee, this —day of ——, 1937.

—— —— by —— ——.

Let this writ issue. —— ——, Presiding Judge.

[fol. 2995] COMPLAINANTS' EXHIBIT No. 498 (Excluded)

STATE OF ALABAMA,
Lawrence County:

Whereas, the Town of Moulton, desires to secure TVA power as soon as possible, and

Whereas, the Alabama Power Company in an agreement with TVA agreed to negotiate with the said TVA for the sale of electric distribution now serving the said Town of Moulton, Alabama, now,

Therefore, the City Council in special session hereby resolved that the Joe Wheeler Electric Membership Corporation enter into negotiation with the said Alabama Power Company for the purchase of said distribution and the rights to operate said system which is now serving the Town of Moulton, Alabama, that the town may receive the TVA power as soon as possible.

Witness our hands and seals this the 29th day of March 1937.

The Town of Moulton, Alabama, by L. W. Gentry, Mayor; Grady Smith, Alderman; C. C. McWhorter, Alderman; J. H. Anders, Alderman; Lowe Harris, Alderman; Marion Barkley, Alderman.

COMPLAINANTS' EXHIBIT No. 499

[fol. 2996]

Annual Sales by Existing Utility Systems to Ultimate Consumers in the Year 1936 Within 100-mile, 150-mile and 250-mile Radii from any TVA Generating Plant Included in the Unified Plan

Sales by TVA and its Wholesale Contractors Excluded Geographical Distribution of Total Sales in Part Estimated

Sales in Millions of Kilowatt-Hours

Within 100-Mile Radius:	Direct Sales	Indirect Sales*	Total Sales	Per Cent
Complainant Companies	2,214	18	2,232	60.9%
Non-Complainants	.....	..	1,429	39.1%

Notes:—(a) The complainant Franklin Power & Light Co. was interconnected with Group 1 in 1936 and thereafter.
(b) Excluding contract capacity.
(c) Includes 23,000 kw. of firm contract capacity to Tennessee Public Service Company in 1929.
(d) Based on largest steam unit out for six weeks at maximum loading for last six months of driest year, average demand outage of 3% applied only to dependable generating capacity for steam, 5% load factor for six months.
(e) Includes firm contract capacity as follows: Carolina Power & Light Co.—14,000 kw. 1929 to 1939 inclusive.
(f) After deducting capacity leased to Duke Power Company.
(g) Includes firm contract capacity as follows: Carolina Power & Light Co.—55,000 kw. 1931 to 1939 inclusive.
Duke Power Company—42,750 kw. 1931 to 1939 inclusive.
(h) Eliminates duplication resulting from 42,750 kw. of Lexington Water Power Company firm capacity contracted for by Duke Power Company from 1931 to 1939 inclusive.
(i) The complainant Birmingham Electric Company is included as a customer of the Alabama Power Company.

Standby Provided For	2.5	2.5	2.5	2.5	2.5	2.5	2.5	12.5	12.5	12.5	12.5

Notes:—(1) Excluding contract capacity.
(2) Includes firm contract capacity from Tennessee Valley Authority to the Arkansas Power & Light Co. in the amount of 25,000 kw. in 1938 and 35,000 kw. in 1939.
(3) In the absence of complete data for the combined load of the Arkansas-Missouri Power Company and the other companies in Group 6, it was assumed that this combined load would approximate the firm peak load of the latter plus the dependable generating capacity of the former.
(4) August 1937 interconnection with Appalachian Electric Power Co. completely integrates these companies with Group 3.
(5) Includes: Adams County Power & Light Company. Peebles Power Company.
Point Pleasant Water & Light Company.
(6) Includes firm contract capacity from Columbus Railway, Power and Light Company in the following amounts: 10,000 kw.—1929 to 1936, inclusive.
20,000 kw.—1937 to 1939, inclusive.

* Overload on remaining units of system in case of outage of largest unit at time of peak load.

Out-of-Pocket Costs of TVA Power

Unified Plan—Ultimate Development

Excluding Initial Stage of Wilson Dam

	Generating Plants	Transmission System	Total
Increment Investment for Power	$312,964,000	$116,587,000	$429,551,000
Increment Operation and Maintenance.....	$832,000	$1,861,000	$2,693,000
Interest on Increment Investment—3½%.....	10,954,000	4,080,000	15,034,000
Depreciation on Increment Investment (3½% Sinking Fund Basis).....	3,736,000	3,610,000	7,346,000
	$15,522,000	$9,551,000	$25,073,000
Annual charges on accumulated interest during construction of generating plants 5% of ($10,954,000 + $3,736,000).....			734,000
Commercial and Metering Expense (710 customers at $202)....			143,000
General Administrative Expense.....			1,000,000
Taxes Lost (Excluding 3% Federal Sales Tax).....			5,607,000
Which would have been obtainable from utility company development of facilities obviated by TVA wholesale system.			
Total Increment Yearly Cost for Power.....			$32,557,000

COMPLAINANTS' EXHIBIT No. 505 (Excluded)

Out-of-Pocket Costs of TVA Power—Unified Plan—Ultimate Development—Excluding Initial Stage of Wilson Dam—Continued

Some Other Yardstick Omissions

Net Additional Interest (Increased) and Depreciation (Decreased)		
Interest and Depreciation Incurred by a Utility Company on Generating and Transmission Facilities if Owning and Operating TVA System	$30,602,000	
Deduct Interest and Depreciation Included Above	22,380,000	8,222,000
Additional Taxes (Excluding 3% Federal Sales Tax)		
Taxes Payable by a Utility Company if Owning and Operating TVA System	$7,895,000	
Deduct "Taxes Lost" as Shown Above	5,607,000	2,288,000
Out-of-Pocket Costs Plus Some Other Yardstick Omissions on Wholesale Operations		$43,067,000

I. Additional out-of-pocket losses to tax-payers not evaluated.
   Taxes on gasoline and motor vehicles used in power plant construction.
   Use of franking privilege.
II. Additional yardstick omissions not evaluated.
   Cost of raising capital.
   Preferential Freight Rates.
III. Additional losses and yardstick omissions on distribution facilities provided by TVA Wholesale Contractors.
   Taxes on ownership and operation of distribution facilities.
   Any services rendered gratis by TVA to its Wholesale Contractors, such as sales promotion, engineering, auditing, etc.
   Government grants to finance competing systems.
   Difference of interest on government loans to finance competing systems.
   Immunity from 3% Federal Sales Tax.

Note: Taxes payable by TVA—5% of gross non-governmental revenue.

[fol. 3009] COMPLAINANTS' EXHIBIT No. 506 (Excluded)

Summary of Annual Deficit from TVA Operations Unified Plan—Ultimate Development Excluding Initial Stage of Wilson Dam

Total Increment Yearly Out-of-Pocket:		
Cost of TVA Power		$32,557,000
Estimated Annual Revenue—1943:		
Total TVA Operations	$25,804,000	
Less Initial Stage of Wilson Dam	2,253,000	
Increment Revenue		$23,551,000
Out-of-Pocket Deficit		$ 9,006,000

COMPLAINANTS' EXHIBIT No. 506 (Excluded)

Some Other Yardstick Omissions for Comparable Utility Operation

Additional Fixed Charges:	
Net Additional Interest and Depreciation incurred by a Utility Company on Generating and Transmission Facilities if Owning and Operating TVA System	$ 8,222,000
Additional Taxes (excluding 3% Federal Sales Tax):	
Taxes Payable by a Utility Company if Owning and Operating TVA System in addition to "Taxes Lost" included in Out-of-Pocket Cost	2,288,000
Out-of-Pocket deficit plus some other yardstick omissions	$19,516,000

I. Additional out-of-pocket losses to tax-payers not evaluated:

Taxes on gasoline and motor vehicles used in power plant construction.

Use of franking privilege.

II. Additional yardstick omissions not evaluated:

Cost of raising capital.

Preferential freight rates.

III. Additional losses and yardstick omissions on distribution facilities provided by TVA Wholesale Contractors:

Taxes on ownership and operation of distribution facilities.

Any services rendered gratis by TVA to its Wholesale Contractors, such as sales promotion, engineering, anditing, etc.

Government grants to finance competing systems.

Difference of interest on government loans to finance competing systems.

Immunity from 3% Federal Sales Tax.

[fol. 3010] COMPLAINANTS' EXHIBIT No. 507

Estimated Power Available at TVA Generating Plants Typical Water Year Under TVA Unified Plan—Ultimate Development

	Million Kilowatt-Hours	Kilowatts at 100% Load Factor
Firm Power:		
Total primarily available	5,780	660,000
Deduct energy used to guarantee annual secondary power (see below)	322	36,700
Net Firm Power Available	5,458	
Allowance for average margin between capacity additions and load growth—5% (Salable as "Other Secondary Power"—see below)	273	31,200
Balance salable as Firm Power	5,185	
Annual Secondary Power (guaranteed 75% of the time in every year):		
Salable to certain large industries for electro-chemical and electro-thermal use	917	104,700
Reduces firm capacity by 7/20 or 35% of this amount in order to insure guarantee in critical year when it would be necessary to use reservoir capacity for 7 weeks out of a 20-week draw-down period.		
Other Secondary Power (Guaranteed 75% of the contract period):		
Estimated amount salable to the aluminum industry and to large utility companies, etc. (including 273 million kwh. of firm energy allowed for average margin between capacity additions and load growth)	790	90,200
Total firm and secondary power available	6,892	

COMPLAINANTS' EXHIBIT No. 507

Estimated Power Available at TVA Generating Plants Typical Water Year Under TVA Unified Plan—Ultimate Development—Continued

	Million Kilowatt-Hours	Kilowatts at 100% Load Factor
Dump Power:		
Estimated amount of energy available for fuel-generation replacement	778	
Total energy marketable ...	7,670	
Additional energy available but not Marketable	2,330	
Total energy available within generating capacity	10,000	

[fol. 3011]

[fol. 3019] COMPLAINANTS' EXHIBIT No. 516

TVA corporate resolution dated July 23, 1935, approving allotment release in the amount of $12,127 for construction of "Nettleton-Shiloh Rural Transmission Line, Lee County, Mississippi".

(Omitted)

COMPLAINANTS' EXHIBIT No. 517

TVA corporate resolution dated July 23, 1935, approving allotment release in the amount of $11,495 for construction of "Blue Springs-Fairfield-Elliston Rural Transmission Line, Union County, Mississippi".

(Omitted)

COMPLAINANTS' EXHIBIT No. 518

TVA corporate resolution dated August 29, 1935, approving allotment release in the amount of $1,891 for the construction of Rural Transmission Line in Prentiss County, Mississippi. The allotment release, attached to and referred to in the approving resolution, states:

"Work done under this release will be billed to the Prentiss County Electric Power Association as an increase in the long term indebtedness."

[fol. 3020] COMPLAINANTS' EXHIBIT No. 519

TVA corporate resolution dated October 10, 1935, approving allotment release in the amount of $102,770 for the construction of "Tupelo-New Albany 44 kv. Transmission Line." The allotment release, attached to and referred to in the approving resolution, states:

"This line is necessary to supplement the existing 11 kv. lines because of load growth at New Albany and in the adjacent areas of Union and Pontotoc Counties. Location and arrangement are such that when required, this line can be extended into Oxford or other points west."

COMPLAINANTS' EXHIBIT No. 520

TVA corporate resolution dated November 18, 1935, approving allotment release in the amount of $3,433 for transformer installation at Corinth Steam Plant. The allotment release, attached to and referred to in the approving resolution, states:

"This release covers the installation of a 600 kva. 6900 to 2300 volt transformer bank at the Corinth Steam Plant, in order to supply the increased load of the Alcorn County Electric Power Association. This load is being taken care of at the present time by daily operation of the Corinth Steam Plant. Installation of the transformers will eliminate the necessity for the steam plant operation, and will increase the reliability of the Alcorn County service."

COMPLAINANTS' EXHIBIT No. 521

TVA corporate resolution dated January 11, 1936, approving an allotment release in the amount of $189,587 for the construction of Pulaski-Columbia-Dickson Transmission Line and Substation.

(Omitted)

[fol. 3021] COMPLAINANTS' EXHIBIT No. 522

TVA corporate resolution dated January 11, 1936, approving allotment release in the amount of $597,420 for construction of Wheeler Dam-Columbia Transmission Line and Columbia Substation.

(Omitted)

COMPLAINANTS' EXHIBIT No. 523

TVA corporate resolution dated January 11, 1936, approving allotment release for construction of rural lines for the City of Dayton, in Rhea County, Tennessee. The allotment release, attached to and referred to in the approving resolution, states:

COMPLAINANTS' EXHIBIT No. 523

"This memorandum release covers the construction of approximately 43 miles of rural lines in Rhea County, Tennessee, on behalf of the City of Dayton, to serve 160 customers. This work is being done under the terms of a contract between the City of Dayton and the REA and a contract between TVA and the City of Dayton, under the terms of which this work is to be financed by REA and the TVA is to be reimbursed for the expenditures."

COMPLAINANTS' EXHIBIT No. 524

TVA corporate resolution dated January 11, 1936, approving allotment release in the amount of $7,946 for the construction of Bodenham Extension from Pulaski, Giles County, Tennessee.

(Omitted)

[fol. 3022] COMPLAINANTS' EXHIBIT No. 525

TVA corporate resolution dated January 11, 1936, approving allotment release in the amount of $13,656 for the construction of a substation west of Ardmore, Lincoln County, Tennessee.

(Omitted)

COMPLAINANTS' EXHIBIT No. 526

TVA corporate resolution dated January 11, 1936, approving allotment release in the amount of $30,950 for construction of Mantachie-Kirkville-Marietta Rural Line, Itawamba County, Mississippi.

(Omitted)

COMPLAINANTS' EXHIBIT No. 527

TVA corporate resolution dated January 11, 1936, approving allotment release in the amount of $16,305 for construction of Birmingham Ridge, Saltillo, Hub Rural Electric Line, Lee County, Mississippi.

(Omitted)

[fol. 3023] COMPLAINANTS' EXHIBIT No. 528

TVA corporate resolution dated January 11, 1936, approving allotment release in the amount of $145,706 for construction of Rural Electric Lines in South Half of Lincoln County, Tennessee.

(Omitted)

COMPLAINANTS' EXHIBIT No. 529

TVA corporate resolution dated January 18, 1936, approving allotment release for Gravel Pit Line Extension to Bigbee, Monroe County, Mississippi. The allotment release, attached to and referred to in the approving resolution, states:

"This line, when complete, will serve 14 residential, 2 commercial, and 1 industrial customers, including the Amory Sand & Gravel Company, and will produce an annual revenue of $1,500 to the City of Amory after the first year.

This line is being constructed on behalf of the City of Amory under the terms of contracts between Amory, the REA, and TVA. The work is to be financed by REA, who are to reimburse the TVA for all expenditures. The cost of this line is estimated at $5,293."

COMPLAINANTS' EXHIBIT No. 530

TVA corporate resolution dated January 18, 1936, approving allotment release in the amount of $128,000 for Rural Electric Line Construction in Hardin and McNairy Counties, Tennessee. The allotment release, attached to and referred to in the approving resolution, states:

"This release provides for the construction of 75.7 miles of primary 12 kv. line, including 15.1 miles of three phase, 60.6 miles of single phase, and the acquisition from the [fol. 3024] Alcorn County Electric Power Association of 27 miles of existing three phase line in Hardin and McNairy Counties, Tennessee.

The proposed project will be operated by a new cooperative membership association in Hardin and McNairy

COMPLAINANTS' EXHIBIT No. 530

Counties, and will include all of the lines in this area now owned by the Alcorn County Association.

The attached summary sheets, which were taken from a detailed report entitled 'Recommendations for Rural Electrification in Hardin and McNairy Counties, West Tennessee, Project No. 1,' dated December 10, 1935, show that the first year revenue, when applied to the operating expenses and fixed charges, leaves a deficit of $75.00 before depreciation, and that the second year annual revenue will be ample to cover all costs except depreciation. Amortization collections based upon first year figures will amortize the project in about twenty-one years, and this period will be reduced on the basis of increased collections in future years."

COMPLAINANTS' EXHIBIT No. 531

TVA corporate resolution dated January 18, 1936, approving allotment release in the amount of $111,133 for the construction of Bedford County, Tennessee, Rural Electrification Project. The allotment release, attached to and referred to in the approving resolution, states:

"This allotment release provides for the construction of approximately 117 miles of single phase, 6900 volt, standard type rural power lines, in Bedford County, Tennessee.

Detailed estimate attached includes cost of complete secondaries, transformers, services and meters to serve 585 prospective rural customers.

The attached report on the financial feasibility of this project indicates that the first year revenue will cover the operating expenses and fixed charges except depreciation, and that the amortization collections should amortize the property in about 22 years."

[fol. 3025] COMPLAINANTS' EXHIBIT No. 532

TVA corporate resolution dated March 17, 1936, approving allotment release in the amount of $114,000 for

COMPLAINANTS' EXHIBIT No. 532.

extension of transmission system to Milan, Bolivar and Somerville, Tennessee. The allotment release, attached to and referred to in the approving resolution, states:

"This release covers the extension of the TVA transmission system to the municipalities of Milan, Bolivar, and Somerville, Tennessee, including the construction of a 44 kv. line from Jackson to Bolivar, which is to be operated temporarily at 12 kv., and 12 kv. lines from Jackson to the Gibson County system, and from Bolivar to Somerville, together with the necessary substations. These three municipalities have already signed contracts for electric service.

Milan will be served by the Gibson County line over the proposed Gibson County rural system. Arrangements will be made for reimbursing the Gibson County Association for our use of their system for transmission purposes. It is expected that the portion of this line which lies in Madison County will eventually be sold to the Madison County Association as soon as this Association may acquire a rural system.

The line from Jackson to Bolivar is to be built for ultimate operation at 44 kv. in anticipation of future load growth and possible extension of this line to other West Tennessee points. Under present conditions, however, this line will operate satisfactorily at 12 kv., making it possible to postpone the construction of 44 kv. substation facilities."

COMPLAINANTS' EXHIBIT No. 533

TVA corporate resolution dated March 17, 1936, approving allotment release in the amount of $110,795 for construction of Rural Electrification Project in Gibson County, Tennessee. The allotment release, attached to and referred to in the approving resolution, states:

"Estimated retail revenues to the Gibson County Association are as follows:

1st year	$14,716
2nd year	22,226
3rd year	28,280

COMPLAINANTS' EXHIBIT No. 533

[fol. 3026] Estimated income and expense statements for the first, second and third years are attached. These statements show that after the first year the annual revenues will pay all operating expenses and fixed charges except depreciation, and that the third year revenue will provide a net income approximately equal to the depreciation.

It is expected that the development of other uses for electricity in the county, such as electric hot beds, will provide additional load which was not included in the revenue estimate."

COMPLAINANTS' EXHIBIT No. 534

TVA corporate resolution dated April 14, 1936, approving allotment release in the amount of $5,400 for the construction of Pratt Single-Phase Rural Line Extension for Prentiss County Association—Prentiss & Lee Counties, Mississippi. The allotment release, attached to and referred to in the approving resolution, states:

"This line is to be built for and on behalf of the Prentiss County Electric Power Association in accordance with the request of its executive committee as of March 24, 1936. The total cost of the work, including overheads of 5%, for engineering, 6½% for administration, and 1% for tool depreciation, will be charged to the Association as an increase in its long term indebtedness.

Twenty-five residential and three commercial customers will be served initially, producing a revenue to the Association of $1,032 the first year and $1,236 the third year, giving ratios of investment to revenue of 5.2 and 4.4 to 1, respectively.

The first year amortization collections will be $218 and, with normal load growth, these collections should be sufficient to amortize the indebtedness in about twenty years. It is estimated that the first year revenue of $1,032, which includes the amortization collections, will be sufficient to pay all operating costs and fixed charges except depreciation. Revenue after the first year is expected to pay all charges."

[fol. 3027] COMPLAINANTS' EXHIBIT No. 535

TVA corporate resolution dated April 14, 1936, approving allotment release in the amount of $87,400 for the construction of Rural Lines in Catoosa County, Georgia, for the North Georgia Electric Membership Corporation. The allotment release, attached to and referred to in the approving resolution, states:

"This release covers the construction of 92 miles of single-phase 7/12 kv. rural line from the Tennessee-Georgia state line along various county roads and state highways and in Catoosa County for the North Georgia Electric Membership Corporation.

This system will serve initially a total of 509 rural customers in Catoosa County, including 14 commercial and 495 residential. The estimated retail revenues, including amortization charges, are as follows:

1st year	$14,490
2nd year	19,551
3rd year	26,595

The estimated Income and Expense Statement for the first three years indicates that the third year revenue will provide a net income before depreciation of $1,995.00 in addition to the amortization collections which will be sufficient to amortize the investment in 14 years. Revenues after the third year will be sufficient to cover all operating costs and fixed charges."

COMPLAINANTS' EXHIBIT No. 536

TVA corporate resolution dated June 19, 1936, approving allotment release in the amount of $6,000 for construction of Transformer Station at Ooltewah, Tennessee. The allotment release, attached to and referred to in the approving resolutions, states:

"This release covers the installation of a transformer station at Ooltewah, Tennessee, at the proposed interchange point with the Tennessee Electric Power Company, for the purpose of supplying the proposed rural system in North Georgia and the connecting rural lines which are to be financed by REA.

COMPLAINANTS' EXHIBIT No. 536

The construction of the 66 miles of rural line in Catoosa County, Georgia, to be served by this transformer station is practically complete and TVA has been authorized to [fol. 3028] proceed with the survey of approximately 300 miles of additional rural lines in North Georgia, to be financed by REA and served from this same point.

The interconnecting line between Ooltewah and the North Georgia system will be a part of a rural system in Hamilton County, Tennessee, which is also to be financed by REA."

COMPLAINANTS' EXHIBIT No. 537

TVA corporate resolution dated June 29, 1936, approving allotment release for Rural Line Construction for North Georgia Electric Membership Corporation. The Allotment release, attached to and referred to in the approving resolution, states:

"This release covers the construction of 357 miles of 11 kv. rural lines in Hamilton County, Tennessee, and Catoosa, Whitfield, Gordon, Walker, Floyd, Murray and Chattooga Counties in Georgia.

This release is supplementary to previous release entitled 'Engineering for Rural Lines in North Georgia for the North Georgia Electric Membership Corporation', which was issued in the amount of $6,000 for the fiscal year 1936, with a total estimated cost for engineering of $12,050. The estimated total cost of $348,550, as shown in the present supplementary release, includes the amount covered by the previous release.

This construction work will be performed by TVA and financed by REA. The $6,000 covered by the previous release will cover all engineering and construction work to be performed during the present fiscal year.

A contract between TVA and the North Georgia Electric Membership Corporation, covering this construction work, has been executed by the North Georgia Corporation and submitted to TVA for final approval. The REA loan to the North Georgia Corporation has been approved."

COMPLAINANTS' EXHIBIT No. 538

TVA corporate resolution dated July 1, 1936, approving allotment release in the amount of $98,705 for the construction of Cullman County, Alabama—Rural Electrifica-
[fol. 3029] tion Project. The allotment release, attached to and referred to in the approving resolution, states:

"This release provides for the construction of a rural electric system in Cullman County, Alabama, consisting of 98 miles of rural line including 28 miles of 3-phase and 70 miles of single-phase 7/12 kv. lines, including transformers, secondaries, meters and services for serving 478 customers. The first year retail revenue will be approximately $11,141 in addition to amortization collections at $2,938, or a total of $14,079. Ratios of investment to total income, including amortization payments, are as follows:

First year	6.7 to 1
Second Year	6.2 to 1
Third Year	5.4 to 1

This system will be constructed for, and operated by, the Cullman County Electric Membership Corporation, who will repay the Authority for the construction costs out of amortization collections and surplus revenues. Wholesale power revenue to the Authority for the first year will be approximately $3,110.

The REA has been requested to finance a part of the project consisting of approximately 26.6 miles of line, at a cost of approximately $25,270 of the above total. If an REA loan for this purpose is granted a credit release in this amount will be prepared, leaving a balance of $70,230 to be financed by TVA."

COMPLAINANTS' EXHIBIT No. 539

TVA corporate resolution dated July 6, 1936, approving allotment release in the amount of $305,250 for the construction of the Pickwick-Memphis Transmission Line. The allotment release, attached to and referred to in the approving resolution, states:

"The total cost of this line, in addition to the amount covered by the previous release, is estimated at $1,187,725.

COMPLAINANTS' EXHIBIT No. 539

No expenditures will be made during the present budget period, but commitments for the foundation and tower steel, in the total amount of $306,280, will be made prior to June 30, 1936.

This line is to be constructed for ultimate operation at 220 kv. with initial operation at 154 kv. It is to be of single circuit steel tower construction with ground wire and three 636,000 cm. aluminum conductors, steel reinforced. The estimated total length is 110 miles."

[fol. 3030] COMPLAINANTS' EXHIBIT No. 540

TVA corporate resolution dated July 14, 1936, approving allotment release for Rural Line Construction for Meigs County Electric Membership Corporation. The allotment release, attached to and referred to in the approving resolution, states:

"This release covers construction of 114 miles of rural line in Meigs, Rhea, Cumberland, and McMinn Counties, Tennessee, for the Meigs County Electric Membership Corporation. This construction is to be financed by REA from a loan of $120,000. A construction contract with the Meigs County Electric Membership Corporation, covering construction of these lines by the TVA, has been executed. The estimated construction costs are as follows:

34.5 miles of 3-phase, 12 kv. lines	$40,986
79.5 " " single-phase "	70,643
Total—114 miles	$111,629"

COMPLAINANTS' EXHIBIT No. 541

TVA corporate resolution dated August 21, 1936, approving allotment release in the amount of $234,685 for the construction of the South Side of Memphis Substation. The Allotment release, attached to and referred to in the approving resolution, states:

"This substation is necessary in order to provide service to the City of Memphis in the Spring of 1937 over the proposed Pickwick-Memphis transmission line."

[fol. 3031] COMPLAINANTS' EXHIBIT No. 542

TVA corporate resolution dated September 5, 1936, approving allotment release in the amount of $19,286 for the construction of Additional Rural Lines in Lincoln County, Tennessee. The allotment release, attached to and referred to in the approving resolution, states:

"This work is to be performed by the TVA for the Lincoln County Electric Membership Corporation as an increase in their long term indebtedness. The cost will be repaid over a period of years out of amortization collections and surplus revenues."

COMPLAINANTS' EXHIBIT No. 543

TVA corporate resolution dated September 21, 1936, approving allotment release for the Rural Electrification Project—Rutherford and Wilson Counties, Tennessee-Transmission Line Construction for the Middle Tennessee Electric Membership Corporation. The allotment release, attached to and referred to in the approving resolution, states:

"This memorandum release covers the construction of approximately 261 miles of rural transmission line, complete with secondaries, transformers and services, in Rutherford and Wilson Counties, Tennessee, on behalf of the Middle Tennessee Electric Membership Corporation.

This work is to be financed by REA, who have granted a loan to the above corporation for this project. Repayment will be made by the corporation to TVA from this loan during the current fiscal year.

The estimated total cost of the work is $254,180, with retail revenues to the Middle Tennessee Corporation of approximately $38,000 the first year, which gives a ratio of 6.7 to 1. An estimated total of 1250 customers will be served, of whom 918 have already signed for service. The first year revenue to TVA from this project is estimated at approximately $12,000.

The project will be served from an 11 kv., 3-phase line which is to be run from the Columbia Substation into Bedford County, connecting with the proposed system near Midland, in Rutherford County."

[fol. 3032] COMPLAINANTS' EXHIBIT No. 544

TVA corporate resolution dated September 23, 1936, approving allotment release for Rural Line Construction for the City of Athens in Limestone County, Alabama. The allotment release, attached to and referred to in the approving resolution, states:

"This release covers the construction of approximately 65.5 miles of rural lines in Limestone County, Alabama; the addition of a neutral conductor to approximately 2.6 miles of existing 11 kv. lines, and rebuilding approximately 3.4 miles of the present Athens city distribution system, to provide for the installation of a single phase, 6900 volt circuit.

This work is to be financed by the REA and to be constructed by TVA. An REA allotment has been requested.

The estimated income and expense statement for this project shows that the retail operating revenues and amortization collections will be sufficient to pay all operating expenses and fixed charges. The ratio of investment to first year revenue is approximately 6.6 to 1.

Summary of Estimated Cost

New Construction, 65.5 miles	$60,679
Addition of Neutral Conductor, 2.6 miles	430
Rehabilitation of Existing System, 3.4 miles	4,299
Total	$65,408"

COMPLAINANTS' EXHIBIT No. 545

TVA corporate resolution dated September 25, 1936, approving allotment release in the amount of $89,864 for Jackson-Trenton 44 kv. Line and Substations—Engineering, Survey, and Right-of-way. The allotment release, attached to and referred to in the approving resolution, states:

"This work is necessary in order to provide adequate facilities for serving industrial loads at Trenton and to make it possible to serve the proposed West Tennessee rural projects in Dyer, Obion, and Weakley Counties. The

COMPLAINANTS' EXHIBIT No. 545

existing 12 kv. facilities between Jackson, Milan and Trenton are inadequate to serve the contemplated loads at Trenton, and the distances involved are such that it is impracticable to serve the new county projects from the existing system.

[fol. 3033]

A rural electrification project has been approved by REA, covering the rural line construction in the area above mentioned. It will be necessary to complete the work covered by the present release before service can be supplied to the proposed project.

The estimated total cost of this work is as follows:

Jackson-Trenton 44 kv. Line	$78,170
Trenton Transmission Substation	34,259
Jackson Transmission Substation Additions	83,304
Total	$195,733

Of the above amount, the following expenditures are covered by the present release:

Surveying	$3,050
Engineering and Drafting	2,780
Overheads, 12½%	730
Additions to Jackson Substation	83,304
Total	$89,864"

COMPLAINANTS' EXHIBIT No. 546

TVA corporate resolution dated October 6, 1936, approving allotment release in the credit amount of $23,258 for Rural Line Construction—Cullman County, Alabama. The allotment release, attached to and referred to in the approving resolution, states:

"This supplementary release covers a credit in connection with previous release 42521, due to agreement of REA to finance some of the rural line construction in Cullman County which was covered by the previous relea

COMPLAINANTS' EXHIBIT No. 546

The complete rural system in Cullman County as now planned and under construction consists of the following:

	Financed by TVA	Financed by REA
Single-Phase Lines—Miles	55.4	101.0
Three-Phase Lines—Miles	16	0
Totals	71.4	101.0

[fol. 3034] The total cost of the work will be $175,549, of which $72,242 will be financed by TVA and $103,307 by REA.

To date REA has granted allotments of $27,000 and $36,000 respectively for this work, and have under consideration a third allotment in the amount of approximately $43,000, approval of which is anticipated.

Amount of previous release #42521	$95,500
Revised estimate of TVA expenditures	72,242
Net reduction in expenditures by TVA	23,258''

COMPLAINANTS' EXHIBIT No. 547

TVA corporate resolution dated October 22, 1936, approving allotment release in the amount of $7,375 for Mimosa Rural Line Extension in Lincoln County, Tennessee.

(Omitted)

COMPLAINANTS' EXHIBIT No. 548

TVA corporate resolution dated October 26, 1936, approving allotment release in the amount of $2,651 for rebuilding Rural Line for City of New Albany, Mississippi. The allotment release, attached to and referred to in the approving resolution, states:

"This work is necessary in order to meet the requirements of the Mississippi State Highway Department

COMPLAINANTS' EXHIBIT No. 548

program of road building on Highway #78. The cost of the work is to be borne by the City of New Albany and, since they are not in a position to do the work and do not have sufficient funds to finance it, they have requested that we perform and finance the work as an addition to the long-term indebtedness of the City to the Authority, or will be paid by the city out of current surpluses."

[fol. 3035] COMPLAINANTS' EXHIBIT No. 549

TVA corporate resolution dated December 7, 1936, approving allotment release for Rural Line Construction for Gibson County Electric Membership Corporation. The allotment release, attached to and referred to in the approving resolution, states:

"This supplementary release covers the construction of 131 miles of rural distribution line in Dyer and Obion Counties on behalf of the Gibson County Electric Membership Corporation, at a cost of $143,323, to be financed by REA.

The existing Gibson County system consists of approximately 104 miles of distribution line. The addition of the proposed lines covered by this release will result in a total of 235 miles of line, serving 1,017 customers, at a total investment of $254,118."

COMPLAINANTS' EXHIBIT No. 550

TVA corporate resolution dated December 7, 1936, approving allotment release for Rural Line Construction for the Southwest Tennessee Electric Membership Corporation. The allotment release, attached to and referred to in the approving resolution, states:

"This release covers the construction of a rural electric distribution system in Madison, Haywood and Tipton Counties, on behalf of the Southwest Tennessee Electric Membership Corporation. The work covered by this release consists of approximately 295 miles of rural lines, together

COMPLAINANTS' EXHIBIT No. 550

with the necessary transformers, meters, services and secondaries to serve 1,085 customers. The estimated total cost of this work is $289,352, to be financed by REA. Expenditures will be incurred by the TVA and repaid during the present fiscal year by the Southwest Tennessee Corporation out of the REA allotment of $290,000, which has already been approved.

The present TVA investment in Madison County for rural lines which will be transferred to the Southwest Tennessee Corporation is $15,250. This will make a total investment by the Corporation of $304,602, with a first year revenue of $41,040. * * *"

[fol. 3036] COMPLAINANTS' EXHIBIT No. 551.

TVA corporate resolution dated February 5, 1937, approving allotment release for Rural Line Construction for the Duck River Electric Membership Corporation. The allotment release, attached to and referred to in the approving resolution, states:

"This release covers the construction by the TVA of approximately 218.6 miles of 7/12 KV rural lines in Marshall, Moore, and Franklin Counties for the Duck River Electric Membership Corporation. This work will be financed by REA, and it is anticipated that repayments will be made by the Duck River Corporation out of REA payments during the current fiscal year.

A total of 810 customers have signed applications for service and there are approximately 500 additional potential customers in the area. The Duck River Corporation will obtain a revenue estimated at $28,463, including amortization collections during the first year from the sale of approximately 992,000 KWH. Power purchases by the Corporation from the TVA during the first year are expected to total 1,167,000 KWH, in the amount of $8,057. The ratio of investment to first year revenue is approximately 7.5 to 1.

This project has been approved by REA and is designated as Tennessee 21 Franklin."

COMPLAINANTS' EXHIBIT No. 552.

TVA corporate resolution dated February 16, 1937, approving allotment release in the amount of $16,127 for Rural Line Construction and Capital Repayments for Tombigbee Electric Power Association. The allotment release, attached to and referred to in the approving resolution, states:

"This release covers transactions during the fiscal year 1937 on account of rural line construction for, and capital repayments by, the Tombigbee Electric Power Association.

1. A net balance of $5,857 is required for completion of projects started during the fiscal year 1936 under Allotment Release #2138. Construction by TVA.

2. An estimated credit of $13,200 is included to cover capital repayments of amortization collections by the Association during the current fiscal year.

[fol. 3037] 3. An additional amount of $23,470 is requested to finance the construction of approximately 26.8 miles of single-phase line extensions to serve 170 present and 47 future additional customers in the operating area of the Tombigbee Association, which comprises Lee and Itawamba Counties, Mississippi. Thirteen short extensions, varying from 0.4 to 8 miles in length, are contemplated, as covered by the attached list of extensions and general summary of financial data. Construction by TVA.

The Authority's net investment in the Association as of June 30, 1936, was $374,935. The operations of the Association to the date of October 31, 1936, showed a net deficit of approximately $7,000 after all expenses, including a reserve for depreciation. The proposed extensions appear to be on a very sound financial basis, and will contribute materially to the reduction of this deficit. In view of these conditions, it is recommended that the additional extensions be financed by TVA rather than asking REA to participate."

COMPLAINANTS' EXHIBIT No. 553.

TVA corporate resolution dated April 9, 1937, approving allotment release in the amount of $20,000 for Rural Line Construction in Franklin County, Alabama. The allotment

COMPLAINANTS' EXHIBIT No. 553

release, attached to and referred to in the approving resolution, states:

"The present investment of the Authority in distribution properties in this county is $3,387, of which $2,312 represents the purchase price of rural lines acquired from the Alabama Power Company, and $1,095 the estimated total cost of short extensions and service connections constructed or under construction by the Authority.

The ultimate disposition of this distribution property has not been determined, but it is probable that arrangements can be made for either including it as a portion of the Colbert County system or transferring it to the City of Russellville at such time as the latter municipality may acquire a distribution system and complete a contract for TVA service. It is also possible that a separate power association may be established in Franklin County if the size of the system is sufficiently increased."

[fol. 3038] COMPLAINANTS' EXHIBIT No. 554.

TVA corporate resolution dated May 15, 1937, approving allotment release in the amount of $141,650 for Additions to Tupelo and Pontotoc Substations. The allotment release, attached to and referred to in the approving resolution, states:

"This release covers the estimated obligations during the fiscal year 1937 in connection with the necessary additions to the Tupelo primary substation, and the construction of the Tupelo-Pontotoc line, which are required for the proposed service to Sardis Dam; also construction of a 44 kv. substation at Pontotoc which is necessary in order to supply the increased demands at that location, due to load growth of the Pontotoc Association.

• • • • • • •

The estimated total revenue from the Sardis load will be at least $250,000 over a period of three years, after which time the proposed facilities will be useful in expanding the transmission facilities of the Mississippi Division and in making a possible future connection to the Mississippi Power and Light Company in western Mississippi."

COMPLAINANTS' EXHIBIT No. 555.

TVA corporate resolution dated May 15, 1937, approving allotment release in the amount of $107,914 for Rural Line Construction in Lawrence and Morgan Counties, Alabama. The allotment release, attached to and referred to in the approving resolution, states:

"This release provides for the construction of additional lines in Lawrence and Morgan Counties, Alabama, and the rearrangement of certain existing lines where necessary, in order to complete an integrated distribution system.

* * * * * * *

Upon completion of the proposed lines the entire system, including also the existing lines in Lawrence and Morgan Counties, Alabama, will be transferred to the newly incorporated Joe Wheeler Electric Membership Corporation, and this corporation will enter into negotiations with the Alabama Power Company for the acquisition of the urban distribution systems in Hartselle, Falkville, Moulton, Town Creek, and Courtland. The acquisition, as well as the pro- [fol. 3039] posed construction work, will be financed by the Authority. Release covering the amount necessary for the acquisition, estimated at approximately $132,679, will be prepared at the time when these negotiations are completed.

The attached estimated income and expense statement is based upon the completion of the program outlined above, that is, combination of the existing lines, the proposed new lines, and the existing urban distribution systems into a single project, to be operated by the Joe Wheeler Electric Membership Corporation. On this basis, the estimate shows a surplus after depreciation of $878 the first year and $8,830 the second year."

Tennessee Valley Authority

CWA Project Authorization Request

Fund CWA-TVA.
Project Rural Electrification.
Allotment Power Fivision

From David E. Lilienthal.
Date: December 6, 1933.

Project Title: Construction of rural electric transmission lines in the five counties of Lee, Pontotoc, Monroe, Alcorn and Tishomingo, Mississippi.

Description

1. Location: General administration from Wilson Dam, Florence, Alabama. Mississippi administration headquarters, Tupelo, Miss.

2. Purpose: Construction of rural electric transmission lines to serve the rural areas of Lee, Pontotoc, Monroe, Alcorn and Tishomingo Counties, Mississippi, using C. W. A. labor.

3. Procedure: With the aid of County Agents, working through the Agricultural section of Dr. H. A. Morgan's department, to locate suitable route for transmission lines to serve the rural residents of the five counties; securing permits and rights of way along County and State highways; securing the aid of farmers in providing tools, transportation and poles in so far as possible; and using C. W. A. workers in getting out poles, digging holes and erecting poles, cross arms, and stringing wire.

4. Organization:

Project Engineer: Llewellyn Evans, Chief Electrical Engineer, will serve as the head of the rural electric transmission section, with Guy W. Thaxton, Assistant Engineer, headquarters Tupelo, Miss., in direct charge, under the supervision of Mr. Evans.

Personnel available for the work: Mr. Thaxton, and such assistants as Mr. Evans may assign to the work.

COMPLAINANTS' EXHIBIT No. 570

Additional personnel required: One thousand and forty five C.W.A. workers, including skilled and unskilled laborers, supervisors and foremen.

Services or cooperation of other departments required: The full cooperation of the Department of Agricultural and Industrial Relations, including Mr. Rommel, Mr. McAmis, and Mr. Ferris, and also the Purchasing Department.

Services or cooperation of outside organization necessary: The C. W. A. administration, both national and for the State of Mississippi, the county agricultural agents, municipal and county officials, and farmers organizations are cooperating even to the point of lending personal services, furnishing tools and transportation for personnel, equipment and materials, aiding in securing rights of way, and such other services which may be helpful in the installation of these county transmission lines.

5. Estimated Cost

	Previously Authorized		Additional Authorization		Total
	Number	Amount		Amount	Amount
Payroll	1	$500	CWA	$112,500	$113,000
Travel & Subsistence			TVA	2,500	2,500
Equipment			TVA	17,000	17,000
Materials & Supplies			TVA	33,500	33,500
Other Expenses			TVA	1,000	1,000
Totals				$166,500	$167,000

* * * * * * * *

9. Recommendations

To take advantage of the opportunity offered by the U. S. Civil Works Administration to furnish skilled and unskilled workers out of C. W. A. funds for the construction of rural electric transmission lines, it is recommended that a maximum of 1,045 C. W. A. workers be used in the construction of such rural electric transmission lines in the counties of Lee, Pontotoc, Monroe, Alcorn and Tishomingo Counties, Mississippi.

The extension of these rural transmission lines will be made in connection with the small industry and agricultural development projects initiated in these five counties by the

industrial and agricultural relations section under Dr. H. A. Morgan's general direction. G. M. Rommel, J. C. McAmis and J. P. Ferris of this section are working closely with Guy W. Thaxton, of the rural electrification section of the Power Division.

The supervisors, foremen, skilled and unskilled labor will be paid entirely out of C. W. A. funds by the C. W. A. Administrator of Mississippi.

Travel and subsistence of T. V. A. staff members assigned to the work, equipment and materials are to be paid out of T. V. A. funds.

The cooperation of the local farmers, city and county officials will be sought in securing all rights of way, permits to use state and county highway rights of way for transmission lines, small tools and transportation for personnel and materials, poles and other equipment. All other equipment and materials not loaned or donated will be rented or purchased. [fol. 3046] The work for which the C. W. A. laborers will be used will consist of staking out the lines, getting out, dressing and hauling poles, clearing any right of way necessary, digging the holes, erecting the poles, putting on the cross arms and stringing the wire. The last items will permit the use of more skilled labor out of C. W. A. funds, and will thereby assist in reducing the ultimate cost of these rural transmission lines.

It is understood that the construction of these rural transmission lines is not for an immediate use; after the lines are completed it will be necessary to provide transformers and sub-stations to step down the current from the Muscle Shoals-Tupelo transmission line, and make the physical connection. It will also be necessary to set up the distribution management organization or system to make contracts with the farmers, and operate the rural lines. It is contemplated that the distribution over the rural lines to be constructed may be in charge of a cooperative association to be set up by the industrial and agricultural section of Dr. H. A. Morgan's department. By furnishing the materials and equipment used in the construction of the lines, the Government may retain title to these lines as long as it may be deemed necessary by the Authority."

To avoid repetition the Project Authorization Request for construction of rural electric transmission lines in Lauder-

COMPLAINANTS' EXHIBIT No. 570

dale County, Alabama, bearing the same date and composing a part of the Exhibit 12-16-33c attached to said resolution is not set forth herein at length. It contains the same comments except only 209 C. W. A. workers were required as additional personnel and the cooperation of C. W. A. administrators in the State of Alabama was contemplated. The total estimated cost was $35,500.

COMPLAINANTS' EXHIBIT No. 571

TVA corporate resolution dated April 13, 1934, approving a project entitled "Marketing of Power Produced by the Tennessee Valley Authority".

"A project, titled 'Marketing of Power Produced by the Tennessee Valley Authority,' was approved. A true copy of the project, labeled Exhibit 4-13-34e, is attached to these minutes and made a part hereof.

4-13-34E.

Tennessee Valley Authority

Project Authorization Request

Fund——

Project Electric Division

Allotment——

From: D. E. Lilienthal
Date: April 4, 1934

Project Title: Marketing of power produced by TVA.

Description

1. Location:
2. Purpose: Increasing the use of electricity in Valley area.
3. Procedure: Employment of advertising agency to furnish special technical assistance in preparation and supervision of specialized printing service and material.

COMPLAINANTS' EXHIBIT No. 571

4. Organization:

Project Engineer:

Personnel available for the work: D. E. Lilienthal, G. D. Munger, W. B. Phillips.

Additional personnel required: Advertising agency.

Services or cooperation of other departments required: Information, Sales Promotion, Purchasing, Accounting, Electric Divisions, EHFA.

Services or cooperation of outside organization necessary:

Printing establishments with specialized equipment.

NOTE: Supplement this project statement with a detailed written report, if necessary.

5. Estimated Cost

	Previously Authorised		Additional Authorization Amount	Total Amount
	Number	Amount		
Payroll				$10,000.00
Travel & Subsistence				
Equipment				
Materials & Supplies				
Other Expenses—Printing service				10,000.00
Totals				$20,000.00

(The above estimate must be supported by detail cost schedules.)

* * * * * * * *

[fol. 3048] 9. Recommendations

In order to lay plans for the marketing of power, to assist our municipal customers in the most efficient ways of increasing their consumption, to assist in reducing the distribution cost of appliances in municipalities served by our wholesale contractors, and to formulate plans for the general program of increasing the use of electricity, it seems

COMPLAINANTS' EXHIBIT No. 571

essential that a contract be entered into between the Tennessee Valley Authority and a large, thoroughly equipped advertising agency, for a period of four months. It is anticipated that the results of this personal service employment will produce results which will be extremely valuable to the Electric Home and Farm Authority, and that the Electric Home and Farm Authority will undoubtedly be willing to bear half of the cost of this service. Mr. Phillips has interviewed the leading advertising agencies in this particular field, and has secured extensive submissions from them.

It is recommended that the Tennessee Valley Authority enter into a contract with the firm of Young & Rubicam, Inc., at a lump sum payment of $10,000.00 to cover the above described services over a period of four months.

These services will include the preparation and technical work involved in the issuance of publications of a character requiring special service. Compensation for the furnishing of such printed material will be on the basis of actual cost of the printing. Compensation for the services rendered by Young & Rubicam, Inc. in the preparation, placing and supervision of this printing will be covered in the compensation of $10,000.00 under the contract recommended above.

COMPLAINANTS' EXHIBIT No. 572

TVA corporate resolution dated June 3, 1937, authorizing communication to War Department re construction of transmission line to Sardis Dam:

"Resolved, That the Board of Directors hereby approves the letter agreement (Exhibit 6-3-37a-1) and authorizes and instructs Arthur E. Morgan to sign and forward the communication to the War Department.

[fol. 3049] Lt. Colonel Lunsford E. Oliver, District Engineer, United States Engineer Office, Vicksburg, Mississippi.

Re Y 131-1.17

DEAR COLONEL OLIVER:

We received your letter of May 25, 1937, advising us that the Chief Engineer desires the Tennessee Valley Authority

to construct for the War Department the so-called Pontotoc-Sardis transmission line and substation, and has authorized your office to make the necessary arrangements with the Authority. We understand that this request of the War Department is made pursuant to section 601 of the Economy Act of 1932 (Public, No. 212, 72d Congress).

Pursuant to your suggestion, Major LaGuardia met with representatives of the Authority at Chattanooga on May 26 and discussed the various matters relative to this project. It is our understanding that the arrangement tentatively agreed upon at that conference was as follows:

1. The Authority will construct for and on account of the War Department a 44,000 volt transmission line from Pontotoc to the Sardis Dam Site and the necessary substation at the Sardis Dam site.

* * * * * * *

4. The Authority will be reimbursed for handling the above work at its actual costs plus its customary charges for overheads. Reimbursement will be made by quarterly payments for the costs incurred by the Authority during the preceeding quarterly periods. The Authority will submit such quarterly statements to you directly and we understand that you will place them in the appropriate channels for payment.

* * * * * * *

Of course this arrangement for construction of these facilities is made in connection with our contract for the sale of power and is contingent upon the execution of that contract. Our Board of Directors has executed the power contract and we understand that the same has been forwarded to you for your approval.

* * * * * * *

There are several other matters which we should like to take up with you as early as possible, but Major LaGuardia asked that they be handled separately from the arrangements for construction of the facilities, in order that work on the latter might not be delayed. A few rural electric

COMPLAINANTS' EXHIBIT No. 572

[fol. 3050] cooperatives in the vicinity of Sardis have applied to us for wholesale power supply. Our engineers advise us that it would be possible for us to transmit from 1,000 to 1,500 kw. of power over your Sardis line, in order to supply these people, without in any way interfering with your power supply or affecting the quality of service which you would obtain. We should like very much to encourage these developments and to supply their power needs, and we are sure that you will feel the same way about it. The Authority would, of course, expect to compensate you for the use of the line. This might be done by way of a reimbursement for line losses, or it might be handled in connection with an arrangement by which the Authority would agree to maintain and operate the Sardis line with its Mississippi personnel. When the Sardis Dam is completed, you will probably have no more use for these transmission facilities, and it may be that by that time the Authority will have developed enough load, or prospective load, in that vicinity to justify us in purchasing the line from you at salvage value. It is our thought that we might provide for an option agreement of this sort and an arrangement with respect to these other matters which would be to the mutual advantage of the Authority and the War Department. We shall appreciate it very much if you will let us have your reaction to these suggestions at your earliest convenience. These matters will, as Major LaGuardia suggested, be considered separately from this agreement regarding the construction of the transmission and substation facilities."

COMPLAINANTS' EXHIBIT No. 573

TVA corporate resolution dated October 5, 1937, re construction of Power Houses at Chickamauga and Guntersville Dams:

"The Board adopted the recommendations of Assistant Chief Engineer Carl A. Bock, concerned with the construction of power houses at Chickamauga and Guntersville Dams, and set out in his memorandum to the General Manager, dated October 5, 1937. A true copy of the memoran-

COMPLAINANTS' EXHIBIT No. 573

dum, labeled Exhibit 10-5-37m, was ordered filed with the Authority's records.

[fol. 3051] Mr. John B. Blandford, Jr., General Manager,
Carl A. Bock, Assistant Chief Engineer

October 5, 1937.

Guntersville and Chickamauga Power Houses (for Board Confirmation)

Upon final discussion with Messrs. A. H. Sullivan, B. M. Jones, T. B. Parker, S. M. Woodward, H. A. Hageman, R. A. Monroe and others we are of the unanimous opinion that the present construction should provide three unit power houses built so as to permit future extension for a fourth unit. This will effect a reduction of some $400,000 or more in our budget requirements for the next two or three years.

Our present plans contemplate providing foundations in the initial construction for the fourth units."

For brevity's sake other portions of this exhibit are omitted.

TVA corporate resolution dated July 30, 1933, re construction of Wilson Dam—Cove Creek transmission line.

"Resolved, That at the earliest possible date the Board proceed with the construction of a transmission line from Wilson Dam to Cove Creek damsite, to provide power for construction purposes and for distribution to cities, counties, and municipalities as from time to time may be necessary or desirable."

COMPLAINANTS' EXHIBIT No. 575

TVA corporate resolution dated October 16, 1933, approving memorandum setting forth "Basic Provisions for Contracts between the Authority and Municipalities for power".

"Resolved, That every contract to supply power to municipalities be made to contain, in substance, the provi-

COMPLAINANTS' EXHIBIT No. 575

sions set forth in a memorandum titled "Basic Provisions for Contracts between the Authority and Municipalities for power", a true copy of which, labeled Exhibit 10-16-33a, is attached to these minutes.

[fol. 3052] Power Project

Subject: Basic Provisions for Contracts between the Authority and Municipalities for Power

I recommend that provisions should be inserted into any contract between the Authority and Municipalities for the purchase and sale of power embodying the following principles. I shall want an opportunity to put the following statements into better legal form, but the substance will not be changed:

1. This is an agreement between the Tennessee Valley Authority, a Corporation created by and acting under the Tennessee Valley Authority Act of 1933, and the City of X, a municipal corporation created and acting under —— ——, of the State of ——.

Whereas, the Authority, by Section 10 of said Act, is "empowered and authorized to sell the surplus power not used in its operations and for operation of locks and other works generated by it to States, Counties, municipalities, corporations, partnerships or individuals, according to policies hereinafter set forth, and to carry out said authority the Board is authorized to enter into contracts for such sale for a term not exceeding twenty years, and in the sale of such current by the Board it shall give preference to States, Counties, municipalities and cooperative organizations of citizens or farmers not organized or doing business for profit, but primarily for the purpose of supplying electricity to its own citizens or members"; and

Whereas, by Section 11 of said Act it is provided that "This policy is further declared to be that the projects herein provided for shall be considered primarily as for the benefit of the people of the section as a whole and particularly the domestic and rural consumers to whom the power can economically be made available, and accordingly that sale to and use by industry shall be a secondary purpose to be utilized principally to secure a sufficiently high

load factor and revenue returns which will permit domestic and rural use at the lowest possible rates and in such manner as to encourage increased domestic and rural use of electricity."

The following contract is entered into:

1. The Authority agrees to furnish electricity to the municipality for a period of — years from the date of this agreement. Delivery will be made under the following conditions:

(Here will be set out the voltage and location of the transformer and other physical operating facts respecting delivery, responsibility for the substation and transformers, etc.)

[fol. 3053] 2. The municipality agrees that for said electric service it will make payment to the Comptroller of the Authority, under such rules and regulations as the Authority may from time to time describe, according to the following schedule of rates:

3. It is understood that in the event of a major increase or major decrease in general price levels of such a substantial character as to materially and substantially change the cost basis upon which the rates fixed by this contract are predicated, the parties hereto will cooperate in making adjustments in this contract in the direction of an increase or decrease in the wholesale rates. It is understood, however, that no such adjustments will be negotiated unless the changes in price level are of a major character and of more than momentary duration.

4. It is understood and agreed that if the Authority enters into a contract with any other municipality located on the same transmission line and operating under similar conditions at a lower rate than that fixed by this contract, that the same wholesale rate will be available to the municipality which is a party to this contract.

5. It is understood that this contract is limited to the supply by the Authority of — kilowatt maximum demand. If the needs of the municipality are such as to require an addition to this maximum demand, such increased supply

will be the subject of additional and supplementary agreements.

6. It is understood between the parties that the Authority will share with purchasers of power from it, the benefits accruing in the future of reductions in cost of generating and transmitting power, by way of reductions in the wholesale rate fixed by this contract.

7. In order to carry out the obligations of the Authority with respect to a wider use of electricity throughout the area in which it operates, it is understood that the municipality will charge its domestic, commercial lighting, rural and industrial consumers the following schedule of rates.

8. It is a condition of this contract that revisions in these rates will be made only in accordance with the principles set out in No. 11 herein.

9. In consideration of — and as an express condition of this contract, the municipality agrees as follows:

The city will administer its municipal electric system as a separate department or administrative unit of the city and not mingle funds and accounts with general city operations.

The City will agree to keep its utility accounts according to a system of accounts prescribed by the Authority after conference with the City as to such system of accounts, which system of accounts will so far as possible be uniform with [fol. 3054] other systems prescribed and applied in other municipalities purchasing power from the Authority. It is understood that the Authority, at its own expense, will render advisory accounting service in the setting up and administration of these accounts.

10. Electricity shall be sold and distributed to the ultimate consumer under rates fixed by the municipality without discrimination as between consumers of the same class, and no rate shall be fixed or practice adopted which will grant a discriminatory rate, rebate or other special concession to any consumer or user served by said municipality. The municipality, in fixing its rates, will observe the principle that the sale to and use by industry shall be secondary purpose, to be utilized principally to secure a sufficiently high

COMPLAINANTS' EXHIBIT No. 575

load factor and revenue return which will permit domestic and rural use at the lowest possible rates and in such manner as to encourage increased domestic and rural use of electricity.

11. The municipality agrees that it will make the following disposition of revenues from the operation of its municipal electric system:

Revenues will first be used for operating expense, depreciation, payment to the general fund of the City of taxes at rates equivalent to the taxes and assessments a private system would have to pay, interest on bonds or other indebtedness applicable to the electric system, the amortization of such bonds and other indebtedness, reasonable reserves for new construction and contingencies, and a return on the City's equity of not more than six per cent per annum. After the above items have been taken care of out of revenues, the City hereby agrees that any and all surplus sums available shall be applied toward reductions in rates to consumers.

12. It is understood that the above provisions as to accounting and rates and the disposition of funds by the municipality are a condition of this contract and that their violation renders this contract voidable at the option of the Board of Directors of the Authority.

13. The municipality recognizes an obligation to serve adjoining farming areas wherever such service can be feasibly rendered."

[fol. 3055] COMPLAINANTS' EXHIBIT No. 576

TVA corporate resolution dated October 16, 1933, re wholesale rate schedule for Tupelo transmitted power:

"David E. Lilienthal submitted a "Wholesale Rate Schedule for Tupelo Transmitted Power," which was approved by the Board. A true copy of this schedule, labeled Exhibit 10-16-33b, is attached to these minutes and made a part hereof.

COMPLAINANTS' EXHIBIT No. 576

Tennessee Valley Authority
Wholesale Power Rates

10-16-33b.

Available:

1. To Municipalities owning their electrical distributing systems with kw. demands of 750 or more.
2. To Others at option of the Authority.

Transmitted Power Rates:*

Demand Charge—$0.90 per kw. per month.
Demand—Maximum integrated sixty (60) minute period.

Energy Charge:

First	100,000	kilowatt	hours	per	month	at	4	mills	per	kwh.
Next	200,000	"	"	"	"	"	3	"	"	"
Next	700,000	"	"	"	"	"	2.5	"	"	"
Over	1,000,000	"	"	"	"	"	2	"	"	"

Non Transmitted Power Rates:**

Demand and Energy Charges computed as for "Transmitted Power" but subject to ten per cent (10%) differential i. e., Bill is multiplied by .9 which results in total amount to be billed monthly.

Minimum Monthly Bill:

$0.90 per kw. per month, and in no case shall the minimum bill be less than the charge for sixty per cent (60%) of the highest demand occurring during the previous consecutive twelve (12) months period.

Minimum bill subject to a reduction of ten per cent (10%) for customers taking delivery at reservation.

Adjustment of Demand Charge:

Demand charge may be adjusted if, and when, Authority deems necessary to correct for power factors lower than eighty-five per cent (85%). Such adjustments being made in such manner as will adjust the demand charge to the equivalent of eighty-five per cent (85%) power factor.

October 23, 1933.

---

*Delivery at outgoing terminals of main line switch on low tension side of step-down transformers.

**Delivery at Boundary line of Reservation as prescribed by law.

[fol. 3056] COMPLAINANTS' EXHIBIT No. 577

TVA corporate resolution dated May 31, 1934, approving Sale, Lease, Trust, and Security Contract between TVA and Alcorn County Electric Power Association:

"Resolved, that the Board of Directors hereby approves a contract between the Tennessee Valley Authority and the Alcorn County Electric Power Association titled "Sale, Lease, Trust, and Security Contract." A true copy of the proposed contract, labeled Exhibit 5-31-34b, is attached to these minutes and made a part hereof.

Exhibit 5-31-34b

This sale, lease, trust and security contract and agreement entered into this 1st day of June, 1934, by and between Tennessee Valley Authority, (hereinafter called Authority), and United States of America (hereinafter called Government), acting through its legal agent, Authority, (both Authority and Government being included within the phrase First Parties where that phrase is used hereinafter), and Alcorn County Electric Power Association of Alcorn County, Mississippi, (hereinafter called Association and being sometimes also referred to as Second Party where that phrase is used hereinafter),

Witnesseth:

Whereas, Authority and/or Government are the owners of the hereinafter described property which has been and is now being used in the distribution of electric energy in Alcorn County, Mississippi, and vicinity, and Association desires to purchase and lease such property and use the same in the transmission and distribution of electric energy under the plan which has been worked out and agreed upon under a contract entitled "Power Contract Between Tennessee Valley Authority and Alcorn County Electric Power Association," dated 1st day of June, 1934; and

Whereas, provision is made in said "Power Contract," under Article I (a), (b), and (c), for the execution of this instrument and that this instrument shall be a part of said "Power Contract",

Now, therefore, in consideration of the mutual benefits to all parties hereto and of the covenants, promises and agreements herein contained, and those also contained in

said "Power Contract," the parties hereto agree and contract as follows:

1. Incorporation of Other Documents: This instrument is executed in connection with and is to be considered a part of a contract styled "Power Contract Between Tennessee Valley Authority and Alcorn County Electric Power Association," dated 1st day of June, 1934.

[fol. 3057] 2. In consideration of the sum of one hundred and fourteen thousand and six hundred and thirty-two dollars and sixty cents ($114,632.60) with interest upon the unpaid balances at the rate of three and one-half (3½) per centum per annu-, to be paid as hereinafter set out, Authority hereby bargains, sells, conveys and delivers unto Association the property located in Alcorn County, Mississippi, described as follows:

(1) All of the line tools now used or useful in the operation and maintenance of the electric distribution system in Corinth, Mississippi, a detailed list of which tools is hereto attached as a part hereof as Exhibit A;

(2) The line materials and supplies now used or useful in the operation and maintenance of said distribution system, a detailed list of which is hereto attached as a part hereof as Exhibit B;

(3) The stock of merchandise now on hand in connection with the operation of the light and power plant at said City of Corinth, a detailed list of which merchandise is hereto attached as a part hereof as Exhibit C;

(4) All office furniture and fixtures now used or useful in connection with the ownership and operation of said light and power plant, a detailed list of which is hereto attached as a part hereof as Exhibit D. But excepting from the above four lists such of the articles listed therein as may have been consumed in use or sold by the time of the delivery thereof hereunder.

If a question shall arise as to what property is intended to be conveyed above, the detailed lists shall control.

(5) One GMC 12000 lb. gross rating truck with which, or separately bought stake body, and one Chevrolet half-ton

commercial light delivery closed cab pick-up truck, used in connection with operating said light and power plant at Corinth;

(6) All right, title and interest of Tennessee Valley Authority in and to a certain franchise granted by said City of Corinth, September 9th, 1927, styled "An Ordinance Granting an Electric Franchise to Mississippi Power Company, Its Successors and Assigns in the City of Corinth, Mississippi," which franchise has been assigned to Tennessee Valley Authority;

(7) All right title and interest of Tennessee Valley Authority in and to a certain lease contract between Mississippi Power Company and Dr. W. A. Johns and Mrs. M. B. Johns, dated March 24, 1933, of a building in Corinth, Mississippi, described in such contract, Association hereby agreeing to carry out the terms of such lease;

(8) All right of Tennessee Valley Authority under a street lighting contract between City of Corinth and Mississippi Power Company;

(9) All rights under and claim of Tennessee Valley Authority to a franchise granted by the Town of Rienzi, Mississippi, styled "An Ordinance Granting an Electric [fol. 3058] Franchise to Mississippi Power Company, Its Successors and Assigns in the Town of Rienzi, Mississippi," dated June 10, 1927.

(10) The electric light and power distribution system now serving the City of Corinth, Mississippi, and vicinity, including switch boards, poles, pole lines, wire, wire lines, distribution lines, service lines, lamps, motors, materials, and other personal property now used or useful in the operation of the distribution system, but not including the power plant lot located at White and Cox Streets nor the buildings and improvements thereon, nor any property in the said buildings, nor any property used or useful in the generation of electric energy at said power plant station, but there is hereby assigned all railroad crossing contracts owned by First Parties, or either of them, needed in the operation of the distribution system conveyed in this article.

(11) The rural distribution electric power line running from the power plant substation in Corinth to the com-

munity of Biggersville extending generally along the public highway, a distance of approximately 8.3 miles, (eight and three tenths miles).

(12) The rural extension electric power line running from substation in Corinth, Mississippi, northwardly to Gaulding, along the public highway a distance of approximately two and one half miles, and all property used or useful in connection with the operation of said line in the distribution of electric energy;

(13) The rural electric line extending from Corinth to Bird's Gin along the Iuka-Corinth public highway, a distance of approximately four and a half miles.

(14) The rural extension electric power line from the substation at Rienzi in Prentiss County, Mississippi, to the Town of Rienzi, Alcorn County, Mississippi.

(15) The rural extension electric power line known as the Thrasher extension from where the same connects with the Rienzi substation line to the Village of Thrasher in Prentiss County, Mississippi, and including all poles, wires, cross arms, insulators, and all property used or useful in the operation of said five rural lines.

(16) The electric distribution system and power line in the Town of Rienzi, Alcorn County, Mississippi, and vicinity, including the wires, poles, wire lines, insulators, transformers, and distribution lines, and all property used or useful in the distribution of electric energy over said line;

3. Government, in consideration of the benefits to it in the performance by Association of this contract and the other interconnected agreements, hereby lets and leases unto Association, for a term of fifty years, subject to termination as hereinafter stated, such right and interest as Government may have in the rights of way and/or easements in any privately owned real property over, through or across which any of above described electric power lines may extend.

[fol. 3059] 4. For the payment of said sum of $114,632.60 and interest thereon as above stipulated, and as security therefor, and to guarantee the faithful performance of the

promises herein of and obligations on the part of Association, it is agreed:

(1) A lien is hereby retained and imposed in favor of Authority on all of the property which is hereby conveyed to Association for the purchase price of such property, plus interest, and as security for faithful performance of all obligations of Association as to deposits and accounts under Article 19 of Power Contract, said lien to be and remain and attach to each and every article of such property until the entire purchase price of all of the property is fully paid, except no lien is retained on the merchandise which is to be sold and which is listed in Exhibit C hereto;

(2) And there is expressly incorporated herein and made a part hereof the provisions of Section 7, Method of Payment for Property; section 8, Repayment of Indebtedness; section 9, Disposition of Association's Revenues, including subheads (a), (b), (c), (d), (e), (f) and (g), under said section 9; section 10, Alienation or Encumbrances of Property or Revenues; section 11, Maintenance and Insurance of Property and all other pertinent provisions of said "Power Contract Between Tennessee Valley Authority and Alcorn County Electric Power Association", dated 1st day of June, 1934. It is specifically agreed and understood that all revenues, membership fees and funds agreed to be paid by Association to Authority under this instrument and under said "Power Contract" are pledged and trust funds while in possession of Association and until paid to Authority as agreed in this instrument and said "Power Contract".

5. It is further agreed and contracted that all repairs, extensions, improvements and additions which may be made to the properties, as provided in section 11 of said "Power Contract", or otherwise, until said sum, with interest is fully paid, shall be and become a part of the property hereby conveyed, and become security for such unpaid balance thereof and a lien thereon shall immediately attach thereto for such purpose.

6. It is further expressly agreed and understood that on the failure of Association to faithfully keep and perform each and every agreement and obligation and promise made and/or imposed upon it by this instrument and said "Power

Contract", or upon the occurrence of any condition giving Authority and/or Government the right to terminate this agreement or the "Power Contract", Authority has the right and power, with or without the aid of court, to immediately take possession of all of the existing properties hereby sold Association, with all additions to and extensions and repairs and improvements of such properties, and to terminate the lease of the leased property, and, if needful, to have a receiver appointed of any or all property, and said Authority itself or through a receiver has the right to operate the properties and continue the business, and all right of Association to operate and/or continue the business shall cease at the option of Authority. In the event Authority exercises the right to retake possession of the property and terminate the [fol. 3060] lease, and, the right of Association to operate the business ceases, then Authority agrees to repay Association the aggregate amount of money which Association has paid to Authority to that date, but not repaying the interest paid by Association to Authority, and without interest on the amount repaid by Authority, upon execution by Association to Authority of the deed provided for in section 7 hereafter.

7. Upon default by Association, or termination, for any reason, of the arrangement hereby made between the parties, Association hereby expressly agrees, contracts, promises and covenants to effectually assign, convey and deliver to Authority the franchises in Corinth and Rienzi and any other municipal franchises for the distribution of electric energy which, until such time, may have been acquired by Association and to reconvey to Authority all of the property hereby conveyed to Association with all extensions, repairs, additions, renewals, and replacements upon tender by Authority of the amount, without interest, which has been paid to Authority by Association, as aforesaid.

8. Neither this contract nor any interest therein shall be transferable or assignable by Association to any other party without first securing the written consent of Authority.

In Witness Whereof, the parties hereto have caused this instrument to be signed and attested at Corinth, Mississippi,

[fol. 3061] COMPLAINANTS' EXHIBIT No. 578

TVA corporate resolutions dated July 27, 1934, approving proposed contract between Tennessee Public Service Company and TVA, a contract between Carolina Power & Light Company and TVA, and letter to C. E. Groesbeck:

"Resolved, That after consideration of the foregoing report and of the terms of a certain proposed contract between the Tennessee Public Service Company, a corporation of the State of Maine, and the Tennessee Valley Authority, a copy of which contract is made a part of these minutes as Exhibit 7-27-34a, the Board of Directors hereby approves said contract and authorizes and directs the execution of said contract by the Chairman of the Board, to be attested by the Secretary to the Board of Directors.

. . . . . .

Resolved, That the Tennessee Valley Authority approves the terms and conditions of a certain contract between the Carolina Power and Light Company and the Tennessee Valley Authority, a copy of which contract is attached hereto and made a part of these minutes as Exhibit 7-27-34e, and further directs the Chairman of the Board to execute, and

COMPLAINANTS' EXHIBIT No. 578

the Secretary to the Board of Directors to attest, the aforesaid agreement.

Resolved, That the Board of Directors approves a statement of fact and policy as contained in a draft of letter directed to C. E. Groesbeck, Chairman of the Board, National Power and Light Company, New York, New York, and that the Board hereby authorizes and directs the Chairman of the Board to sign and deliver such a letter, copy of which is embodied herewith in these minutes as follows:

Knoxville, Tennessee, July 27, 1934.

Mr. C. E. Groesbeck, Chairman of the Board, National Power and Light Company, New York, New York.

MY DEAR MR. GROESBECK:

You have inquired as to the plans and policies of the Tennessee Valley Authority with respect to supplying power to communities now served by companies associated with National Power and Light Company operating in the Tennessee Valley region. The Board of Directors authorizes me to reply as follows:

1. You will understand that to the extent that it has power available, the Authority cannot restrict itself in the sale of that power, under the mandatory and directory provisions laid down by Congress. However, the fact is that after allocating all the power generated at Wilson Dam required to serve various areas served or in the process of being [fol. 3062] served by the Authority, together with a reasonable reservation of power for prospective large-scale industrial customers, the Authority does not have available at the present time any large blocks of firm power which could be sold to municipalities. The areas referred to above are northern Alabama, northeastern Mississippi and northeastern Tennessee, none of which areas (except the latter) are served by companies associated with National Power and Light Company. This situation will be changed upon the completion of Norris or Wheeler Dams.

2. Further, the Board has adopted a policy that, in the coming months, for the best interests of the project, it will seek to develop and consolidate the market area which has thus far been acquired, rather than concentrating, as in the past year, upon acquiring additional market area.

In view of the foregoing facts and this policy, you will see that there is no likelihood that the Tennessee Valley Authority will transmit power to municipalities which lie outside of the aforementioned areas, before the completion of Norris or Wheeler Dams.

Yours very truly, Tennessee Valley Authority, by
Arthur E. Morgan, Chairman of the Board.

(Contract above referred to as Exhibit 7-27-34a, between Tennessee Public Service Company and TVA, not included as part of exhibit.)

Exhibit 7-27-34e

This Agreement, made and entered into this 26th day of July, 1934, by and between Carolina Power & Light Company, a North Carolina corporation, hereinafter referred to as "Carolina Company" and Tennessee Valley Authority, a corporation created by the Tennessee Valley Authority Act of 1933, hereinafter referred to as "Authority",

Witnesseth:

Whereas, Carolina Company entered into a contract with Tennessee Public Service Company, a Maine corporation, hereinafter referred to as "Public Service Company", on August 1, 1929, said contract requiring Public Service Company to purchase its entire power requirements except as therein specified, from Carolina Company; and

Whereas, said contract provided that either party thereto may assign its interest to a successor in ownership and operation of its respective property, and

Whereas, Public Service Company has by instrument of 26th day of July, 1934, agreed to convey and deliver at a future date, and subject to the terms and conditions of said instrument, a large part of its electric transmission and distribution property to Authority, whereby Authority will become the successor in ownership and operation of said property; and

Whereas, Public Service Company has agreed to assign to Authority its right, title and interest in, to and under said contract of August 1, 1929, as of the date of the conveyance [fol. 3063] and delivery by it to Authority of ownership and operation of the aforesaid property; (which date is herein-

after referred to and defined as the "effective date" of this agreement); and

Whereas, certain of the provisions of said contract of August 1, 1929 will not be applicable to the conditions of operation which will obtain under the ownership and operation of said transmission and distribution property by Authority, and the parties hereto desire to enter into certain other convenants and agreements.

Now, Therefore, in consideration of the premises and of the covenants and agreements hereinafter set forth, the parties hereto do hereby agree as follows:

Section 1. The aforesaid contract of August 1, 1929, is hereby canceled and rescinded as of the effective date hereof. Authority on the effective date hereof will pay to Carolina Company an amount equal to $247.62 for each day by which the effective date hereof is earlier than June 4, 1936. (For example, if the effective date hereof be October 4, 1934, this amount will be $150,800.00.)

Section 2. Carolina Company as of the effective date hereof, hereby assigns to Authority all of its right, title and interest in, to and under a certain agreement dated June 16, 1930, by and between Carolina Company and Tennessee Electric Power Company, a Maryland corporation; except that Carolina Company shall have the sole right to any benefits under said agreement which have accrued to it prior to this assignment and that Authority shall not be liable for any claims or damages arising or accruing under said agreement prior to this assignment.

Section 3. Carolina Company will deliver to Authority during the period beginning with the effective date hereof and ending with June 4, 1936, such amounts of firm power as Authority may desire to take, not exceeding 40,000 kw. of demand. Authority will pay on the basis of quarterly billings for power and energy so taken in accordance with the terms of the schedule attached hereto and marked "Exhibit A"; provided that the minimum billing demand shall be 20,500 kw. and that Authority will pay a minimum charge of $96,240.00 per quarter, which payment will entitle Authority to a demand of 20,500 kw. and to the use of 19,320,-

000 kwh. per quarter. The use of energy by Authority shall not exceed 9,000,000 kwh. in any one calendar month, unless consent to greater use be given in advance by Carolina Company in each instance.

(For example, if the effective date hereof be October 4, 1934, the sum of the initial payment provided in Section 1 and the minimum bills provided in this Section 3 will be $792,400.00 for the 20 months from October 4, 1934 to June 4, 1936.),

* * * * * * *

Section 16. It is mutually agreed by and between the parties hereto that this agreement is a contingent agreement conditioned upon the consummation of that certain contract of sale and purchase entered into by and between Authority and Public Service Company on the 26th day of [fol. 3064] July, 1934, and that the effective date as in this agreement used is defined as and shall be the date upon which the conveyance and delivery by the Public Service Company of its electric system and properties to Authority takes place and said contract of sale and purchase is consummated, provided, however, that if such consummation is not effected within one year from the date of execution of this agreement, then and in that event this agreement shall become null, void and of no effect.

In Witness Whereof, the parties hereto have caused to be subscribed hereunto their corporate names, signed by their respective officers thereunto duly authorized, and to be affixed hereto their corporate seals, attested by their respective secretaries, the day and year first herein named.

Carolina Power & Light Company, by —— ——, President.

Attest: —— ——, Secretary.

Tennessee Valley Authority, by —— ——, Chairman.

TVA corporate resolution dated October 9, 1934, approving Plan for furnishing electric service to Knoxville, Tennessee:

"Whereas, on the first day of March, 1934 the City of Knoxville, Tennessee, entered into a contract with the Authority whereby the City engaged to acquire a municipal electric distribution system by purchase or construction and the Authority agreed to supply power to the City at wholesale therefor; and,

Whereas, the Tennessee Public Service Company, which now owns the electric distribution facilities within and adjoining said City, on July 26, 1934, entered into a contract with the Authority in which it agreed to sell said facilities to the Authority at a fair price; and,

Whereas, the Authority and the City thereupon agreed upon a plan whereby the Authority, upon acquiring said distribution facilities from the Company, would resell such facilities to the City the terms and conditions of said agreed plan being set out in Resolution #767 of the Council of the City of Knoxville, approved August 14, 1934, a true copy of which, labeled Exhibit 10-9-34a, is attached to these minutes and made a part hereof.

Be It Therefore Resolved, That the plan set forth in said Resolution of the Council of the City of Knoxville, Tennessee, approved August 14, 1934, be and is hereby formally adopted.

Be It Further Resolved, That the said Resolution of the Council of the City of Knoxville, Tennessee, approved August 14, 1934, be and it is hereby accepted by the Tennessee Valley Authority.

Exhibit 10-9-34a

Resolution No. 767

A Resolution Approving the Plan to Acquire a Municipal Electric Distribution System

Whereas, on the 25th day of November, 1933, the citizens of the City of Knoxville, Tennessee, hereinafter called the "City", at a public referendum voted in favor of acquiring a municipal distribution system by purchase or construction for the purpose of distributing electricity purchased at wholesale from the Tennessee Valley Authority, hereinafter called the "Authority"; and

Whereas, the existing electric distribution and local transportation systems in and adjoining the City are now owned by the Tennessee Public Service Company, hereinafter called the "Company"; and

Whereas, the City of Knoxville, in order to avoid the building of a competitive electric distribution system, at- [fol. 3066] tempted without success, to purchase the existing distribution system from the Tennessee Public Service Company; and

Whereas, the City thereupon made application to the Federal Emergency Administration of Public Works for

a loan and grant with which to construct a distribution system, and the Federal Emergency Administration of Public Works has agreed by contract of the 2nd day of April, 1934, to make such loan and grant upon the issuance of general obligation bonds of the City; and

Whereas, on the 1st day of March, 1934, the City entered into a contract with the Authority whereby the City engaged to acquire a municipal distribution system by purchase or construction, and the Authority agreed to supply power at wholesale therefor; and

Whereas, it is desirable to avoid the building of a competitive electric distribution system; and

Whereas, the Company has agreed to sell to the Authority and the Authority has agreed to purchase a major part of the electrical properties of the Company, including the existing electric distribution facilities in and adjoining the City, at a fair price, said agreement being conditioned on the City relieving the Company of certain obligations relating to the local transportation system in the City; and

Whereas, if said sale is consummated it will be desirable for the City to extend relief to the Company in the operation of its local transportation system; and

Whereas, since the execution of the aforesaid contract between the City and the Authority, representatives of the Authority and the City have formulated a plan whereby the City can acquire the existing distribution facilities in and adjoining the City in Knox County, Tennessee, with minimum delay, without pledging its credit, without loss to investors in such facilities, without prejudicing the operation of the local transportation system, and without building a competitive electric plant, the said plan being as follows, to-wit:

1. The City, conditioned on the sale and transfer of said electrical properties of the Company to the Authority, will cooperate with said Company in a joint program of ride-building and will, in lieu of and in the discharge of any obligation of said Company under its present franchises, relieve the Company of any obligation to maintain or repair any street or the pavement thereon, or the pavement upon any viaduct or bridge upon which the Company shall have tracks or operate street cars, trolley buses or other

type of conveyance, provided that if the Company shall remove any track from a street, viaduct or bridge it shall pave the area vacated as the balance of the street, viaduct or bridge shall be paved; and provided further that if the Company voluntarily removes or destroys any pavement in the replacement, repair or maintenance of its track structure, the paving so removed or destroyed shall be replaced by the Company at its expense, and the City will likewise relieve the Company of any obligation to pay any [fol. 3067] part of the cost of constructing, reconstructing, maintaining or repairing any viaduct or bridge over which the Company operates gasoline buses, or other type of vehicle not requiring fixed tracks, but in any case where the Company operates over such bridge or viaduct street cars or other conveyance required fixed tracks, the Company shall bear the additional cost, if any, of construction and/or reconstruction of any such viaduct or bridge made necessary by such fixed tracks, but in lieu thereof the Company may substitute trackless vehicles.

If, however, any vehicle such as a trackless trolley is operated by the Company over a bridge or viaduct and such vehicle requires additional or special construction for its operation, the cost thereof shall be borne by the Company. If the Company elects, it shall be granted the right to substitute for street car service, on any street, viaduct or bridge, gasoline buses or other type of vehicle not requiring fixed tracks.

In event of consummation of such sale to the Authority, suitable ordinances and franchises with necessary details to carry these provisions into effect will be passed by the Council.

The City, subject to the conditions stated, will take appropriate action to sever the street railway and electric rights and obligations in any joint franchise.

2. The Tennessee Valley Authority will purchase the said electrical properties of the Tennessee Public Service Company, including the existing distribution system in and adjacent to the City, at a price which is fair to both consumers and investors.

3. The Authority will operate all of such properties directly for a limited period during which the distribution

system in and adjacent to the City will be rehabilitated, improved, extended and rearranged, in such manner, including such properties, and covering such an area, as the Authority may deem advisable, in order to establish it as an economic and efficient operating unit. The City will grant the Authority whatever franchise rights, within its limits, may be necessary for such direct operation, in form satisfactory to the Authority. During such period of direct operation the Authority may find it desirable upon investigation to extend the farm electric lines in the rural areas adjoining the City, such rural lines, so far as feasible, to be made a part of the existing system. In case such extensions are found to be desirable, the same shall not be made until after conference between the City and Authority, but in no event shall the amount expended therefor exceed the sum of $100,000. The Authority will further undertake, pending transfer of the properties of the City, an intensive program of residential, industrial and commercial load development. All the activities which are to be undertaken by the Authority, as described herein, will be accomplished at the Authority's expense, but the actual net cost thereof will be added to the original cost of acquiring the system.

When the Authority has achieved the objectives above described, estimated to take from one to two years, the period of direct operation by the Authority shall terminate. The Authority will then sell and transfer to the City, and the City will purchase, the distribution system and prop- [fol. 3068] erties appurtenant to or used in connection therewith and lying and being in Knox County, Tennessee, as to rehabilitated, improved, extended and rearranged, at the actual net cost to the Authority of such system, plus the actual cost of such rehabilitation, improvement, extension and rearrangement, subject to reduction as set forth below.

The basic price to be paid by the City for the purchase of the system and properties, as set out herein, is estimated to be approximately $4,250,000, but said amount is subject to additions and reductions, as outlined herein.

The City will be supplied with such accounting records as may be necessary to establish the investment of the Au-

thority in said system. The transfer will be by appropriate instrument securing the interest of the Authority and the City in said system. In this way the City will acquire, and will assume responsibility for managing and operating a well equipped and efficient electric system which will be co-extensive with the City's business and trade area so far as engineering and economic considerations permit.

5. During the period of direct operation, the Authority will add to its resale rates a surcharge of ten percent on all classes of customers. The proceeds of such additional charge, as well as all revenues in excess of the Authority's cost of operation, and interest upon its investment of 4%, shall be applied toward the reduction of the purchase price to the City.

6. The City will pay the Authority, for the system as purchased, plus interest at the rate of 4% per annum, by turning over to the Authority all of its revenues from the operation of the system in excess of the costs of operation thereof. The City will purchase power from the Authority at its standard wholesale rates for transmitted power, and will resell such power at the Authority's basic resale rates, plus an additional ten percent surcharge, until the Tennessee Valley Authority is entirely reimbursed for its investment.

7. It is recognized that the foregoing plan sets up a situation which differs from the situation contemplated under the contract of March 1, 1934, between the City and the Authority, and that, therefore, subsequent to the transfer of the foregoing properties to the Authority from the Tennessee Public Service Company, some of the provisions of the contract of March 1, 1934, will be inapplicable and — lieu thereof, another and different contract will be entered into between the City and the Authority embodying the foregoing plan.

Now, Therefore, be it Resolved by the Council of the City of Knoxville, That said plan hereinabove set out be and it is hereby ratified and approved and that the Tennessee Valley Authority be and hereby is requested to purchase the existing electric distribution system, and to proceed forthwith in carrying out the plan, as above described.

COMPLAINANTS' EXHIBIT No. 580

Be it Further Resolved, That this resolution shall take [fol. 3069] effect from and after its passage and acceptance by the Tennessee Valley Authority.

John T. O'Connor, Presiding Officer of the Council.
W. H. Peters, Jr., Acting Recorder.

I, Helen M. Bunch, Acting Recorder of the City of Knoxville, Tennessee, do hereby certify that the foregoing is a true and correct copy of Resolution No. 767, which passed first and final reading August 14, 1934, as the same appears of record in Minute Book 15, pages 217, 218, 219 and 220, in my office.

Witness my hand and the official seal of said City, this 15th day of August, 1934.

Helen M. Bunch, Acting Recorder, City of Knoxville, Tennessee.

COMPLAINANTS' EXHIBIT No. 581

TVA corporate resolution dated March 18, 1935, approving contract with Electric Home and Farm Authority, Inc.:

"Resolved, That the Board of Directors hereby approves and authorizes entry into the contract (Exhibit 3-18-35h) with the Electric Home and Farm Authority, Inc. in its corporate capacity, and as a trustee under a trust deed dated August 11, 1934.

* * * * * * *

Exhibit 3-18-35h

Agreement, made and entered into as of the 1st day of July, 1934, between Electric Home and Farm Authority, Inc. a corporation organized and existing under the laws of the State of Delaware, in its individual corporate capacity, hereinafter called "Authority"; and Electric Home and Farm Authority, Inc., as Trustee under a trust deed executed in May, 1934, as amended, to secure an issue of notes to aggregate not in excess of Ten Million Dollars ($10,000,000), hereinafter called "Trustee"; and Tennessee Valley Authority, a corporation organized and exist-

ing under and by virtue of the Tennessee Valley Authority Act of 1933, hereinafter called "Utility":

Witnesseth:

Whereas, Authority proposes to cooperate with manufacturers, dealers, and electric utility companies who are operating under the plan to promote the widespread purchase and use of domestic electric appliances, and thereby to make possible an increased use of electricity in the home; and

Whereas, the plan provides for the billing of purchasers [fol. 3070] of said appliances along with the regular monthly service bills of Utilities cooperating in the plan and is therefore limited to customers of such cooperating Utilities,

Now, Therefore, in consideration of the mutual covenants herein contained, the parties hereto for themselves, their successors and assigns, covenant and agree as follows:

Article I. The special terms used herein shall have the following definitions:

"Electric Appliance" shall mean any piece of electric equipment which Authority may agree from time to time to finance. "Manufacturer" shall mean the manufacturer of an electric appliance. "Dealer" shall mean a retailer of electrical appliances who is approved by the Authority and is cooperating in the plan. "Purchaser" shall mean an ultimate user to whom a Dealer sells at retail an electric appliance. "Customer Paper" shall mean chattel mortgages, conditional sale contracts, leases, promissory notes, or other forms of obligation given by purchasers and accepted by Dealers in connection with the sale of electric appliances under a deferred-payment plan.

Article 2. Utility will, in accordance with the terms and conditions herein contained, and as agent for the Authority and/or Trustee, receive Customer Paper from Dealers, and collect installments due on Customer Paper.

Article 3. Utility will receive and transmit to Authority for approval or rejection by Authority, Customer Paper from Dealers only upon the following conditions:

(a) Utility will check the installation of the appliances purported to have been sold. A statement that this instal-

lation has been checked and a statement of the Customer Account number upon the records of the Utility is to be forwarded at the time the Customer Paper is transmitted to the Authority.

(b) The purchaser to whom the Electric Appliance is sold must be using the electric service of the Utility; and the Electric Appliance must be sold for installation in a residence for domestic use;

(c) The Customer Paper must be on forms prescribed and furnished by Authority, completely and properly filled out, and properly assigned by Dealer on the assignment form on the Customer Paper;

(d) Customer Paper shall be received only from approved Dealers. Authority shall advise Utility in writing of all Dealers approved in Utility's territory. Any Dealer may be removed from the approved list at any time by the Authority, and Utility will be notified of any such removal;

(e) Utility shall not receive any Customer Paper if the cash delivered sale price of the Electric Appliance used as the base price in such sale, was in excess of the Manufacturer's suggested retail price approved by Authority:

[fol. 3071] (f) Utility shall not, without written consent of the Authority, receive any Customer Paper which is not presented by the Dealer within thirty (30) days after the sale of the Electric Appliance covered thereby;

(g) Utility shall not receive any Customer Paper unless the finance charges thereon are in accordance with Authority's then prevailing chart of finance charges, and unless the following requirements are observed:

The maximum period for which Customer Paper or terms may be extended shall be three (3) years where one Electric Appliance is sold, and four (4) years if two or more Electric Appliances are sold to the same Purchaser at the same time under the same contract. There shall be minimum equal monthly payments of at least Two Dollars ($2.00) on each contract, and the down payment shall be not less than the monthly installment.

(h) If Customer Paper is offered by Dealer which was received in payment for an approval range or water-heater which Utility refuses to install, or if by reason of any credit information Utility may have on the purchaser or for any other reason Utility deems that any Customer Paper offered by Dealer may be unsatisfactory to Authority and/or Trustee, Utility shall forward to Authority the Customer Paper offered, together with a statement of the reasons why Utility deems it unsatisfactory.

Article 4. Utility will collect from Purchasers who are using electric service of Utility monthly installments on Customer Paper and will pursue the following procedure with reference to collection of such installments:

(a) Utility will send to Purchaser, along with the monthly service bill of Utility, notice of each installment due. The installment will be considered delinquent if not paid within ten (10) days from its due date;

(b) If installment is not paid, Utility will send a delinquent notice to Purchaser within ten (10) days after the installment becomes delinquent;

(c) If installment is still unpaid at the time for mailing the next monthly service bill, Utility will send to Purchaser a second delinquent notice with that monthly service bill;

(d) Utility will assign a collector to contact Purchaser between thirty (30) and forty (40) days after delinquency;

(e) If the installment is unpaid forty (40) days after delinquency, Utility will, within five (5) days thereafter, notify Dealer of the delinquency and send Authority a copy of this notice;

(f) If the installment is unpaid fifty (50) days after delinquency, Utility will, within five (5) days thereafter, send demand notice to the Dealer to repurchase the Customer Paper according to his repurchase agreement;

[fol. 3072] (g) If sixty (60) days after Purchaser's delinquency, Dealer has not repurchased the Customer Paper and Purchaser has not paid all installments then due, Utility will, within five (5) days thereafter, notify Authority of such default on the part of Dealer.

It is understood and agreed that Utility will not be required to comply with the above procedure for billing and collection, with respect to those purchasers who are employees of Utility so long as collections are being effected from such Purchasers by payroll deductions.

Article 5. At the request of any dealer, Utility shall furnish to such Dealer any credit information Utility may have on a proposed Purchaser.

Article 6. Utility shall semi-monthly (fifteenth and end of each month) forward to Authority and/or Trustee all collections on Customer Paper, together with all sums received from Dealers, accompanied by a statement on a form, mutually agreed upon by the parties, of collections and of sums received from Dealers. Any authorized agent of Utility is hereby authorized to indorse to Utility, for deposit only, any check payable to Authority or Trustee which is received by Utility in payment on Customer Paper.

Article 7. Utility shall submit to Authority monthly a statement showing the Outstanding balances, segregated according to Dealers, on all Customer Paper held by Utility for Authority and/or Trustee, on which Utility is still making, or attempting to make, collections.

Article 8. It is understood and agreed that title to all Customer Paper shall be vested in Authority and/or Trustee; Utility shall at all times keep all Customer Paper and accounts in connection therewith entirely separate and distinct from all other papers, accounts, and records of Utility. Title to all collections on Customer Paper shall, from the instant same comes into possession of Utility be vested in Authority and/or Trustee.

Article 9. Utility's books, accounts, correspondence, and other records pertaining to Customer Paper and collections, shall at all times be open for inspection by Authority, and by the Comptroller-General of the United States or their respective authorized agents. Utility shall furnish to Authority and to the Comptroller-General of the United States, upon request, any reasonable information requested by either and pertaining to Customer Paper, or to collec-

tions, or to any other matter in connection with Customer Paper or collections thereof.

Article 10. Utility shall be obligated to furnish to Dealers all information available to it with reference to the operation of Authority's plan of financing Customer Paper, shall maintain a supply of Purchaser contract forms, rate charts, pamphlets (all of which will be furnished by Authority), and distribute the same to Dealers; and shall immediately forward to Authority all communications and inquiries from either Dealers or Purchasers, which Utility is unable to answer or which for any reason require the attention of Authority.

Article 11. Utility shall immediately notify Authority and Dealer concerned:

[fol. 3073] (a) If Utility's electric service is for any reason discontinued to any Purchaser who is thirty (30) days or more in default in payment of any installment due on Customer Paper;

(b) If, to Utility's knowledge, any Purchaser moves off of Utility's lines, or moves and leaves behind an Electric Appliance on which unpaid Customer Paper is held by Authority or Trustee;

(c) If, to Utility's knowledge, any Electric Appliance covered by Customer Paper which is thirty (30) days or more in default is removed from the place originally installed, or is injured, or if for any other reason Utility deems that Authority's or Trustee's rights in such Electric Appliance or the security thereof are jeopardized;

(d) If, to Utility's knowledge, any Purchaser is in default in any obligation under his contract, or becomes insolvent, or if a petition in bankruptcy or for a receiver is filed by or against the Purchaser, or if for any other reason Utility deems action against the Purchaser advisable or necessary to protect Authority's or Trustee's interests. This provision does not apply to a default of a Purchaser in payment of installments due, the procedure in such case being as provided in Article 4 hereof.

The notice to Authority shall contain a statement of Utility's opinion as to whether or not the Dealer involved

will be able and willing to repurchase the Customer Paper involved if so required.

Article 12. If, to Utility's knowledge or belief, any Dealer is in default under, or is violating any obligation of, his contract with Authority and/or Trustee, or ceases to do business as a going concern, or becomes insolvent, or if a petition in bankruptcy or for a receiver is filed by or against any Dealer, or if for any other reason Utility deems action against any Dealer necessary or advisable to protect Authority's or Trustee's interests, Utility shall immediately notify Authority.

Article 13. Utility shall for a flat charge of Five Dollars ($5.00), install inside wiring for approved ranges and water heaters for Customers on Utility's lines, unless Utility does not approve the credit of the Purchaser, or does not believe Purchaser's residence is sufficiently permanent to justify the expense of such installation, or unless the cost of installation is more than Twenty Dollars ($20.00) and the Purchaser is unwilling to pay the amount in excess of said Twenty Dollars ($20.00). Utility shall obtain consent of Authority before refusing installation for any other reason.

Article 14. If any Purchaser whose Customer Paper is being collected by Utility hereunder transfers his Electric Appliance or Appliances from one point on Utility's lines to another point on Utility's lines, Utility will continue to make collections from Purchaser. If electric service of any Purchaser whose Customer Paper is being collected by Utility is discontinued for any reason whatsoever, Utility will continue to make collections from Purchaser and any notice which under regular collection procedure would have been sent to Purchaser with Purchaser's monthly service bill shall be sent to Purchaser on approximately the same [fol. 3074] day of each month on which the last regular monthly service bill was sent to Purchaser.

Article 15. Authority will pay to Utility the sum of One Dollar ($1.00) as booking charge for each item of Customer Paper purchased by Authority or Trustee and handled through Utility, each contract being considered as one item.

In addition, Authority will pay to Utility, at the end of each month, as collection and billing charges, the sum of twelve and one-half cents (12½¢) on each contract on which Utility has sent to the Purchaser during that month a first notice of installment due. Payment of the above sums will constitute payment in full for all services to be performed by Utility hereunder, including all space, mailing service, telephones, personal services, and supplies, except that Authority will furnish to Utility purchaser contract forms, rate charts, and any other standard forms regularly made up by the Authority.

Article 16. Utility may consent that any Dealer make a new contract with the Purchaser under any Customer Paper not in default, if the purpose is to extend the time of credit for payment of the balance due under the original Customer Paper; Provided, that the term of the new contract, plus the time then elapsed since the original contract was executed, shall not exceed the maximum period of time for which credit could have been extended under the original contract, and that the new contract in every other respect meets the requirements of Customer Paper as set out in Article 3 hereof.

The amount of the refinanced contract (which in the making of the refinanced contract shall be treated for all purposes as though it were the cash sale price of the appliance under an original contract) shall be the balance owing under the original contract less unearned finance charges, which latter sum shall be determined as provided in Article 17 hereof. Such refinanced contracts shall thereafter be considered as Customer Paper for all purposes of this contract, and Utility shall be entitled to the same sums for its services in connection therewith as in the case of original Customer Paper. Utility shall not, in any other manner, without written consent of Authority, waive, adjust, compromise, extend, or change any right which Authority or Trustee may have against any Purchaser or Dealer.

Article 17. If any Customer Paper is refinanced, as provided in Article 16 hereof, or is repurchased by Dealer, or is paid up in full in advance of maturity, the amount due

on the Customer Paper at that time shall be the unpaid face amount less unearned finance charges, the latter to be determined as provided in Authority's then prevailing chart of finance charges.

Article 18. If, by reason of any default of Utility in the performance of any of its obligations under this contract, Authority or Trustee shall lose any of its rights with reference to any Customer Paper against any Purchaser or Dealer, Utility shall, upon demand and as liquidated damages for such default, immediately purchase from Authority or Trustee, at a price equal to the unpaid face amount thereof, any such Customer Paper.

Article 19. This contract shall inure to the benefit of and bind the successors and assigns of the parties hereto to the [fol. 3075] same extent as the original parties, and shall be in effect from the date hereof until cancelled by either party by thirty (30) days written notice to the other party. Such cancellation shall not affect any obligation of any party with respect to Customer Paper purchased prior thereto.

Article 20. It is agreed that if any change in the obligation of Utility with reference to receiving or collecting of Customer Paper is mutually agreed on by the parties hereto, such change may be authorized by a letter from Authority to Utility and such letter, when acknowledged by Utility, shall become a part of this contract, which shall otherwise remain unchanged and in full force and effect.

Article 21. The parties hereto agree that Trustee has no obligations hereunder, but that any obligation of Authority hereunder may, at the option of Authority and Trustee (or any successor of Trustee) be performed by Trustee (or any successor of Trustee) and that such performance will be accepted by Utility as a compliance with this contract to the same extent as though such performance had been by Authority itself. The parties hereto further agree that all of Utility's obligations hereunder, however expressed and to whomsoever stated to run, shall be deemed to run severally to Trustee (or any successor of Trustee) and to Authority, and any of said obligations

COMPLAINANTS' EXHIBIT No. 581

may at any time and from time to time be enforced severally, in whole or in part, by suit or otherwise, by Authority or by Trustee (or any successor of Trustee); Provided, that satisfaction to one shall constitute satisfaction to both.

In Witness Whereof, the parties hereto have caused this contract to be executed and their respective seals to be affixed hereto as of the day and year first above written.

Tennessee Valley Authority, (Signed) Arthur E. Morgan. (Seal.)

[fol. 3076] COMPLAINANTS' EXHIBIT No. 582

TVA corporate resolution dated May 7, 1935, approving contract between TVA and City of Athens, Alabama:

"Resolved, That the Board of Directors hereby approves and authorizes entry into the agreement (Exhibit 5-7-35b) with the City of Athens, Alabama.

Exhibit 5-7-35b

This Agreement, made and entered into this 23rd day of April, 1935, between the Tennessee Valley Authority, hereinafter called "Authority," a corporation created by Act of Congress approved May 18, 1933, and the City of Athens, Alabama, a municipal corporation duly organized, created and existing under and by virtue of the laws of the State of Alabama, hereinafter called "City."

Whereas, it is desirable to enlarge and clarify Section 10 of the Rules and Regulations incorporated in the Power

Contract executed on the 6th day of April, 1934, between Authority and City; and

Whereas, a valuation of the City's Electric Distribution System has been completed giving its value as of June 1, 1934, the effective date of the aforementioned agreements; and

Whereas, it is desirable to have a definite determination of the amount of the City's investment in its Electric Distribution System, and the manner in which such investment should be administered.

Now, Therefore, for and in consideration of the mutual covenants contained herein and as a supplement to the aforementioned agreement between the Authority and City, the parties hereto mutually agree as follows:

Article I

The value of the Electric Distribution System of the City as of the 1st day of June, 1934, is $72,607.51.

Article II

The investment of the City in the Electric Distribution System as of June 1, 1934, is $72,607.51. This amount is determined by deducting the total amount of outstanding bonds applicable to the Electric Distribution System from $72,607.51, which is the present value of the System. Since there are no outstanding bonds applicable to the Electric Distribution System, the City's investment in the Electric Distribution System is accordingly $72,607.51.

Article III

The City agrees that it will administer this investment in the following manner:

[fol. 3077] A. Determination of the Maximum Return to be Derived by the City From Its Investment in the Electric Distribution System

The amount set out in Article II above representing the City's investment in the Electric Distribution System shall be adjusted at the end of each fiscal year. The City shall

receive a return on this investment not to exceed one-half (½) of one (1) per cent per month, computed on the basis of the investment as of the last day of the month next preceding.

B. Payment by the City for Electric Service

The City shall pay the Electric Department monthly for all electric services supplied to it. The City shall be billed in the same manner and at the same rate as other customers in the same service classification.

C. Payment by the Electric Department to the City in Lieu of Taxes

The City shall be allowed from the revenues or funds of the Electric Department an amount in lieu of taxes, to be determined as follows:

(a) Tax Equivalent to City Property Tax.—The prevailing city property tax rate shall be applied to the value of the property used in electric operations.

(b) Tax Equivalent to County and State Property Tax.—If the electric operations of the City are not subject to county and state taxation, the tax equivalent paid to the city under (a) above shall be increased by application of the County and State tax rates to the value of the Electric Distribution System. If, however, the County and State governments levy taxes upon the municipal Electric Distribution System, this county and state tax equivalent will not be allowed to the City.

(c) Sales Tax Equivalent.—If there is in effect in the state in which the municipality is located a sales tax applicable to privately owned electric systems and such tax is not applicable to municipally owned electric systems, an amount equivalent to the application of such sales tax to the revenues of the municipal electric system may be paid to the City in addition to the tax equivalent payments set forth above. The payment of this tax shall cease at such time as the state may impose a tax upon municipal electric systems.

(d) In determining the amount to which the City is entitled in lieu of taxes under (a) and (b) above, the tax rate

shall be applied to the value of the property determined in Article I above as $72,607.51, plus additions, less retirements. The computations shall be made monthly and shall be based upon this value plus additions, less retirements, as shown by the books at the beginning of each taxable year. For the current taxable year computations shall be based upon the value of $72,607.51.

D. Payment by Electric Department for Service.

The Electric Department shall pay the salary of those persons who devote their full time to the operation of the [fol. 3078] Electric Distribution System, and an equitable portion of the salary of those persons devoting part time to the operation of the Electric Distribution System.

E. Treatment of Excessive Withdrawals and Reinvestments by the City

If, at any time, the City should withdraw from the funds of the Electric Department amounts in excess of the allowable return on investment and of the tax equivalent, the City's investment shall be reduced in the amount of such excess withdrawals: Provided, however, that withdrawals of the City's investment shall be made only at such times and in such amounts as not to interfere with the efficient operation of the Electric Distribution System; Provided, further, that in no event shall the excess withdrawals in any fiscal year exceed ten (10%) per cent of the City's investment on the initial date of delivery as set out in Article II above without the written consent of Authority; and Provided, further, that in no event shall the excess withdrawals by the City exceed the amount of the City's investment in the Electric Distribution System. If, at any time, the City should fail to withdraw the full amount of return, due on account of its investment and/or on account of tax equivalent, that part or whole of the return and/or tax equivalent which is not withdrawn shall be added to the City's investment.

F. Treatment of Short Term Loans and Advances

The City may borrow funds or lend funds to the Electric Department only on a short term basis (one year or less

without the right of renewal). The amount so borrowed or loaned shall bear a rate of interest not to exceed six (6%) per cent per annum. At the end of each fiscal year all borrowings and advances by the City and the Electric Department shall be paid or closed out by adjustment of the City's investment account; Provided, however, that any short term obligations then outstanding which are to be paid in the succeeding fiscal year may remain outstanding for the unexpired term, in the discretion of the Board of Aldermen, or other governing body of the City.

G. Action by Governing Body of City

Except as limited in this statement, the Board of Aldermen or other governing body of the municipality shall determine the rate of return on the City's investment and/or the interest rate of loans and advances. No transfer of funds shall be made between the City and the Electric Department, nor shall any change in the City's investment in the Electric Distribution System be made except pursuant to a resolution of the Board of Aldermen or other governing body of the City.

H. Publication of Statement of City's Investment

The Board of Aldermen or other governing body of the municipality shall publish a statement of the amount of the City's investment in its Electric Distribution System, the outstanding short term borrowings and advances, and all [fol. 3079] other accounts existing between the City and the Electric Department, at the close of each fiscal year. A copy of such statement shall be forwarded to Authority immediately at its office at Wilson Dam, Alabama. After the closing of the books at the end of each month, the Board of Aldermen or other governing body of the municipality shall make known upon demand to any taxpayer of the City or customer of the Electric Distribution System, the amount of the City's investment in its Electric Distribution System.

Article IV

This agreement is hereby made a part of and incorporated into the Power Contract between Authority and City executed the 6th day of April, 1934.

COMPLAINANTS' EXHIBIT No. 582

In Witness Whereof, the parties hereto have caused this instrument to be signed and attested by their duly authorized officers, the day and year first above written.

Tennessee Valley Authority (Signed) by Arthur E. Morgan, Chairman.

Attest: (Signed) Charles E. Hoffman, Ass't Secretary.

City of Athens (Signed) by R. H. Richardson, Jr., Mayor. (Seal.)

Attest: (Signed) R. A. Smith, City Clerk.

COMPLAINANTS' EXHIBIT No. 583

TVA corporate resolution dated July 25, 1935; approving Sale, Lease and Security Contract between Tennessee Valley Authority and Tishomingo County Electric Power Association.

(Omitted)

To avoid repetition, the contract attached to and referred to in the approving resolution is not set forth herein at length. It is substantially the same as the Sale, Lease, [fol. 3080] Trust and Security Contract comprising a part of Complainants' Exhibit No. 577 hereinbefore set forth as an exhibit, but said contract contains an additional paragraph, to-wit:

"9. Authority shall have, and hereby reserves, the option for a period of ten (10) years from the effective date of this contract to repurchase the personal property, terminate the Government's lease of any real property relating thereto, and retake possession of the 22 kv. transmission line described in Section (19) and (20) of Article 2 hereof, together with all rights-of-way and easements, connected therewith, all railroad crossing contracts covering said line and any other property or rights connected with or appertaining to said 22 kv. transmission line. In the event of the exercise of said option Authority shall pay to Association the purchase price of said line which shall be taken as twenty-three thousand, nine hundred and sixty-two dollars and fifty-eight cents ($23,962.58), plus replace-

COMPLAINANTS' EXHIBIT No. 583

ments, additions, and betterments at actual cost, less actual retirements and less accrued depreciation at the rate of four (4%) per cent per annum.

In the event Authority exercises the option herein granted service to Association or Association's customers shall in no wise be impaired, nor shall the exercise of said option by Authority result in any increased cost to or necessitate any increased investment by Association."

COMPLAINANTS' EXHIBIT No. 584

TVA corporate resolution dated November 16, 1935, approving Sale, Lease and Security Contract between TVA and Tombigbee Electric Power Association.

(Omitted)

To avoid repetition, the contract attached to and referred to in the approving resolution is not set forth herein at length. It is substantially the same as the Sale, Lease, Trust, and Security Contract comprising a part of Complainants' Exhibit No. 577 hereinbefore set forth as an exhibit, but contains as paragraph 11 an option similar in nature to that hereinbefore set forth in the comment, supra, respecting Complainants' Exhibit No. 583.

[fol. 3081] COMPLAINANTS' EXHIBIT No. 585

TVA corporate resolution dated November 16, 1935, approving contract between TVA and the City of Dayton, Tennessee, for cooperation in construction of rural lines:

"Resolved, That the Board of Directors hereby approves and authorizes entry into the contract (Exhibit 11-16-35c) with the City of Dayton, Tennessee.

Exhibit 11-16-35c

This Agreement, made and entered into this 2nd day of November, 1935, by and between Tennessee Valley Authority, hereinafter called "Authority", a corporation created

by the Tennessee Valley Authority Act of 1933, and the City of Dayton, Tennessee, a municipal corporation duly organized, created, and existing under and by virtue of the laws of Tennessee, hereinafter called "Municipality".

Witnesseth:

Whereas, Municipality has executed a loan contract with the Rural Electrification Administration in the amount of $38,058.00 by which Municipality is to receive funds to be used in the construction of rural electric lines in and adjacent to Rhea County, Tennessee, and

Whereas, Authority is preparing engineering plans and specifications which will enable Municipality to advertise for bids and award contracts for the construction of said rural lines and Municipality has agreed to reimburse Authority for the cost of these services, and

Whereas, Municipality is anxious to begin the construction immediately of certain of these rural lines which are now being surveyed, and

Whereas, Authority by Section 10 of the Tennessee Valley Authority Act of 1933 is authorized to construct transmission lines to farms and small villages that are not otherwise supplied with electricity at reasonable rates, and

Whereas, Municipality has requested that Authority cooperate in the immediate construction of certain proposed rural lines, and

Whereas, all parties to this contract have duly authorized its execution,

Now, Therefore, for and in consideration of the mutual covenants herein contained and subject to all the provisions of the Tennessee Valley Authority Act of 1933, the parties hereto mutually covenant and agree as follows:

[fol. 3082] 1. Authority will cooperate with Municipality in the construction of rural transmission lines which have been or are to be surveyed by Authority under the terms of the request for these and other services by the Board of Commissioners of Municipality, and contained in an order to the Authority dated October 2, 1935, and signed by the Chairman of said Board and the City Recorder, which order was accepted on behalf of Authority by A. H. Sullivan, Assistant Chief Electrical Engineer, in a letter

to Municipality dated October 31, 1935, in the following manner:

A. Authority will supply to Municipality such poles, conductors, crossarms, transformers, meters, insulators, pole line hardware, and other material necessary or useful in the construction of rural transmission lines in such quantities as Municipality may request and as may be necessary in the construction of the rural lines hereinabove referred to.

B. Authority will furnish to Municipality, at Municipality's request, trucks, tools, and other equipment necessary or useful in the construction of the rural lines referred to hereinabove.

C. Authority will furnish Municipality, at Municipality's request, line crews, laborers, and supervisors, both field and office, in such numbers as Authority may deem advisable for use in the construction of the rural lines referred to hereinabove.

2. Municipality will pay to Authority the Authority's actual cost, plus overhead charges, of the materials, supplies, labor, supervision, and services performed pursuant to this agreement, and for Authority's actual cost for the use of equipment supplied hereunder. Municipality agrees to pay any sums due hereunder to Authority within thirty (30) days after the receipt of invoice therefor from Authority.

In Witness Whereof, the parties hereto have caused this instrument to be signed and attested by their duly authorized officers the day and year first above written.

Tennessee Valley Authority, by —— ——, Coordinator.

Attest: —— ——, Assistant Secretary.

City of Dayton Tennessee, by —— ——, Chairman of Board of Commissioners.

Attest: —— ——, Recorder.

[fol. 3083] COMPLAINANTS' EXHIBIT No. 586

TVA corporate resolution dated November 16, 1935, approving contract between TVA and Alcorn County Electric Power Association for interchange of power:

(Omitted)

COMPLAINANTS' EXHIBIT No. 587

TVA corporate resolution dated December 20, 1935, approving Sale, Lease and Security Contract between TVA and the City of New Albany, Mississippi:

(Omitted)

To avoid repetition, the contract attached to and referred to in the approving resolution is not set forth herein at length. It is substantially the same as the Sale, Lease, Trust, and Security Contract comprising a part of Complainants' Exhibit No. 577 hereinbefore set forth as an exhibit, and includes the option for repurchase provision set forth in Complainants' Exhibit No. 583.

COMPLAINANTS' EXHIBIT No. 588

TVA corporate resolution dated December 23, 1935, approving contract between TVA and Lincoln County Electric Membership Corporation for collection of bills and other services:

(Omitted)

[fol. 3084] COMPLAINANTS' EXHIBIT No. 589

TVA corporate resolution dated December 31, 1935, approving supplementary contract between TVA and Alcorn County Electric Power Association for the construction of rural lines by the Association:

"Resolved, That the Board of Directors hereby approves and authorizes entry into the contract (Exhibit 12-31-35d) with the Alcorn County (Mississippi) Electric Power Association.

Exhibit 12-31-35d

This Agreement, made and entered into this 31st day of December, 1935, pursuant to the Tennessee Valley Au-

thority Act of 1933, between the Tennessee Valley Authority, a corporation created by and acting under said Act, hereinafter called "Authority", and the Alcorn County Electric Power Association, a non-profit civic improvement corporation, organized, created and existing under and by virtue of the laws of the State of Mississippi, hereinafter called "Association:"

Witnesseth:

Whereas, Authority is delivering electricity to Association pursuant to a power contract between the parties, dated June 1, 1934, and

Whereas, Authority conveyed certain property to Association on June 1, 1934 under the terms of an agreement entitled "Sale, Lease, Trust and Security Contract Between Tennessee Valley Authority, United States of America and Alcorn County Electric Power Association," and as partial security therefor Association agreed to pay over to Authority all of its surplus revenues and all membership fees received, including installments paid by additions to Association's bills for service to members, and

Whereas, Association desires to construct certain rural lines from the surplus revenues pledged Authority as partial security for Association's debt to Authority.

Now, Therefore, for and in consideration of the premises and the mutual convenants contained herein and subject to all the provisions of the Tennessee Valley Authority Act of 1933, the parties hereto mutually covenant and agree as follows:

1. This agreement shall be effective for fifteen (15) months from April 1, 1936, subject to the provisions hereof. Association shall be under no obligation to pay to Authority the surplus revenues (excluding membership fees and charges) from its operations during this period.

2. During the period hereof, Association will construct [fol. 3085] and put into service not less than thirty (30) additional miles of rural lines. All projects must be submitted in advance to Authority, together with general plans and specifications of such projects, and no project shall be constructed until such project, with the general plans and specifications therefor, has been approved by Authority.

COMPLAINANTS' EXHIBIT No. 589

3. Authority may terminate this agreement upon five (5) days written notice, if Association has not substantially completed eight (8) miles of rural lines within six (6) months from the effective date hereof and ten (10) additional miles within ten (10) months from the effective date hereof.

4. In order to afford additional security to Authority in lieu of the payment of surplus revenues, which payment is extended under the terms of this agreement, Association hereby covenants and agrees that Authority shall have a prior lien on all the rural lines constructed or acquired by Association hereunder, said lien to be and remain and attach to each and every article of property constructed or acquired until the entire indebtedness of Association to Authority under the agreement of January 1, 1934, hereinabove referred to is fully paid.

5. The agreement of June 1, 1934 hereinabove referred to is hereby amended to the extent necessary to conform to the provisions hereof.

In Witness Whereof, the parties hereto have caused this instrument to be signed and attested in duplicate by their duly authorized officers, the day and year first above written.

Tennessee Valley Authority, by Arthur E. Morgan, Chairman, Board of Directors. C. G. D., Leg. Div.

Attest: Charles E. Hoffman, Assistant Secretary.

Alcorn County Electric Power Association, by ——, President.

Attest: H. W. Weeks, Secretary."

(Verifications omitted.)

COMPLAINANTS' EXHIBIT No. 590

TVA corporate resolution dated January 10, 1936, approving construction of Hiwassee Dam:

"Resolved, That the Board of Directors hereby approves and authorizes the construction of a reservoir storage dam

COMPLAINANTS' EXHIBIT No. 590

in the Hiwassee River on the Fowler Bend Site as recommended by the Assistant Chief Engineer, including provision for the future installation of such equipment as is necessary to generate hydro-electric energy."

[fol. 3086] COMPLAINANTS' EXHIBIT No. 591

TVA corporate resolution dated December 31, 1935, approving the construction of Chickamauga dam:

"Resolved, That the Board of Directors hereby approves and authorizes the construction of a high dam in the Tennessee River on the site at the foot of Chickamauga Island located approximately seven miles above Chattanooga, Tennessee, in accordance with the general plan contained in the report labeled exhibit 12-31-35e, including the provision for the future installation of such equipment as is necessary to generate hydro-electric energy."

COMPLAINANTS' EXHIBIT No. 592

TVA corporate resolution dated January 18, 1936, approving sale and loan contract between TVA and The Monroe County Electric Power Association:

"Resolved, That the Board of Directors hereby approves and authorizes entry into the contract (Exhibit 1-18-36b) with the Monroe County (Mississippi) Electric Power Association.

Exhibit 1-18-36b

This Agreement, made and entered into as of the fifteenth day of January, 1936, between the Tennessee Valley Authority (hereinafter called Authority), the United States of America (hereinafter called Government) acting through its legal agent, Authority, and The Monroe County Electric Power Association (hereinafter called Association), a non-profit civic improvement corporation, organized, created and existing under and by virtue of the laws of the State of Mississippi.

Witnesseth:

Whereas, Authority and/or Government are the owners of certain electric properties in Monroe County, Mississippi, and

Whereas, Association desires to purchase said properties for the sum of Seventeen Thousand Two Hundred Thirty-seven Dollars and Eighty-nine Cents ($17,237.89), for the purpose of completing, improving and operating them for the transmission and sale of electric power to its members under an agreement made between Association and Authority entitled "Power Contract Between Tennessee Valley Authority and Monroe County Electric Association" dated July 19, 1935, and

[fol. 3087] Whereas, Authority is authorized by Section 4 (f) of the Tennessee Valley Authority Act of 1933, as amended, to dispose of personal property, and by Section 4 (k) of said Act, as amended, subject to the approval of the President, to dispose of such real property as may no longer be necessary in carrying out the purposes of said Act, and Authority's Board of Directors has found that the following described properties are no longer necessary in carrying out the purposes of said Act, and

Whereas, Association has contracted with the Smithville Light and Power Company to purchase from said Company certain distribution systems and an inter-connecting transmission line, located in Monroe and Lowndes Counties, Mississippi, for the sum of Eleven Thousand Five Hundred Dollars ($11,500) and Association desires to borrow that amount from Authority for the purpose of paying for said properties and operating the same for the transmission and sale of electric power to its members, according to the "Power Contract" hereinabove referred to, and

Whereas, Authority is authorized by Section 12 (a) of the Tennessee Valley Authority Act of 1933, as amended, to assist non-profit organizations in acquiring existing distribution facilities, incidental works and inter-connecting transmission lines, by extending credit to such organizations, and

Whereas, as evidence of Association's obligation to pay Authority the sum of Seventeen Thousand Two Hundred Thirty-seven Dollars and Eighty-nine Cents ($17,237.89) for the properties which Authority herein agrees to sell to

Association, and to repay to Authority the sum of Eleven Thousand Five Hundred Dollars ($11,500) which Authority herein agrees to loan to Association, Association has executed on even date herewith a certain "First Mortgage three and one-half per cent note" (hereinafter called the "Note") for the sum of Twenty-eight Thousand Seven Hundred Thirty-seven Dollars and Eighty-nine Cents ($28,737.89) and a certain First Mortgage (hereinafter called the "Mortgage") to secure the payment of said Note, said Note and Mortgage being incorporated into this contract as fully as if they were physically made a part hereof.

Now, Therefore, for and in consideration of the mutual covenants herein contained, the parties hereto for themselves, their successors and assigns forever covenant and agree as follows:

1. Sale of Property—In consideration of the sum of Seventeen Thousand Two Hundred Thirty-seven Dollars and Eighty-nine Cents ($17,237.89), which sum Association agrees to pay to Authority as hereinafter provided, Government, acting through Authority, its legal agent, and Authority hereby covenant and agree to convey to Association by quitclaim deed executed on even date herewith, all their right, title and interest in and to the following described property, located in Monroe County, Mississippi, to have and to hold the same to itself, its successors and assigns, forever, to wit:

[fol. 3088] (1) The three-phase, 4-wire, 11.9 kv. rural distribution line, known as the Amory-Gravel Pit Line, extending from the Amory-Substation at Amory, Mississippi, in a westerly direction for a distance of approximately one mile to the Amory-Gravel Pit, including poles, cross arms, pole line hardware, conductors, insulators, one service metering equipment, and three 25 kva. 6900/115-230 volt, single-phase transformers.

(2) The poles, cross arms and guying material composing the following uncompleted lines:

The Becker-Hamilton Line, approximately 12.7 miles.

The Smithville-Suggs Pottery Line, approximately 3.6 miles.

The Smithville-Pierce Chapel Line, approximately 3.5 miles.

The Amory-Hatley-Smithville Line, approximately 9.0 miles.

The Parham Store-Greenwood Springs Line, approximately 1.8 miles.

Included in this transfer are 532 poles, 269 6-pin cross arms, and 14 anchor logs, all erected in place.

(3) All the rights-of-way and/or easements now owned by Authority in any privately-owned real property over, through, or across which any of the above lines, complete or incomplete, extend.

(4) All franchises held by Authority for the use of public roads, and all contracts owned by Authority granting privileges for railroad crossings, which are necessary for the completion and operation of the above lines.

2. Title to the above described property shall vest in the Association upon the execution of said quitclaim deed, but Authority shall retain possession and control of said property until Association shall have employed a Superintendent or made the arrangements necessary, in the opinion of Authority, for taking over the possession, control, and operation of the properties, which Association agrees shall be not later than March 1, 1936. Until the possession, control and operation of said properties is transferred to Association, Authority shall be entitled to all the revenues accruing therefrom. Upon the transfer of such possession, control, and operation of said properties, customer bills shall be prorated on a calendar basis.

The sale of the above property is and the conveyance thereof shall be made, subject to the approval by the Presi- [fol. 3089] dent of the United States of the disposal by Authority of such of the property as may be real property. Authority agrees to take the reasonable and proper steps to secure such approval by the President.

3. Loan.—Authority hereby agrees to loan, and Association agrees to borrow, the sum of Eleven Thousand Five Hundred Dollars ($11,500) to be used by Association in payment to the Smithville Light and Power Company for the electric distribution system located in the village of Cale-

donia, Lowndes County, Mississippi, the electric distribution system located in the town of Smithville, Monroe County, Mississippi, the inter-connecting transmission line extending from the city of Amory, Mississippi, to the city of Smithville, Mississippi, together with the properties connected with or incidental to the above described properties, all of which properties Association has agreed to purchase from the Smithville Light and Power Company for the sum of Eleven Thousand Five Hundred Dollars ($11,500), under a contract executed October 25, 1935, and amended November 2, 1935.

Association agrees to take over the possession, operation and control of the above described properties of the Smithville Light and Power Company at the same time that it takes over the possession, operation and control of the properties herein sold to Association by Authority. Upon notice in writing being given to Authority by Association that Association has employed a Superintendent, or made other arrangements necessary, in the opinion of the Authority, for taking over said properties, and upon the presentation to Authority of the certificate of Association's counsel that Association will receive a good and valid title to the above described property of the Smithville Light and Power Company, subject only to a lien for ad valorem taxes for the year 1936, upon the satisfaction of those claims specified in said certificate of counsel which claims shall not exceed Eleven Thousand Five Hundred Dollars ($11,500), Authority will issue a check to the Monroe County Electric Power Association in the sum of Eleven Thousand Five Hundred Dollars ($11,500). If Association is unable to secure such good and valid title to the properties of the Smithville Light and Power Company for the sum so specified Authority shall not be obligated to loan to Association the said Eleven Thousand Five Hundred Dollars ($11,500), and Authority shall credit Association with the payment of said Eleven Thousand Five Hundred Dollars ($11,500) on Association's Note. However, Authority's obligation to transfer, and Association's obligation to receive and pay for Authority's properties described in paragraph 2 of this contract, shall not be thereby affected.

4. Payment of Indebtedness.—The total amount of Association's indebtedness to Authority under this contract is

Twenty-eight Thousand Seven Hundred Thirty-seven Dollars and Eighty-nine Cents ($28,737.89). As hereinabove stated, said indebtedness is evidenced by Association's Note and secured by Association's Mortgage executed on even date herewith, and incorporated as a part of this contract. Said Mortgage shall be deemed to cover and include all the properties described in this contract, as and when they become properties of Association. Association agrees to pay said indebtedness to Authority according to the terms, covenants and agreements contained in said Note and Mort- [fol. 3090] gage, and according to the terms, covenants and agreements contained in this contract and a certain contract entitled "Power Contract Between Tennessee Valley Authority and Monroe County Electric Power Association," dated July 19, 1935, and also incorporated into this Contract.

Upon the date set for the first payment of interest on indebtedness of Association to Authority, Authority agrees to credit Association with payment of interest between the effective date of this contract and the date on which Authority transferred the possession, control and operation of the above properties to Association and issued the above check to the Smithville Light and Power Company.

5. Neither this contract nor any interest therein shall be transferable or assignable by Association to any other party without first securing the written consent of Authority.

In Witness Whereof, the parties have caused this instrument to be signed and attested by their duly authorized officers, the day and year first above written.

COMPLAINANTS' EXHIBIT No. 593

TVA corporate resolution dated February 1, 1936, approving contract between TVA and the City of Dayton, Tennessee, to sell rural lines:

[fol. 3091] "Resolved, That the Board of Directors hereby approves and authorizes entry into the revised contract (Exhibit 2-1-36a) with the City of Dayton, Tennessee.

Exhibit 2-1-36a

This Agreement, made and entered into this 24th day of January, 1936, between Tennessee Valley Authority, hereinafter called "Authority", a corporation created by Act of Congress May 18, 1933, and the City of Dayton, Tennessee, hereinafter called "Municipality," a municipal corporation organized and existing by virtue of the laws of the State of Tennessee.

Witnesseth:

Whereas, Municipality has executed a Loan Contract with the Rural Electrification Administration in the amount of Thirty-eight Thousand and Fifty-eight Dollars ($38,058.00), by which Municipality is to receive funds to be used in the construction of rural electric lines in and adjacent to Rhea County, Tennessee; and

Whereas, pursuant to Section 10 of the Tennessee Valley Authority Act of 1933, the Authority agreed to construct rural lines for Municipality in and adjoining Rhea County, Tennessee; and

Whereas, under the terms of a Construction Contract between Authority and Municipality, dated January 24, 1936, Municipality has agreed to pay Authority for the lines so constructed a sum not exceeding Thirty-eight Thousand and Fifty-eight Dollars, ($38,058.00); and

Whereas, both parties feel it desirable to set out the terms by which the payment for said rural lines shall be made;

Now, Therefore, for and in consideration of the mutual covenants herein contained, the parties hereto covenant and agree as follows:

1. In the event Municipality receives the money from the Rural Electrification Administration under the terms of the Loan Contract between Municipality and Rural Electrification Administration, dated the 4th day of November, 1935, before February 1, 1937, Municipality will pay Authority for

the rural lines constructed in and adjacent to Rhea County, Tennessee, under the terms of the Construction Contract between Tennessee Valley Authority and City of Dayton, Tennessee, entered into the 24th day of January, 1936.

2. If Municipality has not received the loan from the Rural Electrification Administration referred to above by February 1, 1937, the parties hereto agree that title to the lines constructed under the terms of the Construction Contract referred to in Section 1 hereof, shall be and remain in Authority as complete satisfaction of Municipality's indebtedness to Authority under the terms of said Construc-
[fol. 3092] tion Contract. Municipality hereby disclaims any ownership of the rural lines due to any ownership of the rights-of-way and/or easements over which the lines extend. In the event title to said rural lines is so retained by Authority, Authority agrees to sell and Municipality agrees to buy the rural lines constructed by Authority under the terms of said Construction Contract on the following terms and conditions:

(a) Municipality will pay monthly to Authority all amortization charges which shall be collected from rural customers of Municipality served from the lines constructed under the terms of the Construction Contract referred to above, and which Municipality agrees to collect from said customers, at the rate of one cent (1¢) per kwh. for each kwh. of electricity used per customer per month up to and including 100 kwh., but not less than twenty-five cents (25¢) per month shall be paid for each customer each month, until Municipality's indebtedness to Authority is fully paid.

(b) Municipality will pay to Authority all remaining revenues before the reduction or elimination of surcharges, or the reduction in rates to consumers required by Section 10 (b) of the Rules and Regulations attached to and incorporated into the Power Contract between Tennessee Valley Authority and the City of Dayton, Tennessee, dated the 12th day of September, 1934.

(c) Municipality will pay interest to Authority on any outstanding indebtedness at the rate of three and one-half per cent (3½%) per annum, payable semi-annually, out of

COMPLAINANTS' EXHIBIT No. 593

the revenues of its electric system and under the terms of Section 10 (a) of the Rules and Regulations attached to and incorporated into the Power Contract between Tennessee Valley Authority and the City of Dayton, Tennessee, dated the 12th day of September, 1934.

(d) Authority will deliver title to the rural lines so constructed by the execution of a quit claim deed to Municipality. As security for the payment of Municipality's indebtedness to Authority, Municipality will execute a mortgage to Authority covering all the rural lines so conveyed.

In Witness Whereof, the parties hereto have caused this instrument to be signed and attested by their duly authorized officers the day and year first above written.

City of Dayton, Tennessee, (Signed) by G. W. Taylor, Chairman, Board of Commissioners.

[fol. 3093] COMPLAINANTS' EXHIBIT No. 594

TVA corporate resolution dated February 10, 1936, approving Power Interchange Agreement between TVA and City of Amory, Mississippi:

(Omitted)

COMPLAINANTS' EXHIBIT No. 595

TVA corporate resolution dated February 11, 1936, approving Sale and Loan Contract between TVA and Pontotoc County Electric Power Association:

"Resolved, That the Board of Directors hereby approves and authorizes entry into the contract (Exhibit 2-11-36h) with the Pontotoc County (Mississippi) Electric Power Association.

COMPLAINANTS' EXHIBIT No. 595

Exhibit 2-11-36h

This Agreement, entered into this 12th day of February, 1936, by and between the Tennessee Valley Authority (hereinafter called "Authority"), United States of America (hereinafter called "Government"), acting through its legal agent, Authority (Authority and Government being jointly referred to hereinafter by the phrase "First Parties"), and the Pontotoc County Electric Power Association, a non-profit civic improvement corporation, duly organized, created, and existing under and by virtue of the laws of the State of Mississippi (hereinafter called "Association").

Witnesseth:

Whereas, on February 15, 1935, First Parties and Association entered into a contract entitled "Sale, Lease, Trust and Security Contract Between Tennessee Valley Authority, United States of America, and Pontotoc County Electric Power Association" (said contract being hereinafter referred to as "Sale, Lease Contract") under which First Parties sold certain personal property and leased certain real property to Association, Association agreeing to pay to Authority therefor the sum of Sixty-seven Thousand, Six Hundred Forty-five and 36/100 Dollars ($67,645.36), with interest on the unpaid balance at the rate of three and one-half per centum (3½%) per annum, payable semi-annually, and

Whereas, said indebtedness of Association to Authority has been increased to One Hundred Twenty-eight Thousand, Forty-seven and 85/100 Dollars ($128,047.85) by reason of the construction of certain rural lines by Authority as agent [fol. 3094] for Association and the sale of other lines by Authority to Association, the latter being fully described hereinafter, and certain rehabilitation services performed by Authority for Association, and

Whereas, said indebtedness of Association to Authority has been reduced to One Hundred Sixteen Thousand Eight Hundred Thirty-one and 57/100 Dollars ($116,831.57) by adjustments made in regard to work orders, and to the accounts receivable and meter deposits transferred to Association by Authority, in compliance with Sections 3, 4 and 5 of the Sale, Lease Contract, and by payments made on its indebtedness by Association to Authority, and

Whereas, First Parties and Association desire to cancel, annul, and rescind said Sale, Lease Contract and to enter into a new contract providing for the sale of the above mentioned real and personal property by First Parties to Association, and the payment by Association to Authority therefor of the sum of One Hundred Sixteen Thousand, Eight Hundred Thirty-one and 57/100 Dollars $116,831.57), and

Whereas, Association has an option to acquire the urban distribution system in Bruce, Calhoun County, Mississippi, from the E. L. Bruce Company of Memphis, Tennessee, its present owners, for the sum of Four Thousand Dollars ($4,000.00), and has requested Authority to extend credit to Association for the acquisition of said system, and further to extend credit up to the sum of Twenty-five Thousand Dollars ($25,000.00) to finance the construction by Association of a rural electric line connecting Association's present lines at Randolph, Pontotoc County, Mississippi, with said distribution system in Bruce, Mississippi, and

Whereas, all the said properties are to be used by Association in the transmission and distribution of electric energy under a plan agreed upon between Authority and Association in a contract entitled "Power Contract Between Tennessee Valley Authority and Pontotoc County Electric Power Association" executed on even date herewith (said contract being hereinafter called "Power Contract").

Now, Therefore, in consideration of the Mutual benefits to all parties hereto, and of the covenants and agreements herein contained, and those also contained in said Power Contract, and subject to the provisions of the Tennessee Valley Authority Act of 1933, the parties hereto covenant and agree as follows:

1. Rescission of Sale, Lease Contract.—First Parties and Association covenant and agree that the Sale, Lease Contract, hereinabove referred to, is hereby cancelled, rescinded, and rendered null and void, However, neither the rescission of said Sale, Lease Contract nor the execution of this contract shall prejudice any right or cause of action which may have heretofore accrued to either of the parties to the Sale, Lease Contract by reason of the breach thereof by either of the other parties to said Sale, Lease Contract.

2. Sale of Property.—(a) First Parties hereby sell to Association all their right, title, and interest in and to the following described real and personal property, and agree to execute a quitclaim deed to said property to Association on even date herewith:

[fol, 3095] (1) All of the line tools owned by Authority and now used in the operation and maintenance of the electric distribution system in Pontotoc County, Mississippi, a detailed list of which tools is hereto attached and made a part hereof as Exhibit A;

(2) The line materials and supplies owned by Authority and now used in the operation and maintenance of said distribution system, a detailed list of which is hereto attached and made a part hereof as Exhibit B;

(3) All office furniture and fixtures owned by Authority and now used in connection with the ownership and operation of the properties conveyed herein; a detailed list of which is hereto attached and made a part hereof as Exhibit C.

If a question shall arise as to what property is intended to be conveyed above, the detailed lists shall control.

(4) All right, title and interest of Authority in and to a certain franchise granted by the Town of Pontotoc, June 26, 1925, styled "An Ordinance Granting an Electric Franchise to Mississippi Power Company, its Successors and Assigns in the Town of Pontotoc, Mississippi," which franchise has been assigned to Authority:

(5) All rights under and claim of Authority to a franchise granted by the Town of Ecru, Mississippi, December 2, 1930, styled "An Ordinance Granting an Electric Franchise to Mississippi Power Company, its Successors and Assigns in the Town of Ecru, Mississippi," which franchise has been assigned to Authority;

(6) The electric light and power distribution system now serving the City of Pontotoc, Mississippi, and vicinity, including poles, crossarms, pole lines, pole line hardware, conductors, insulators, transformers, service lines, lamps, meters, materials, and other personal property now used or useful in the operation of the distribution system, and

there is hereby assigned all railroad crossing and joint use of poles contracts, if any, owned by First Parties, or either of them, needed in the operation of the distribution system conveyed in this article.

(7) The 11950 Y-volt single phase distribution system now serving the Town of Ecru, Mississippi, and vicinity, including poles, crossarms, pole lines, pole hardware, conductors, insulators, service lines, lamps, meters, transformers, materials and other personal property now owned or useful in the operation of the distribution system, and there is hereby assigned all railroad crossing and joint use of poles contracts, if any, owned by First Parties, or either of them, needed in the operation of the distribution system conveyed in this article.

[fol. 3096] (8) The rural distribution extension running out of the City of Pontotoc, Mississippi, known as the Hardin extension, including poles, crossarms, pole lines, pole line hardware, conductors, insulators, service lines, transformers and meters, extending for a distance of approximately 2.5 miles.

(9) The three phase 11,950 Y-volt transmission or distribution line extending from the Lee-Pontotoc County line along highway No. 6 to the distribution sub-station described below, located in the City of Pontotoc, a distance of approximately 11 miles. Said line consists of 221 creosoted pine poles complete with crossarms and pole line hardware, carrying four No. 2 aluminum conductors and including transformers, meters, and services for serving the rural customers along the line.

(10) The three phase 11,950 Y-volt transmission or distribution line extending from the sub-station described below in or near the City of Pontotoc to a point in or near the Town of Ecru, a distance of approximately 8.5 miles, including all poles, crossarms, pole lines, pole line hardware, conductors, insulators, transformers, meters, and service lines for serving the rural customers along the line.

(11) The Sub-station and equipment known as Pontotoc Central Sub-station located in or near the City of Pontotoc, and consisting of 2 pole 35′ wood structure with metal plat-

form, 13 kv. drop-out fuses, 2.3 kv. reclosing oil circuit breaker in metal switch cabinet, totalizing metering equipment, metal fence, and 3-300 kva. 13,000/2,300 volt transformers.

(12) That parcel of land in Pontotoc County upon which the sub-station above described is located and more particularly described as follows:

Beginning at the northeast corner of lot number 31 in the southeast quarter of Section 32, Township 9; Range 3 east, thence south 87 degrees west 50 feet, thence south 3 degrees east 50 feet, thence north 87 degrees east 50 feet, thence north 3 degrees west 50 feet to the point of beginning.

(13) A single phase two-wire 11,950 Y-volt grounded neutral rural distribution line extending from the town of Ecru in a northerly direction to the community of Ingomar, including two branch lines, a total distance of 7½ miles with poles, crossarms, conductors, meters, pole lines, pole line hardware, insulators, transformers, and service lines.

(14) A three phase four-wire 11,950 Y-volt rural distribution line starting at a point one-half mile from Pontotoc on the Pontotoc-Ecru line and running in a westerly direction for a distance of six miles to a junction point, where one branch of the line proceeds in a northwesterly [fol. 3097] direction for a distance of eight miles to the community of Toccopola, and the other branch proceeds in a southwesterly direction from the junction point for a distance of 4½ miles to the community of Randolph, and includes one mile of single phase two-wire 11,950 Y-volt grounded neutral rural line running through the community of Randolph with poles, crossarms, conductors, meters, pole lines, pole line hardware, insulators, transformers, and service lines.

(15) A single phase two-wire 11,950 Y-volt grounded neutral rural distribution line starting from a point on the Pontotoc-Lee County line approximately five miles east of the town of Pontotoc and extending south on what is known as the Valley Road for a distance of approximately four miles from the point; one branch extends east for a distance of one mile and a second branch extends west from the same

point a distance of two miles, including poles, crossarms, conductors, meters, pole lines, pole line hardware, insulators, transformers, and service lines.

(16) A partially constructed rural line consisting of poles only starting at the southeast end of the Ecru distribution system and extending in a southeasterly direction along the Cherry Creek road a distance of ten miles.

(17) All such rights and interest as Government may have in the rights-of-way and/or easements in any privately owned real property over, through or across which any of the above described electric power lines may extend.

(b) Association hereby agrees to pay to Authority for the above described property the sum of One Hundred Sixteen Thousand, Eight Hundred Thirty-one and 57/100 Dollars ($116,831.57) with interest on the unpaid balance at the rate of three and one-half per centum (3½%) per annum, payable semi-annually.

(c) The sale and conveyance of the above described property shall be conditional upon the approval of the President of the United States of the disposition by Authority of so much of the above described property as may be real property.

3. Loan to Association.—(a) Authority agrees to advance Four Thousand Dollars ($4,000.00) to Association to be used by Association in purchasing the Bruce distribution system from the E. L. Bruce Company. Upon the presentation by Association to Authority of (1) proof that Association has an option to purchase said Bruce system for not to exceed Four Thousand Dollars ($4,000.00), conveyance to be made by warranty deed and free of all liens and encum- [fol. 3098] branches, except liens for ad valorem taxes of 1936, which shall be prorated, and the present owner to operate the system for not less than two months after the exercise of said option, (2) proof that Association has all necessary or advisable franchises, permits, licenses, and other governmental approvals, and all rights-of-way and easements necessary or advisable for the construction and operation of the said distribution system and interconnecting line, (3) a certified copy of a resolution of the Executive

Committee of Association requesting that the advance be made, (4) an opinion of counsel (who shall be satisfactory to Authority) that the E. L. Bruce Company is the owner of said system and is capable of giving Association valid title thereto, and that all the acts and proceedings of Association necessary for borrowing said money from Authority and purchasing said system from the E. L. Bruce Company have been duly taken and are within the power of Association, and (5) a receipt acknowledging the payment of said Four Thousand Dollars ($4,000.00) by Authority to Association, Authority will issue a check payable to Association in the sum of Four Thousand Dollars, ($4,000.00).

(b) Authority agrees to loan to Association that amount required by Association to construct a rural electric line, approximately twenty (20) miles long, connecting Association's lines at Randolph, Pontotoc County, Mississippi, with such Bruce system, said amount not to exceed the sum of Twenty-five Thousand Dollars ($25,000.00). Upon the presentation by Association to Authority of (1) proof that Association has all necessary or advisable franchises, permits, licenses, and other governmental approvals, and all rights-of-way and easements necessary or advisable for the construction and operation of said line, (2) a certified copy of a resolution of the Executive Committee of Association requesting such advance, (3) an opinion of counsel that Association has power to and has taken the necessary steps to borrow such money and construct such line, and (4) a receipt acknowledging the advance of such money, Authority will issue a check payable to Association in the sum of Five Thousand Dollars ($5,000.00). Authority will make further advances to Association up to said Twenty-five Thousand Dollars ($25,000.00), as needed from time to time in the construction of said interconnecting line, upon presentation of similar requests and receipts for such advances, accompanied by a certificate stating in detail the use to which prior advances have been put and the use to which the sum applied for is to be put.

Association agrees that it will construct the interconnecting line according to and in compliance with Authority's schedule entitled "Specifications for Rural Electric Distribution Lines," attached hereto and hereby incorporated

and made a part hereof. Association further agrees that Authority shall have the right to demand that the specifications for such line be presented to Authority, and to inspect such line at any time during the construction thereof, in order that Authority may ascertain whether Association is complying with this section, and Association agrees to reimburse Authority for the actual cost to Authority of making such inspections and reviewing Association's specifications, such sum, however, not to exceed five per centum (5%) of the total cost of constructing the line. If Authority finds that Association's specifications or its construction is not in compliance with the schedule of specifications, and [fol. 3099] Association refuses to alter the same to conform therewith, Authority shall not be obligated to advance any further sums to Association under this section.

(c) Association hereby expressly agrees that it will not use any funds advanced by Authority to Association under paragraphs (a) and (b) hereof except for the purposes therein stated, and Association further agrees that all advances so made shall become a part of the principal obligation of Association to Authority under this Sale and Loan Contract.

4. Construction of Rural Lines.—Authority agrees to construct, at its own expense, on rights-of-way and/or easements to be secured by Association, such additional rural electric distribution or transmission lines in or adjacent to Pontotoc County, State of Mississippi, as the parties may from time to time agree. Said lines will be constructed by Authority for and on behalf of Association as Association's agent for such construction. Association agrees to pay to Authority, in addition to all other outstanding indebtedness to Authority, the actual cost to Authority as billed by Authority of any lines so constructed pursuant to this agreement, and said additional indebtedness shall be added to the principal obligation of Association under this contract and shall become a part thereof.

5. Payment of Indebtedness.—Association hereby agrees that its principal obligation to Authority under this con-

tract as of the effective date thereof, is One Hundred Forty-five thousand, Eight Hundred Thirty-one Dollars and Fifty-seven Cents ($145,831.57) (subject to proper deductions if all of the above described Twenty-five Thousand Dollars ($25,000.00) loan is not required by Association or advanced by Authority). Upon the construction of any lines by Authority for Association, pursuant to Sections 3 and 4 of this contract, or upon the loan of any moneys by Authority to Association, or upon the incurrence of any other indebtedness by Association to Authority, said indebtedness shall become a part of the principal obligation of Association to Authority under this contract, and the payment thereof to Authority shall be secured by the mortgage which Association agrees to execute to First Parties under paragraph 6 of this contract. Association agrees to pay said principal obligation to Authority, with interest on the unpaid balance at the rate of three and one-half per centum (3½%) per annum, payable semi-annually, and at the times and in the manner provided for in said Power Contract between Association and Authority. Interest shall not begin to run, however, on any money loaned by Authority to Association hereunder until such money has actually been advanced and turned over to Association.

6. Security for Payment of Principal Obligation and Performance of Agreements.—Association agrees to execute to First Parties on even date herewith a first mortgage covering all the properties and revenues of Association, including those after acquired, as security for the payment to Authority of the principal obligation of Association to Authority under this contract, and the performance by Association of all its covenants and agreements under this contract and under said Power Contract. Association agrees to perform all its covenants and agreements in, and to observe all the terms and conditions of, said mortgage.

[fol. 3100] 7. Contract Not Transferable.—Neither this contract nor any interest therein shall be transferable or assignable by Association to any other party without first securing the written consent of Authority.

COMPLAINANTS' EXHIBIT No. 595

In Witness Whereof, the parties hereto have caused this contract to be signed and attested by their duly authorized officers the day and year first above written.

COMPLAINANTS' EXHIBIT No. 596

TVA corporate resolution dated February 11, 1936, approving contract between TVA and Monroe County Electric Power Association for operation of rural transmission line and collection of bills:

(Omitted)

[fol. 3101] COMPLAINANTS' EXHIBIT No. 597

TVA corporate resolution dated April 27, 1936, approving Sale and Assignment Contract between TVA and Alcorn County Electric Power Association and Pickwick Electric Membership Corporation:

"Resolved, That the Board of Directors hereby approves and authorizes entry into the contract (Exhibit 4-27-36d) with the Alcorn County Electric Power Association and the Pickwick Electric Membership Corporation.

COMPLAINANTS' EXHIBIT No. 597

Exhibit 4-27-36d

This Sale and Assignment Contract, entered into as of the 21st day of April, 1936, between the Alcorn County Electric Power Association (hereinafter called "Association"), a corporation duly organized and existing under the laws of the State of Mississippi, the Pickwick Electric Membership Corporation (hereinafter called "Corporation"), a corporation duly organized and existing under the laws of the State of Tennessee, and the Tennessee Valley Authority (hereinafter called "Authority"), a corporation created by the Tennessee Valley Authority Act of 1933,

Witnesseth:

Whereas, under an agreement entitled, "Power Contract Between Tennessee Valley Authority and Alcorn County Electric Power Association," executed June 1, 1934, Authority agreed to construct rural transmission lines for Association and Association agreed to pay to Authority for such lines the actual cost to Authority, as billed by Authority, of constructing the same, plus interest upon unpaid balances at the rate of three and one-half per cent (3½%) per annum, and Association further agreed that Authority should have and retain a first lien upon any such lines until the obligation of Association therefor was fully paid, and

Whereas, Authority has constructed for and turned over to Association the rural transmission lines described in Article 1, paragraphs (a) and (c) of this contract, and Association has recognized its obligation to Authority therefor, under said Power Contract; and

Whereas, Association has made the service extensions and meter installations on said lines described in Article i, paragraphs (b) and (d) of this contract; and

Whereas, Corporation desires to purchase all the above-described lines from Association, and to borrow the neces- [fol. 3102] sary money from Authority to enable Corporation to purchase such lines; and

Whereas, Authority is authorized by Section 12 (a) of its Act to extend credit to non-profit organizations to assist them in acquiring existing distribution facilities and incidental works; and

Whereas, all parties to this contract have duly authorized its execution,

Now, Therefore, for and in consideration of the mutual covenants herein contained, and subject to the provisions of the Tennessee Valley Authority Act of 1933, the parties hereto mutually covenant and agree as follows:

1. Agreement to Sell Rural Lines.—Association agrees to sell, transfer, assign and convey to Corporation, by valid quitclaim deed executed on even date herewith, all its right, title and interest in and to the following described real and personal property:

(Description of rural transmission lines and other property omitted.)

2. Payment for Rural Lines.—Corporation agrees to pay to Association for all of the above described lines the sum of Forty-eight Thousand and One Dollars and Eighteen Cents ($48,001.18). Authority hereby loans to Corporation the sum of Forty-eight Thousand and One Dollars and Eighteen Cents ($48,001.18), with interest on unpaid balances at the rate of three and one-half per cent (3½%) per annum, payable semi-annually, to enable Corporation to purchase said lines. The payment by Corporation to Association and the loan by Authority to Corporation shall be effected by the following adjustment of accounts on the books of Authority:

(a) Authority shall credit Association with the payment, as of the effective date of this contract, of Forty-eight Thousand and One Dollars and Eighteen Cents ($48,001.18), less the amount of the credit for membership fees transferred under Article 3 of this contract, and less the amount of the credit for surplus revenues transferred under Article 4 of this contract.

(b) Authority shall debit Corporation as of the effective date of this contract in the sum of Forty-eight Thousand and One Dollars and Eighteen Cents ($48,001.18), less the amount of the credit for membership fees transferred under Article 3 of this contract, and less the amount of the credit for surplus revenues transferred under Article 4 of this contract.

3. Transfer of Credit for M bership Fees.—Association agrees to complete the collection of all membership

fees (consisting of the One Cent (1¢) amortization charge, or otherwise) which may be due to Association up to the effective date of this contract by members of Association [fol. 3103] who receive service over the lines to be transferred. Association will complete the payment to Authority of all such membership fees, as required by the Power Contract between Association and Authority. Association recognizes that the credit for such membership fees is properly attributable to the members of Association paying the same. Association agrees that the total credit for such payments shall be transferred to and credited to Corporation on Authority's books, unless deductions from such total credit become necessary under Article 5 (b) hereof. Association and Authority shall advise Corporation of the total amount of such fees paid by each such member in order to make possible full compliance with Article 5 hereof.

4. Transfer of Credit for Surplus Revenues.—Association recognizes that the members of Association receiving service on the lines to be transferred have an equity in such of the total surplus revenues of Association (as defined in Article 9 (c) of the Power Contract between Association and Authority) as were earned since the inauguration of service over the transferred lines. Association and Corporation request Authority to determine within sixty (60) days after the effective date of this contract the total surplus revenues earned by Association from the first day of the month after the date on which such transferred lines were energized up to March 31, 1936, and to make a fair allocation of such total surplus revenues between the members of Association receiving service on such transferred lines and the remaining members of Association. In making such calculation Authority shall allocate to the members on the transferred lines that proportion of the total surplus revenues which the total revenues received from members on the transferred lines bears to the total revenues received from all the members of Association during the above period. Association and Corporation agree to accept the allocation determined by Authority, and further agree that the total amount allocated to members on the transferred lines shall be credited to Corporation and

debited to Association on Authority's books, unless deductions from such total credit become necessary under the provisions of Article 5 (b) hereof. Corporation and Association further request Authority to determine the amount of such credit which is properly allocable to each of the members of Association receiving service on such transferred lines, in order to make possible a full compliance with the provisions of Article 5 hereof. Corporation agrees that Authority shall debit Corporation for the expense involved to Authority in making the calculations provided for in this paragraph.

5. Transfer of Memberships from Association to Corporation:

(a) Corporation agrees to accept as members all of the present members of Association receiving service from Association over the above-described lines on the effective date of this contract, who shall surrender their memberships in and turn in their membership certificate to Association and shall apply for membership in Corporation and agree to abide by its Charter and By-laws. Corporation will issue to said members the regular certificates of membership as soon as such certificates have been made available. The total membership fee and amortization charges required by Corporation of a transferred member shall be Two Hundred Ten Dollars ($210.00), and Corporation will [fol. 3104] credit such transferred members with the payment on said Two Hundred Ten Dollars ($210.00) of all amounts which such transferred members have paid on their membership fees to Association, and all surplus revenues allocated to such members under Articles 3 and 4 of this contract.

(b) If any member of Association who is receiving service over the above-described lines on the effective date of this contract shall be unwilling to become a member of Corporation under the terms provided in this contract Authority shall return to Association all the membership payments which have been made by such member to Association and turned over to Authority by Association, together with the part of the total surplus revenues of Association allocated

to such member to the extent that such surplus revenues have been paid over to Authority by Association. Association shall then return to each such member his membership payments and allocated part of the surplus revenues if his membership in Association is terminated. All such payments made directly to members of Association shall be deducted from the total credit for membership fees and the total credit for surplus revenues to be transferred under Articles 3 and 4 of this contract.

6. Taxes.—Corporation will assume all taxes on the properties herein transferred for the year 1936, in consideration of Association's agreement to make no charges to Corporation or the transferred members for range and water-heater payments made by Association to members on the transferred lines, or for expenses incurred by Association in qualifying to do business in Tennessee.

7. Security for Payment of Corporation's Obligation to Authority.—Corporation hereby agrees that Authority shall hold and retain a first lien on all of the property which is sold herein by Association to Corporation as security for the payment to Authority of the obligation incurred by Corporation to Authority under this contract, and such lien shall remain and attach to each and every article of such property until the entire obligation of Corporation to Authority under this or any other contract is paid. Corporation agrees that it will perform all its covenants and agreements contained in the "Preliminary Operation Contract Between Pickwick Electric Membership Corporation and Tennessee Valley Authority," executed on even date herewith. Corporation further agrees that it will grant to Authority, at such time as Authority may request, a valid first mortgage on all of the properties herein purchased by Corporation and all other properties which Corporation may hereafter own, as further security for the payment of Corporation's obligations to Authority.

In Witness Whereof, the parties have caused this instrument to be signed and attested in triplicate, by the duly authorized officers, the day and year first above written."

COMPLAINANTS' EXHIBIT No. 601

TVA corporate resolution dated May 28, 1936, approving Operation Contract between TVA and Bedford County Electric Membership Corporation:

"Resolved, That the Board of Directors hereby approves and authorizes entry into the contract (Exhibit 5-28-36e) with the Bedford County (Tennessee) Electric Membership Corporation."

The contract attached to and referred to in the approving resolution is the same as Complainants' Exhibit No. 180 and to avoid repetition is not here set forth at length.

the amortization charge referred to in this section, Municipality shall charge the same rates for the same classes of service to all customers of Municipality, except that Municipality may add the ten per cent (10%) surcharge provided for in its power contract with Tennessee Valley Authority to all commercial and industrial customers on the lines purchased by and constructed for Municipality under the terms of this contract.

2. Article 10 of the "Agreement for Sale of Properties Between Tennessee Valley Authority and City of Athens, Alabama" executed on October 9, 1936 is hereby amended to read as follows:

10. Execution of Bond and Mortgage—Payment of Principal Obligation.—Authority shall notify Municipality upon the completion of the construction of the work orders described in Exhibit B attached hereto, and upon the determination of the cost thereof. Authority shall also notify Municipality of the final determination of the amounts due under Articles 4 and 5 and under any other provisions of this contract. The total of all amounts due by Municipality to Authority under the terms of this contract shall be considered and hereinafter called the "Principal Obligation." [fol. 3117] Authority shall execute a quit-claim deed conveying to Municipality all the right, title, and interest of Authority and/or the United States Government in and to the properties described in this agreement. The conveyance of so much of said property as may be real property shall be made subject to the approval of the President of the United States. Authority hereby agrees promptly to submit said quit-claim deed to the President and recommend the same for approval.

Simultaneously with the execution of the quit-claim deed Municipality shall issue to Authority its bond or bonds in the amount of Municipality's principal obligation to Authority under this contract. Said bond or bonds shall be payable exclusively from the revenues of the electric transmission or distribution lines sold by Authority to or constructed by Authority for Municipality under this agreement, and shall be issued pursuant to and in accordance with the terms and provisions of the Alabama "Municipal Bond Act of 1935." Such bonds shall be issued in denominations

COMPLAINANTS' EXHIBIT No. 622

of One Thousand Dollars ($1,000.00) each, shall bear interest at the rate of three and one-half per cent (3½%) per annum, payable semi-annually, and shall provide for their payment in full and retirement within twenty (20) years after their date of issuance. In determining the amount of said bonds to be issued to Authority, Municipality's indebtedness to Authority for sale and construction of rural lines shall be considered to have accrued on the date or dates upon which such lines or any part thereof were transferred from Authority to Municipality for maintenance and operation, and all interest shall be calculated from such date or dates of delivery.

At the time of execution of the above described quit-claim deed Municipality shall also execute a mortgage to Authority and the United States Government, or a deed of trust to a trustee satisfactory to Authority, covering all the rural lines and facilities sold by Authority to Municipality hereunder, or constructed by Authority for Municipality hereunder, securing the payment and retirement of the bonds issued to Authority in accordance with the provisions of this article.

In Witness Whereof, the parties hereto have caused this instrument to be signed and attested by their duly authorized officers the day and year first above written.

COMPLAINANTS' EXHIBIT No. 618

TVA corporate resolution dated June 3, 1937, approving contract of sale between TVA and Town of Bolivar, Tennessee:

"Resolved, That the Board of Directors hereby approves and authorizes entry into the contract (Exhibit 6-3-37w) with the Town of Bolivar, Tennessee."

Exhibit 6-3-37w

This Agreement, made and entered into as of the 20th day of March, 1937, by and between Tennessee Valley Authority (hereinafter called "Authority"), a corporation created by the Tennessee Valley Authority Act of 1933, United States of America (hereinafter called "Government"), acting through its legal agent, Authority (Authority and Government being jointly referred to hereinafter by the phrase "First Parties"), and the Town of Bolivar [fol. 3110] (hereinafter called "Municipality"), a municipal

corporation duly organized, created and existing under and by virtue of the laws of the State of Tennessee,

Witnesseth:

Whereas, First Parties are the owners of the hereinafter described property which is being used in the transmission and sale of electric energy in Hardeman County, Tennessee; and

Whereas, Municipality desires to purchase said property and to use the same in the transmission and sale of electric energy according to the plan set forth and agreed upon in a certain contract entitled "Power Contract between Tennessee Valley Authority and Town of Bolivar, Tennessee," executed December 31, 1935; and

Whereas, under section 4 (f) of the Tennessee Valley Authority Act of 1933 as amended, Authority is authorized to dispose of any personal property held by it; and

Whereas, under section 4 (k) of said Act as amended Authority is authorized, subject to approval of the President of the United States, to dispose of any such real property owned by Government and entrusted to Authority as in the judgment of Authority's Board of Directors is no longer necessary in carrying out the purposes of said Act, and Authority's Board of Directors has found that such of the property hereinafter described as is real property is no longer needed by Authority for such purposes;

Now, Therefore, in consideration of the mutual benefits of all parties hereto and of the covenants and agreements contained herein and in said Power Contract, the parties hereto covenant and agree as follows:

1. Sale of Property.—In consideration of the sum of Two Thousand One Hundred Ninety-five Dollars and Ninety-five Cents ($2,195.95), which Municipality hereby agrees to pay to Authority in cash, First Parties agree to sell and convey to Municipality the following described real and personal property:

(1) A three-phase, four-wire, 11,950Y volt rural electric transmission line extending from pole No. 33 on the Bolivar-Somerville transmission line now owned by Authority in a northeasterly direction for a distance of approximately 0.23 miles, including all poles, crossarms, pole-line hardware, conductors, insulators, transformers, primary metering

equipment and other personal property now used or useful in the operation of said line.

2. Conveyance of Property.—Upon the tender to Authority of the cash payment in full for the above property, Authority will deliver to Municipality the good and valid [fol. 3111] quitclaim deed of First Parties conveying the above-described property to Municipality. The conveyance of such of said property as may be real property shall be subject to the approval of the President of the United States, but Authority hereby agrees diligently and without delay to have said deed submitted and recommended for such approval of the President.

3. Power Requirements and Resale.—Municipality agrees to purchase from Authority and Authority agrees to supply at wholesale all the electric energy required by Municipality for distribution over the above rural transmission line, and said power shall be purchased from Authority and resold by Municipality in accordance with all the agreements, terms, conditions, rules and regulations contained in, and at the rates prescribed by, the Power Contract entered into between Authority and Municipality on December 31, 1935, as the same may be from time to time amended, revised, re-executed or extended.

4. Point of Delivery.—Authority will deliver the electricity purchased by Municipality for distribution over the above rural transmission line at the point of intersection between said rural line and Authority's Somerville-Bolivar 12 kv. transmission line. Until other arrangements are made, however, Municipality's electricity requirements for said line shall be measured by the metering equipment on the low tension side of the transmission bank located at the Western State Hospital. In billing Municipality for power at wholesale, the latter shall be considered a separate metering point and the demand and consumption there recorded shall not be added to the demand and consumption recorded at the metering equipment located in the Bolivar substation.

If the above metering arrangement shall prove inequitable from the standpoint of either Authority or Municipality, said parties shall agree upon and put into effect other

arrangements for the metering of Municipality's wholesale requirements which will be mutually satisfactory and equitable.

5. Assignment of Contract.—Subject to the approval of the authorized representatives of the Western State Hospital (such approval to be indicated in writing in the space provided at the end of this contract), Authority hereby assigns, transfers and sets over to Municipality, and Municipality hereby accepts the assignment of, all Authority's [fol. 3112] right, title and interest in and to a certain contract entitled "Power Contract between Tennessee Valley Authority and Western State Hospital" executed September 8, 1936. Upon execution of this contract and approval thereof by said Hospital, all rights, privileges, powers, duties, obligations and liabilities which Authority enjoys or to which Authority is subject under the terms of or by virtue of said contract shall be transferred to Municipality as fully as if contract had been originally executed between Municipality and Western State Hospital rather than between Authority and said Hospital.

(Signatures omitted.)

Western State Hospital hereby approves and consents to all of the provisions of the above contract, and specifically approves and consents to the assignment of the Power Contract between Tennessee Valley Authority and Western State Hospital, executed on September 8, 1936.

"(S.) by J. R. Wilson, Supt.

Attest: (S.) Elizabeth Durett."

Power Contract Between Tennessee Valley Authority and Western State Hospital

"This Contract, made this 8 day of September, 1936, by and between Western State Hospital, a corporation organized and existing under the laws of the State of Tennessee, with principal offices at Western State Hospital, Tenn., hereinafter called "Customer" and Tennessee Valley Authority, hereinafter called "Authority":

COMPLAINANTS' EXHIBIT No. 618

Witnesseth:

Whereas, Customer has applied to Authority for electricity for the operation of Hospital at Western State Hospital, Tenn.

Now, Therefore, in consideration of the mutual covenants and agreements hereinafter set forth and subject to the provisions of the Tennessee Valley Authority Act of 1933, the parties hereto mutually agree as follows:

1. Authority will supply and Customer will take and pay for all the electricity required for the operation of Hospital at Western State Hospital, Tenn. up to a maximum demand of 100.0 kw, in accordance with the terms hereof and the Schedule of Terms and Conditions of Contract attached hereto and hereby made a part hereof.

[fol. 3113] 2. The minimum quantity of power contracted for hereunder and to be paid for by Customer shall be a minimum demand of 25.0 kw.

3. Attached hereto and hereby made a part hereof is a rate schedule designated Rate Schedule B-3, and the electricity sold hereunder shall be purchased and paid for by Customer according to the provisions of said Rate Schedule B-3, except as modified by this agreement, including a surcharge of 10% and an amortization charge of 1¢ per kwh. for the first 100 kwh. used per month, the minimum amortization charge to be $0.25 and the maximum $1.00 per month.

4. The electricity furnished hereunder shall be in the form of 3-phase, alternating current, at approximately 60 cycles and approximately 2300 volts.

5. The Point of Delivery for the electricity supplied hereunder shall be the secondary terminals of the Authority's sub-station and maintenance by Authority of approximately the above stated voltage and frequency at said Point of Delivery shall constitute delivery of electricity for the purposes of this contract. The electricity to be supplied Customer hereunder shall be metered at the low tension side of the step-down transformer bank or banks of a substation to be constructed, owned, and operated by Authority, and Authority will install only such protective devices as in its opin-

ion are necessary for the protection of its transformer bank or banks and/or the transmission line or transmission lines supplying power to such substation. Customer shall furnish Authority gratis with suitable substation site for the period hereof, the transformer banks and other equipment installed thereon to be considered the personal property of Authority. Authority shall have free right of ingress and egress on said site, and Customer shall supply a right of way over Customer's property to such site.

6. The term of this contract shall be 5 years. This contract shall begin on the date the delivery of electricity hereunder is actually begun, which it is estimated will be approximately on or about October 1, 1936, and shall be considered renewed for a year from the expiration of said term, and from year to year thereafter, unless a written notice to the contrary is given by either party to the other at least three months prior to the expiration of the term of the contract or any then existing renewal thereof.

7. This contract shall inure to the benefit of and be binding upon the respective heirs, legal representatives, successors and assigns of the parties hereto, but is not assignable by Customer without written consent of Authority.

In Witness Whereof, the parties hereto have caused this contract to be duly executed in duplicate the day and year first above written.

Tennessee Valley Authority, by Arthur E. Morgan, Chairman. Western State Hospital, (S.) by J. R. Wilson, Superintendent.

Approved by: E. P. Pardue, Commissioner.

COMPLAINANTS' EXHIBIT No. 621

TVA corporate resolution dated July 12, 1937, extending maturity date for payment of principal installment on note of Monroe County Electric Power Association:

"Whereas, Pursuant to a Sale and Loan Contract dated January 15, 1936, the Tennessee Valley Authority sold to the Monroe County Electric Power Association certain rural electric distribution facilities for the sum of $17,237.89 and loaned to said Association the sum of $11,500.00, and the Association issued to the Authority its first mortgage 3½% note in the sum of $28,737.89 as evidence of the Association's long-term obligation to the Authority therefor, and

Whereas, The principal of said note is payable in semi-annual installments coming due on the 15th day of July, 1937, and on the 15th days of January and July of each succeeding year, including the 15th day of January, 1956, and each semi-annual payment amounting to 1/38 of the principal amount of said note remaining unpaid on July 15, 1937, and

Whereas, The rural electric distribution project of the Monroe County Electric Power Association has not developed to a point enabling the Association conveniently to pay on July 15, 1937, the first principal installment on said note, and the Association has requested the Authority to agree to postpone the date on which the first principal installment on said note is to become due until July 15, 1938, therefore

Be It Resolved, That the Board of Directors hereby ap- [fol. 3115] approves the postponement of the date on which the first payment of principal on the first mortgage 3½% note of the Monroe County Eectric Power Association is to become due from July 15, 1937, to July 15, 1938. The principal on said note shall be payable to the Tennessee Valley

COMPLAINANTS' EXHIBIT No. 621

Authority in semi-annual installments becoming due on the 15th day of July, 1938, and on the 15th days of January and July in each year thereafter, including the 15th day of January, 1956. Each such semi-annual installment of principal shall be an amount equal to 1/36 of the principal amount of the note remaining unpaid on the 15th day of July, 1938. This postponement of the first principal payment by the Association shall not relieve the Association from the obligation of making the regular payments of interest on the amount of the note from time to time remaining unpaid.

Further Resolved, That the Comptroller and the General Counsel are hereby authorized to prepare and submit for execution any amendments to the contract between the Authority and the Monroe County Electric Power Association and any amendments to or substitutions for said note and said first mortgage as may be necessary to effectuate the above resolution."

COMPLAINANTS' EXHIBIT No. 622

TVA corporate resolution dated July 20, 1937, approving supplemental contract between TVA and City of Athens, Alabama:

"Resolved, That the Board of Directors hereby approves and authorizes entry into the contract (Exhibit 7-20-37c) with the City of Athens, Alabama.

Exhibit 7-20-37c

This Agreement, made and entered into this 23rd day of July, 1937, by and between Tennessee Valley Authority (hereinafter called "Authority") a corporation created by the Tennessee Valley Authority Act of 1933, its successors and assigns, and the City of Athens, Alabama (hereinafter called "Municipality") a municipal corporation duly organized, created, and existing under and by virtue of the laws of the State of Alabama.

Witnesseth: Whereas, on the 9th day of October, 1936 Authority and Municipality entered into a certain contract entitled "Agreement for Sale of Properties Between Tennes-

see Valley Authority and City of Athens, Alabama" under which it was agreed that Authority should sell certain rural electric transmission and distribution lines and facilities to Municipality, and construct certain additional lines and facilities for Municipality, and

[fol. 3116] Whereas, Authority and Municipality desire to amend the above described contract by changing certain provisions contained therein with respect to the method of payment for such transmission and distribution lines and the means by which such payment shall be secured.

Now, Therefore, for and in Consideration of the mutual covenants and agreements herein contained, the parties hereto covenant and agree as follows:

1. Article 8 of the "Agreement for Sale of Properties Between Tennessee Valley Authority and City of Athens, Alabama" executed October 9, 1936, is hereby amended to read as follows:

8. Amortization Collections. — Municipality shall collect from each customer on the lines sold by Authority to Municipality hereunder, or constructed by Authority for Municipality pursuant to this agreement and/or pursuant to the construction loan contract between United States of America and municipality, and from any additional customers which may hereafter be connected with and receive service from such lines, an amortization charge of one cent (1¢) per kwh. for the first one hundred (100) kwh. used per month, such charge to be not less than Twenty-five Cents (25¢) nor more than One Dollar ($1.00) per customer per month. The amortization charges so collected by Municipality shall be used solely for equal and ratable retirement of the $132,000 of bonds to be issued by Municipality in payment of the lines and the facilities sold by Authority to Municipality and constructed by Authority for Municipality under this agreement and in repayment of the loan of approximately $65,000 to be made by the United States Government through the Rural Electrification Administration to enable Municipality to construct such transmission lines and facilities. As soon as Municipality has fully paid and retired the said bonds issued to Authority and to the United States Government pursuant hereto, Municipality agrees to remove this amortization charge. With the exception of

This contract attached to and referred to in the approving resolution is the same as Complainants' Exhibit No. 170 and to avoid repetition is not here set forth at length.

COMPLAINANTS' EXHIBIT No. 625

TVA corporate resolution dated August 13, 1937, approving proposed letter to be sent by TVA to the City Manager of Knoxville, Tennessee:

"David E. Lilienthal submitted to the Board for consideration a letter he proposed to send to George R. Dempster, City Manager of Knoxville, Tennessee, requesting an expression from the City concerning its plans covering the acquisition of an electric distribution system. The contents of the communication were found satisfactory. After instructing the Secretary to file a true copy of the communication with the Authority's records as Exhibit 8-13-37e, the Board authorized Mr. Lilienthal to affix his signature to the letter and forward it to the City Manager.

Exhibit 8-13-37e

Tennessee Valley Authority,

Knoxville, Tennessee

Knoxville, Tennessee, August 13, 1937.

Honorable George R. Dempster, City Manager, Knoxville, Tennessee.

DEAR MR. DEMPSTER:

During the past four years the progress of the Tennessee Valley Authority under the policies established by Congress has been materially aided by the splendid cooperation of the various public agencies in the Valley. To no small extent, their willingness to participate in carrying out the objectives of the TVA Act has been the principal factor in the success of many phases of this undertaking.

[fol. 3119] As the Authority has proceeded to put into effect the purposes of the statute, I am confident the people of the Valley have come to a closer and more complete

understanding of the benefits such a program can yield to this region-benefits in navigation and flood control, benefits in agriculture, benefits in the availability of an abundance of low-priced power. This public support and understanding here at home are gratifying to those who have the responsibility of putting these Congressional purposes to work.

As you know, our Board is authorized, in the language of the statute, "in order to avoid the waste of water power, to transmit and market such power as in this act provided, and thereby, so far as may be practical, to assist in liquidating the cost or aid in the maintenance of the projects of the Authority." Thus the Board has a duty to sell its surplus power and to obtain revenues from such sales. "This policy," the Act states, "is further declared to be that the projects herein provided for shall be considered primarily for the benefit of the people of the section as a whole and particularly the domestic and rural customers to whom the power can economically be made available."

The increasing demand for power generated at TVA dams makes it necessary, in connection with the planning of our entire watershed program, that the Authority follow closely the progress of public agencies with which it has contracts to supply power at some future time. To this end, the Authority is now engaged in making studies of immediate and future requirements in electric facilities. These studies require that we be brought up to date on the status of outstanding power contracts where service has not yet begun. Among these, Knoxville is one of the earliest.

The history of Knoxville's effort to obtain public power, as I recall it, is substantially as follows:

On November 25, 1933, the people of Knoxville by referendum approved the acquisition by the City of a distribution system to be supplied with power from TVA. As a result of this election, on February 27, 1934, your City Council approved, and the City Manager signed, a power contract with the Authority, and this contract was signed by Dr. A. E. Morgan on behalf of our Board March 1, 1934. A revision of this contract was signed by you for the City and Chairman Morgan for TVA on February 19, 1936. Upon refusal of the Tennessee Public Service Company to entertain the City's offer of March 3, 1934, to purchase that

Company's system, the City requested the Authority to negotiate with the Company in an effort to buy that system for the City of Knoxville. About the same time the City applied for and obtained a loan and grant from the Public Works Administration for the construction of a distribution system.

During the summer of 1934, with the assistance of an engineering firm employed for that purpose, the City proceeded with its plans for construction. Shortly before the City was to open bids for construction of the first unit, how- [fol. 3120] ever, the Company agreed to sell to TVA. As you know, subsequent litigation prevented that purchase and that particular agreement to sell the Company's system lapsed. Thereupon the City (a) resumed its construction activities, (b) obtained a substantial sum of money from PWA, (c) made the award for the first unit, and, (d) in early March, 1935, saw the contractor begin the placing of poles in a unit which was to serve about 3,500 customers. In addition, I have been informed, a large quantity of materials for this first unit was ordered from manufacturers and received by the City.

Construction on the first unit was halted March 26, 1935, when, on suit of the Tennessee Public Service Company, Chancellor Mitchell first temporarily and later permanently enjoined further building. This injunction was set aside by the Supreme Court of the State of Tennessee March 9, 1936.

Since that time there have been a number of conferences between representatives of the City and members of the Authority. As I recall them, the principal meetings were as follows:

On June 5, 1936, the City Manager, Law Director, and Council Power Committee met with me and several of my associates.

On September 4, 1936, the City Manager, Law Director, and Council Power Committee met with Mr. Swidler and Mr. Muir of the Authority's staff.

On May 17, 1937, the Mayor, City Manager, Law Director, and Council Power Committee met with me and several of my associates.

On June 8, 1937, the Mayor, City Manager, Law Director, and the Council Power Committee met with me and some of my associates.

At the meetings in June, 1936, and in May and June, 1937, I made it clear each time that the Authority stood ready to make good on its commitments to the City, and that it was the Authority's policy to abide by the decision which the voters of Knoxville had expressed in the referendum of November 25, 1933. As you know, the Authority, in its original contract of March 1, 1934, and the revised contract of February 19, 1936, is committed to supply power to a distribution system to be purchased or constructed by the City of Knoxville. In accordance with our commitments under that contract, the Authority, at a considerable cost, has made plans at Norris Dam and elsewhere on the basis of such service and has held in reserve a large block of power for Knoxville.

In view of the foregoing facts, I should like to call attention to some of the language contained in both the 1934 and 1936 contracts. In the contract of February 19, 1936, there is this statement:

[fol. 3121] "The electors of the Municipality have by referendum authorized Municipality to acquire by construction or purchase a municipal electric distribution system, *and Municipality intends, with all possible diligence and expedition, to acquire by construction or purchase and to operate such a system.*"

Again, in Section 2 of that contract, the City of Knoxville agrees:

"to use all reasonable diligence in acquiring by construction or purchase a municipal distribution system for the City of Knoxville."

An allotment of a large block of power has been held in reserve for the City of Knoxville for more than three years under the conditions of these contracts. In view of the ever increasing demand elsewhere for power from TVA dams and the heavy expenditures which are obligated in the Authority's commitments with the City, we should appreciate it if you would advise TVA in the very near future as to the City's plans and proposed procedure. So far as the Authority is concerned, the Board authorizes me to say, as we have informed you and your associates in our con-

COMPLAINANTS' EXHIBIT No. 625

ferences, that you can rest assured that TVA stands ready fully to perform its obligation to the City of Knoxville to supply it with power, in accordance with the terms of the contract and the preference in the allotment of TVA power to which the City of Knoxville is entitled, as a public agency, under the terms of the Act.

There is no question, of course, as to the priority given to public agencies by the statute. If the City Council of Knoxville, however, does not choose to take advantage of that priority in the near future, the Authority should have adequate notice in order that we can review our plans for the provision of other outlets and be free to commit this power to public agencies elsewhere.

I am sending copies of this letter to the Mayor, the members of the Power Committee, and also the other members of the City Council.

Very truly yours, David E. Lilienthal, Director.

DEL: DM.

Wendell L. Wilkie, President Commonwealth and Southern Utilities Co., 20 Pine St. NYK.

Confirming our conversation of yesterday it is Monsantos desire to support and be identified with private enterprise Stop This we have evidenced by our willingness to pay a very large annual premium for your power and to accept from you several other much less favorable contract conditions stop Due to the unfortunate competitive conditions surrounding the Tennessee Electric Power Company our directors are unwilling to hazard a several million dollar investment whose success is entirely dependent upon the continuity of its power supply at contract rates which we believe are insecure without a guarantee from Commonwealth and Southern in substantially the form submitted to you by Mr. Rassieur and which with modifications which our directors believe essential embodies our understanding of the guarantee tentatively agreed upon last week Stop I understood you are unwilling to accept this Stop Please confirm as it is necessary that we act promptly.

Edgar M. Queeny.

This exhibit is a part of the application for license made by the undersigned this the 13th day of June, 1925.

Alabama Power Company, by Thos. W. Martin, (Sgd.) Thos. W. Martin, President. (Sgd.) Lamar Aldridge, Secretary.

[fol. 3130] Exhibit "D"

Evidence That Applicant Has Complied With the Laws of the State

Applicant, Alabama Power Company, is a corporation organized and existing under the general laws of the State of Alabama as more specifically shown in and by the certified copy of its charter, merger agreements and amendments thereto, filed with the Commission and referred to in Exhibit "A" to this application; and applicant has, by its said charter, the right to manufacture, supply and sell to the public power produced by water as a motive force.

Applicant further shows that it heretofore acquired by purchase and not by condemnation, and now owns a dam site or power site at Lock 18 on the Coosa River in Elmore County, Alabama, at which site the proposed development will be made; that said dam site consists of more than one

acre of land upon each and opposite sides of the Coosa River, and which said land is described as follows to-wit:

East Side:

Fraction D and the northeast quarter of the northeast quarter of Section 16; fractional southwest quarter, the south half of the northwest quarter and the southeast quarter of Section 15; the fractional north half of Section 22; all in Township 19 North, Range 18 East, Elmore County;

West Side:

Fractional east half of the southwest quarter and fractional southeast quarter of Section 16; the northeast quarter of Section 21 and the fractional north half of Section 22; all in Township 19 North, Range 18 East, Elmore County;

and by virtue of the aforesaid charter powers and of its ownership of said dam site or power site, has, under the laws of Alabama, the right, power and authority to manufacture, supply and sell to the public power produced by water as a motive force, and to acquire by condemnation the lands and rights necessary for the construction and operation of said dam and works connected therewith or useful thereto, and to construct and operate at said site or other points up or down the stream therefrom and across [fol. 3131] said stream a dam, together with all works incident, necessary or related thereto and in connection therewith to impound or divert the water of the said Coosa River and its tributaries, together with other rights, powers and authority granted it by the laws of Alabama for such services.

Applicant further shows that it will in due time apply to the Alabama Public Service Commission for a Certificate of Convenience and Necessity in compliance with the laws of Alabama for the construction of said project works, and upon the issuance of the same, duly certified copy thereof will be filed with this Commission.

The water impounded by said dam will flood, injure or damage certain public roads in the counties of Elmore, Chilton and Coosa, and by virtue of the laws of Alabama, applicant may acquire the right to flood, injure or damage

such roads by paying the Court of County Commissioners or Board of Revenue of the respective counties the cost of locating, laying out and opening other public roads in lieu of and to the same extent as the public roads are so flooded, injured or damaged. Applicant shows that it will shortly and in due course present its petition to the proper county authorities to ascertain such damages, and will forthwith compensate said county for any injury or damage said county authorities may find proper.

The laws of Alabama confer the right and authority to flood public and private ferries and approaches thereto, with which laws applicant proposes to comply and properly to acquire in the course of construction of the project works, as may be necessary, the privilege of flooding any and all public and private ferries and approaches thereto which may be flooded by said project.

No franchise or other right from municipalities are necessary so far as applicant is now advised before the project can be completed and put into operation.

This exhibit is a part of the application for license made by the undersigned this the 13th day of June, 1925.

Alabama Power Company, by Thos. W. Martin, (Sgd.) Thos. W. Martin, President. (Sgd.) Lamar Aldridge, Secretary.

[fol. 3132] Exhibit "E"

Statement of Nature, Extent and Ownership of Water Rights, and of Ownership of Lands Which Applicant Contemplates Using in the Development of the Project. Also Statement of Plans With Reference to Procuring Water Rights and of Acquiring Lands

Applicant proposes to use in the development of the project the lands, together with the water rights incident thereto, as indicated on Map No. 1, Exhibit "J". Said map shows the location of the proposed dam and approximately the lands affected by said development. Applicant owns the dam site and has purchased and will continue to purchase or otherwise acquire from time to time before the completion of the project, various other lands in the locality which may be needed in the construction thereof. None of said lands, so far as applicant's information goes, con-

sists of either reservations or public lands, except a parcel of land not a part of other United States Government lands, and entirely isolated from any other lands of the United States. Said land is situated a distance of about three-eighths of a mile from the east abutment of applicant's dam at Duncan's Riffle (known as Mitchell Dam) and is unimproved and described as follows: That part of fractional Section 14, Township 21 North, Range 16 East, which lies west of the Coosa River, in Chilton County, Alabama, and containing 66.16 acres more or less.

This exhibit is a part of the application for license made by the undersigned this the 13th day of June, 1925.

Alabama Power Company, by Thos. W. Martin, (Sgd.) Thos. W. Martin, President. (Sgd.) Lamar Aldridge, Secretary.

[fol. 3133] Exhibit "F"

Applicant's Plan for Acquiring Title to, or the Right to Occupy and Use, Lands Other Than Those Owned by the Applicant or by the United States, Essential for Carrying Out the Project

The Company has been engaged for some time, and is continuing to purchase outright, or else to acquire by purchase, the right to flood all lands useful or necessary to the project. Such lands and right to flood lands which the Company cannot acquire by purchase, it will acquire the right to use of flood under the Eminent Domain laws of the State of Alabama, and the United States. When required, a complete list and other data with reference to lands acquired will be supplied.

This exhibit is a part of the application for license made by the undersigned this the 13th day of June, 1925.

Alabama Power Company, by Thos. W. Martin, (Sgd.) Thos. W. Martin, President. (Sgd.) Lamar Aldridge, Secretary.

[fol. 3134] Exhibit "I"

Estimate of Power Capacity

The power capacity is estimated to be:

.08 x 95 x 4000 = 30,400 H. P. where 95 = head in feet, and 4000= flow in sec. ft. for 90% of the time.

COMPLAINANTS' EXHIBIT No. 631 (Excluded)

This exhibit is a part of the application for license made by the undersigned this the 13th day of June, 1925.

Alabama Power Company, by Thos. W. Martin, (Sgd.) Thos W. Martin, President. (Sgd.) Lamar Aldridge, Secretary.

[fol. 3135] This Exhibit M submitted with and made a part of application of the Alabama Power Co. for a license for project No. 618 Alabama is recommended for approval.

(Sgd.) ——— ———, Chief Engineer. (Sgd.) ——— ———, Executive Secretary. (Sgd.) ——— ———, Executive Secretary.

Approved Oct. 3, 1925.
By Order of The Federal Power Commission.
License Issued Nov. 7, 1925.

[fol. 3136] Exhibit "M"

General Description and General Specifications of Mechanical, Electrical and Transmission Equipment and Appurtenances

This project contemplates the construction of a dam and power house on Coosa River in vicinity of site known as Lock 18 as designated by survey of Coosa River from Lock N. 4 in Alabama to Wetumpka, Alabama, made August 2, 1903, to December 19, 1903, under the direction of J. B. Cavanaugh, Corps of Engineers, U. S. A., and by D. M. Andrews, Assistant Engineer, and N. A. Yuille, Chief of Party as indicated in Exhibits "K" and "L" herewith attached.

The dam will be of solid concrete masonry construction, raising elevation of pool approximately 95 feet above present low water level.

The power house will consist of foundations for five generating units, two units of which will be installed in first construction. Further provisions will be made for three more generating units to be constructed from time to time to meet the reasonable market demands for power.

The generating units in first construction will consist of two vertical type water wheels of approximately 36,000 H. P. each driving generators of approximately 25,000 kw. capacity each.

COMPLAINANTS' EXHIBIT No. 631 (Excluded)

Power will be generated at 13,200 volts, stepping up to 110,000 volts for transmission.

This station will be connected to the transmission line system of the Alabama Power Company by means of the now existing transmission line in the vicinity of this site.

This exhibit is a part of the application for license made by the undersigned this the 13th day of June, 1925.

Alabama Power Company, by Thos. W. Martin, (Sgd.) Thos. W. Martin, President. (Sgd.) Lamar Aldridge, Secretary.

[fol. 3137] Exhibit "N"

Estimated Cost of Project

Earth and Rock Excavation	275,000 cubic yards.
Concrete	354,000 cubic yards.
Railroad	10 miles.
Initial Installation	72,000 horse power.
Lands for Reservoir	8,000 acres.
Total Estimated Cost of Initial Installation	$13,250,000.

This exhibit is a part of the application for license made by the undersigned this the 13th day of June, 1925.

Alabama Power Company, by Thos. W. Martin, (Sgd.) Thos. W. Martin, President. (Sgd.) Lamar Aldridge, Secretary.

[fol. 3138] Exhibit "O"

A Detailed Statement of the Time Required for Completing the Preliminary Construction and for Beginning and Completing the Construction of the Project.

The applicant desires to begin preliminary construction of the project works on or before December 1, 1925. It is estimated that it will require approximately three years for the initial installation. The time required for installation of each additional unit is estimated to be approximately one year, and it is proposed to construct the additional units from time to time to meet the reasonable market demands for power.

This exhibit is a part of the application for license made by the undersigned this the 13th day of June, 1925.

Alabama Power Company, by Thos. W. Martin, (Sgd.) Thos. W. Martin, President. Lamar Aldridge, Secretary.

[fol. 3140] COMPLAINANTS' EXHIBIT No. 633 (Excluded)

The Power Policy of the Tennessee Valley Authority

1. The business of generating and distributing electric power is a public business.

2. Private and public interests in the business of power are of a different kind and quality and should not be confused.

3. The interest of the public in the widest possible use of power is superior to any private interest. Where the private interest and this public interest conflict, the public interest must prevail.

4. Where there is a conflict between public interest and private interest in power which can be reconciled without injury to the public interest, such reconciliation should be made.

5. The right of a community to own and operate its own electric plant is undeniable. This is one of the measures

which the people may properly take to protect themselves against unreasonable rates. Such a course of action may take the form of acquiring the existing plant, or setting up a competing plant, as circumstances may dictate.

6. The fact that action by the Authority may have an adverse economic effect upon a privately-owned utility, should be a matter for the serious consideration of the Board in framing and executing its power program. But it is not the determining factor. The most important considerations are the furthering of the public interest in making power available at the lowest rate consistent with sound financial policy, and the accomplishment of the social objectives which low cost power makes possible. The Authority cannot decline to take action solely upon the ground that to do so would injure a privately-owned utility.

7. To provide a workable and economic basis of operations, the Authority plans initially to serve certain definite regions and to develop its program in those areas before going outside.

8. The initial areas selected by the Authority may be roughly described as:

(a) The region immediately proximate to the route of the transmission line soon to be constructed by the Authority between Muscle Shoals and the site of Norris Dam.

(b) The region in proximity to Muscle Shoals, including northern Alabama and north-eastern Mississippi.

(c) The region in the proximity of Norris Dam (the new source of power to be constructed by the Authortiy on the Clinch River in north-east Tennessee).

[fol. 3141] At a later stage in the development it is contemplated to include, roughly, the drainage area of the Tennessee River in Kentucky, Alabama, Georgia and North Carolina, and that part of Tennessee which lies east of the west margin of the Tennessee drainage area.

To make the area a workable one and a fair measure of public ownership, it should include several cities of substantial size, (such as Chattanooga and Knoxville) and, ultimately, at least one city of more than a quarter million,

within transmission distance, such as Birmingham, Memphis, Atlanta, or Louisville.

While it is the Authority's present intention to develop its power program in the above-described territory before considering going outside, the Authority may go outside the area if there are substantial changes in general conditions, facts, or governmental policy, which would necessarily require a change in this policy of regional development, or if the privately-owned utilities in the area do not cooperate in the working out of the program.

Nothing in the procedure here adopted is to be construed in any sense a commitment against extending the Authority's power operations outside the area selected, if the above conditions or the public interest require. Where special considerations exist, justifying the Authority going outside this initial area, the Authority will receive and consider applications based on such special considerations. Among such special considerations would be unreasonably high rates for service, and a failure or absence of public regulation to protect the public interest.

9. Every effort will be made by the Authority to avoid the construction of duplicate physical facilities, or wasteful competitive practices. Accordingly, where existing lines of privately-owned utilities are required to accomplish the Authority's objectives, as outlined above, a genuine effort will be made to purchase such facilities from the private utilities on an equitable basis.

10. Accounting should show detail of costs, and permit of comparison of operations with privately-owned plants, to supply a "yard-stick" and an incentive to both private and public managers.

11. The accounts and records of the Authority as they pertain to power, will always be open to inspection by the public.

Electric Rates Announced

The following statement respecting rates for electric power from the publicly-owned plant at Muscle Shoals was made today by David Lilienthal, member of the Board of Directors of the Tennessee Valley Authority to whom has been assigned the execution of the Authority's power program.

"At the direction of the Board of Directors of the Tennessee Valley Authority, rates for electricity supplied from the publicly-owned plant at Muscle Shoals have been formulated, after weeks of careful study of costs and market factors.

"Any municipality, in the area we plan to serve initially, which owns its distribution system, assuming half-time use, may secure wholesale power from the Authority at an average cost to it of seven mills a kilowatt hour. We propose that our municipal wholesale customers charge the individual residence consumer in the towns and cities thus served a maximum gross rate of 3 cents a kilowatt hour for the first block, and for subsequent blocks 2 cents, 1 cent, and 4 mills. For the typical general consumer this is an average of about 2 cents a kilowatt hour, and for the typical limited user an average of about 2¾ cents. For a fully electrified home—which is our objective—the rate would average 7 mills per kilowatt hour.

"The farm user, we propose, should pay the same rate for energy as the town and city householder. These schedules, both for town and farm, carry with them a requirement that the customer use a reasonable amount per month as a minimum. These minimum requirements vary, both in urban and farm territory, with the size of the customer's meter. Farm users will have a larger minimum requirement wherever the greater distances between customers result in increased cost of service.

COMPLAINANTS' EXHIBIT No. 634 (Excluded)

"These wholesale rates have been computed on a conservative basis to cover all the costs of furnishing the service, including operation, maintenance, depreciation, and taxes. In addition to these costs, we have made provision for interest and retirement, although such provision is not required by the Tennessee Valley Authority Act. The power project is designed to be strictly self-supporting and self-liquidating.

"We believe that these low rates will mean that the people of the Valley will greatly increase their use of electricity—which is one of the objectives of the President and Congress. [fol. 3143] If this occurs, even lower rates can be planned for the future.

"The proposed rates to the householder and farmer should be explained in more detail. Under the rate for domestic service, it is proposed that for the first 50 kilowatt hours which the householder uses he shall pay 3 cents a kilowatt hour. These 50 kilowatt hours, in the ordinary small or medium sized house, would care for the lights and small electrical appliances, such as the flat iron, toaster, percolator, vacuum sweeper, washing machine, and similar small devices. For these 50 kilowatt hours the user would pay $1.50. If the consumer has an electric refrigerator and an electric range which together consume 200 kilowatts, 150 of these kilowatt hours per month he would get for 2 cents per kilowatt hour, and the remaining 50 kilowatts at 1 cent. If in addition to an electric refrigerator and range the customer had an electric hot water heater, this service he could secure partly for 1 cent per kilowatt hour, and partly for 4 mills per kilowatt hour. All these services the consumer would receive for $6.70 a month. Any other appliances which the consumer installed such as electrical house heating or cooling, he could operate at 4 mills per kilowatt hour.

"It is apparent that the rates proposed are designed to encourage and make possible the widest use of electric service, with all the individual and community benefits which go with such wide use."

A Learning Unit for Schools

The Tennessee Valley Looks to the Future

WALTER E. MYER
Editor, The American Observer

EDITORIAL NOTE—*Of all the activities of the present administration, the TVA is the most constructive and prophetic. Here is the story told by a keen student and observer, after spending weeks in the Valley gathering material for this special* JOURNAL *feature.*

IN THE SPRING of 1933 the United States government began an experiment in economic planning. By Act of Congress, May 18, it created the Tennessee Valley Authority. The Authority was given a very important—and a very difficult—assignment. Its job is to plan the industrial life and improve the well-being of a large section of the country. The region selected for the experiment is the territory which drains into the Tennessee River and its tributaries. This watershed, somewhat inaccurately termed the Tennessee Valley, takes in a great part of Tennessee and portions of six other states: Virginia, North Carolina, Georgia, Alabama, Mississippi, and Kentucky. Its area is about 42,000 square miles. Only 2,000,000 people live within the Valley area, but 6,000,000 are to be found within its sphere of influence.

The Tennessee Valley Authority, or the TVA as it is called, is doing its work in this territory. It is studying social conditions and social needs. It is making a survey of the natural resources, the soil, minerals, forests. It is canvassing the possibilities of water power development and is actively at work harnessing the waters of the Tennessee and its branches, creating a great, integrated power system. It is already generating electric power and selling it at low rates. It is devising means of preserving the fertility of the soil, of checking erosion, of encouraging the reforestation of the wooded regions. It is trying to find steady employment for the people of the Valley.

But it is doing more than that. Its work in this Valley serves as a yardstick for the whole nation. In showing what can be done in planning the future of industry and agriculture, and in maintaining high standards of workmanship in all its operations, it will be suggesting what may be done elsewhere. It is working not only to promote industrial growth but to see that this growth contributes to the welfare of human beings. If the TVA succeeds in directing business and agricultural development so that the people of the Valley are happier and more secure, it will serve as an object lesson to the nation.

But why is it that this particular part of the country is being used as an experiment ground by the United States government? The choice of the Tennessee Valley is really a product of historical accident. There had been a long drawn-out discussion as to what should be done with the great dam and power plant at Muscle Shoals, Alabama. These had been built by the government during the war. They were to generate power for the production of nitrogen, needed in the making of explosives. When peace came, many people thought that the government should generate electricity for domestic and commercial use. Others said the government should keep out of business; that it should sell the plant to private interests. Twice Congress declared in favor of government operation. Each time the congressional bill was blocked by presidential veto. Finally, after more than a decade of indecisive wrangling, President Roosevelt settled the question. The government would operate the Muscle Shoals properties. But it would do more than that. It would use the power developed along the Tennessee as a part of a larger plan—a plan for the economic safety and welfare of the whole [illegible] leads logically to national planning for a complete river watershed involving many states and the future lives and welfare of millions. It touches and gives life to all forms of human concerns.

I, therefore, suggest to the Congress legislation to create a Tennessee Valley Authority—a corporation clothed with the power of government but possessed of the flexibility and initiative of a private enterprise. It should be charged with the broadest duty of planning for the proper use, conservation, and development of the natural resources of the Tennessee River drainage basin and its adjoining territory for the general, social, and economic welfare of the nation. This Authority should be clothed also with the necessary power to carry these plans into effect. Its duty should be the rehabilitation of the Muscle Shoals development and the coordination of it with the wider plan.

Many hard lessons have taught us the human waste that results from lack of planning. Here and there a few wise cities and counties have looked ahead and planned. But our nation has "just grown." It is time to extend planning to a wider field, in this instance comprehending in one great project many states directly concerned with the basin of one of our greatest rivers.

This in a true sense is a return to the spirit and vision of the pioneer. If we are successful here we can march on, step by step, in a like development of other great natural territorial units within our borders.

The Authority is a corporation, owned by the government. There was set aside for its use $50,000,000 from the $3,300,000,000 public works fund. It is authorized to issue $50,000,000 more in bonds on the credit of the United States. The Authority is administered by a Board of Directors consisting of three members appointed by the President.

The three directors are men who have long been interested in problems such as the Authority must meet. Arthur E. Morgan, chairman of the board, has had experience as a practical engineer. He is also a social engineer. As president of Antioch College he was deeply concerned

ment in economic planning. By Act of Congress, May 18, it created the Tennessee Valley Authority. The Authority was given a very important—and a very difficult—assignment. Its job is to plan the industrial life and improve the well-being of a large section of the country. The region selected for the experiment is the territory which drains into the Tennessee River and its tributaries. This watershed, somewhat inaccurately termed the Tennessee Valley, takes in a great part of Tennessee and portions of six other states: Virginia, North Carolina, Georgia, Alabama, Mississippi, and Kentucky. Its area is about 42,000 square miles. Only 2,000,000 people live within the Valley area, but 6,000,000 are to be found within its sphere of influence.

The Tennessee Valley Authority, or the TVA as it is called, is doing its work in this territory. It is studying social conditions and social needs. It is making a survey of the natural resources, the soil, minerals, forests. It is canvassing the possibilities of water power development and is actively at work harnessing the waters of the Tennessee and its branches, creating a great, integrated power system. It is already generating electric power and selling it at low rates. It is devising means of preserving the fertility of the soil, of checking erosion, of encouraging the reforestation of the wooded regions. It is trying to find steady employment for the people by developing new industries, located preferably in small towns so that members of farmers' families may find work. It is building a town near the site of a great dam which is under construction. This town of Norris is laid out with an eye to beauty and as an experiment in construction of comfortable low-cost homes. Attention is given to housing and to labor relations.

The TVA is working to improve conditions in the Tennessee Valley. That is its immediate object. But it is doing more than that. It would use the power developed along the Tennessee as a part of a larger plan—a plan for the economic safety and welfare of the whole watershed. His concept of the project is admirably stated in his address to Congress:

> The continued idleness of a great national investment in the Tennessee Valley leads me to ask the Congress for legislation necessary to enlist this project in the service of the people.
>
> It is clear that the Muscle Shoals development is but a small part of the potential public usefulness of the entire Tennessee River. Such use, if envisioned in its entirety, transcends mere power development: it enters the wide field of flood control, soil erosion, afforestation, elimination from agricultural use of marginal lands, and distribution and diversification of industry. In short, this power development of war days must mark the beginning of a new relationship between the Federal Government and the Tennessee Valley. It must look to the proper use, conservation, and development of the natural resources of the Tennessee River drainage basin and its adjoining territory for the general, social, and economic welfare of the nation. This Authority should be clothed also with the necessary power to carry these plans into effect. Its duty should be the rehabilitation of the Muscle Shoals development and the coordination of it with the wider plan.
>

It is time to extend planning to a wider field, in this instance comprehending in one great project many states directly concerned with the basin of one of our greatest rivers.
>
> This in a true sense is a return to the spirit and vision of the pioneer. If we are successful here we can march on, step by step, in a like development of other great natural territorial units within our borders.

But why is it that this particular part of the country is being used as an experiment ground by the United States government? The choice of the Tennessee Valley is really a product of historical accident. There had been a long drawn-out discussion as to what should be done with the great dam and power plant at Muscle Shoals, Alabama. These had been built by the government during the war. They were to generate power for the production of nitrogen, needed in the making of explosives. When peace came, many people thought that the government should generate electricity for domestic and commercial use. Others said the government should keep out of business; that it should sell the plant to private interests. Twice Congress declared in favor of government operation. Each time the congressional bill was blocked by presidential veto. Finally, after more than a decade of indecisive wrangling, President Roosevelt settled the question. The government would operate the Muscle Shoals properties. But it would do more than that. It would use the power developed along the Tennessee as a part of a larger plan—a plan for the economic safety and welfare of the whole watershed. His concept of the project is admirably stated in his address to Congress:

The Authority is a corporation, owned by the government. There was set aside for its use $50,000,000 from the $3,300,000,000 public works fund. It is authorized to issue $50,000,000 more in bonds on the credit of the United States. The Authority is administered by a Board of Directors consisting of three members appointed by the President.

The three directors are men who have long been interested in problems such as the Authority must meet. Arthur E. Morgan, chairman of the board, has had experience as a practical engineer. He is also a social engineer. As president of Antioch College, he was deeply concerned with the possibilities inherent in the development of small industries. He was concerned with methods of cooperation. He has for years been a student of problems relating to the development of a more stable society. Harcourt A. Morgan came to the TVA from the presidency of the University of Tennessee. He has been recognized as an authority on soils and on the problems of agriculture. He has been a leader in the advocacy of the decentralization of industry. David E. Lilienthal, a lawyer of Chicago, came to the TVA as a public utilities specialist.

The Valley As It Is

BEFORE we inquire any further into the activities of the TVA, perhaps we should consider the nature of the problems with which it has to deal. It is concerned, of course, with human problems; with conditions under which men and women and children live. It is trying to alter conditions so that people may be freer and happier. But what are some of these conditions? That we may better answer that question, suppose we make an imaginary journey thru the Valley region, visiting several representative sections of the watershed.

TVA photos

WASHDAY without modern conveniences is "blue Monday" indeed; two familiar landmarks—the old mill and the general store.

As we travel thru the mountains which make up the eastern part of this territory, we are impressed by the facts of poverty and primitive living. The first impression is that the region is very sparsely peopled, since for long distances [illegible] and more substantial than they are now. The time was when pioneer men and women, with hope in their hearts, pushed into the mountains and built these little homes. For a while hope may have seemed justified for there were fish in the streams and game in the woods. The forests themselves, while they lasted, furnished a source of revenue, and patches of the hillsides could be cleared for the planting of corn and potatoes.

But now the best of the forests are gone. Game is less plentiful. And the little fields on the steep slopes are denuded of their soil, for the heavy rains wash it from the cultivated spots into the swift mountain streams. So poverty has settled upon the mountain families, and hope has departed. Mile after mile, as one drives along, he sees tumble-down cabins, with the large families sitting aimlessly on the porches. The cabins are distressingly similar and the conditions of life are painfully alike. These families, sitting idly on the porches from Virginia to Georgia, are the victims of a regimentation of poverty which casts all into a mold of hopeless inactivity. Left to their own devices, there seems to be little prospect that these mountain people can find the way to a better industrial order. None of them sees the way, acting individually, to shake off the forces which have rendered them helpless.

As we reach the westward turn of the river and travel along the south-central portion of the watershed, we leave the hills and come to the cotton fields—the old plantation district. But the glamour [illegible] So here, as in the mountains, we look about and say, "This land has seen better days." Here, as there, the individual farmers seem unable to reorganize their economic lives.

Thru south-central Tennessee we find a richer soil and a more diversified agriculture. We see comfortable dwellings and well-kept farms. The villages and towns, tho perhaps not bustling with pre-depression activity, are showing, at any rate, no positive signs of decadence. On the Cumberland plateau, which forms a considerable portion of central and northern Tennessee, the soil appears to be thin, due in many cases to erosion; the forests have been cut and the second growth is not yet ready for cutting; the farms bear evidences of poverty; and the villages are running down. The frequent coal mining areas are victims of the depression. Many of the mines have ceased operation and where that has happened one finds stranded towns, the inhabitants sitting about, waiting for jobs which will probably never come back and meanwhile living largely upon charity and relief.

There are regions of neatness, thrift, and as much prosperity as American farming communities enjoy. Yet in the large, the prospect in the Valley is not encouraging.

Not that the inhabitants themselves are backward. They are of old-line American stock. They are as intelligent and resourceful as the natives of other sections. But they have been unable to make a living except by farming methods which have robbed the soil of its fertility. Fertilizers have not been available and the soil has got away from them. So have the forests. They have not developed a rich or diversified agriculture.

Even in the pre-depression days they were not finding employment for a[illegible]

better answer that question, suppose we make an imaginary journey thru the Valley region, visiting several representative sections of the watershed.

As we travel thru the mountains which make up the eastern part of this territory, we are impressed by the facts of poverty and primitive living. The first impression is that the region is very sparsely peopled, since for long distances few signs of human habitation are visible. But the narrow little valleys, or "hollers" as they are locally called, winding among the hills, are more thickly settled. On the small hillside farms are to be found the homes of the mountaineers—small huts or cabins, often of one or two rooms, and often in pitiful state of disrepair.

These little cabins were never spacious or comfortable, but once they were newer plentiful. And the little fields on the steep slopes are denuded of their soil, for the heavy rains wash it from the cultivated spots into the swift mountain streams. So poverty has settled upon the mountain families, and hope has departed. Mile after mile, as one drives along, he sees tumble-down cabins, with the large families sitting aimlessly on the porches. The cabins are distressingly similar and the conditions of life are painfully alike. These families, sitting idly on the porches from Virginia to Georgia, are the victims of a regimentation of poverty which casts all into a mold of hopeless inactivity. Left to their own devices, there seems to be little prospect that these mountain people can find the way to a better industrial order. None of them sees the way, acting individually, to shake off the forces which have rendered them helpless.

As we reach the westward turn of the river and travel along the south-central portion of the watershed, we leave the hills and come to the cotton fields—the old plantation district. But the glamour of the old plantation days is gone. The planters have moved into the towns. The land is farmed largely by "sharecroppers."

The soil, planted year after year to cotton, becomes worn out. Dilapidated buildings tell the story of hard times which go back far beyond the crash of 1929. Cotton is the money crop of this region, and despite the failing yield, prices suffer from the fact of surplus. considerable portion of central and northern Tennessee, the soil appears to be thin, due in many cases to erosion; the forests have been cut and the second growth is not yet ready for cutting; the farms bear evidences of poverty; and the villages are running down. The frequent coal mining areas are victims of the depression. Many of the mines have ceased operation and where that has happened one finds stranded towns, the inhabitants sitting about, waiting for jobs which will probably never come back and meanwhile living largely upon charity and relief.

There are regions of neatness, thrift, and as much prosperity as American farming communities enjoy. Yet in the large, the prospect in the Valley is not encouraging.

Not that the inhabitants themselves are backward. They are of old-line American stock. They are as intelligent and resourceful as the natives of other sections. But they have been unable to make a living except by farming methods which have robbed the soil of its fertility. Fertilizers have not been available and the soil has got away from them. So have the forests. They have not developed a rich or diversified agriculture.

Even in the pre-depression days they were not finding employment for all their workers. Their problems were social in nature and called for cooperative effort. But they did not act collectively. They did not plan their economic life. They depended upon individual effort and found it inadequate. Today conditions are such that some form of public planning—either that offered by the TVA or something of like nature—appears necessary if prosperity is ever to be attained.

are now working on the dam. A considerable number will remain in charge of the property when it is completed. Probably a few small industries will locate in Norris. Negotiations are now under way looking in that direction. It seems likely, therefore, that a permanent population of perhaps 2000 can be expected. Houses are being built to meet the demand, inexpensive houses of a beautiful design, built and equipped for comfort and convenience as well as beauty. The houses will remain in the possession of the TVA and will be rented to the occupants at a reasonable rental.

The houses which were built first had to be rented at a price which fit the pocketbooks of executives, engineers, and the highly skilled rather than unskilled workers. Experiments were later made with cinder block houses which can be rented at from $14 to $20 a month; houses which may set a new standard for low-cost construction. With each house will go a four-acre tract of farming ground. The farming plots will not be adjacent to the houses but will be near enough for convenience. The residents of Norris will have a chance to practise subsistence farming.

The Division of Social and Economic Development has collected an imposing body of information about local conditions in the Valley. Every county has been examined. Studies have been made of schools, of tax collections, financial conditions of counties and cities, unemployment, administration of justice, and a hundred other subjects. This information is so varied that it gives a very complete picture of the situation in every community. It is doubtful whether anywhere else in the United States an accumulation of so much definite information about local communities and their social, economic, and governmental problems exists.

If the TVA is thinking of helping an industry locate in a certain county, it goes to this division and finds out about the financial and social situation. This will help it to decide whether the industry should be established. This economic and social material is also useful if a cooperative association is planned or if a new highway is projected. The TVA needs it whenever any of its community plans are being considered. The TVA is also obliged to meet many immediate problems as a result of its developments. In the area soon to be flooded by the waters of Norris Lake, for example, there are some 3000 families, 26 schools, dozens of churches, sixty cemeteries, most of them small.

TVA photo

Looking down one of the streets of Norris, Tennessee, we see a few of the finished houses

The TVA employs a large body of workers in its various operations, principally in the building of Norris and Wheeler Dams. These workers are of many classifications, skilled and unskilled. They are taken from the Tennessee Valley area. Negroes are employed in the same proportion that the negro population of the locality bears to the total population. For example, 20 percent of the workers at Wheeler and 4 percent at Norris are colored. An examination is given to applicants for work. It is a comprehensive examination designed to test ability to follow printed or oral directions, and mechanical aptitudes. Account is taken of those who cannot read or write. Selections are made from the applicants with the higher scores. Need as well as competence is given consideration. A disproportionate number are taken from stranded communities where the need for employment is especially acute.

Close and sympathetic relations are maintained with the workers. They may do as they please about joining unions. Most of the crafts are organized, being members of national organizations. Those in charge of the labor policy impress upon the foremen the desirability of establishing cordial and helpful relations with the men.

This enlightened labor policy is bearing fruit. The relationship with the workers is peculiarly constructive. Union committees confer with the management about efficiency measures, and union officials negotiate with the authorities about the possibility of bringing in new industries in order to furnish continuous employment.

At Norris the men work in four shifts, 5½ hours a day, six days a week. Provision is made for leisure time. A recreation hall is maintained; dances are given; speakers are brought in, sometimes by the unions. Vocational training is given to those who wish it. Instruction is given voluntarily by members of the TVA staff. There are courses in agriculture, motor mechanics, electricity, and forms of engineering. The purpose of the training is to fit the workers to better their lot when the Norris job is finished. The men taking this training will be able to hold better places in their own communities.

The spirit of the workers is indicated by the fact that not long ago the entire machine shop force gave notice that they wished instruction from the training section. In the request it was stated that the unskilled wanted training which would fit them for skilled positions, and that the skilled workers wanted instruction "so that they may be more useful to the TVA and be better all round mechanics."

Looks to the Future

The New Industrialism—Promise or Threat?

THE STUDENT of Valley conditions does not come away, however, with a feeling of hopelessness. An appraisal of the resources of the region leads to the conviction that an economic development beyond anything the past has known is a possibility. It seems by no means out of the question for this region in the middle South to become a great center of industry and trade. Enthusiasts speak of it as the coming "American Ruhr." There are fuels here, coal in abundance, lignite, petroleum, natural gas. There are such heavy metals as iron ore, manganese, chromium, and nickel. Among the light metals are aluminum and magnesium. There are quantities of materials for the production of cement, fertilizers, ceramics, and chemical products. Add to the abundant mineral resources the fact of low-cost electric power in generous quantities and adequate transportation facilities—water, rail, and highway—and we have the foundations upon which a flourishing society may be built.

The industrialization of this section of the South was already under way during the years preceding the depression. Textile manufacturers, taking advantage of cheap labor and relatively cheap power, had been moving from New England and the Middle Atlantic states to the South, and mill towns, scattered over the Tennessee Valley region, are the result. Here and there, the mill owners have due regard for the labor forces, and higher standards of living have been attained. In other instances, however, the mills have operated by a system amounting practically to peonage. Men, women, and children, brought in from the hills, were given work at starvation wages. Industry in the South has indeed been stimulated, but southern standards of living have not been adequately raised. The shifting of industry has too often impoverished sibility under the rules of the old game of "rugged individualism."

We sometimes say as we look upon the once prim villages and green fields of industrial England, now bleak and begrimed; as we see men and women shambling from their miserable hovels to the sordid factories, their lives as bleak as the smoke-befouled hills themselves—we say as we look upon this cradle of the Industrial Revolution, or upon the more recent examples of industrialization in Pittsburgh or northern Indiana and Ohio, "If we but had this to do over again! We would direct the forces of industrialization in such a way as to conserve the beauties of nature and the welfare of human beings." Well, here in the Tennessee Valley is a soil ready for industrialization, and thoughtful people are beginning to inquire what that industrialization shall mean in human values. It is because of the possibilities involved in the developments of the next few decades, possibilities of tragic import to the whole nation, that the TVA finds this Valley such a fertile field for its program of economic and social development with human wellbeing rather than excessive manufacturing profits as the guiding aim.

Photo by U. S. Forest Service

Heavy stand of timber, state of Washington

THE Tennessee Valley Authority is trying to save or restore the soil and the forests of the Valley. That is one of its first and most important jobs. The forests present a difficult problem. There are eighteen million acres of forest land in the Valley area, but only one-half million is virgin forest. The rest is second growth. Now forest land, if it is to be productive, must be cared for. The owner must cut only a certain proportion a year, cutting his forest slowly enough so that by the time he gets over the ground the plot first cut will be ready for cutting again. Only by such a method of cutting will the yield from the forest be regular and stable. Privately-owned forests are seldom cut in that way, because the owner cannot wait so long for his income—he cannot wait fifty years or so to cut his trees. Forests can be preserved satisfactorily only if they are public-owned. Public authorities alone can be depended upon to adopt and maintain long-range policies.

That is the big problem with the Tennessee Valley forest lands. Only one and one-half million acres are owned by the public. The public forests are mostly in the Smoky Mountain National Park and the National Forests, tho there are state forests, and the TVA has some forest land. The National Forest Service intends to obtain three million acres more, bringing the publicly-owned forests to four and one-half million acres. Scientific reforestation will be carried on in these forests.

[illegible] that industries calling for the use of wood be discouraged until the forests are ready.

Plans for the future prosperity of the Tennessee Valley must consider the restoration of the soil. Wasteful, careless, and unskillful methods of agriculture have caused an alarming loss of fertility. A great portion of the land is mountainous, hilly, or rolling in character, and much of the surface soil has been washed away from the slopes. Steep lands, which should never have been cultivated, have been plowed and put to crops, and this cultivated soil has washed away, leaving an unfertile subsoil on the surface. In the plateau region, which makes up from a tenth to a sixth of the Tennessee watershed, the soil has grown thin thru erosion. In the lower country there are large one-crop areas. The farms have been planted to corn or cotton or tobacco year after year, and these recurring crops have drawn so much of the substance from the soil that fertility can be maintained only thru the use of fertilizers.

Four fertilizer elements are needed for the support of vegetation. These plant foods are nitrogen, phosphorus, potash, and lime. There is no very serious problem in connection with lime for it is found in sufficient quantities and may be had at a low price. Nitrogen is greatly needed but, until lately, the price was high. Recently new methods of manufacturing nitrates, from the nitrogen which makes up a large part of the air, have been developed, and the price has fallen. At the same time it has been found that farmers need not depend upon commercial nitrates at all. They can develop their own supply. Nitrogen is present in the air everywhere. Legumes, such as clover or alfalfa, extract the nitrogen from the air and establish it in the soil. Land sown for a few years to legumes becomes rich again in nitrogen.

Another food required by plants is phosphorus and the problem of obtaining phosphates is not so simple. Phosphate rock is found in abundance in the growth of vegetation, such as cotton, but because it gives strength to the cotton plant and insures it against disease. It also lends quality and flavor to vegetables of nearly all kinds. Potash may be had commercially in large quantities in Germany and in considerable quantities in New Mexico. It is also present in manures and may be obtained in sufficient quantities in regions where stock is raised. Potash production, therefore, works well with the production of nitrogen, for stock may be pastured on the legumes which put nitrogen into the soil.

The most serious problem of fertilizer development is the production of phosphates, and on this problem the TVA is seriously at work. The great nitrate plants at Muscle Shoals are no longer needed for the production of nitrogen, but Nitrate Plant No. 2, a huge development, costing originally $75,000,000, covering 2300 acres and containing fourteen factory buildings, is being used as an experiment station for the production of cheap phosphates. Considerable progress has already been achieved thru the operations which are being performed on the phosphate rock brought in from central Tennessee.

In its effort to produce and distribute more and better fertilizers, the Tennessee Valley Authority is not working alone. It is cooperating with agricultural stations in each of the seven states within the Valley area. Representatives from institutions in each state work with the Authority in devising plans for fertilization. The different state institutions are kept informed as to the progress of the experiments. Careful studies are being made of soils and soil needs in all parts of the Valley, and a concerted effort is being made by associated scientists, under the leadership of the TVA, in an effort to restore and maintain the fertility of the entire region. New and better means of producing fertilizers as perfected by TVA will be available to private industry, providing a share of the savings is passed on to the farmer.

become a great center of industry and trade. Enthusiasts speak of it as the coming "American Ruhr." There are fuels here, coal in abundance, lignite, petroleum, natural gas. There are such heavy metals as iron ore, manganese, chromium, and nickel. Among the light metals are aluminum and magnesium. There are quantities of materials for the production of cement, fertilizers, ceramics, and chemical products. Add to the abundant mineral resources the fact of low-cost electric power in generous quantities and adequate transportation facilities—water, rail, and highway—and we have the foundations upon which a flourishing society may be built.

The industrialization of this section of the South was already under way during the years preceding the depression. Textile manufacturers, taking advantage of cheap labor and relatively cheap power, had been moving from New England and the Middle Atlantic states to the South, and mill towns, scattered over the Tennessee Valley region, are the result. Here and there, the mill owners have due regard for the labor forces, and higher standards of living have been attained. In other instances, however, the mills have operated by a system amounting practically to peonage. Men, women, and children, brought in from the hills, were given work at starvation wages. Industry in the South has indeed been stimulated, but southern standards of living have not been adequately raised. The shifting of industry has too often impoverished New England without greatly helping the people of the South.

A renewed drive toward industrialization is in prospect for the Valley as soon as normal times return. What will be the fruit of that industrialization? Will these new industries displace those of the North because of their cheaper power and labor? Will they bring unemployment and decay to the industrial centers of the East and the Midwest without greatly raising the standards of living in the South? That would be a distinct possay as we look upon this cradle of the Industrial Revolution, or upon the more recent examples of industrialization in Pittsburgh or northern Indiana and Ohio, "If we but had this to do over again! We would direct the forces of industrialization in such a way as to conserve the beauties of nature and the welfare of human beings." Well, here in the Tennessee Valley is a soil ready for industrialization, and thoughtful people are beginning to inquire what that industrialization shall mean in human values. It is because of the possibilities involved in the developments of the next few decades, possibilities of tragic import to the whole nation, that the TVA finds this Valley such a fertile field for its program of economic and social development with human wellbeing rather than excessive manufacturing profits as the guiding aim.

Laying Out the Plans

Preparing clay for pottery

IF AN industrial counselor were appointed adviser to a large estate and were asked to help shape the policies of the manager, his first step could easily be predicted. He would find out all he could about the estate's resources. He would inquire about its properties and the personnel. He would study the men and women with whom he would be obliged to work.

That is the sort of thing the TVA is doing as it takes the position of adviser to the Tennessee Valley. It maintains a Division of Land Planning and Housing and another Division of Social and Economic Studies. The Land Planning Division is making an inventory of the natural resources. It is locating mineral deposits. It is classifying the soils of the different sections. It is studying transportation facilities.

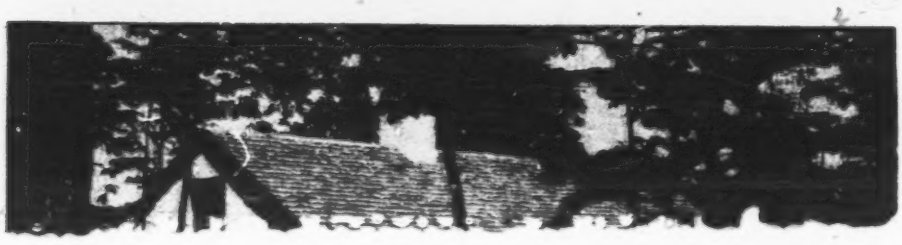
When the TVA learns about the minerals and soils and railroads and highways and waterways and water power sites, it will be in a better position to give industrial advice. It may discover, for example, that kaolin and feldspar are located in a certain district. It knows that these materials are used in the making of chinaware. It sees that a ceramic or chinaware industry can be developed in that locality. But the TVA is not passive. It does not stop when it discovers the possibility of the ceramic industry. It gives positive assistance. It may, for example, furnish low cost electric power so that the industry can get under way on advantageous terms. It finds out what industries can be operated profitably in the Valley and at what locations. In this way it gives direction to the course of industrial development.

THE three directors: Harcourt A. Morgan; Arthur E. Morgan, *chairman;* and David E. Lilienthal.

The Tennessee Valley Authority undertakes to assist industries which will contribute to the welfare of the people. It is not interested in developing industrial centers merely in order that profits may be made or in order that population in certain cities may increase. It wants the low cost electric power and fertilizer which it furnishes actually to help raise the standard of living. That is why it goes to such pains to study resources, human and material. It must know how to use all its powers effectively toward the betterment of human conditions.

The TVA does not think exclusively of the Tennessee Valley in its planning. It takes the rest of the nation into account. It is in a position to help business enterprises materially. It may, for example, furnish them with electric power at low cost. This may give a business a decided advantage. But the TVA does not want to develop industries which will compete ruinously with industries in other parts of the country. If it can avoid the danger of cut-throat competition between sections, which we spoke of a while ago, it will do so. Here is where the Division of Planning is influential. It finds opportunities for the development of industries in which the Valley may specialize. If, for example, it can point the way to the development of a chinaware industry in Tennessee, it will be helping the people of Tennessee without hurting other parts of the country, for there is no chinaware industry of importance in America. Our high grade china is imported.

The Division of Land Planning and General Engineering Division draw up plans for dams, reservoirs, and all sorts of public works. With all these plans at hand it advises with the highway commissions of all the states so that roads will be built where they will be perma-



factors. A great deal of the land slopes steeply; the soil is especially soft; and the rainfall is very heavy.

Naturally we find erosion at its worst on the steep mountain slopes. The wearing away of the land goes on very slowly and is not an alarming problem when the surface is covered with forests or a thick growth of grass. But hillside farmers have in many cases cut down the trees and have plowed the land where the slope is so steep that it should never have been cultivated. Land is cleared and planted to corn and potatoes, and within three or four years the soil from the fields is washed away, so that the yield falls to almost nothing. The farmers often abandon a field after a few years and clear other patches and put them out to crops, until the new fields, too, have washed away. On the gentler forests. Cattle raising should in many cases take the place of corn and potato cultivation. With the cheap fertilizers which the TVA hopes to develop, the growing of the sod crops should be easier.

Meanwhile, a positive work of erosion prevention is necessary. The gullies must be filled so as to check the wearing away of the soil. The problem is particularly acute in the territory which drains into the lake to be created thru the erection of Norris Dam. This lake lies in a hilly country where erosion is proceeding at a rapid rate.

The TVA is conducting an intensive campaign of erosion prevention in this territory. It is cooperating with the Civilian Conservation Corps. It is directing the efforts of twenty-one camps consisting of over 4000 CCC boys.

It is systematically filling the gullies caught by this mass of brush and is deposited. The grass grows and, after a while, the torrents of water are stopped and a beginning is made in the covering of the slope with grass. At the very outset the filling in of the gullies retards the swiftness of the streams and checks the cutting away of the soil. It is thought that if the TVA can keep the CCC boys at this task for two years, the worst of the soil erosion in the region about Norris Lake may be checked.

But in the long run effective erosion prevention thruout the Valley must be effected, not thru the positive acts of the TVA or any other central organization, but thru the enlightened efforts of the farmers themselves. Encouraging progress has been made in arousing a public sentiment which may lead to a general campaign for the preservation of the soil.

TVA photo

CCC boys starting to work on a badly eroded hillside

Preparing clay for pottery

step could easily be predicted. He would find out all he could about the estate's resources. He would inquire about its properties and the personnel. He would study the men and women with whom he would be obliged to work.

That is the sort of thing the TVA is doing as it takes the position of adviser to the Tennessee Valley. It maintains a Division of Land Planning and Housing and another Division of Social and Economic Studies. The Land Planning Division is making an inventory of the natural resources. It is locating mineral deposits. It is classifying the soils of the different sections. It is studying transportation facilities.

When the TVA learns about the minerals and soils and railroads and highways and waterways and water power sites, it will be in a better position to give industrial advice. Our high grade china is imported.

The Division of Land Planning and General Engineering Division draw up plans for dams, reservoirs, and all sorts of public works. With all these plans at hand it advises with the highway commissions of all the states so that roads will be built where they will be permanently most useful; so they will not be built, for example, thru territory that will be flooded when, in a few years, a dam is constructed. A little way east of Knoxville is a million dollar bridge, just opened for use, which stands on ground which soon would be flooded should the TVA build a contemplated dam. The million dollars would be wasted because the bridge was not built in accordance with a general plan. Such mistakes will be avoided in the future if state and federal agencies continue to make use of the Land Planning Division's blue prints.

Looks to the Future

Experiments in Planning

THIS DIVISION is also building a little town, Norris, named in honor of the Nebraska Senator who so long led the campaign for the operation of Muscle Shoals by the government. The town is near the dam of the same name—about twenty miles northwest of Knoxville, Tennessee. Nearly 2000 men are now working on the dam. A considerable number will remain in charge of the property when it is completed. Probably a few small industries will locate in Norris. Negotiations are now under way looking in that direction. It seems likely, therefore, that a permanent population of perhaps 2000 can be expected. Houses are being built to meet the demand, inexpensive houses of a beautiful design, built and equipped for comfort and convenience as well as beauty. The houses will remain in the possession of the TVA and will be rented to the occupants at a reasonable rental.

TVA photo

Looking down one of the streets of Norris, Tennessee, we see a few of the finished houses

The houses which were built first had to be rented at a price which fit the pocketbooks of executives, engineers, and the highly skilled rather than unskilled workers. Experiments were later made with cinder block houses which can be rented at from $14 to $20 a month; houses which may set a new standard for low-cost construction. With each house will go a four-acre tract of farming ground. The farming plots will not be adjacent to the houses but will be near enough for convenience. The residents of Norris will have a chance to practise subsistence farming.

The Division of Social and Economic Development has collected an imposing body of information about local conditions in the Valley. Every county has been examined. Studies have been made of schools, of tax collections, financial conditions of counties and cities, [illegible] and social material is also useful if a cooperative association is planned or if a new highway is projected. The TVA needs it whenever any of its community plans are being considered. The TVA is also obliged to meet many immediate problems as a result of its developments. In the area soon to be flooded by the waters of Norris Lake, for example, there are some 3000 families, 26 schools, dozens of churches, sixty cemeteries, most of them small.

The TVA employs a large body of workers in its various operations, principally in the building of Norris and Wheeler Dams. These workers are of many classifications, skilled and unskilled. They are taken from the Tennessee Valley area. Negroes are employed in the same proportion that the negro population of the locality bears to the total population. For example, 20 percent of the workers at Wheeler and 4 percent at Norris are [illegible] members of national organizations. Those in charge of the labor policy impress upon the foremen the desirability of establishing cordial and helpful relations with the men.

This enlightened labor policy is bearing fruit. The relationship with the workers is peculiarly constructive. Union committees confer with the management about efficiency measures, and union officials negotiate with the authorities about the possibility of bringing in new industries in order to furnish continuous employment.

At Norris the men work in four shifts, 5½ hours a day, six days a week. Provision is made for leisure time. A recreation hall is maintained; dances are given; speakers are brought in, sometimes by the unions. Vocational training is given to those who wish it. Instruction is given voluntarily by members of the TVA staff. There are courses in agriculture, motor [illegible] city.

on power development than on all the rest of its program. It is engaged in a great power project, harnessing the waters of the Tennessee and its tributaries for production on a great scale. It is utilizing these waters to develop an integrated system of power plants, which, when completed, will have capacity to generate more electricity than is now consumed in all the southeastern states.

This integrated system, all under the TVA unified control, consisting of a string of dams and generating plants, will place low-cost electricity at the service of the people. It will brighten millions of homes, on the farms as well as in the cities; it will lighten the burdens of domestic labor; it will stimulate industry. It may be a powerful tool in the hands of the industrial planners.

The first link in this chain of plants with which the Tennessee River system is to be harnessed has already been forged. The Wilson Dam and power [illegible] dam. On the crest of the dam is a 20-foot highway across the river. Running parallel with the dam is the power house, nearly a quarter of a mile long and 145 feet wide. In this power house nine great turbines are installed and there is room for as many more. When this plant is fully equipped it will be capable of meeting the power needs of literally hundreds of towns.

But the Wilson Dam and power plant, located at Muscle Shoals, Alabama, must not be thought of as an isolated unit. It is a link in a chain, the other links being either under construction or under consideration. Up the river fifteen miles from Muscle Shoals, the Wheeler Dam is being built. The power plant at this dam, when completed, will have a capacity about half that of the plant at Wilson Dam. The Wheeler Dam will serve another purpose. It will be an aid to navigation. It will create a lake which will extend up the river for eighty miles, rendering the river navigable for that distance. [illegible] age dam. It is being built chiefly for the purpose of holding back and storing the water of the river during the flood seasons—fall and spring—thus creating a lake. The lake will have an area of 83 square miles. During the dry season, when the river is ordinarily very low, the water will be released, generating power at Norris Dam and at every dam down the river. In addition, by regulating the river's flow, it will aid navigation.

The storing of the water during the rainy season will prevent floods down the river and will thus save lives and property. The operation of the Norris Dam will also increase the efficiency and productivity of the plant at Wilson Dam. During the rainy season the river is high and there is plenty of water. The power plant can run at capacity. But during the dry seasons the river is low and there is not enough water to keep the turbines going at capacity. Only about a fifth as much electricity can be produced during the dry season as can be generated when the river is high.

This is a serious matter, for a power plant cannot sell more electricity at any time than it can produce at *all* times. No city and no private firm will contract to buy power unless it can be assured that delivery will be made at all times.

The practical capacity of the Muscle Shoals plant is, therefore, only a fraction of the capacity which appears on paper. Norris Dam will regularize the flow of the river, so that there will never be a very low period. The building of Norris Dam will increase the practical capacity at Muscle Shoals severalfold. Norris Dam itself will produce some power. During the dry time when water is flowing thru the dam, electricity will be generated at the Norris plant.

Four other dams are planned. They, too, are parts of a unified system. Water stored at Norris Dam will help all the plants down the river because it will equalize the flow of water.

COMPLAINANTS' EXHIBIT No. 635 (Excluded)

Forests and Soil

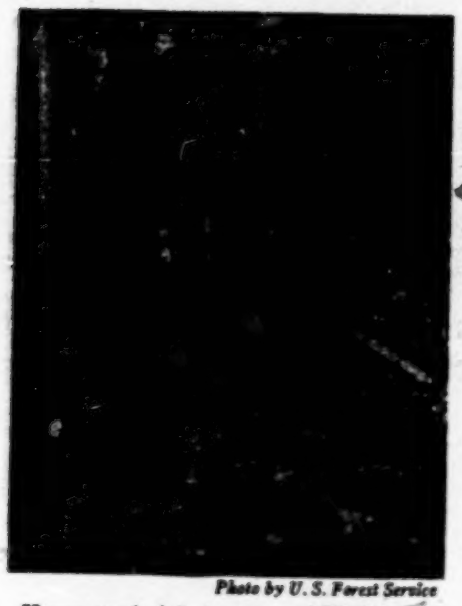

Photo by U. S. Forest Service

Heavy stand of timber, state of Washington

THE Tennessee Valley Authority is trying to save or restore the soil and the forests of the Valley. That is one of its first and most important jobs. The forests present a difficult problem. There are eighteen million acres of forest land in the Valley area, but only one-half million is virgin forest. The rest is second growth. Now forest land, if it is to be productive, must be cared for. The owner must cut only a certain proportion a year, cutting his forest slowly enough so that by the time he gets over the ground the plot first cut will be ready for cutting again. Only by such a method of cutting will the yield from the forest be regular and stable. Privately-owned forests are seldom cut in that way, because the owner cannot wait so long for his income—he cannot wait fifty years or so to cut his trees. Forests can be preserved satisfactorily only if they are public-owned. Public authorities alone can be depended upon to adopt

But twelve or thirteen million acres are in private hands and it will be very hard to do anything with the private woodlands. The TVA is making an inventory of the forests so that it will know the ownership of every tract. Then it will try to formulate and carry out a policy. Meanwhile, those in charge of the forestry work of the TVA are advising that industries calling for the use of wood be discouraged until the forests are ready.

Plans for the future prosperity of the Tennessee Valley must consider the restoration of the soil. Wasteful, careless, and unskillful methods of agriculture have caused an alarming loss of fertility. A great portion of the land is mountainous, hilly, or rolling in character, and much of the surface soil has been washed away from the slopes. Steep lands, which should never have been cultivated, have been plowed and put to crops, and this cultivated soil has washed away, leaving an unfertile subsoil on the surface. In the plateau region, which makes up from a tenth to a sixth of the Tennessee watershed, the soil has grown thin thru erosion. In the lower country there are large one-crop areas. The farms have been planted to corn or cotton or tobacco year after year, and these recurring crops have drawn so much of the substance from the soil that fertility can be maintained only thru the use of fertilizers.

Four fertilizer elements are needed for the support of vegetation. These plant foods are nitrogen, phosphorus, potash, and lime. There is no very serious problem in connection with lime for it is found in sufficient quantities and may be had at a low price. Nitrogen is greatly needed but, until lately, the price was high. Recently new methods of manufacturing nitrates, from the nitrogen which make up a large part of [illegible]

central Tennessee, but present methods of extraction and distribution are such as to render the finished product expensive. There is this further complication: Phosphates are needed especially in the growing of legumes, so its presence is necessary to create the conditions under which nitrogen may be developed. Potash is needed, not because it contributes to the growth of vegetation, such as cotton, but because it gives strength to the cotton plant and insures it against disease. It also lends quality and flavor to vegetables of nearly all kinds. Potash may be had commercially in large quantities in Germany and in considerable quantities in New Mexico. It is also present in manures and may be obtained in sufficient quantities in regions where stock is raised. Potash production, therefore, works well with the production of nitrogen, for stock may be pastured on the legumes which put nitrogen into the soil.

The most serious problem of fertilizer development is the production of phosphates, and on this problem the TVA is seriously at work. The great nitrate plants at Muscle Shoals are no longer needed for the production of nitrogen, but Nitrate Plant No. 2, a huge development, costing originally $75,000,000, covering 2300 acres and containing fourteen factory buildings, is being used as an experiment station for the production of cheap phosphates. Considerable progress has already been achieved thru the operations which are being performed on the phosphate rock brought in from central Tennessee.

In its effort to produce and distribute more and better fertilizers, the Tennessee Valley Authority is not working alone. It is cooperating with agricultural stations in each of the seven states within the Valley area. Representatives from

is more effective protection of the public interest, by the setting up of a measure of public operation of power as a 'yardstick.' The second objective of this new national policy is a greatly increased use of electricity in the homes, the farms, and the factories of the United States—*an electrified America.*"

A yardstick to determine the fairness of rates charged by private power companies has long been needed. It has been almost impossible to find what rates were reasonable. Customers complained when they thought their bills were too high. Sometimes they took their grievances to state utility boards. Arguments were presented before the boards. The companies pointed to their heavy investments, their interest charges, costs of operation, taxes. They held that their profits were small. Representatives of consumers declared the companies were over-capitalized, that the financial interests owning the companies were wasteful, inefficient; that exorbitant salaries were paid and bonuses given to insiders.

When arguments of this sort are going on it is natural that both sides, the utilities on the one hand and consumer interests on the other, should try to control the bodies which regulate rates. The utility companies say that they must protect themselves against unjust regulation; that is, against what they consider to be unjust regulation. So they take a hand in politics. They seek to influence public opinion insofar as it relates to the regulation of utility rates. They buy advertising in newspapers. They seek to influence editorial policy. They carry their influence to the schools and secure the adoption of textbooks which are favorable to utility companies and the elimination from other textbooks of statements they consider harmful. They bring about the rejection of texts which are too critical. Sometimes they induce boards of education to dismiss teachers who criticize the policies of the great power companies. Arguments carried on in such

Here is where the government steps in. When Congress created the TVA and defined its powers it said in effect: "We will settle this question of rates by a trial comparison; we will have the government generate, transmit, and sell electricity in a given region.

TVA photo

GENERATORS in the great hall of Wilson Dam power house. This hall is 1197 feet long and 145 feet wide. Many feet below the generators are the giant rotors thru which the waters of the Tennessee are passed to manufacture cheap power for people in the region.

Acting thru the TVA, the government will manufacture the power as private companies do. It will charge against itself all the expense which it incurs, including taxes. It will sell the power to the same sort of customers to whom they sell. It will keep a careful record of its costs. It will find out how much it costs to produce and sell electric power. This action of the government will serve as a 'yardstick' by which to determine what the costs of production are and what prices are fair."

The TVA is authorized to use as much electricity as it needs in the development of its own projects. The surplus power will be sold. It will undertake to provide electricity to states, cities, and cooperative associations. These cooperatives may distribute electricity to towns or to farmers. The usual procedure is for the TVA to generate the electricity and send it over its own transmission lines to a town which is to use it. The town or city usually owns its own distribution system. It buys the electricity at wholesale rates from the TVA and sells it to its own citizens. The TVA has a fixed price at which electricity is delivered to municipalities. It also prescribes the retail rates which the municipalities shall make to private users. In this way it is assured that the benefit of cheap electric power furnished by the TVA shall be passed on to consumers. If there is a surplus of electricity after states, towns, and cooperative associations are served, the TVA may sell it to private companies for manufacturing purposes, or it may sell its surplus to private power companies.

When the TVA makes a contract to sell electricity to a municipality which has been getting its power from a private company, the TVA offers to buy the company's equipment. It does not want to go into the community and build its own transmission lines, duplicating the equipment which the private company already has. Arrangements have already been made whereby the TVA has taken over the transmission lines previously owned by private companies in a number of counties of northern Alabama, northern Mississippi, and Tennessee. It is prepared, therefore, to furnish power to the communities of these areas. It is already serving several small cities and it has formed an agreement whereby it is to serve the larger city of Knoxville, Tennessee. It has purchased the equipment of the private power company with which Knoxville has been dealing. In order that the costs of producing and selling electricity may be fairly measured, the TVA feels that it must have a reasonably good territory to serve. It must sell to a number of small towns. It must have lines going to farmers. It must have a few larger cities and must serve industrial plants of considerable size. If it is selling electricity to a varied field of this kind, it can determine the cost of electric power under conditions similar to those under which the large private companies operate.

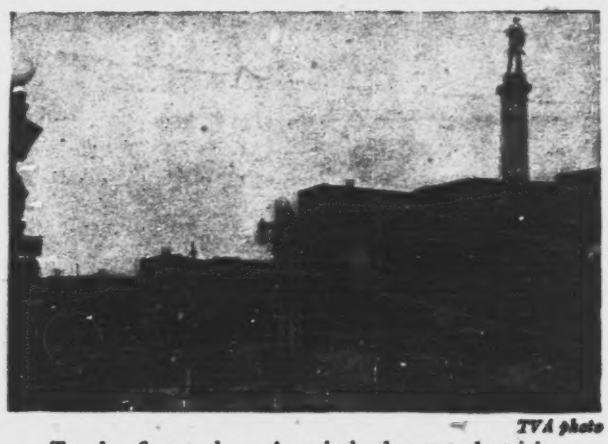
The Tennessee Valley

Encouraging Electrification

THE FIRST CITY to begin the use of TVA power was Tupelo, Mississippi, a town of about 6000. Tupelo already owned its own distribution system, buying its power from a private company. It now buys power from the TVA. It operates this system as a strictly business enterprise. The books are kept separately from other city accounts and are carefully audited. Taxes, interest, and depreciation are counted as part of the costs. Consumers are charged enough to meet all these expenses of distribution and to pay off the indebtedness. After meeting all these charges, however, just as a private company would, Tupelo is able to sell electricity to its inhabitants at a price about 40 percent lower than that which had been paid to the private company. The TVA sells electricity cheaply enough to make this saving possible.

The lower price of electricity has resulted in increased use. During the first six months that Tupelo was getting its power from the TVA, there was an increase of 83 percent in the amount of electricity used in the homes of the city. In part this came thru the securing of new customers. Families which had not been able to afford electricity before were electrifying their houses. In part it came from increased use by families which had been customers all the time. During the first two months that Tupelo was using TVA electricity, $6000 worth of electrical equipment was sold in the city. This means one dollar's worth of equipment per person, or about five dollars' worth per family. The cheap electricity obtained by Tupelo is thus having the effect



TVA photo

Tupelo—first to have America's cheapest electricity

thusiastically to the time when a considerable number of the farmers may have electricity in their homes.

Electricity can be sold more cheaply if it is sold in great quantities. If the power plants can run at capacity, and if all the product can be disposed of, the cost of production per kilowatt hour will be very much less than it would if a large part of the equipment were lying idle. Prices have been high because so little electricity was consumed, and consumption has been low because prices have been high. The TVA now comes in producing electricity in quantities and planning to produce it in vastly greater quantities. It is planning to produce more than the region it intends to serve is now consuming. It is acting on the theory that use depends largely upon prices and that if prices go down use will increase.

Consumption of electricity has been held down not only by high rates but by the price of electrical appliances. Electric refrigerators, electric stoves, and electric water heaters have been so costly that many consumers have hesitated [illegible] and it gives it on favorable terms. It secures the cooperation of the manufacturers of electrical equipment. The manufacturers of electric refrigerators, for example, put on the market a specially made ice box. It is simple in design and less costly than the standard refrigerators. It is a serviceable product, however, and it bears the stamp of TVA approval. These refrigerators sell for as little as $75 each. They are sold by the manufacturing companies to private dealers, just as other refrigerators are. They are purchased by individual customers. The customer pays perhaps 10 percent in cash and agrees to pay the rest in monthly installments over a period of three years. These monthly payments are added to his electric bill.

The EHFA thus encourages the more widespread use of electricity by furnishing credit to purchasers of equipment on easy terms and by inducing manufacturers of equipment to put out low-cost, high-grade products. But it does not stop there. It cooperates with manufacturers and dealers in setting up displays, in providing cooking schools, which emphasize the use of electrical equipment, and, in every possible way, it works with manufacturers, dealers, and private power companies in popularizing the use of electricity. It is the hope of those in charge of the TVA and EHFA that, by furnishing cheap power and cheap electrical equipment and by bringing the advantages of the use of electricity to the attention of the people, great strides may be made toward the electrification of America.

[illegible] steps and it was very difficult for them even to obtain a living from the soil. Acting individually they seemed condemned to the same meagre existence which characterizes the lives of most mountaineers thruout this region. A really effective leader, however, appeared among them, S. T. Henry—like Johnson of Kingsport, an unusual man. Henry is a graduate of Illinois University. He has had Wall Street experience. He has engaged in the publishing business. But years ago he went to Spruce Pine, built a little home on a mountain top, and identified himself with the community.

Under the leadership of Mr. Henry and with the help of the Tennessee Valley Authority, a cooperative association was formed. This association could not possibly have gained support had it not had the endorsement of the TVA, and it could not have carried on its work without loans and expert counsel from that quarter. This cooperative has developed a seed potato industry. It has put up canneries so that now the farmers have a market for their tomatoes and beans at the local canneries. The cooperative secures a market for these products. It turns out, however, that the canned goods which are manufactured in the locality are not all thrown upon the markets of the nation to add to the surplus of agricultural products. Much of the canned vegetables are consumed by the people of Spruce Pine, people who before had been eating vegetables only during the vegetable season. A new market has thus been created in the community, the result being a higher standard of living.

But the cooperative association of Spruce Pine has further ideas as to the development of the locality. The raw materials needed in making dishes are all present in the soil of that district. It is planned, therefore, to engage in the manufacture of pottery. Arrangements are being considered whereby TVA electric power may be made available, and thru use of the electric process it is thought that a cheap and fine grade of pottery may be produced. Nor is that all. It is hoped that herds of cattle may be kept during the winter down in the valleys where corn and other concentrated forms of feed may be had, and driven to the mountain sides in the summer.

In the little town of Banner Elk, also in the North Carolina mountains, is Lees-[illegible] [illegible] by the TVA. Half a dozen cooperatives, assisted by the TVA are in operation, and several more are being formed. They have thousands of members. In these little communities, as in the others we have spoken of, one feels that a new and better and more secure way of life is being discovered.

Looks to the Future

Checking Soil Erosion

LITTLE can be done, however, to maintain the fertility of soil which is constantly wearing away under pressure of heavy rains. Erosion is, of course, going on at all times in all parts of the country. Every creek or river valley is the result of the carrying away of soil thru the ages. Soil is washing away and blowing away. But the problem is especially serious in the Tennessee Valley because of a combination of three factors. A great deal of the land slopes steeply; the soil is especially soft; and the rainfall is very heavy.

Naturally we find erosion at its worst on the steep mountain slopes. The wearing away of the land goes on very slowly and is not an alarming problem when the surface is covered with forests or a thick growth of grass. But hillside farmers have in many cases cut down the trees and have plowed the land where the slope is so steep that it should never have been cultivated. Land is cleared and planted to corn and potatoes, and within three or four years the soil from the fields is washed away, so that the yield falls to almost nothing. The farmers often abandon a field after a few years and clear other patches and put them out to crops, until the new fields, too, have washed away. On the gentler slopes, erosion is not so bad, but it goes on just the same, as occasional great gullies with a thin and barren soil between abundantly show.

The TVA is at work on this problem. It is cooperating with farm bureaus and other organizations to teach people how to use their sloping lands. These slopes should not be plowed, but should be given over to sod crops, to grass or clover, or should be turned back into forests. Cattle raising should in many cases take the place of corn and potato cultivation. With the cheap fertilizers which the TVA hopes to develop, the growing of the sod crops should be easier.

Meanwhile, a positive work of erosion prevention is necessary. The gullies must be filled so as to check the wearing away of the soil. The problem is particularly acute in the territory which drains into the lake to be created thru the erection of Norris Dam. This lake lies in a hilly country where erosion is proceeding at a rapid rate.

The TVA is conducting an intensive campaign of erosion prevention in this territory. It is cooperating with the Civilian Conservation Corps. It is directing the efforts of twenty-one camps consisting of over 4000 CCC boys.

It is systematically filling the gullies and ditches thru which the water pours in torrents, carrying tons of soil with it. In some cases stone dams are built across the gullies to check the flow of water. This is an expensive process, however, so a more economical method has been developed. Brush and branches of cedar trees are thrown into the gullies, staked down, and fastened with a tangle of wire. Grass seeds are thrown among the branches. As the soil washes down it is caught by this mass of brush and is deposited. The grass grows and, after a while, the torrents of water are stopped and a beginning is made in the covering of the slope with grass. At the very outset the filling in of the gullies retards the swiftness of the streams and checks the cutting away of the soil. It is thought that if the TVA can keep the CCC boys at this task for two years, the worst of the soil erosion in the region about Norris Lake may be checked.

But in the long run effective erosion prevention thruout the Valley must be effected, not thru the positive acts of the TVA or any other central organization, but thru the enlightened efforts of the farmers themselves. Encouraging progress has been made in arousing a public sentiment which may lead to a general campaign for the preservation of the soil.

are carefully audited. Taxes, interest, and depreciation are counted as part of the costs. Consumers are charged enough to meet all these expenses of distribution and to pay off the indebtedness. After meeting all these charges, however, just as a private company would, Tupelo is able to sell electricity to its inhabitants at a price about 40 percent lower than that which had been paid to the private company. The TVA sells electricity cheaply enough to make this saving possible.

The lower price of electricity has resulted in increased use. During the first six months that Tupelo was getting its power from the TVA, there was an increase of 83 percent in the amount of electricity used in the homes of the city. In part this came thru the securing of new customers. Families which had not been able to afford electricity before were electrifying their houses. In part it came from increased use by families which had been customers all the time. During the first two months that Tupelo was using TVA electricity, $6000 worth of electrical equipment was sold in the city. This means one dollar's worth of equipment per person, or about five dollars' worth per family. The cheap electricity obtained by Tupelo is thus having the effect which was anticipated. Individual consumers and industries are using more electricity. Four lines are soon to be built out into the country, so that electricity may be made available to farmers.

In Corinth, Mississippi, a town about the size of Tupelo, the local distribution system is owned not by the municipality but by a county cooperative association. Electricity is being obtained from the TVA on the same terms as it is obtained in Tupelo, and with about the same reduction in cost to consumers. The people of Alcorn County, of which Corinth is the county seat, are looking forward en-

be very much less than it would if a large part of the equipment were lying idle. Prices have been high because so little electricity was consumed, and consumption has been low because prices have been high. The TVA now comes in producing electricity in quantities and planning to produce it in vastly greater quantities. It is planning to produce more than the region it intends to serve is now consuming. It is acting on the theory that use depends largely upon prices and that if prices go down use will increase.

TVA photo

Tupelo—first to have America's cheapest electricity

Consumption of electricity has been held down not only by high rates but by the price of electrical appliances. Electric refrigerators, electric stoves, and electric water heaters have been so costly that many consumers have hesitated to buy them. They must be in the homes, however, if electricity in considerable amounts is to be consumed. A way has been devised by which this electrical equipment is made available at a cheaper price than it formerly was and on easier terms of payment.

This cheapening of electrical equipment has been made possible thru the efforts of the Electric Home and Farm Authority, which is an agency of the TVA and controled by the same board of directors. The EHFA does not manufacture or sell equipment. It furnishes credit to persons who buy the equipment and it bears the stamp of TVA approval. These refrigerators sell for as little as $75 each. They are sold by the manufacturing companies to private dealers, just as other refrigerators are. They are purchased by individual customers. The customer pays perhaps 10 percent in cash and agrees to pay the rest in monthly installments over a period of three years. These monthly payments are added to his electric bill.

The EHFA thus encourages the more widespread use of electricity by furnishing credit to purchasers of equipment on easy terms and by inducing manufacturers of equipment to put out low-cost, high-grade products. But it does not stop there. It cooperates with manufacturers and dealers in setting up displays, in providing cooking schools, which emphasize the use of electrical equipment, and, in every possible way, it works with manufacturers, dealers, and private power companies in popularizing the use of electricity. It is the hope of those in charge of the TVA and EHFA that, by furnishing cheap power and cheap electrical equipment and by bringing the advantages of the use of electricity to the attention of the people, great strides may be made toward the electrification of America.

At the present time the average consumption of electricity in the average American home is 50 kilowatt hours a month. In Ontario, where cheap power has long been distributed, the average use is 150 kilowatt hours. If American standards of electricity consumption can be brought to those of Canada, it will mean a tremendous stimulation of the electrical industry and a transformation of our ways of living. It will also mean the need for additional sources of electricity. The increased sales of electricity, in turn, will cheapen the cost of production, resulting in lower prices, and still more extensive electrification.

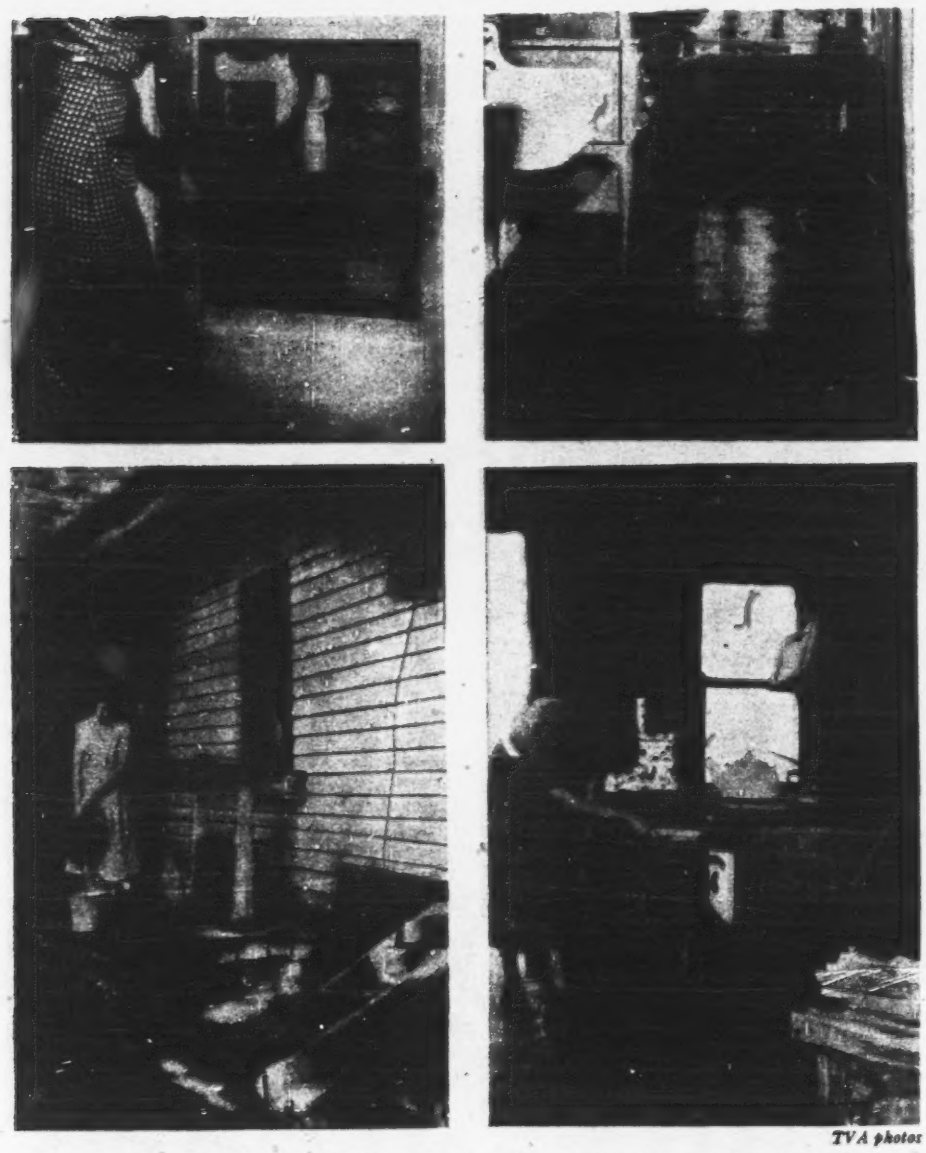
Looks to the Future

Government and Industry

An air view of the Nitrate Plant at Muscle Shoals, Alabama, with Wilson Dam in background

TVA photo

WHAT will the entry of the government into the field of electricity mean to the private power companies and to those whose funds are invested in public utility stocks and bonds? The answer frequently given is that nothing which the government might do is likely to cause investors in private utility companies greater loss than these investors have already suffered as a result of financial manipulations of such power- that direction. The private power companies may be forced, by government competition, to lower their rates also. Some of them have already cut their charges. These companies, like the TVA, may have greatly increased business and may make satisfactory profits thru mass production, even tho prices are cut. Perhaps the electrical industry may undergo a change similar to that which occurred in the [illegible] to operate on a similarly large scale. Private companies would have to obtain their own great river systems. Perhaps public opinion, however, would not permit such monopolistic use of river systems. It seems not improbable that, if the development of a chain of unified government-owned plants along the Tennessee River insures cheaper production of electric power, the people of the nation



TVA photos

THIS comparison of the old with the new shows how the standard of living is raised, ideas of beauty and utility cultivated, and the work lightened—think of the implications here for leisure-time activities!

THIS IS the sort of thing the TVA is hoping to encourage thruout the Tennessee Valley region. In certain instances the result may be gained, as it has been at Spruce Pine, by working with cooperative associations. There is a fertile field for such efforts, especially in North Carolina. The Extension Division of North Carolina University has been active for a long time in promoting cooperative associations among the farmers, and the people of that state appear ready to turn to such a form of organization. In other states the cooperative idea is less advanced and it will not be so easy to make headway along that road. expert guidance and counsel.

In carrying out industrial plans for the Valley, the TVA will not rely by any means, however, upon cooperative associations. It is working also with private industry. The Division of Land Planning is determining the best uses of land in various sections. Plans are being made for the betterment of the transportation systems. The TVA is finding out what new industries might be developed and where they might profitably be located. Its chemists, for example, are studying processes for the use of coal not as a fuel but as a raw material. It is gaining a mass of information which will be useful in mapping out future industrial possibilities.

Manufacturers, large and small, will make use of this information. They will come to the TVA for advice about the locating of factories in the district. Already a considerable number of manufacturers are calling upon the Authority for counsel. The TVA thru its negotiations with these industrialists, will be able to exert a considerable influence in shaping the industrial life of the communities in this region. It may be able to do for the Valley what J. Fred Johnson did for Kingsport. It may be able to bring in industries which will conform to the principles of industrial development the TVA lays down. And the TVA will have in mind the development of industries which will furnish employment to the local inhabitants. The officials know that in each of the counties of rural Tennessee there are from 500 to 3000 persons who are not needed either by agriculture or by industry. The effort will be made to find employment for such persons and to keep a considerable number of them on the farms even after they are employed in the factories. Such local employment will bring with it, it is hoped, progress for the whole region rather than decadence in the rural sections, with alternating periods of prosperity and starvation in the cities.

3157

3506

The Production of Power

SOIL, mineral resources, forests—all these are needed for the development of stable and prosperous conditions, and all of them are receiving the attention of the TVA. They are figuring in its plans. But something else is needed—electric power—and it, too, is figuring largely in plans for the Valley. As a matter of fact, the TVA today is spending more money and more energy on power development than on all the rest of its program. It is engaged in a great power project, harnessing the waters of the Tennessee and its tributaries for production on a great scale. It is utilizing these waters to develop an integrated system of power plants, which, when completed, will have capacity to generate more electricity than is now consumed in all the southeastern states.

This integrated system, all under the TVA unified control, consisting of a string of dams and generating plants, will place low-cost electricity at the service of the people. It will brighten millions of homes, on the farms as well as in the cities; it will lighten the burdens of domestic labor; it will stimulate industry. It may be a powerful tool in the hands of the industrial planners.

The first link in this chain of plants with which the Tennessee River system is to be harnessed has already been forged. The Wilson Dam and power plant were built during the War. The TVA took them over in the summer of 1933. The dam is one of the largest in the world. It is nine-tenths of a mile long, 101 feet wide at the base, and it rises 107 feet above the base to the level of the lake which the dam creates. There are 58 spillways, each 38 feet wide. Any or all of these spillways may be opened, permitting the flow of water thru the dam. On the crest of the dam is a 20-foot highway across the river. Running parallel with the dam is the power house, nearly a quarter of a mile long and 145 feet wide. In this power house nine great turbines are installed and there is room for as many more. When this plant is fully equipped it will be capable of meeting the power needs of literally hundreds of towns.

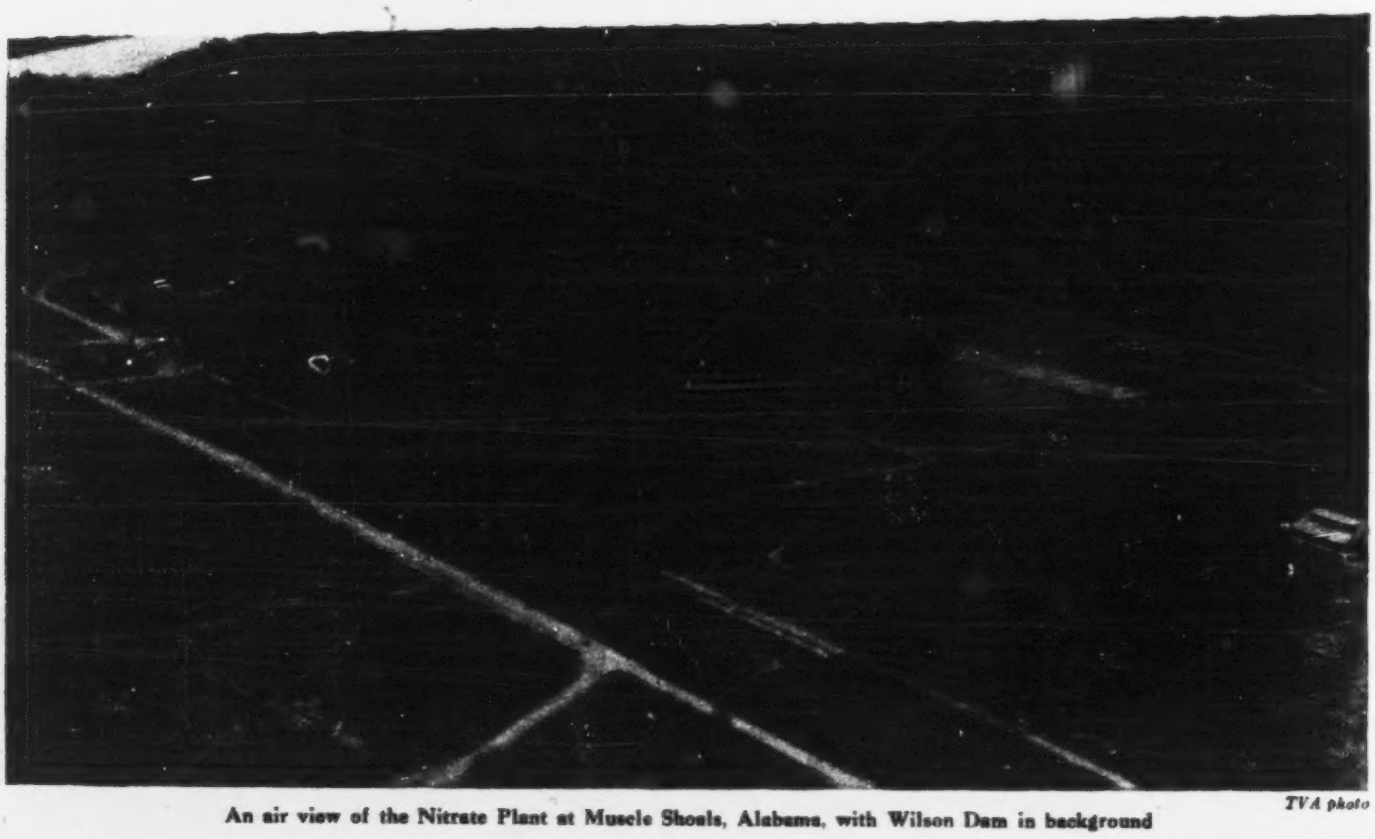
But the Wilson Dam and power plant, located at Muscle Shoals, Alabama, must not be thought of as an isolated unit. It is a link in a chain, the other links being either under construction or under consideration. Up the river fifteen miles from Muscle Shoals, the Wheeler Dam is being built. The power plant at this dam, when completed, will have a capacity about half that of the plant at Wilson Dam. The Wheeler Dam will serve another purpose. It will be an aid to navigation. It will create a lake which will extend up the river for eighty miles, rendering the river navigable for that distance. Locks are being built at the dam to allow boats to pass up and down the river.

A third link in the chain of dams is being built on the Clinch River, a tributary of the Tennessee, about 400 miles from Muscle Shoals. This is the Norris Dam, to which we referred a while ago. It is not so long as the one at Muscle Shoals but is much higher. It is a storage dam. It is being built chiefly for the purpose of holding back and storing the water of the river during the flood seasons—fall and spring—thus creating a lake. The lake will have an area of 83 square miles. During the dry season, when the river is ordinarily very low, the water will be released, generating power at Norris Dam and at every dam down the river. In addition, by regulating the river's flow, it will aid navigation.

The storing of the water during the rainy season will prevent floods down the river and will thus save lives and property. The operation of the Norris Dam will also increase the efficiency and productivity of the plant at Wilson Dam. During the rainy season the river is high and there is plenty of water. The power plant can run at capacity. But during the dry seasons the river is low and there is not enough water to keep the turbines going at capacity. Only about a fifth as much electricity can be produced during the dry season as can be generated when the river is high.

This is a serious matter, for a power plant cannot sell more electricity at any time than it can produce at *all* times. No city and no private firm will contract to buy power unless it can be assured that delivery will be made at all times.

The practical capacity of the Muscle Shoals plant is, therefore, only a fraction of the capacity which appears on paper. Norris Dam will regularize the flow of



TVA photo

WHAT will the entry of the government into the field of electricity mean to the private power companies and to those whose funds are invested in public utility stocks and bonds? The answer frequently given is that nothing which the government might do is likely to cause investors in private utility companies greater loss than these investors have already suffered as a result of financial manipulations of such power magnates as Samuel Insull. This answer is probably true so far as it goes, but it does not cover the entire problem. Will the development of the TVA program, if successful, drive the private companies out of business? Can these companies stand competition from the government?

It is not easy to answer that question. The lower rates charged by the TVA may lead to a vast increase in power business. The indications, as we have seen, look in that direction. The private power companies may be forced, by government competition, to lower their rates also. Some of them have already cut their charges. These companies, like the TVA, may have greatly increased business and may make satisfactory profits thru mass production, even tho prices are cut. Perhaps the electrical industry may undergo a change similar to that which occurred in the automobile industry when Henry Ford produced a cheap car and took automobiles out of the luxury class, into the class of large-scale production and use.

It is a fact, however, that the TVA is operating not a single power plant but a whole river system. The costs of generating water power may be lowered almost a half thru such large-scale operation. If that is true, it would seem that a private company, in order to compete with the government's rate, would be obliged to operate on a similarly large scale. Private companies would have to obtain their own great river systems. Perhaps public opinion, however, would not permit such monopolistic use of river systems. It seems not improbable that, if the development of a chain of unified government-owned plants along the Tennessee River insures cheaper production of electric power, the people of the nation may insist that the government develop other chains of plants on other rivers.

Those who feel, therefore, that the TVA experiment looks toward the probable substitution of public for private production and sale of power have some grounds upon which to base their predictions. The directors of the TVA have said frankly that, while private business interests are given serious consideration, the TVA is chiefly concerned with the interests of the public.

COMPLAINANTS' EXHIBIT No. 635 (Excluded)

The Future of Farms and Industry

TVA photo

SKILLED workmen at Kingsport Press—one of the largest printing establishments in the world.

IT SHOULD BE kept in mind that the TVA is trying to make life and happiness in the Tennessee Valley more secure. That is why it is surveying the region's resources and trying to save the forests and the soil; that is why it is developing a great power system. But in order to bring about economic security, the TVA planners must change the industrial set-up, or so they believe.

No one has known in the past what proportion of the Valley's workers should operate farms and what proportion should work in the factories. Neither the agricultural nor the manufacturing industry was organized according to plan. As a matter of fact, many farmers did not have a ready market for their products, partly because factories were not located near at hand. There were no local city workers to feed. The farmers had to sell their produce to distant markets and these markets were glutted. Conditions were equally unsatisfactory in the industrial centers. Employment was not stable and when workers lost their jobs they had no means of support.

The TVA is seeking a remedy for this situation. Those who are making the plans think the answer is decentralized industry. If factories were scattered among the small rural communities, they require the continued efforts of a generation. Forests cannot be restored in a day; soil cannot be refertilized; people cannot be brought suddenly into cooperative enterprises; nor can industrial habits be hurriedly changed.

No one can tell as yet to what extent the TVA vision will be realized. Much will depend upon the continued interest and support of the Valley people. At present the majority of them appear friendly, disposed to cooperate. The test will come when the novelty of the idea wears off, and when the absence of quick and tangible results of TVA efforts may try the popular patience. It is not enough that the people tolerate the Authority. They must follow its guidance actively if its purposes are to be achieved.

The TVA must expect active hostility at times from business groups who feel themselves adversely affected by its operations. If, as is clearly possible, the factory. They are not obliged to depend wholly upon commercial agriculture—upon selling their products to distant and undependable markets. Neither are the factory workers wholly dependent upon steady work in the factories. If the shops close down people living in the country have at least food and shelter, and they need not ask for help.

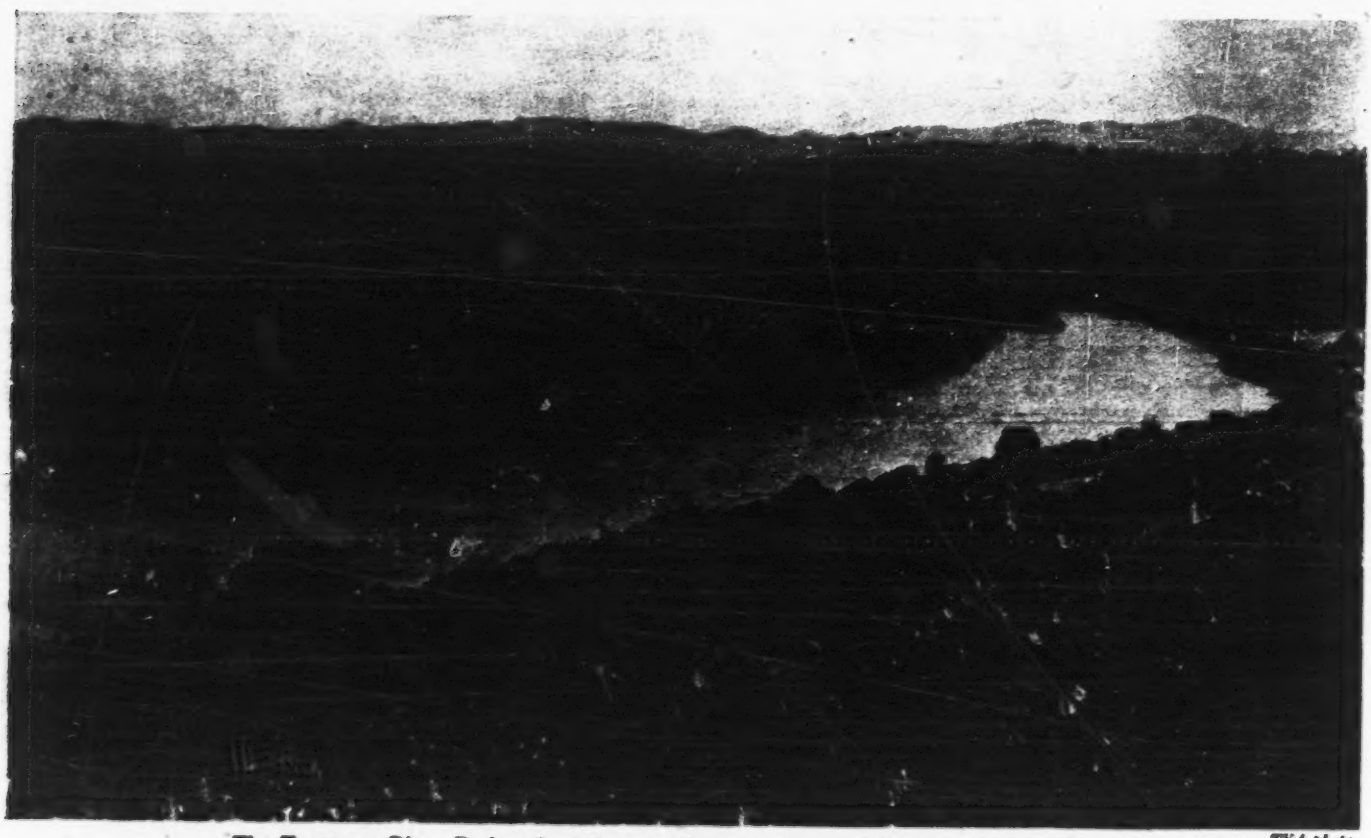
In seeking to promote the decentralization of industry, with a better balance between industry and agriculture, the TVA is not breaking new ground. It is not advocating a novel idea. It is merely throwing its influence behind a movement which has been under way in this section of the country for a quarter of a century. The coming of the automobile, making quick travel possible, and the building of good roads, helping the movement of workers and materials, have led factories to break away from crowded regions to go to small towns or villages. The use of electricity leads to the same result, for power can be carried long distances. Electricity plays such a large part in the decentralization of industry that the Tennessee Valley Authority may push that movement along at rapid rate once its plans for the cheap electrification of the Tennessee Valley area are realized. The planning for the future of industry which the Authority is doing is seen, therefore, to dovetail nicely into its power program.

We may be able to see more clearly the picture of future industrial development which the leaders of the TVA have in mind by examining certain communities which are already practising the decentralization idea. Let us take the cases, for example, of Tupelo and Corinth, Mississippi, two towns which are now buying their electricity from the TVA. In each of these towns there are small factories or his father or brother.

These farmers do not use their farms just for money crops. They do not raise cotton or anything else exclusively as many other southern farmers do. They look upon their farms largely as a place to raise food for themselves. Their money income is largely from the factory. Since they live on the farm they are not obliged to spend the greater part of their wages for rent and food so they can spend their money for other things and can have a higher standard of living. The houses and farms are wellkept and there are signs of comfort and progress. These small communities seem to have taken long steps toward the solving of their economic problems. They seem to have gone far toward the attainment of a way of life far more secure than that in most of the communities of the nation.

A different kind of situation is to be found in the industrial city of Kingsport, Tennessee. Where this remarkable town now stands, there were only bare hills and impoverished hillsmen twenty years ago. Then a railroad came thru the country and the company bought up a large tract of land on the present site of Kingsport and decided to develop an industrial center. The work of development was placed in the hands of a most unusual man, J. Fred Johnson. He conceived the idea of building a community which maintained truly humane and enlightened standards, a town where a high level of living might be insured. He went to experts for counsel. He called upon land planning authorities, among them Earle S. Draper, the present director of land planning and housing of the Tennessee Valley Authority, to lay out plans for the town. For a model municipal charter he went to the Rockefeller Institute of Municipal Research. For a school system he went to Columbia University for counsel. He brought in factories whose owners wanted to maintain high standards for workers. He brought in a rayon mill and a large branch of the Eastman Camera plant. One of the largest printing establishments in the world came to Kingsport. Careful attention was given

[illegible] equivalent of war. These engineers, land planners, agriculturists, social scientists, industrial technicians, are bending their energies, not, as in the case of war, toward the destruction of life, but toward the devising of means whereby thousands of families may live in greater comfort and security. About the offices of the TVA one senses an atmosphere of enthusiasm consistent with the size of the experiment in human welfare which is being made. Even the workmen engaged in the building of the great dams give evidence of a zeal such as one might expect of soldiers in a popular war. They appear to feel a sense of the dignity of the undertaking of which they are a part. Rarely has a constructive effort of peace time fired the imaginations and stirred the hopes of participants and spectators as has this experiment in economic and social planning which is under way in the Valley of the Tennessee.



The Tennessee River Basin, where "an experiment in human welfare" is being made

Looks to the Future

Power Policy

BUT WHAT IS the purpose of the TVA in going so heavily into the power business? David E. Lilienthal, one of the directors, answers that question. "The Tennessee Valley Authority Act," he says, "marks the beginning of a new national power policy and national power program. This new national policy has two major objectives. The first objective is more effective protection of the public interest, by the setting up of a measure of public operation of power as a 'yardstick.' The second objective of this new national policy is a greatly increased use of electricity in the homes, the farms, and the factories of the United States—*an electrified America.*"

A yardstick to determine the fairness of rates charged by private power companies has long been needed. It has been almost impossible to find what rates were reasonable. Customers complained when they thought their bills were too high. Sometimes they took their grievances to state utility boards. Arguments were presented before the boards. The companies pointed to their heavy investments, their interest charges, costs of operation, taxes. They held that their profits were small. Representatives of consumers declared the companies were over-capitalized, that the financial interests owning the companies were wasteful, inefficient; that exorbitant salaries were paid and bonuses given to insiders.

When arguments of this sort are going on it is natural that both sides, the utilities on the one hand and consumer interests on the other, should try to control the bodies which regulate rates. The utility companies say that they must protect themselves against unjust regulation; that is, against what they consider to be unjust regulation. So they take a hand in politics. They seek to influence public opinion insofar as it relates to the an atmosphere of confusion and propaganda cannot easily come to definite and generally accepted conclusions. The question as to what rates are fair remains undetermined.

Here is where the government steps in. When Congress created the TVA and defined its powers it said in effect: "We will settle this question of rates by a trial comparison; we will have the government generate, transmit, and sell electricity in a given region. Acting thru the TVA, the government will manufacture the power as private companies do. It will charge against itself all the expense which it incurs, including taxes. It will sell the power to the same sort of customers to whom they sell. It will keep a careful record of its costs. It will find out how much it costs to produce and sell electric power. This action of the government will serve as a 'yardstick' by which to determine what the costs of production are and what prices are fair."

The TVA is authorized to use as much electricity as it needs in the development of its own projects. The surplus power will be sold. It will undertake to provide electricity to states, cities, and cooperative associations. These cooperatives may distribute electricity to towns or to farmers. The usual procedure is for the TVA to generate the electricity and send it over its own transmission lines to a town which is to use it. The town or city purposes, or it may sell its surplus to private power companies.

When the TVA makes a contract to sell electricity to a municipality which has been getting its power from a private company, the TVA offers to buy the company's equipment. It does not want to go into the community and build its own transmission lines, duplicating the equipment which the private company already has. Arrangements have already been made whereby the TVA has taken over the transmission lines previously owned by private companies in a number of counties of northern Alabama, northern Mississippi, and Tennessee. It is prepared, therefore, to furnish power to the communities of these areas. It is already serving several small cities and it has formed an agreement whereby it is to serve the larger city of Knoxville, Tennessee. It has purchased the equipment of the private power company with which

TVA photo

GENERATORS in the great hall of Wilson Dam power house. This hall is 1197 feet long and 145 feet wide. Many feet below the generators are the giant rotors thru which the waters of the Tennessee are passed to manufacture cheap power for people in the region.

TVA photo

IT SHOULD BE kept in mind that the TVA is trying to make life and happiness in the Tennessee Valley more secure. That is why it is surveying the region's resources and trying to save the forests and the soil; that is why it is developing a great power system. But in order to bring about economic security, the TVA planners must change the industrial set-up, or so they believe.

No one has known in the past what proportion of the Valley's workers should operate farms and what proportion should work in the factories. Neither the agricultural nor the manufacturing industry was organized according to plan. As a matter of fact, many farmers did not have a ready market for their products, partly because factories were not located near at hand. There were no local city workers to feed. The farmers had to sell their produce to distant markets and these markets were glutted. Conditions were equally unsatisfactory in the industrial centers. Employment was not stable and when workers lost their jobs they had no means of support.

The TVA is seeking a remedy for this situation. Those who are making the plans think the answer is decentralized industry. If factories were scattered among the small rural communities, they say, there would be a better balance between industry and agriculture. Farmers would have a local market for their food supplies. Not only would this give them better prices but it would encourage them to diversify their crops, raising more food products instead of relying wholly on one money crop such as cotton, corn, or tobacco.

These small factories might employ many members of farm families. These employees would live on the farms. Under such a system of industry and agriculture farmers have a living from their land and a money income from the

In seeking to promote the decentralization of industry, with a better balance between industry and agriculture, the TVA is not breaking new ground. It is not advocating a novel idea. It is merely throwing its influence behind a movement which has been under way in this section of the country for a quarter of a century. The coming of the automobile, making quick travel possible, and the building of good roads, helping the movement of workers and materials, have led factories to break away from crowded regions to go to small towns or villages. The use of electricity leads to the same result, for power can be carried long distances. Electricity plays such a large part in the decentralization of industry that the Tennessee Valley Authority may push that movement along at rapid rate once its plans for the cheap electrification of the Tennessee Valley area are realized. The planning for the future of industry which the Authority is doing is seen, therefore, to dovetail nicely into its power program.

We may be able to see more clearly the picture of future industrial development which the leaders of the TVA have in mind by examining certain communities which are already practising the decentralization idea. Let us take the cases, for example, of Tupelo and Corinth, Mississippi, two towns which are now buying their electricity from the TVA. In each of these towns there are small factories. There are textile mills in Tupelo, and at Corinth there is a textile mill employing 200 workers and a pants factory employing 700 workers. Forty percent of all persons employed live on farms. This is true in both towns. In the textile mills, most of the workers are women. The farm women go back and forth to the factory in school buses. When the men work in the factory it does not mean that they also work on the farms and thus have excessive hours of labor. One member of the family may work in the factory. The farm is cared for by other members, by the farmer's son, perhaps, to spend the greater part of their wages for rent and food so they can spend their money for other things and can have a higher standard of living. The houses and farms are wellkept and there are signs of comfort and progress. These small communities seem to have taken long steps toward the solving of their economic problems. They seem to have gone far toward the attainment of a way of life far more secure than that in most of the communities of the nation.

A different kind of situation is to be found in the industrial city of Kingsport, Tennessee. Where this remarkable town now stands, there were only bare hills and impoverished hillsmen twenty years ago. Then a railroad came thru the country and the company bought up a large tract of land on the present site of Kingsport and decided to develop an industrial center. The work of development was placed in the hands of a most unusual man, J. Fred Johnson. He conceived the idea of building a community which maintained truly humane and enlightened standards, a town where a high level of living might be insured. He went to experts for counsel. He called upon land planning authorities, among them Earle S. Draper, the present director of land planning and housing of the Tennessee Valley Authority, to lay out plans for the town. For a model municipal charter he went to the Rockefeller Institute of Municipal Research. For a school system he went to Columbia University for counsel. He brought in factories whose owners wanted to maintain high standards for workers. He brought in a rayon mill and a large branch of the Eastman Camera plant. One of the largest printing establishments in the world came to Kingsport. Careful attention was given to housing. The rule was made that no residence should be constructed without a bathroom. The public buildings were designed with an eye to beauty as well as to use. The streets were laid out with the same thought in mind. The factories took at least two-fifths of their employees from the farms so that here, as in Tupelo and Corinth, there is a union of agriculture and industry. Now, after seventeen years, Kingsport, with adjoining villages, has a population of about 15,000, and is perhaps as free from poverty as any similar population center in the country. People are well housed and they are relatively secure. The factories in Kingsport would come under the classification of large industry. So here we have a demonstration of a possible linking of large industry with a genuine community development.

Looks to the Future

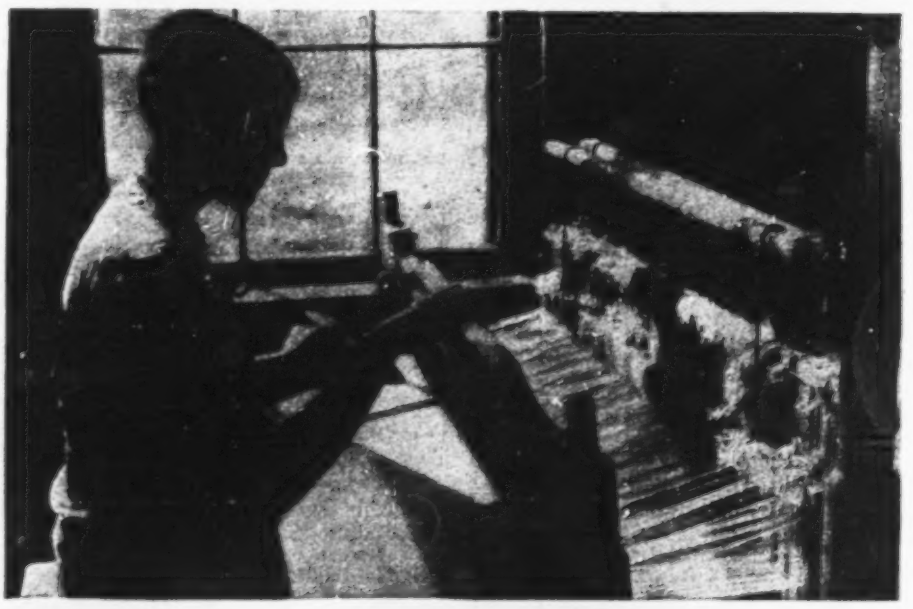
Working with the Cooperatives

UP in the mountains of North Carolina there is another variety of development. Another community is being made over here, this time with the active support of the TVA. Spruce Pine is, or was, a typical mountain village. The people were very poor, for on the steep slopes they could raise no money crops and it was very difficult for them even to obtain a living from the soil. Acting individually they seemed condemned to the same meagre existence which characterizes the lives of most mountaineers thruout this region. A really effective leader, however, appeared among them, S. T. Henry—like Johnson of Kingsport, an unusual man. Henry is a graduate of Illinois University. He has had Wall Street experience. He has engaged in the publishing business. But years ago he went to Spruce Pine, built a little home on a mountain top, and identified himself with the community.

Under the leadership of Mr. Henry and with the help of the Tennessee Valley Authority, a cooperative association was formed. This association could not possibly have gained support had it not had the endorsement of the TVA, and it could not have carried on its work without loans and expert counsel from that quarter. This cooperative has developed a seed potato industry. It has put up canneries so that now the farmers have a market for their tomatoes and beans at the local canneries. The cooperative secures a market for these products. It turns out, however, that the canned goods which are manufactured in the locality are not all thrown upon the markets of the nation to add to the surplus of agricultural products. Much of the canned vegetables are consumed b[y] th[e]

Mr. Henry, knowing that the steep mountain slopes should be used as grass lands and should not be cultivated, is planning that the cooperative shall secure cheap fertilizers from the TVA and shall grow good grass on the hillsides. Then this land shall be taken out of cultivation and used as pasture land. Eventually, it is hoped that herds of cattle may be kept during the winter down in the valleys where corn and other concentrated forms of feed may be had, and driven to the mountain sides in the summer.

In the little town of Banner Elk, also in the North Carolina mountains, is Lees-MacRae College. Here also a cannery cooperative and the seed potato cooperatives are at work. Further south, also in the North Carolina mountains, is the Campbell Folk School, similar to folk schools in Denmark. Here a dairy cooperative is at work, with a canning cooperative close by, both helped by the TVA. Half a dozen cooperatives, assisted by the TVA are in operation, and several more are being formed. They have thousands of members. In these little communities, as in the others we have spoken of, one feels that a new and better and more secure way of life is being discovered.



shows such foresight, such intelligence, such concern for the welfare of its citizens? Why should they not come to realize that no great and worthwhile thing is done without careful planning, and that the Tennessee Valley project is a gigantic demonstration of planning, a demonstration which is peculiarly needed at this juncture in the national life? Why should not the curriculum of the school reach out constantly for new materials that would help young people to understand and take part in matters of national policy which concern them vitally? Would not the school make a stronger appeal to youth and to the citizens who support it, if it contained at least 10 percent of new, more vital, experimental material, properly integrated with the best elements of the older curriculum? Cannot the curriculum be so arranged that every student will be studying some current activity, so that his powers of observance and analysis will be trained to look upon the passing scene?

Such questions as these were in the editor's mind, when the plan was made to work out in cooperation with the Tennessee Valley Authority, the story of what is being done in that great watershed. By a piece of good fortune, arrangement was made for Walter E. Myer, editor of the *American Observer*, and a gifted writer and student, to prepare the story. Try it in your classes. Perhaps it will help young people to realize that America has a great future, if it wills to have such a future.

This special feature in the fifteen pages preceding provides specific and abundant teaching material for a study unit based on one of the most significant developments now taking place in the United States. It can be used to vitalize the teaching of many school subjects. It will turn teachers' attention to a study of their own communities—their resources and needs. Perhaps most important, is the emphasis this special feature makes on the idea of planning and that a new and better civilization can and is being created in the Tennessee Valley, which classroom teachers are farreaching.

School subjects with which this feature can be used—Geography, history, civics, current events, economics, sociology, geology, agriculture, forestry, general science, town and regional planning.

How this feature can be used in rural schools—The older children could use this feature in connection with geography, current events, and agriculture. An outline map of the United States might be used, locating on it important geographic names in this feature; the states, rivers, dams, towns. An imaginary trip by boat up the Tennessee River or by automobile thru this region is an opportunity for an interesting project. The children might contrast the effect of a few "money crops," as cotton, with the addition of new industries, as ceramics, which the TVA is seeking to develop. Also, in a region where pioneers like Daniel Boone once lived, pupils will see that the TVA is doing a truly heroic piece of pioneering in the interest of the public good. Lead the children to recall that this area has witnessed such battles as Shiloh and Lookout Mountain; but now the TVA is battling against desperate poverty, against further destruction of soil, forests, and watersheds to save a virile people and to lay the cornerstone for similar development elsewhere in the nation. Pupils in the Middlewest, where soil erosion because of winds during the 1934 drought has been heavy, might contrast the work being done in the Tennessee Valley with erosion measures in their own section. The use of electric power on farms and better housing for rural people are questions of intense interest to children, when applied to their own homes and lives. Children will enjoy making scrapbooks of pictures and newspaper clippings about the TVA.

GENERAL outline of the Tennessee River Basin. The shaded area indicates the sphere of development by the Tennessee Valley Authority.

[3] Special TVA assembly program in which the topics of this JOURNAL feature could be used for the subjects of talks by students. TVA activities could be dramatized: George W. Norris and the Senate debates on Muscle Shoals, President Roosevelt signing the TVA Act, etc.

[3] A program for a parent-teacher meeting given by students on the educational phases of the TVA: the modern school at Norris, the training of TVA personnel thru leisure-time opportunities, diversity of jobs, health examinations; the education of adults in home planning, use of modern conveniences, hygiene and sanitation, modern methods of agriculture. Include in such a program, Arthur E. Morgan's Antioch College work-study plan; also the educational aspects of the CCC.

[4] A TVA commencement program. The Knoxville, Tennessee, high school has already used the TVA as a theme for commencement. Students impersonated the three directors and other TVA workers; maps, a model of a mountain cabin, and a home in Norris were shown.

[5] Debate by students, the public invited, on the *laissez faire* policy vs. government planning, as shown in the TVA.

[6] Exhibits, for the entire school and the public, of maps, pictures, models of the town of Norris, mountain cabin, modern houses in Norris, "Then and Now" exhibits.

Additional references—See references above; also consult *Reader's Guide to Periodical Literature* [H. W. Wilson Co. N. Y.] in your library for titles of many magazine articles on the TVA.

Suggestions for colleges, including those for the education of teachers—This JOURNAL feature on the TVA may suggest several questions to which college students may wish to give intensive study. One of these may be city and regional planning. See *The New Exploration: A Philosophy of Regional Planning* by Benton Mackaye. [Harcourt, Brace & Co. N. Y. 1928. $3.]; also *The Awakening Community* by Mary Mims. [Macmillan Co. N. Y. 1932. $2.] Other questions students may well ask are: What are the rates for electric service in my community? How do these compare with charges in other communities of similar size? Under public ownership? Private ownership? Write to the Federal Power Commission, Washington, D. C., for information about rates for electric power thruout the country; also to the Dominion Waterpower and Hydro-Electric Bureau, Ottawa, for rates in Canada. Among the many books on electric power, are: *The Power Age* by Walter N. Polakov [Covici, Friede] 1933, $2. *What Electricity Costs* by Morris L. Cooke. 1933. New Republic. 421 W. 21st, New York. $1.

[2] Summer camping trips to the Tennessee Valley for classes in regional planning, rural economics, geology, sociology, forestry, will be profitable and enjoyable in preparation and in actuality.—Joy Elmer Morgan.

The Tennessee Valley

Planning the Industrial Future

Everywhere, however, cooperation for the purpose of developing a planned community life will be encouraged. A special organization, the Tennessee Valley Associated Cooperatives, Inc., an agency of the TVA, is working to that end. It is making loans to cooperative associations when necessary and it is offering expert guidance and counsel.

In carrying out industrial plans for the Valley, the TVA will not rely by any means, however, upon cooperative associations. It is working also with private industry. The Division of Land Planning is determining the best uses of land in various sections. Plans are being made for the betterment of the transportation systems. The TVA is finding out what new industries might be developed and where they might profitably be located. Its chemists, for example, are studying processes for the use of coal not as a fuel but as a raw material. It is gaining a mass of information which will be useful in mapping out future industrial possibilities.

Manufacturers, large and small, will make use of this information. They will come to the TVA for advice about the locating of factories in the district. Already a considerable number of manufacturers are calling upon the Authority for counsel. The TVA thru its negotiations with these industrialists, will be able to exert a considerable influence in shaping the industrial life of the communities in this region. It may be able to do for the Valley what J. Fred Johnson did for Kingsport. It may be able to bring in industries which will conform to the principles of industrial development the TVA lays down. And the TVA will have in mind the development of indus-

Looks to the Future

What to Expect

WE HAVE spoken now of the plans and the achievements of the Tennessee Valley Authority. The plans naturally bulk larger than the achievements. The TVA, after all, is but a little more than a year old, and much of the work it has laid out for itself will require the continued efforts of a generation. Forests cannot be restored in a day; soil cannot be refertilized; people cannot be brought suddenly into cooperative enterprises; nor can industrial habits be hurriedly changed.

No one can tell as yet to what extent the TVA vision will be realized. Much will depend upon the continued interest and support of the Valley people. At present the majority of them appear friendly, disposed to cooperate. The test will come when the novelty of the idea wears off, and when the absence of quick and tangible results of TVA efforts may try the popular patience. It is not enough that the people tolerate the Authority. They must follow its guidance actively if its purposes are to be achieved.

The TVA must expect active hostility at times from business groups who feel themselves adversely affected by its operations. If, as is clearly possible, the dominance of the private power companies in the utility field is seriously challenged by the TVA, the companies may throw their great influence into the scales against the practise of governmental competition. Other industrial interests will have their grievances. If the TVA maintains its purpose to encourage industries which contribute to the public good and to discourage those which do not, it would be fatuous to suppose that it will not step on the toes of a good many very powerful business men. It would be equally fatuous to suppose that they will not strike back. But perhaps the TVA's most serious problems may come, not from outside opposition, but from the difficulty of the planning job itself. It is easy to plan on paper, but if plans for an extensive region are put into practise, it must be expected that unexpected obstacles will arise and that certain disharmonies may result. All of which is not to say that the TVA task is impossible, but merely that it is infinitely complicated and difficult.

No one expects, of course, that it will be an easy thing to help in the development of a new industrial society, to assist in the discovery of new ways of life, to participate in the reshaping of a civilization. But this much can be said:

The job is being undertaken with a calm determination, with an efficiency of organization, with a spirited enthusiasm, which reminds one of William James' vision of "a moral equivalent of war." These engineers, land planners, agriculturists, social scientists, industrial technicians, are bending their energies, not, as in the case of war, toward the destruction of life, but toward the devising of means whereby thousands of families may live in greater comfort and security. About the offices of the TVA one senses an atmosphere of enthusiasm consistent with the size of the experiment in human welfare which is being made. Even the workmen engaged in the building of the great dams give evidence of a zeal such as one might expect of soldiers in a popular war. They appear to feel a sense of the dignity of the undertaking of which they are a part. Rarely has a constructive effort of peace time fired the imaginations and stirred the hopes of participants and spectators as has this experiment in economic and social planning which is under way in the Valley of the Tennessee.

COMPLAINANTS' EXHIBIT No. 641 (Excluded)

lieve it is for the municipal applicant to determine whether or not it desires to compete with privately owned utilities. It is our policy to consider such applications particularly where franchises are soon to expire, provided the project is self-liquidating at rates lower than those which the existing utility is willing to put into effect."

Federal Emergency Administration of Public Works

PWA Press Section, Release Sunday, December 30, 1934

Release No. 1165

The President has written letters to Governors or Governors-elect in the forty-eight States offering the assistance of the Public Works Administration in the preparation of legislation which would enable municipalities and other public bodies to obtain fuller benefits of whatever additional public works program is authorized at the coming session of Congress.

The President submitted to the States for their consideration general suggestions covering the simplification of procedure for bond issues, the delegation of greater powers to municipalities to issue bonds, slum-clearance and low-cost housing, rural electrification, and creation of municipal improvement authorities.

The Legal Division of PWA, which already has assisted a number of States at their request in the preparation of legislation designed to facilitate and expedite the public works program, was designated by the President as the Federal agency which upon invitation will assist the States in the [fol. 3173] formulation of their legislative programs.

The following letter is typical of those sent out by the White House:

The White House, Washington

MY DEAR GOVERNOR:

In the event that an additional public-works program is authorized at the coming session of the Congress, I should

like to see the municipalities of your State legally able to take full advantage of such a program. With this in mind, I have instructed Administrator Ickes to place at your disposal the Legal Division of the Public Works Administration for the purpose of suggesting bills which if enacted into law would enable municipalities of your State to secure the benefits of this phase of the recovery program.

Our experience in the past eighteen months has brought to light the difficulty of gearing the legal machinery which has served municipalities of your State adequately for decades to the speed with which the Federal Government must extend credit to achieve desired results. It has been found that revision of the procedure relative to municipal financing is essential, at least for the duration of the exist- [fol. 3174] ing emergency. I wish to submit for your consideration in formulating your legislative program, the following general suggestions:

(1) Simplification of the procedure for the authorization and financing by municipalities of public-works projects, for example, by eliminating the requirement for an election and in lieu thereof substituting a permissive referendum on bond issues, by shortening the periods of notices before such referendum elections, and by permitting the sale of bonds privately to the Federal Government.

(2) Conferring of additional powers upon municipalities to undertake public-works projects and issue bonds to finance the same, including the relaxing of statutory limitations upon taxing power to pay debts, and the delegation of a broader authority to municipal officials to make such contracts with the Federal Government as are deemed in the best interests of the municipality.

(3) Creation of municipal improvement authorities without power to tax, but with power to issue bonds payable solely from the income of revenue-producing improvements, such as water, sewer, and electric light and power systems.

(4) Authorizing municipalities to engage in slum clearance, including condemnation of necessary lands, and the construction, operation and maintenance of low-cost housing, to make contributions therefor, and to enter into con-

COMPLAINANTS' EXHIBIT No. 642 (Excluded)

tracts with the Federal Government in connection therewith.

(5) Providing for the creation of non-profit public benefit [fol. 3175] corporations or agencies to provide for the electrification of rural communities with the assistance of the Federal Government.

(6) Validation of bonds and other obligations heretofore issued by municipalities for public-works projects and sold to the Federal Government.

If you will write me how you feel about these suggestions, I will request Administrator Ickes to have prepared such bills as may be deemed advisable.

Quite apart from the above suggestions, I think it would be helpful if arrangements could be made whereby the Public Works Administration is furnished with copies of all laws enacted at the forthcoming legislative session. This will materially aid the Administration in advancing funds on approved projects.

Very sincerely, Franklin D. Roosevelt.

Federal Emergency Administration of Public Works

PWA Press Section, Immediate Release

Release No. 1396

An allotment of $125,000 to the Federal Power Commission to continue the electric rate survey and the national power survey was announced today by Public Works Administrator Harold L. Ickes.

Of the amount, $25,000 will be used for a tabulation and analysis of an investigation of rates paid for electric light and power by Federal agencies and institutions; $25,000 for a special field investigation of the power requirements and power resources in the area that may be served by the Tennessee Valley Authority, and $75,000 for the completion and publication of studies, maps and charts now in the course of preparation by the Federal Power Commission.

The Tennessee Valley Looks to the Future

A Study Unit: Suggestions About Its Use

SOMEDAY students of American history will read about the development of the Tennessee Valley as one of the great events in the life of the Republic. Why should not today's students study this great development while the building is actually going on? Why should they not learn to be proud of the nation that shows such foresight, such intelligence, such concern for the welfare of its citizens? Why should they not come to realize that no great and worthwhile thing is done without careful planning, and that the Tennessee Valley project is a gigantic demonstration of planning, a demonstration which is peculiarly needed at this juncture in the national life? Why should not the curriculum of the school reach out constantly for new materials that would help young people to understand and take part in matters of national policy which concern them vitally? Would not the school make a stronger appeal to youth and to the citizens who support it, if it contained at least 10 percent of new, more vital, experimental material, properly integrated with the best elements of the older curriculum? Cannot the curriculum be so arranged that every student will be studying some current activity, so that his powers of observance and analysis will be trained to look upon the passing scene?

Such questions as these were in the editor's mind, when the plan was made to work out in cooperation with the Tennessee Valley Authority, the story of what is being done in that great watershed. By a piece of good fortune, arrangement was made for Walter E. Myer, editor of the *American Observer*, and a gifted writer and student, to prepare the story. Try it in your classes. Perhaps it will help young people to realize that America has a great future, [illegible]

is possible in other sections of our country. The potential public usefulness of the entire Tennessee Valley "enters the wide fields of flood control, soil erosion, afforestation, elimination from agricultural use of marginal lands, and distribution and diversification of industry." The implications of all this for education and classroom teachers are farreaching.

School subjects with which this feature can be used—Geography, history, civics, current events, economics, sociology, geology, agriculture, forestry, general science, town and regional planning.

How this feature can be used in rural schools—The older children could use this feature in connection with geography, current events, and agriculture. An outline map of the United States might be used, locating on it important geographic names in this feature; the states, rivers, dams, towns. An imaginary trip by boat up the Tennessee River or by automobile thru this region is an opportunity for an interesting project. The children might contrast the effect of a few "money crops," as cotton, with the addition of new industries, as ceramics, which the TVA is seeking to develop. Also, in a region where pioneers like Daniel Boone once lived, pupils will see that the TVA is doing a truly heroic piece of pioneering in the interest of the public good. Lead the children to recall that this area has witnessed such battles as Shiloh and Lookout Mountain; but now the TVA is battling against desperate poverty, against further destruction of soil, forests, and watersheds to save a virile people and to lay the cornerstone for similar development elsewhere in the nation. Pupils in the Middlewest, where soil erosion because of winds during the 1934 drought has been heavy, might contrast the work being done in the Tennessee Valley with erosion measures in their own section. The use of electric power on farms and better housing for rural people are questions of intense interest to children, when applied to their own homes and lives. Children will enjoy making scrapbooks of pictures and newspaper clippings about the TVA.

These studies include rural electrification, the cost of the distribution of electricity and economics of interconnection and coordination. They are of great practical value.
[fol. 3177] The tabulation and analysis of rates was requested by the Procurement Division, of the Treasury Department, to be used in connection with negotiations for light and power contracts for the next fiscal year. The field investigation in the TVA area will be of use to TVA.

The original investigations by the Federal Power Commission, financed by a PWA allotment, were authorized by the Senate and by executive order.

[fol. 3178] COMPLAINANTS' EXHIBIT No. 644 (Excluded)

Federal Emergency Administration of Public Works

November 8, 1933.

To State Engineers:

A number of inquiries have come in to me regarding our attitude and procedure in regard to applications for loans for municipal light plants. I have prepared the present letter to set forth my views.

It seems to me that we should do all in our power to prevent becoming embroiled in local political disputes. I think it is going a bit too far and creates an unnecessary amount of work to notify all the utility companies when a municipal utility application comes in. Isn't it a fact that when you hear one argument you hear all of them? In principal they are the same. After all, the question for you to decide is one of whether or not it is engineeringly, economically and socially sound.

The entire procedure of the utility company is one of delay. You find this everywhere. We are most anxious to set up around the country sound publicly owned utilities as yard-sticks to determine the principle of whether or not communities can satisfy themselves and give lowered rates [fol. 3179] for electricity.

Where you do find it necessary to have a hearing, both sides, of course, should be present. I cannot see why it is necessary for the utilities to get into the whole file. If you

COMPLAINANTS' EXHIBIT No. 644 (Excluded)

do this you immediately get into a three-cornered engineering discussion, the utilities, the applicant and ourselves. As far as the engineering is concerned I don't think it is any of the utilities business. Your engineering force, together with the engineering which has been done by the applicant and which will be checked here, is sufficient.

If the utility desires to file a brief or be heard, and you decide it is necessary and advisable to do so, you can give them enough of the facts on which they can prepare their brief.

H. M. Waite, Deputy Administrator.

P. W. 1073.

President's Letter Creating the National Power Policy Committee

Establishment by the President in the Public Works Administration of a Committee called the "National Power Policy Committee" was announced today at the White House. (July 16, 1934.)

Secretary Ickes will be Chairman of this Committee, the membership of which will be composed of:

Dr. Elwood Mead, of the Bureau of Reclamation,

Honorable Frank R. McNinch, of the Federal Power Commission,

Honorable Morris L. Cooke, of the Mississippi Valley Committee, PWA,

Major General Edward M. Markham, Chief of Engineers, War Department,

Honorable Robert E. Healy, of the Federal Stock Exchange Commission,

Honorable David E. Lilienthal, of the Tennessee Valley Authority,

Honorable T. W. Norcross, Assistant Forrester of the Forest Service.

In the following letter from the President to Secretary Ickes under date of July ninth the purpose and duties of this Committee are outlined:

"I wish to establish in the Public Works Administration a Committee to be called the "National Power Policy Com-

[fol. 3181] mittee." Its duty will be to develop a plan for the closer cooperation of the several factors in our electrical power supply—both public and private—whereby national policy in power matters may be unified and electricity be made more broadly available at cheaper rates to industry, to domestic and, particularly, to agricultural consumers.

"Several agencies of the government, such as the Federal Power and Trade Commissions, have in process surveys and reports useful in this connection. The Mississippi Valley Committee of Public Works is making studies of the feasibility of power in connection with water storage, flood control and navigation projects. The War Department and Bureau of Reclamation have under construction great hydro-electric plants. Representatives of these agencies have been asked to serve on the Committee. It is not to be merely a fact-finding body, but rather one for the development and unification of national power policy.

"As time goes on there undoubtedly will be legislation on the subject of holding companies and for the regulation of electric current in interstate commerce. This committee should consider what lines should be followed in shaping up this legislation. Since a number of the States have commissions having jurisdiction over intrastate power matters, it is necessary that whatever plan is developed should have regard to the powers of these various State commissions as well as of the States in general.

[fols. 3182-3208] "It is not thought that it will be necessary to have frequent meetings of the full Committee. An adequate administrative staff will be provided, and personal expenses of the members of the Committee in connection with its meetings will be met.

"The Committee is to be advisory to the President. I hope that you will accept membership on this Committee and act as its Chairman."

[fol. 3160] COMPLAINANTS' EXHIBIT No. 636

[fol. 3161] COMPLAINANTS' EXHIBIT No. 637 (Excluded)

Federal Emergency Administration of Public Works

Release No. 44

Room 6013—Interior Department

Release August 8

An allotment of $400,000 from public works funds to the Federal Power Commission was announced today by Public Works Administrator Harold L. Ickes.

The Power Commission, under the direction of President Roosevelt, will prepare a comprehensive national plan for the development of water power and the transmission of electricity, examine public works power projects referred to it by the Public Works Administration and make a study into the costs of the transmission of electricity from generating stations to consumers.

The allotment will enable the Commission to begin its investigations and studies at once.

The determination of facts with regard to the cost of transmitting and distributing electricity to consumers under varying conditions is of great importance not only in ascertaining the economic feasibility of power projects but also the distribution cost element properly to be included in rates to consumers of electricity.

Such an investigation was ordered by the Senate at the last session through a resolution introduced by Senator [fol. 3162] Costigan, of Colorado.

National planning of water power development, the Federal Power Commission advises the Public Works Administration, will effectuate the purposes of Congress, which in the Federal Water Power Act of 1920, authorized the commission to investigate "the water power industry and its relation to other industries and to interstate or foreign commerce, and concerning the location, capacity, development costs, and relation to markets of power sites, and whether the power from Government dams can be advan-

tageously used by the United States for its public purposes, and what is fair value of such power, to the extent the Commission may deem necessary or useful for the purpose of this act."

The Federal Power Commission points out that up to the present time the development of the water power resources of the United States, both public and private, has been carried on without reference to any comprehensive or integrated national plan. As a result, there have been many instances in which the full economic and social value of the Nation's resources has not been secured. In other cases there has been a lack of proper coordination between projects developed in the same region. Power projects have also sometimes been developed without proper regard for the available market to consume the electricity generated. The failure to develop a national power program has therefore resulted in great economic loss.

It is planned to organize the work on a regional basis so that local projects under the Public Works Administra-
[fol. 3163] tion may receive prompt consideration. Making use of the trained personnel and facilities of the Power Commission will obviate the necessity of setting up a new organization for this purpose within the Public Works Administration.

In the preparation of the national plan the Federal Power Commission will cooperate with the Public Service Commissions of the several States, as well as with the Public Works Administration, the Tennessee Valley Authority and leading authorities of the electrical industry throughout the United States.

The Federal Power Commission is composed of Frank R. McNinch, of North Carolina, Chairman; Basil Manley, of the District of Columbia, Vice Chairman; Herbert J. Drane, of Florida; Claude J. Draper, of Wyoming, and George Otis Smith, of Maine.

Federal Emergency Administration of Public Works

PWA Press Section, Immediate Release

Release No. 709

A Public Works Administration Electric Power Board of Review has been established Public Works Administrator Harold L. Ickes today announced.

This board will be comprised of Henry T. Hunt, General Counsel of PWA, Morris L. Cooke, Chairman of the Mississippi Valley Committee, and Otto M. Rau, Counselor for the Administrator. Mr. Cooke is a Pennsylvania authority on power development and Mr. Rau is a qualified expert on utilities costs and operations.

It will be the duty of this board to review disapprovals and special conditions imposed by any division of PWA and to make recommendations to the Deputy Administrator with regard to applications of public bodies to finance the construction, repair, improvement or extension of electrical power plant facilities.

Because of the wide variety of conditions under which such applications are made the controversial nature of cer-
[fol. 3166] tain of the projects and the important economic factors involved in the general questions of power development, Administrator Ickes has decided such projects should receive the attention of the new review board comprised of men who have made detailed studies of the issues involved and who are fully informed on various developments in this field.

The Administrator ordered the Technical Board of Review and the Projects Division of PWA to refer such applications to the Electric Power Board of Review.

The Administrator directed the power board to formulate and submit instructions for the guidance of various PWA divisions with regard to controversial questions affecting this class of projects so that uniform policies and handling of these questions might be evolved.

Federal Emergency Administration of Public Works

PWA Press Section, Immediate Release

Release No. 989

Achievement in certain instances of the administration purpose of making electric energy more widely available at cheaper rates today lead to a clarification of the policy on power by the Public Works Administration.

Municipal or local publically owned power projects will be aided by PWA only when, in addition to meeting those qualifications necessary for public works projects, they assure electricity to communities at rates subtantially lower than otherwise obtainable under the unchanged basic policy enunciated by Public Works Administrator Ickes.

The statement of Administrator Ickes followed action by some privately owned utilities, which, on reexamination of their condition, found it possible to reduce rates to a point below those proposed by municipal project plants.

In all allotments made for municipal power plants by the [fol. 3169] Public Works Administration proposed rates have been well below existing private company rates. Consequently, the fact that the companies in some instances have met these proposed municipal rates has been deemed as showing progress toward one of the aims of this phase of the public works program.

In the cases affected Public Works Administration policy will be so administered that municipal plant construction will not be deprived of the possibility of public works support until such time as the local Government feels assured the proposed rate reduction by the existing utility will be in effect on a reasonably permanent basis.

Since the public works program began financing electric plants, where they are socially desirable and where they will be self-liquidating, there have been reductions of rates

by private utilities in different localities. The private utilities are becoming increasingly cognizant of the greater use of power resulting from lower rates.

Administrator Ickes said:

"PWA has endeavored to make electric energy more broadly available at cheaper rates by acting on applications of municipalities for loans and grants to finance municipal systems where reasonable security is offered and the project is socially desirable. They are deemed desirable where the loan can be amortized in a reasonable period while charg-
[fol. 3170] ing rates substantially lower than those of the existing utility.

"However, we make it a practice before approving the loan to give the company an opportunity to put in effect rates at least as low as those at which the municipal system will be self-liquidating. Several utility companies have accepted this opportunity. It is obvious that in such cases it is advantageous to the city and to PWA that the offer be accepted and the applications withdrawn. To make loans and grants to finance projects where the competitor offers rates which are lower than those possible by the city plant, would duplicate facilities without any social betterment and impose on the city a burden which it probably could not meet without resort to taxation.

"Furthermore, in the described situation Public Works will be free to use its funds to better advantage elsewhere. The action of the utility companies referred to supports the belief that domestic rates, in certain instances at least, are so high as to be disadvantageous to the company as well as unjust to the consumers. Experience shows that lower rates may produce larger profits particularly (p-2) where promotional campaigns are conducted and the cost of electrical appliances is made reasonable.

"PWA will cooperate with cit-es to prevent rates rising on an indication municipal plants may not be built. PWA will not rescind allotments or suggest the withdrawal of applications until the lowered rates are legally in effect.
[fol. 3171] "State laws authorize municipal competition, hence it is PWA's position that the State has determined that such competition may be socially desirable. We be-

COMPLAINANTS' EXHIBIT No. 647 (Excluded)

gives to the government, viz., the people, that same very essential "birch rod" in the cupboard.

• • • The water power of the State should belong to all the people. The title to this power must rest forever in the people. No commission—not the Legislature itself—has any right to give, for any consideration whatever, a single potential kilowatt in vital perpetuity to any person or corporation whatever. It is the duty of our representative bodies to see that this power is transferred into useable electrical energy and distributed at the lowest possible cost. It is our power, and no inordinate profits must be allowed to those who act as the people's agent in bringing this power to their homes and workshops.

• • • Here you have the clear picture of four great government power developments in the United States, the St. Lawrence River in the Northeast, Muscle Shoals in the Southeast, the Boulder Dam project in the Southwest, and, [fol. 3224] finally, but by no means the least of them, the Columbia River in the Northwest. Each one of these will be forever a national yardstick to prevent extortion against the public and to encourage the wider use of that servant of the people—electricity.

The power issue, where vigorously handled in the public interest, means abundant and cheaper current for American Industry, reduced rates and increased use in millions of urban and rural homes, and preservation of our water power resources in coordination with flood control reclamation and irrigation.

• • • My distinguished opponent is against giving the Federal Government in any case the right to operate their own power business.

I favor giving the people this right where and when it is essential to protect them against inefficient service or exorbitant charges.

As an important part of this policy, the natural hydroelectric power resources belonging to the people of the United States or the several States shall remain forever in their possession.

• • • Never shall the Federal Government part with its sovereignty and control over its power resources while I am President of the United States.

COMPLAINANTS' EXHIBIT No. 647 (Excluded)

[fol. 3225] P. W. 22982

"Looking Forward" by Franklin D. Roosevelt

March, 1933.

The Power Issue

The power issue, where vigorously handled in the public interest, means abundant and cheaper power for American industry, reduced rates and increased use in millions of urban and rural homes—to say little of the preservation of our water power resources in coordination with flood control, reclamation and irrigation. The American people have a vital stake in the proper handling of this issue.

Let us be clear at the outset that the liberty of individuals to carry on their business should be *be* abrogated unless the larger interests of the many are concerned. It is the purpose of government to see that not only the legitimate interests of the few are protected but that the welfare and rights of the many are conserved. These are the principles which must be remembered in any consideration of this question. This, I take it, is sound government—not politics. Those are the essential basic conditions under which the government can be of service.

The regulation commission must be a tribune of the people, putting its engineering, accounting and legal resources [fol. 3226] into real use for the purpose of getting the facts and doing justice to both the consumers and the investors in public utilities. This means positive and active protection of the public against private greed.

Therefore I lay down the following principle: that where a community or a district is not satisfied with the service rendered or the rates charged by a private utility, it has the undeniable right as one of its functions of government, one of its functions of home rule, to set up, after a fair referendum has been taken, its own governmentally owned and operated service.

This right has been recognized in most of the states of the Union. Its general recognition by every state will hasten the day of better service and lower rates.

State-owned or Federal-owned power sites can and should properly be developed by government itself. When so

developed, private capital should be given the first opportunity

P. W. 22982

F. D. R.—"Looking Forward".

March, 1933.

to transmit and distribute the power on the basis of the best service and the lowest rates to give a reasonable profit only.

As an important part of this policy, the natural hydro-electric power resources belonging to the people should re- [fol. 3227] main forever in their possession. This policy is as radical as American liberty, as radical as the Constitution of the United States. Never shall the Federal Government part with its sovereignty and control over its power resources while I am President of the United States.

Holding Companies.

We must have uniform accounting systems.

Stockholders in holding companies, on suitable representation, must have the right at any time to examine the transcript of every word that is said at a directors' meeting.

A stockholder must have the right to examine every company contract—be it with officers or directors or with other companies.

Reports of holding companies must show actual ownership in shares and changes of ownership by officers and directors.

With the knowledge that such information can at any time become public many holding company irregularities would automatically cease.

Message of President Roosevelt

April 10, 1933.

The continued idleness of a great national investment in the Tennessee Valley leads me to ask the Congress for legislation necessary to enlist this project in the service of the people.

It is clear that the Muscle Shoals development is but a small part of the potential public usefulness of the entire Tennessee River. Such use, if envisioned in its entirety, transcends mere power development; it enters the wide fields of flood control, soil erosion, afforestation, elimination from agricultural use of marginal lands, and distribution and diversification of industry. In short this power development of war days leads logically to national planning for a complete river water shed involving many States and the future lives and welfare of millions. It touches and give- [fol. 3229] life to all forms of human concerns.

I, therefore, suggest to the Congress legislation to create a Tennessee Valley Authority—a corporation clothed with the power of government but possessed of the flexibility and initiative of a private enterprise. It should be charged with the broadest duty of planning for the proper use, conservation and development of the natural resources of the Tennessee River drainage basin and its adjoining territory for the general social and economic welfare of the nation. This Authority should also be clothed with the necessary power to carry these plans into effect. Its duty should be the rehabilitation of the Muscle Shoals development and the coordination of it with the wider plan.

Many hard lessons have taught us the human waste that results from lack of planning. Here and there a few wise cities and counties have looked ahead and planned. But our nation has "just grown". It is time to extend planning to a wider field, in this instance comprehending in one great project many States directly concerned with the basin of one of our greatest rivers.

This in a true sense is a return to the spirit and vision of the pioneer. If we are successful here we can march on, step by step, in a like development of other great natural [fol. 3230] territorial units within our borders.

P. W. 22982

Message of President Roosevelt

June 8, 1934.

• • • The extent of the usefulness of our great natural inheritance of land and water depends on our mastery of it. We are now so organized that science and invention have given us the means of more extensive and effective attacks upon the problems of nature than ever before. We have learned to utilize water power, to reclaim deserts, to recreate forests and to redirect the flow of population. Until recently we have proceeded almost at random, making many mistakes.

• • • The rate of speed that we can usefully employ in this attack on impossible social and economic conditions must be determined by business-like procedure. It would be absurd to undertake too many projects at once or to do a patch of work here and another there without finishing the whole of an individual project. Obviously, the government cannot undertake national projects in every one of the 435 Congressional districts, nor even in every one of the 48 states. The magnificent conception of national realism and [fol. 3231] national needs that this Congress has built up has not only set an example of large vision for all time, but has almost consigned to oblivioin our ancient habit of pork barrel legislation: to that we cannot and must not revert. When the next Congress convenes I hope to be able to present to it a carefully considered national plan, covering the development and the human use of our natural resources of land and water over a long period of years.

• • • This seeking for a greater measure of welfare and happiness does not indicate a change in values. It is rather a return to values lost in the course of our economic development and expansion.

Ample scope is left for the exercise of private initiative. In fact, in the process of recovery, I am greatly hoping that repeated promises that private investment and private initiative to relieve the government in the immediate future of much of the burden it has assumed will be fulfilled. We have not imposed undue restrictions upon business. We have not opposed the incentive of reasonable and legitimate private profit. We have sought rather to enable certain

COMPLAINANTS' EXHIBIT No. 647 (Excluded)

aspects of business to regain the confidence of the public. We have sought to put forward the rule of fair play in finance and industry.

[fol. 3232] P. W. 22982

President's Letter Creating The National Power Policy Committee

July 9, 1934.

I wish to establish in the Public Works Administration a Committee to be called the "National Power Policy Committee." Its duty will be to develop a plan for the closer cooperation of the several factors in our electrical power supply—both public and private—whereby national policy in power matters may be unified and electricity be made more broadly available at cheaper rates to industry, to domestic and, particularly, to agricultural consumers.

Several agencies of the government, such as the Federal Power and Trade Commissions, have in process surveys and reports useful in this connection. The Missisippi Valley Committee of Public Works, is making studies of the feasibility of power in connection with water storage, flood control and navigation projects. The War Department and Bureau of Reclamation have under construction great hydroelectric plants. Representative of these agencies have been asked to serve on the committee. It is not to be merely a fact-finding body, but rather one for the development and unification of national power policy.

[fol. 3233] As time goes on there undoubtedly will be legislation on the subject of holding companies and for the regulation of electric current in interstate commerce. This committee should consider what lines should be followed in shaping up this legislation. Since a number of the States have commissions having jurisdiction over intrastate power matters, it is necessary that whatever plan is developed should have regard to the powers of these various State Commissions as well as of the States in general.

It is not though- that it will be necessary to have frequent meetings of the full Committee. An adequate administrative staff will be provided and personal expenses of the members of the Committee in connection with its meetings will be met.

The Committee is to be advisory to the President.

Power Views of Franklin D. Roosevelt

Compiled November, 1934, for National Power Policy Committee

[fol. 3210] P. W. 22982

Hon. Harold L. Ickes, Chairman, National Power Policy Committee.

SIR:

Submitted herewith is a compilation of extracts from public statements by Franklin D. Roosevelt, as President and as Governor of the State of New York, revealing his views with regard to electric power.

Here, too, are presented excerpts from Federal laws, and documents which disclose the policy of the United States in this regard.

Respectfully, (Signed) Joel David Wolfsohn, Executive Secretary.

[fol. 3213] Inaugural Address of Franklin D. Roosevelt as Governor of New York

January 1, 1929.

State Water Power Policy

I should like to state clearly the outstanding features of the problem itself. First, it is agreed, I think, that the water power of the State should belong to all the people. There was, perhaps, some excuse for careles legislative gift of power sites in the days when it was of no seemingly great importance. There can be no such excuse now. The title to this power must vest forever in the people of this

COMPLAINANTS' EXHIBIT No. 647 (Excluded)

State. No commission, no, not the Legislature itself has any right to give, for any consideration whatever, a single potential kilowatt in virtual perpetuity to any person or corporation whatsoever. The Legislature in this matter is but the trustee of the people, and it is their solemn duty to administer such heritage so as most greatly to benefit the whole people. On this point there can be no dispute.

[fol. 3214] It is also the duty of our legislative bodies to see that this power, which belongs to all the people, is transformed into useable electrical energy and distributed to them at the lowest possible cost. It is our power; and no inordinate profits must be allowed to those who act as the people's agents in bringing this power to their homes and work shops. If we keep these two fundamental facts before us, half of the problem disappears.

I, as your Governor, will insist, and I trust with the support of the whole people, that there be no alienation of our possession of and title to our power sites, and that whatever method of distribution be adopted there can be no possible legal thwarting of the protection of the people themselves from excessive profits on the part of anybody.

P. W. 22982

Message to the Legislature by Governor Roosevelt

January 2, 1929.

* * * On the subject of the development of water power sites, owned in part or in whole by the people of the State, I am convinced of two facts: First, that there is a definite demand for the undertaking of their develop-

[fol. 3215] ment—not several years hence but this year; second, that the title and constant control of the power generated at the sources shall remain definitely in the people and shall not be alienated by long term leases. This is one of those questions on which I hope we can reach an agreement * * *.

COMPLAINANTS' EXHIBIT No. 647 (Excluded)

P. W. 22982

Special Message of Governor Roosevelt on St. Lawrence Power Development

March 12, 1929.

In the matter of the actual development of the St. Lawrence power, it is not enough that the ultimate title vest in the State. I hope there will be no difficulty in securing agreement that not only title buy physical possession of the development should at all times vest in direct representatives of the people.

At least of equal importance is the problem of transmission and distribution to the ultimate consumer. A mere development of power at a low production cost is insufficient unless, at the same time we make certain that it is finally distributed to the ultimate consumer at a fair price, under which no individual or corporation, involved in the business of transmitting or distributing, will make more than a [fol. 3216] reasonable profit.

First arises the question of who should do the transmitting and distributing of the power actually generated by representatives of the people of the State. I follow, I think, the opinion of my distinguished predecessor in saying that because of the complications involved, the actual operation of a transmission or a distribution system in this field of activity should, if possible with safety to the people, be undertaken by private enterprise, and that the State should undertake it only if private enterprise proves that it cannot, or will not, successfully carry out the task. * * *

(Referring to the extent to which the Federal Courts had nullified the protection to the consumer originally embodied in public utility regulation, he said:)

That is why in trying to treat this whole problem of development, transmission and distribution of the St. Lawrence power as a complete picture in the interests of the people of the State, I have sought a method by which we could avoid the rate regulating powers of the Public Service Commission, tied up as it is at the present time by Federal Court rulings. I have, therefore, after consultation with many experts on the subject, come to the conclusion that the

representatives or trustees who develop the power can enter [fol. 3217] into contract with transmitting and distributing companies, under which contracts a fair price to the consumer will be guaranteed, this price to make allowances only for a fair return to the companies on the actual capital invested in the transmitting and distributing of this particular power energy. It is a matter frankly based on theory of contract rather than the theory of regulation.

P. W. 22982

Annual Message by Governor Roosevelt

January 1, 1930.

At the same time I thought it advisable that the State agency should at least provide the financing of, and retain the fee to, any system of statewide transmission of electricity made necessary by the new power development. As a mere matter of saving in interest rates alone this would reduce the cost of electricity many millions of dollars each year, for the consumer, of course, pays the interest and dividend charges on the project.

P. W. 22982

[fol. 3218] Speech of Governor Roosevelt at Portland, Oregon

September 21, 1932.

Protection of the Public Interest

* * * I have strengthened the belief that I have had for a long time, and that I have constantly set forth in my speeches and papers in my work as Governor of the State of New York, that the question of power, of electrical development and distribution is primarily a national problem. * * * As I see it, the object of government is the welfare of the people. The liberty of people to carry on their business should not be abridged unless the larger interest of the many are concerned. The interests of the few must yield. It is the purpose of government to see not only that the legitimate interest of the few are protected but that the welfare and rights of the many are conserved. These

COMPLAINANTS' EXHIBIT No. 647 (Excluded)

are the principles which we must remember in any consideration of this question. This I take it, is sound government—not politics. Those are the essential basic conditions under which government can be of service.

• • • When the great possessions that belong to all of us—that belong to the nation—are at stake, we are not partisans, we are Americans.

[fol. 3219] • • • A false public policy has been spread throughout the land, through the use of every means, from the innocent school teacher down to a certainly less innocent former chairman of the Republican National Committee itself.

• • • Let me make it clear that I have no objection to the method of control through a public service commission. It is in fact, a proper way for the people themselves to protect their interests.

In practice, however, it has in many instances departed from its proper sphere of action and, I may add, from its theory of responsibility.

It is an undoubted and undeniable fact that, in our modern American practice, the public service commissions of many States have often failed to live up to the high purpose for which they were created.

P. W. 22982

Protection of the Public Interest

Sept. 21, 1932.

In many instances their selection has been obtained by the public utility corporations themselves. These corporations have often influenced, to the prejudice of the public, the actions of public service commissions.

• • • The regulating commission, my friends, must be a tribune of the people, putting its engineering, accounting, legal resources into the breach for the purpose of getting the facts and doing justice to both the consumers and investors [fol. 3220] in public utilities.

This means positive and active protection of the people against private greed.

• • • But • • • cold figures do not measure the human importance of electric power in our present social

order, Electricity is no longer a luxury—it is a definite necessity. It lights our homes, our places of work and our streets.

• • • The reason that we cannot take advantage of our own possibilities is frankly and definitely because many selfish interests in control of light and power industries have not been sufficiently far-sighted to establish rates low enough to encourage widespread public use. The price you pay for your utility service is a determining factor in your use of it.

• • • True regulation is for the equal benefit of the consumer and the investor, and the only man who will suffer from true regulation is the speculator or the unscrupulous promoter who levies tribute equally from the man who buys the service and from the man who invests his savings in this great industry,

I seek to protect both the consumer and the investor, To that end I propose and advocate now, as I have proposed and advocated heretofore, the following remedies, on the part of the government for the regulation and control of public utilities engaged in the power business and companies [fol. 3221] and corporations relating thereto:

1. Full publicity as to all capital issues of stock, bonds and other securities, liabilities and indebtedness, and capital investment, and frequent information as to gross and net earnings.

2. Publicity on stock ownership of stocks and bonds and other securities, including the stock and other interest of all officers and directors.

P. W. 22982

Protection of the Public Interest

Sept. 21, 1932.

3. Publicity with respect to all inter-company contracts, and services and interchange of power.

4. Regulation and control of holding companies by Federal Power commission and same publicity with regard to such holding companies as provided for the operating companies.

5. Cooperation of the Federal power commission with public utilities commissions of the several States, obtaining

COMPLAINANTS' EXHIBIT No. 647 (Excluded)

information and data pertaining to the regulation and control of such public utilities.

6. Regulation and control of the issue of stocks and bonds and other securities on the principal of prudent investment only.

7. Abolishing by law the reproduction cost theory for rate making and establishing in place of it the actual money, [fol. 3222] prudent-investment principle as the basis for rate making.

8. Legislation making it a crime to publish or circulate false or deceptive matter relating to public utilities.

* * * I do not hold with those who advocate government ownership or government operation of all utilities. I state to you categorically that as a broad general rule the development of utilities should remain, with certain exceptions, a function for private initiative and private capital.

* * * I therefore lay down the following principle: That where a community, a city or county or a district is not satisfied with the service rendered or the rates charged by the private utility, it has the undeniable right as one of its functions of government, one of its functions of home rule, to set up, after a fair referendum has been taken, its own governmentally-owned and operated service.

That right has been recognized in most of the States of the union. Its general recognition by every State will hasten the day of better service and lower rates.

* * * State-owned or Federal-owned power sites can and should properly be developed by government itself. When so developed, private capital should be given the first opportunity to transmit and distribute the power on the [fol. 3223] basis of the best service and the lowest rates to give a reasonable profit only.

P. W. 22982

Protection of the Public Interest

Speech of President Roosevelt at Grand Coulee, Washington

August 5, 1934.

Sees Power in Every Home

* * * It is going to affect not only the Columbia River Basin, but it is going to affect all mountain States and the Pacific Coast territory, and we are going to see, I believe, [fol. 3234] with our own eyes, electricity and power made so cheap that they will become a standard article of use not only for agriculture and manufacturing, but also for every home within reach of an electric light line.

The experience of those sections of the world that have cheap power proves very conclusively that the cheaper the power the more of it is used—the more of it is used in home and small businesses; and that makes me believe that this low dam which we are undertaking at the present time is going to justify its existence before it is completed by our being able to contact for the sale of practically all of the power it will develop. * * *

P. W. 22982

Speech of President Roosevelt at Tupelo, Mississippi

November 18, 1934.

I would not make a speech to you today because we are assembled on this glorious Sunday morning more as neighbors than as anything else.

I have had a very wonderful three days and everywhere that I have gone the good people have come as neighbors to talk with me, and they have not come by the thousands they have come literally by the acres.

[fol. 3235] This is the first time in my life that I have had the privilege of seeing this section of the State of Mississippi. Many, many years ago, when Pat Harrison and I were almost boys, I got acquainted with his stamping ground down on the gulf. Today I am especially glad to come into the northern part of the State.

Two years ago, in 1932, during the campaign, and again in January, 1933, I came through Kentucky—through the

Tennessee Valley—and what I saw on those trips—what I saw of human beings, made the tears come to my eyes. The great outstanding thing to me for these past three days has been the change in the looks of people's faces.

It has not been only a physical thing. It has not been the contrast between what was actually a scarcity of raiment two years ago or a lack of food two years ago—the contrast between that and better clothing and more food today—but it is something in people's faces, and I think you understand what I mean. There wasn't much hope in those days. People were wondering what was going to come to this country. And yet today I see not only hope, but I see determination—knowledge that all is well with the country and that we are coming back.

I suppose that you good people know a great deal more of the efforts that we have been making in regard to the work of the Tennessee Valley Authority than I do, because you [fol. 3236] have seen its application in your counties and your own towns and your own homes, and, therefore, it will be like carrying coals to Newcastle for me to tell you about what has been done.

But perhaps in referring to it I can use you as a text—a text that may be useful to many other parts of the

P. W. 22982

F. D. R. Speech at Tupelo

Nov. 18, 1934.

Nation, because people's eyes are upon you and because what you are doing here is going to be copies in every State in the Union before we get through.

We recognize that there will be a certain amount of—what shall I say?—rugged opposition to this development, but I think we recognize also that the opposition is fading as the weeks and months go by, fading in the light of practical experience.

I cite certain figures for the benefit of the gentlemen of the press, who have come hither from many climes. I am told that from March of this year, when you started using TVA power, the consumption of power for residential purposes has risen from 41,000 kilowatts to 89,000 kilowatts, an increase of 126 per cent. I understand that from the finan-

cial point of view, in spite of various fairy tales that have been spread in other parts of the country, your power sys- [fol. 3237] tem is still paying taxes to the municipality. That is worth remembering. Furthermore, that, as a whole, it is a remarkabel business success.

I talk about those figures first because it has been so often wrongly alleged that this yardstick which we are using could not be applied to private business and because a Government yardstick receives so many favors, that it is left off from paying this and paying that and paying the other thing. Well, we are proving it in this Tennessee Valley that by using good business methods we can instruct a good many business men in the country.

And there is another side of it. I have forgotten the exact figures and I can't find them in the voluminous report at this moment, but them number of new refrigerators that have been put in—that means something besides just plain dollars and cents. That means a greater human happiness.

Electric cookstoves and all the other dozens of things which, when I was in the Navy—we used to call gadgets—are making it possible. All of us working together, to improve human life through the introduction of things that aren't especially new so far as invention is concerned, but things which are becoming more and more necessities in our American life in every part of the country.

[fol. 3238] And I have been interested this morning in seeing these new homesteads—not just the buildings, not just the

land that they are on, not just the excellent landscaping of the trees among which those homes have been set, but especially the opportunities that those homes are giving to families to improve the standard of living.

And finally, my friends, there is one thing about all that you are doing here in Tupelo, that they are doing in Corinth, that they are doing in Athens, and Norris and the various other places where accomplishment can be seen today—aye, the most important thing of all, I think, is that it is

being done by the communities themselves. This is not coming from Washington. It is coming from you. You are not being Federalized. We still believe in the community, and things are going to advance in this country exactly in proportion to the community effort. This is not regimentation—it is community rugged individualism. It means no longer the kind of rugged individualism that allows an individual to do this, that or the other thing that will hurt his neighbors. He is forbidden to do that from now on—and it is a mighty good thing. But he is going to be encouraged in every known way from the National Capitol and the State capital and the county seat to use that individualism in cooperating with his neighbor's indi-
[fol. 3239] vidualism so that he and his neighbors may improve their lot in life.

Yes, I have been thrilled by these three days—thrilled in the knowledge not only of practical accomplishment, but thrilled also in the belief—the deep-seated belief on my part—that the people of this Nation understand what we are trying to do, are cooperating with what we are trying to do and have made up their minds that we are going to do it.

And so, in saying "good bye" to you for a short time—because I am coming back—I ask all of you, throughout the length and breadth of the Tennessee Valley and those areas which form an economic portion of that valley—I ask you all to remember that the responsibility for success lies very largely with you—confident that you are going to give to the Nation an example which will be a benefit not only to yourselves, but to the whole 130,000,000 Americans in every part of the land.

P. W. 22982

National Industrial Recovery Act

Public No. 67

1933

Sec. 202. The Administrator, under the direction of the President, shall prepare a comprehensive program of pub-
[fol. 3240] lic works, which shall include among other things the following: * * * (b) conservation and development

of natural resources, including control, utilization and purification of waters, prevention of soil or coastal erosion, development of water power, transmission of electrical energy. * * *

P. W. A. 22982

Press Release of PWA

September 27, 1934.

Achievement in certain instances of the administration purpose of making electric energy more widely available at cheaper rates today lead to a clarification of the policy on power by the Public Works Administration.

Municipal or local publicly owner power projects will be aided by PWA only when, in addition to meeting those qualifications necessary for public works projects, they assure electricity to communities at rates substantially lower than otherwise obtainable under the unchanged basic policy enunciated by Public Works Administrator Ickes.

The statement of Administrator Ickes followed action by some privately owned utilities, which, on reexamination of their condition, found it possible to reduce rates to a point below those proposed by municipal project plants. [fol. 3241] In all allotments made for municipal power plants by the Public Works Administration proposed rates have been well below existing private company rates. Consequently the fact that the companies in some instances have met these proposed municipal rates has been deemed as showing progress toward one of the aims of this phase of the public works program.

In the cases affected Public Works Administration policy will be so administered that municipal plant construction will not be deprived of the possibility of public works support until such time as the local Government feels assured the proposed rate reduction by the existing utility will be in effect on a reasonably permanent basis.

Since the public works program began financing electric plants, where they are socially desirable and where they will be self-liquidating, there have been reductions of rates by private utilities in different localities. The private utilities are becoming increasingly cognizant of the greater use of power resulting from lower rates.

COMPLAINANTS' EXHIBIT No. 647 (Excluded)

Administrator Ickes said:

"PWA has endeavored to make electric energy more broadly available at cheaper rates by acting on applications of municipalities for loans and grants to finance municipal [fol. 3242] systems where reasonable security is offered and the project is socially desirable. They are deemed desirable where the loan can be amortized in a reasonable period while charging rates substantially lower than those of the existing utility.

P. W. A. 22982

Press Release of PWA

September 27, 1934.

"However, we make it a practice before approving the loan to give the company an opportunity to put in effect rates at least as low as those at which the municipal system will be self-liquidating. Several utility companies have accepted this opportunity. It is obvious that in such cases it is advantageous to the city and to PWA that the offer be accepted and the applications withdrawn. To make loans and grants to finance projects where the competitor offers rates which are lower than those possible by the city plant, would duplicate facilities without any social betterment and impose on the city a burden which it probably could not meet without resort to taxation.

"Furthermore, in the described situation Public Works will be free to use its funds to better advantage elsewhere. The action of the utility companies referred to supports the [fol. 3243] belief that domestic rates, in certain instances at least, are so high as to be disadvantageous to the company as well as unjust to the consumers. Experience shows that lower rates may produce larger profits particularly where promotional campaigns are conducted and the cost of electrical appliances is made reasonable.

"PWA will cooperate with cities to prevent rates rising on an indication municipal plants may not be built. PWA will not rescind allotments or suggest the withdrawal of applications until the lowered rates are legally in effect.

"State laws authorize municipal competition, hence it is PWA's position that the State has determined that such

competition may be socially desirable. We believe it is for the municipal applicant to determine whether or not it desires to compete with privately owned utilities. It is our policy to consider such applications particularly where franchises are soon to expire, provided the project is self-liquidating at rates lower than those which the existing utility is willing to put into effect."

P. W. 22982

(Public No. 222—73d Congress)

May 14, 1934.

[fol. 3244] Johnson Act

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first paragraph of section 24 of the Judicial Code, as amended, is amended by adding at the end thereof the following: "Notwithstanding the foregoing provisions of this paragraph, no district court shall have jurisdiction of any suit to enjoin, suspend, or restrain the enforcement, operation, or execution of any order of an administrative board or commission of a State, or any rate-making body of any political subdivision thereof, or to enjoin, suspend, or restrain any action in compliance with any such order, where jurisdiction is based solely upon the ground of diversity of citizenship, or the repugnance of such order to the Constitution of the United States, where such order (1) affects rates chargeable by a public utility, (2) does not interfere with interstate commerce, and (3) has been made after reasonable notice and hearing, and where a plain speedy, and efficient remedy may be had at law or in equity in the courts of such State."

Sec. 2. The provisions of this Act shall not affect suits commenced in the district courts, either originally or by removal, prior to its passage; and all such suits shall be continued, proceedings therein had, appeals therein taken, [fol. 3245] and judgment therein rendered, in the same manner and with the same effect as if this Act had not been passed.

Public No. 17

1933

Tennessee Valley Authority

(1) To produce, distribute, and sell electric power, as herein particularly specified • • •

Sec. 10. The board is hereby empowered and authorized to sell the surplus power not used in its operations, and for operation of locks and other works generated by it, to States, counties, municipalities, corporation-, partnerships, or individuals, according to the policies hereinafter set forth; and to carry out said authority, the board is authorized to enter into contracts for such sale for a term not exceeding twenty years, and in the sale of such current by the board it shall give preference to States, counties, municipalities, and cooperative organizations of citizens or farmers, not organized or doing business for profit, but primarily for the purpose of supplying electricity to its own citizens [fol. 3246] or members: Provided, That all contracts made with private companies or individuals for the sale of power, which power is to be resold for a profit, shall contain a provision authorizing the board to cancel said contract upon five years' notice in writing, if the board needs said power to supply the demands of States, counties, or municipalities. In order to promote and encourage the fullest possible use of electric light and power on farms within reasonable distance of any of its transmission lines the board in its discretion shall have power to construct transmission lines to farms and small villages that are not otherwise supplied with electricity at reasonable rates, and to make such rules and regulations governing such sale and distribution of such electric power as in its judgment may be just and equitable; Provided further, That the board is hereby authorized and directed to make studies, experiments, and determinations to promote the wider and better use of electric power for agricultural and domestic use, or for small or local industries, and it may cooperate with State governments, or their subdivisions or agencies, with educational

or research institutions, and with cooperatives or other organizations, in the application of electric power to the fuller and better balanced development of the resources of the region.

Sec. 11. It is hereby declared to be the policy of the Gov-
[fol. 3247] ernment so far as practical to distribute and sell the surplus power generated at Muscle Shoals equitably among the States, counties, and municipalities within transmission distance. This policy is further declared to be that the projects herein provided for shall be considered primarily as for the benefit of the people of the section as a whole and particularly the domestic and rural consumers to whom the power can economically be made available, and accordingly that sale to and use by industry shall be a secondary purpose,

P. W. 22982

1933

Public No. 17

to be utilized principally to secure a sufficiently high load factor and revenue returns which will permit domestic and rural use at the lowest possible rates and in such manner as to encourage increased domestic and rural use of electricity. • • •

P. W. 22982

The Power Policy of the Tennessee Valley Authority

August 25, 1933.

1. The business of generating and distributing electric power is a public business.

[fol. 3248] 2. Private and public interests in the business of power are of different kind and quality and should not be confused.

3. The interest of the public in the widest possible use of power is superior to any private interest. Where the private interest and this public interest conflict, the public interest must prevail.

4. Where there is a conflict between public interest and private interest in power which can be reconciled without injury to the public interest, such reconciliation should be made.

5. The right of a community to own and operate its own electric plant is undeniable. This is one of the measures which the people may properly take to protect themselves against unreasonable rates. Such a course of action may take the form of acquiring the existing plant, or setting up a competing plant, as circumstances may dictate.

6. The fact that action by the Authority may have an adverse economic effect upon a privately-owned utility, should be a matter for the serious consideration of the Board in framing and executing its power program. But it is not the determining factor. The most important considerations are the furthering of the public interest in making power available at the lowest rate consistent with sound [fol. 3249] financial policy, and the accomplishment of the social objectives which low cost power makes possible. The Authority cannot decline to take action solely upon the ground that to do so would injure a privately-owned utility.

7. To provide a workable and economic basis of operations, the Authority plans initially to serve certain definite regions and to develop its program in those areas before going outside.

8. The initial areas selected by the Authority may be roughly described as:

(a) The region immediately proximate to the route of the transmission line soon to be constructed by the Au-

thority between Muscle Shoals and the side of Norris Dam.

(b) The region is proximity to Muscle Shoals, including northern Alabama and north-eastern Mississippi.

COMPLAINANTS' EXHIBIT No. 647 (Excluded)

(c) The region in the proximity of Norris Dam (the new source of power to be constructed by the Authority on the Clinch River in Northeast Tennessee).

[fol. 3550] At a later stage in the development it is contemplated to include, roughly, the drainage area of the Tennessee River in Kentucky, Alabama, Georgia and North Carolina, and that part of Tennessee which lies east of the west margin of the Tennessee drainage area.

To make the area a workable one and a fair measure of public ownership, it should include several cities of substantial size, (such as Chattanooga and Knoxville), and ultimately, at least one city of more than a quarter million, with transmission distance, such as Birmingham, Memphis, Atlanta, or Louisville.

While it is the Authority's present intention to develop its power program in the above-described territory before considering going outside, the Authority may go outside the area if there are substantial changes in general conditions, facts, or governmental policy, which would necessarily require a change in this policy of regional development, or if the privately-owned utilities in the area do not cooperate in the working out of the program.

Nothing in the procedure here adopted is to be construed in any sense a com-itment against extending the Authority's power operations outside the area selected, if the above conditions or the public interest required. Where special considerations exist, justifying the Authority going outside this initial area, the Authority will receive and consider applica-[fol. 3251] tions based on such special considerations. Among such special considerations would be unreasonably high rates for service, and a failure or absence of public regulation to protect the public interest.

9. Every effort will be made by the Authority to avoid the construction of duplicate physical facilities, or wasteful competitive practices. Accordingly, where existing lines of privately-owned utilities are required to accomplish the Authority's objectives, as outlined above, a genuine

COMPLAINANTS' EXHIBIT No. 647 (Excluded)

P. W. 22982

The Power Policy for the Tenn. Valley Authority

Aug. 25/34.

effort will be made to purchase such facilities from the private utilities on an equitable basis.

10. Accounting should show detail of costs, and permit of comparison of operations with privately-owned plants, to supply a "yardstick" and an incentive to both private and public managers.

11. The accounts and records of the Authority as they pertain to power, will always be open to inspection by the public.

P. W. 22982

[fol. 3252] Annual Report of the Commission of Reclamation for 1932

Power Policy

* * * What should be the policy of the Government with relation to the income from these commercial plants built as adjuncts to irrigation development? The position of the bureau is that the profits from these power plants should be applied—

1. To the repayment of the construction cost of the power system.

2. To aid in repayment of the construction cost of the dam or other structure which creates or makes possible the power development.

3. To be covered into the reclamation fund to be used as other moneys in this fund in the construction of additional works.

The reason for this policy is that in every case these works have been wholly built at the cost of the Government. Irrigators under these projects have advanced no part of the money for their construction, and in some part of the recent works have not obligated themselves to pay any part of the

construction. Where they have obligated themselves such payments have not been required because the income from [fol. 3253] the power plant has more than met the repayments on its cost required by the Government. If the income from these power works is to be given to the water users under the projects, it will be made as a gift. The revenue will furnish a perpetual income for which no investment was made and which benefit is not shared by the irrigators on projects where power development is not possible.

The position of the bureau is that these commercial power plants should be the perpetual property of the Federal Government; that after they have been paid for out of power revenues the water users have no further claim on the power plants or their revenues. Because of the fact that the small plants built for construction purposes were turned over to the water users those dwelling under the larger commercial plants insist that they shall also be turned over to them and that they have the revenues to put in their pockets as a perpetual dividend on the investment not made by them but by the Government.

P. W. 22982

Power Policy

There is need for a definite policy applicable alike to all future Federal reclamation projects, involving power developments, to control the construction of power plants and related features where needed either to provide cheap power [fol. 3254] for use in construction, for irrigation and drainage purposes, or to produce and dispose of surplus power for commercial and industrial uses, as a means of providing revenues to repay the cost of the power development as well as part of the cost of the irrigation development, thereby relieving the water users of some of the financial burden which otherwise they would have to bear. The policy should also provide for disposition of the power revenues.

The Bureau of Reclamation has taken the position that the power plants which are built with Government funds or which utilize power opportunities created by such expenditures should be the perpetual property of the Federal Government and that the profits resulting therefrom should be used to further the work of reclamation.

COMPLAINANTS' EXHIBIT No. 647 (Excluded)

Some of the more recent appropriation acts for certain projects established a new plan for the disposition of power revenues under which they are applied, first, to the cost of operation and maintenance of the power system, and, second, to the repayment of the cost of the power system and other related works, and after these costs have been repaid then the new power revenues are to go into the reclamation fund. This plan has several advantages over the original plan. It relieves the water users of the obligation to repay [fol. 3255] part of the project costs which are to be repaid out of power receipts. Eventually after the costs of the power systems have been repaid the reclamation fund will receive substantial revenues from power which will enable reclamation work to proceed at a faster rate than would otherwise be possible. Water users on projects having power income and on projects having no power income would be placed on a more nearly equal basis.

P. W. 22982

Thirteenth Annual Report of the Federal Power Commission

1933

The Federal Water Power Act represents a declared policy of the Congress to provide for the improvement of navigation and the development of water power through the instrumentality of private and governmental agencies, which, by the act, may be licensed to use, upon prescribed conditions, the water power of streams subject to Federal jurisdiction or to use public lands. These conditions to the granting of such valuable privileges are intended to promote the fundamental conservation purposes of the act through improvement of navigation and development of [fol. 3256] water power, and at the same time to safeguard the public interest by protecting the consumers of the generated power against exorbitant charges.

* * * Pursuant to an Executive order of the President (Executive Order No. 6251, Aug. 19, 1933, under title 11 of the National Industrial Recovery Act), the Commission has undertaken a survey of the water resources of the Nation as they relate to the conservation, development, control, and

utilization of water power and of the relation of water power to other industries and to interstate and foreign commerce. The allocation of necessary funds available under the public works section of the National Industrial Recovery Act for this purpose permits the Commission to make an investigation prescribed by section 4(a) of the Federal Water Power Act, which heretofore has not been possible for lack of necessary funds.

On the basis of this survey the Commission is directed to assist the Federal Emergency Administrator of Public Works in formulating a comprehensive program — public works pertaining to the development of water power and the transmission of electrical energy. Under authority of this Executive order, the Commission has also instituted an investigation of the cost of the transmission of electrical energy in the United States and its distribution to con- [fol. 3257] sumers, this being in harmony with the purpose of Senate Resolution 80, introduced by Senator Costigan. A still further duty imposed by this Executive order upon the Commission is that of investigating and reporting upon applications for loans referred to it by the Federal Emergency Administrator of Public Works for construction of public-works projects involving the development and utilization of electric power. In order to assist in expediting the national recovery program, the Commission has given immediate consideration to such applications in reporting on the engineering and economic aspects of the proposed projects.

P. W. 22982

S. 3375, 73d (2d Session) Passed by the Senate Only

June 6, 1934.

AN ACT To provide for the distribution of power revenues on Federal reclamation projects, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any power system hereafter built on Federal reclama- [fol. 3258] tion projects heretofore or hereafter constructed by the United States under the provisions of the Act of June 17, 1902 (32 Stat. 388), and Acts amendatory thereof and supplementary thereto, shall be operated by the United

States as a separate and distinct system, independently of the irrigation system. The construction cost of such power system, including such portion as the Secretary of the Interior may find (his finding to be conclusive) to be proper and equitable of the cost of structures and other facilities provided and used primarily for irrigation purposes but incidentally used in connection with and as a part of said power system, shall be returnable from power revenues and shall not be charged to or repaid, in whole or in part, by the water users of the project. Power furnished from such power system for construction of project features, for operation of project pumping plants, and for any and all project purposes shall be considered a sale and purchase and shall be charged for at such rate as determined by the Secretary of the Interior. Such charge for power furnished for project purposes during the period of construction and operation of the irrigation system by the United States and any rentals or sale of power to water users and their organizations after they have taken over the operation and [fol. 3259] maintenance of the irrigation system shall not be construed as vesting in them any interest in the power system. All revenues realized from the operation of any such power system shall be covered into the reclamation fund and shall not be credited in payment of any obligations payable by the water users of the project or any division thereof.

Sec. 2. That as to reclamation projects now constructed or partially constructed having a power development in operation the cost of which has been charged to the water users who have obligated themselves to repay the same, the water users of the project, or any division thereof, who have assumed such obligation, may, at their option, be placed upon the same basis and become subject to the same conditions as those outlined in section 1 hereof, upon the execution of appropriate contract or contracts therefor satisfactory to the Secretary of the Interior.

P. W. 22982

S. 3375, 73d (2d Session)

Sec. 3. That wherever any power system now in operation, constructed under the provisions of the reclamation

law by and at the expense of the United States, shall be enlarged or new construction work done thereon in the way of betterments or otherwise, such additional construction work shall be upon the same basis and subject to the same conditions as those provided for in section 1 hereof.

[fol. 3260] COMPLAINANTS' EXHIBIT No. 648 (Excluded)

Electric Home and Farm Authority, Inc., Activities Review

Chattanooga, Tennessee, May 20, 1935.

The Electric Home and Farm Authority, a federal agency, was incorporated on January 17, 1934. Its purpose was to increase electricity's usefulness to homes by reducing the costs of electrical services.

Activities and results up to this date may be summarized as follows:

A new plan for financing retail sales of approved electrical appliances, at lowered prices and lowered financing costs has been made available to approximately 375,000 home users of electricity in parts of Tennessee, Alabama, Georgia and Mississippi, and to many more within potential reach of electrical service in that area.

Eleven manufacturers of electric refrigerators, thirteen manufacturers of electric ranges, thirteen manufacturers of electric water heaters and fifteen manufacturers of electric water pumps have joined the Authority's program for marketing low-cost, standard quality appliances at prices and finance costs which made their use economical for families of average means.

[fol. 3261] Eight manufacturers of refrigerators introduced new models designed expressly for the EHFA program and sold at prices which made electric refrigeration a practical possibility for homes which could not afford it before.

The program's effects became national with the announcement that these manufacturers planned to sell the new models throughout the country at the prices effective in the EHFA's immediate territory.

Approximately 300 independent retail dealers, and the retail departments of five power companies, are participat-

ing in the selling of EHFA approved and financed appliances.

A comprehensive educational program has been undertaken. It is intended to help home makers obtain the greatest possible benefits from electricity at the least possible cost.

Sales figures collected by private agencies not connected with EHFA indicated that amid a nation-wide upswing in appliance sales, the sales increases in the area affected immediately by EHFA and TVA exceeded the increases recorded in other sections.

An account of EHFA requires some statement of its official personnel and financial structure, of the conditions which brought it into being, and of the means it is using to develop its program.

The directors of EHFA are Dr. A. E. Morgan, David E. [fol. 3262] Lilienthal, and Dr. H. A. Morgan. Mr. Lilienthal is president of EHFA. Other principal officers are F. J. Carr, treasurer, and George D. Munger, commercial manager.

On April 5, 1935, Electric Home and Farm Authority extended its financing facilities to include the complete line of appliances rather than approved models only. This means that if there is an approved model in the line, EHFA will finance the other models at the standard EHFA financing terms that have heretofore been applicable to approved models only.

As an example to demonstrate the meaning of the new policy, assume Blank Company has received an EHFA approval on its small model refrigerstor, which up to this time is the only model that could be financed through EHFA. Under the new policy of financing the complete line, EHFA will finance the other models of domestic refrigerators that are manufactured by Blank Company. This same policy of course applies to electric ranges, water heaters, and deep and shallow well pumps.

EHFA operated with a capital of one million dollars allocated from funds of the National Industrial Recovery Act, and a credit of ten million dollars from the Reconstruction Finance Corporation. This credit provides capital for EHFA's retail sales financing.

COMPLAINANTS' EXHIBIT No. 648 (Excluded)

EHFA came into being primarily because the high cost of electric power and the high cost of household appliances have been a double barrier to the full use of electricity in homes and on farms. EHFA set out to remove this barrier [fol. 3263] by encouraging the reduction of rates and prices.

EHFA works with and through existing manufacturers, retailers and electric power distributors. EHFA makes no appliances, it does no selling, it is not in the power business. It cooperates with many agencies, private and public, engaged in these activities.

EHFA's financing plan affects the manufacturer, the seller, and the user of electrical appliances.

The plan provides that the buyer of an electric refrigerator, range, water heater, or electric pump sold by an authorized dealer in an authorized locality may pay for the equipment in three years if one appliance is bought, or in four years if two or more appliances are bought. The interest charges, and a small additional charge for bookkeeping and collection costs, are substantially lower than any previously available to buyers of electrical household equipment. These low charges and long terms, in conjunction with the low retail prices required for EHFA approval of an appliance, have materially reduced the costs of electrical appliances in the areas served by TVA and EHFA.

In the EHFA financing areas, the appliances are purchased on low monthly payments, collected by the local utility and billed with the user's monthly light bill. The utility forwards the payments to EHFA. The retailer receives his money immediately after the purchase is com- [fol. 3264] pleted, EHFA buying his paper after the usual manner of commercial financing practice.

EHFA requires that its financing plan may be used only where rates are low enough to justify the full use of electricity by families of moderate income.

At this time it is available in the following territories: The part of Georgia served by the Georgia Power Company and the part of Tennessee served by the Tennessee Electric Power Company. The territory also includes the following independent utilities: Alcoa, Etowah, Lebanon, Cookeville, Dayton, Pulaski, and Franklin in Tennessee; Barnesville and Cartersville in Georgia; Athens in Alabama; Alcorn County, Amory, Tupelo, and New Albany in Mississippi,

and the following counties in northeast Mississippi which are served directly by TVA power: Benton, Tippah, Tishomingo, Prentiss, Pontotoc, Lee, Itawamba, Union, and the northern half of Monroe. Also rural lines in western half of Lauderdale County, Alabama, and rural lines in eastern half of Colbert County, Alabama.

The electrical appliance industry has been linked to the EHFA program from the start. The first move of EHFA was a series of conferences with a special committee of the National Electric Manufacturers Association, and manufacturers have been in close cooperation since. One result was Mr. Lilienthal's announcement of July 28, 1934, that "through action on the part of the manufacturers," low-[fol. 3265] cost refrigerators approved for EHFA financing would be sold nationally at prices effective in EHFA territory.

This announcement was in line with Mr. Lilienthal's repeated statement that "the EHFA program is a consumer program."

The appearance of the EHFA emblem on an appliance means that the appliance was manufactured to quality standards, that it was priced reasonably and that its retail sale can be financed by EHFA in authorized localities.

A comprehensive domestic electric service program is under way, directed by Miss Eloise Davison, director of domestic electric service. One of her first activities was assistance to the University of Tennessee in setting up a modern electric home laboratory, equipped with a full assortment of household appliances consigned by manufacturers, and the offering of courses in home electrification as part of the home economics curriculum.

Cooperation is being given other universities and colleges in providing up-to-date instruction in the home uses of electricity.

Electric Home and Farm Authority maintains central offices at Chattanooga, Tennessee, using for this purpose the Old Post office and Federal Building.

[fol. 3266] COMPLAINANTS' EXHIBIT No. 649

Contract No. TVHU-8A

EHFA 2A.

To Tennessee Valley Authority, Knoxville, Tennessee.

GENTLEMEN:

Under a contract made effective as of the 1st day of July 1934 you agreed with the Electric Home and Farm Authority, Inc., in its individual corporate capacity, hereinafter called "Authority", and with the Electric Home and Farm Authority, Inc., in its capacity as Trustee under a trust deed executed in May, 1934, hereinafter called "Trustee," to receive as the agent of the Authority and/or Trustee, as those terms were defined in the aforesaid agreement, "customer paper" received by retailers through the sale of "approved appliances."

It is now the wish of certain of the retailers operating under the Electric Home and Farm Authority plan that the Authority and/or Trustee directly, or operating through its agents, undertake to purchase deferred payment paper received by said retailers through the sale of electrical appliances other than "approved appliances." Authority and Trustee have indicated to said retailers a willingness [fol. 3267] to purchase such deferred payment paper on the condition that said paper shall be subject to all the terms, conditions, obligations, and warranties which attach to the form, offer, sale, recording payment, assignment, or repurchase of "customer paper," as that term is defined in the Retailers Application and Repurchase Agreement and in the above mentioned contract with you.

To carry out this extended financing plan the Electric Home and Farm Authority, Inc. wishes to extend the agency powers granted to you under the above mentioned contract of July 1, 1934 in such manner that your company will undertake to receive as agent for Authority and/or Trustee, deferred payment paper received by the retailers through the sale of an appliance other than an "approved appliance" in the same manner as you now receive "customer paper" from said retailers.

To perform this service the Authority offers to pay you the same consideration for each item of deferred payment paper purchased hereunder for the account of the Author-

ity as it now pays you for each item of "customer paper" in accordance with Article 18 of the existing agency contract of July 1, 1934.

Any deferred payment paper purchased by you in behalf of the Authority hereunder shall be subject to the same terms and conditions, and you will be subject to the same responsibilities for said deferred payment paper, as now [fol. 3268] exist with reference to "customer paper" under the aforesaid contract with you.

If you are willing to accept this offer and to act as the agent of the Electric Home and Farm Authority, Inc., in the extended financing plan above set forth, indicate your acceptance by the signature of your duly authorized officers in the places provided for herein and this offer shall thereupon become a binding contract effective as of the 1st day of July, 1934.

Electric Home and Farm Authority, Inc., (Signed) by David E. Lilienthal. W.C.F., Jr., Legal Division. Electric Home and Farm Authority, Inc., Trustee under a Trust Deed Executed in May, 1934, to Secure an Issue of Notes to Aggregate Not in Excess of Ten Million ($10,000,000) Dollars, (Signed) by David E. Lilienthal. (Seal.)

Attest: (Signed) Charles E. Hoffman, Asst. Secretary.

Accepted this — day of ——, 19—.

Tennessee Valley Authority (Signed) by Arthur E. Morgan, Chairman. (Seal.)

Attest: (Signed) Charles E Hoffman, Asst. Secretary.

[fol. 3269] COMPLAINANTS' EXHIBIT No. 650 (Excluded)

Electric Home and Farm Authority—Its plan for financing the retail purchase of electrical appliances:

Revised March 1937—Electric Home and Farm Authority.

This circular describes the time payment plan of Electric Home and Farm Authority for financing the retail purchase of electrical appliances.

Among the principal objectives of this program, in addition to offering a beneficial and necessary service to the

users of electricity, is to lessen the burdens in the home and to increase efficiency on the farm, through the greater use of electricity. The beneficial effects of this program are felt not only by the actual consumers of electricity but also by the producers and distributors of electric power as well as manufacturers of and dealers in electrical appliances.

Electric utilities and appliance manufacturers participating in this plan realize that the way to increase appliance sales and the use of electricity is to provide a plan which makes their use feasible and economical. The utilities cooperating with Electric Home and Farm Authority are selling electricity at rates which make the use of appliances economical.

Electric Home and Farm Authority is not a manufacturing or a merchandising organization. It is interested in making the benefits of electricity more generally available through the greater use of electricity consuming appliances. It seeks to bring about cooperation among the electrical utilities and electric appliance manufacturers and the dealers with the view of accomplishing the widespread purchase and use of electricity and electric appliances.

How the Plan Operates

Utilities.—The program may be extended only to those areas where the rates for electricity are such as to make feasible the purchase and use of electrical appliances by families of average income. The plan is available to the customers of those publicly owned and privately owned electric utilities who enter into an agreement with Electric Home and Farm Authority. This agreement provides that the utility, as agent for the Authority, shall collect monthly installments on appliances finances through Electric Home and Farm Authority. The utility is reimbursed for this service. In addition, the agreement may provide for the utility to purchase for Electric Home and Farm Authority, customer contracts that are presented to it by authorized dealers; that is, dealers may present their retail customer sales contracts to the utility and receive cash immediately for the unpaid balance of the contracts. The funds so advanced to dealers are repaid to the utility by Electric Home and Farm Authority.

COMPLAINANTS' EXHIBIT No. 650 (Excluded)

[fol. 3270] If, for any reason, arrangements cannot be made for the utility to advance funds to the dealer, an agreement may be made whereby the customer contracts will be forwarded directly to Electric Home and Farm Authority. In these cases Electric Home and Farm Authority pays directly to the dealer the cash selling price of the appliance, minus the down payment and the utility collects the installments due.

Manufacturers.—All electrical appliances eligible for financing under this plan must be first approved by Electric Home and Farm Authority. A large number of manufacturers have received Electric Home and Farm Authority approvals on their products. Other manufacturers whose products have not been approved for financing, but who desire to participate in the plan, are invited to communicate with Electric Home and Farm Authority, Washington, D. C., and submit their products for consideration. The appliances which have been approved for financing up to this time are as follows:

Refrigerators, Ranges, Water Heaters, Water Pumps, Domestic Clothes Washers, Domestic Clothes Ironers, Cream Separators, Portable and permanent Motors, Dishwashers, Waste Disposal Units, Radios, Domestic Clothes Driers, Vacuum Cleaners, Bottle Coolers, Milk Coolers, Milking Machines.

Dealers.—Dealers wishing to obtain approval under the plan will submit an application in triplicate directly to Electric Home and Farm Authority, Washington, D. C. Application forms for this purpose may be secured from the Electric Home and Farm Authority offices or from the nearest cooperating utility. The dealer will be informed of the action on his application as a retailer under the plan at the earliest possible date. With their application retailers will sign the standard form of Electric Home and Farm Authority contract by which the retailer agrees to buy back, upon default, purchaser contracts sold by him to the Authority for a price equal to the unpaid balance less unearned discount on each contract repurchased.

Approved dealers may obtain without charge purchaser contract forms and time payment charts by Application to Electric Home and Farm Authority. These forms and

charts may be obtained also from the nearest cooperating utility.

Electric Home and Farm Authority will not buy any purchaser's contract unless it is on the Authority's forms and unless the contracts comply with the latest Electric Home and Farm Authority chart of time payments.

The contract periods applicable to the appliances listed heretofore are as follows:

1. Water heaters, milk coolers, water pumps, cream separators, ranges, home and farm motors, refrigerators, domestic clothes ironers and driers—purchased individually—36 months maximum.

2. Combinations of any two or more appliances listed in No. 1—48 months maximum.

[fol. 3271] 3. Clothes washers or vacuum cleaners purchased individually or combined on one contract—24 months maximum.

4. Clothes washer or vacuum cleaner purchased with any one appliance listed in No. 1—36 months maximum.

5. Clothes washer or vacuum cleaner purchased with any two appliances in No. 1—48 months maximum.

6. Dishwashers—18 months maximum.

7. Waste disposal units—12 months maximum.

8. Bottle coolers—24 months maximum.

9. Milking machines—30 months maximum.

10. Radios (priced at $100 or less)—12 months maximum. Radios (priced at over $100) 18 months maximum.

The minimum unpaid balance (retail price less down payment) of any contract financed through Electric Home and Farm Authority is $40: The down payment on any contract must be at least 5 per cent, except the down payment on bottle coolers, milking machines, and radios, on which it shall be at least 10 per cent.

Consumers.—The routine of purchasing an approved electrical appliance and financing it under the Electric Home and Farm Authority plan is not unlike purchasing many

COMPLAINANTS' EXHIBIT No. 650 (Excluded)

other commodities on a plan of deferred payments. The customer, after selecting the approved appliances desired from a dealer participating in the program, merely makes an initial payment of 5 per cent or more of the cash retail price and executes an Electric Home and Farm Authority conditional sale contract. Monthly installments are payable to the utility at the same time the electric service bills are due. These payments are credited to the customer's account and forwarded to Electric Home and Farm Authority.

Utility companies, department stores, electrical equipment shops, dealers, and others who are in the business of retailing electrical appliances and serving the customers of a cooperating utility, may apply for an authorization to participate in this program.

Any additional information that may be required can be secured from Electric Home and Farm Authority, Washington, D. C.

Finance Plan of Electric Home and Farm Authority, Inc.

Electric Home and Farm Authority—The Program

This pamphlet describes the time payment plan of Electric Home and Farm Authority, Inc. (EHFA) for the purchase of electric appliances. The plan provides lower rates, smaller down payments and longer terms than previously have been available.

COMPLAINANTS' EXHIBIT No. 653 (Excluded)

The full program involves an utterly new approach to the whole problem of distribution and financing of electric appliances and the adjustment of rates for electricity. The major objective is a lessening of the burdens in the home and an increased efficiency on the farm through the greater use of electricity.

One of the first functions of the EHFA has been to convince electric utilities and appliance manufacturers that the way to increase appliance sales and the use of electricity is to reduce appliance prices and electric rates below prevailing levels, depending upon volume to bring a satisfactory profit to both.

As another function of the program, EHFA has undertaken, through educational work throughout the territory of its operations, to increase the demand for electric appliances and to bring about a greater usefulness of electricity for the householder and the farmer.

[fol. 3275] Utilities co-operating with EHFA have so adjusted electric rates as to make the use of appliances economical. These utilities have further indicated their willingness to assist in collecting installments on appliance sales at a low cost.

The program does not favor any manufacturer. All established manufacturers, operating in conformity with NRA, who wish to and who can meet provisions as to quality and price, may participate. It does not favor any utility. All utilities, publicly and privately-owned, in the territory who are willing to meet requirements as to rates and who are willing to undertake the obligations involved, are urged to participate.

It is equally open to all dealers. All dealers able to meet the necessary requirements will be eligible to participate. Every dealer is on the same footing as every other dealer and every utility merchandise department. Electric appliances will continue to be distributed through existing channels.

EHFA is not a manufacturing or a merchandising organization. It is interested only in promoting and financing sales of electric appliances to make electricity more generally available. It seeks to bring about cooperation among the electrical utilities and electric appliance manu-

[fol. 3276] facturers and the dealers as to rates and prices

with a view to accomplishing the widespread purchase and use of appliances at fair profits to all.

To best accomplish the purpose of this plan, complete co-operation must be had among:

Consumers,
Retailers,
Manufacturers,
Utilities.

The EHFA Time Purchase Plan

Electric Home and Farm Authority has approved certain electric appliances, manufactured to a standard of specifications established by the Authority, and will from time to time approve the products of other manufacturers who qualify. The manufacturers are authorized to place on these products the emblem of the Authority. EHFA will finance time payment sales of emblem appliances, as well as other models of domestic appliances where the manufacturers have an approved model of the same type in their line, and through retailers who have been approved under the Authority's plan. This means that a manufacturer who has an approved refrigerator in his line may have the sales of other domestic models of refrigerators which he manu- [fol. 3277] factures financed through EHFA. This same policy applies to all appliances approved by the Authority.

Retailers wishing to obtain approval under the plan will apply direct to EHFA. The dealer will be informed of his approval as a retailer under the plan at the earliest possible date. With their application, retailers will sign the standard form of EHFA contract by which the retailer agrees to buy back, upon default, purchaser contracts sold by him to the Authority.

Because of the unusual advantages offered it will be necessary to remove dealers from approved lists if they fail to comply within ten days after a request by the Authority to repurchase a contract.

EHFA has made arrangements with a group of electric utilities by which these utilities will co-operate under the plan. Since purchasers desiring to take advantage of the finance plan will be billed along with their monthly electric bill, the finance program will be limited to sales to pur-

chasers served by electric utilities cooperating in the program.

Approved dealers may obtain without charge purchaser contract forms and Time Payment Charts by application to EHFA. These forms and charts may be obtained also from the nearest co-operating utility.

EHFA will not buy any purchaser's contract unless it is [fol. 3278] on the Authority's forms and unless the contracts comply with the latest EHFA chart of time-payments.

The purchaser's contract period must be 36 months or less on one appliance, 48 months or less on more than one appliance. The down payment on each contract must meet requirements set out in the Official Time Payment Chart. The monthly payment must be not less than $2.00.

Purchaser contracts will be presented by the retailer to the utility, which will forward them to EHFA. The utility is authorized in most cases to pay the retailer immediately for contracts so tendered. In other cases, the utility is required by EHFA regulations to forward the purchaser's contracts to the Authority before making payment to the retailer.

A retailer may elect to carry his own EHFA paper but if he sells any such paper to EHFA he will be required to offer to EHFA all EHFA paper thereafter taken by him until he has given 30 days notice that he intends to carry his own EHFA paper. A retailer will not be permitted to sell any EHFA paper to anyone else unless each contract is first offered to EHFA.

EHFA will not generally record installment contracts. Retailer may record contracts for his own protection.

EHFA may call on the retailer to repurchase a contract prior to the time provided in the retailer's contract with [fol. 3279] EHFA. Retailer will not, without consent of EHFA, repossess any appliance until he has repurchased the contract from the Authority. Retailer's cooperation will be expected in collecting accounts which are not paid after the sending of the first notice to purchaser.

Approved retailers will be permitted to use the EHFA insignia in advertising, subject to the Authority's rules and regulations.

EHFA is co-operating with retailers, manufacturers and distributors, through education and demonstrations or such

other means as deemed advisable, to promote the wide distribution of electric appliances.

Retailers are urged to apply direct to EHFA for any information or assistance they may need in operating under the EHFA plan.

How to Operate under the EHFA Plan

1. Make application for approval on EHFA application form (either direct or through distributor or utility).

2. Upon notice of approval from EHFA, obtain from utility or EHFA (at no cost to you) purchaser contract forms and EHFA Time Payment Charts. Contracts on other than Authority forms will not be accepted.

3. Negotiate your sale, obtaining as large a down pay-
[fol. 3280] ment as possible. (See Official Time Payment Chart as to requirements of minimum down payment). Follow carefully instructions in filling out purchaser contract forms. Only forms completely and properly filled out will be accepted.

4. Purchaser's credit statement must be filled out in full. Send in any other information on purchaser which leads you to believe purchaser a good credit risk. It is recommended that delivery be withheld until full information is obtained and you are confident that purchaser is acceptable. You may make inquiry of utility for any credit information it may have available.

5. Make sure that purchaser is using electric service of a utility which is co-operating under the EHFA plan and that the appliance is to be installed in a residence for domestic use.

6. Make sure that the time balance conforms with the EHFA rate chart; that the contract term is not over 36 months if for one appliance, or 48 months if for two or more; that the monthly installment is at least $2.00 on each contract; and that the down payment meets the requirements stated in the Official Time Payment Chart.

7. When you are sure of acceptability, get signature of purchaser on contract, making certain that the purchaser

COMPLAINANTS' EXHIBIT No. 653 (Excluded)

[fol. 3281] understands fully the terms of the contract, and deliver the appliance.

8. Forward promptly the executed contract in duplicate, properly assigned by you, to the office of the utility where the purchaser's bill for electric service is payable.

9. If you have any reason at any time to feel that action against the purchaser is necessary to save Electric Home and Farm Authority or yourself from loss under this plan, please communicate promptly with utility and with the Authority.

10. Retailers are to report monthly to EHFA their sales for the previous month, on forms supplied by EHFA, and such other reports or information as may be required from time to time.

This pamphlet is explanatory only and nothing herein contained shall impose any obligation of any nature whatsoever upon the Electric Home and Farm Authority, Inc.

TVA—Electricity for All

"A Realization for all the people of the benefits electricity brings—in lightening their burdens, in increasing their incomes, in making for a richer and better life."

Look at the towers of a great transmission line. There goes electricity in large quantities • • • through woods, across fields, over the distant hillsides.

COMPLAINANTS' EXHIBIT No. 655 (Excluded)

Formerly only a small portion of the power carried in such a line entered private homes. The home owner used very little current * * * he was content if he had electric lights and a few small appliances * * * a toaster, a fan, an electric iron.

Today electricity in large quantities is going into homes. Not just electricity for lights and a few small appliances, but electricity in large enough quantities—and at low enough rates—to do heavy work.

That power in a great transmission line will cook food * * * heat and pump water * * * freeze ice. Well-cooked food, firm butter, cool milk, health, comfort, and cleanliness for you and your children * * * and all at the turn of a switch * * * this is the promise of cheap electricity for every American family.

This little booklet will tell you how your Government, through Electric Home and Farm Authority, is trying to bring you the full benefits of low-cost electricity.

By order of the President of the United States in December, 1933, a new kind of governmental agency was created. It is known as Electric Home and Farm Authority. Its directors are the directors of the Tennessee Valley Authority, and it is allied in spirit and policy with that great national undertaking in the Tennessee River basin.

The certificate of incorporation summarizes the objectives of Electric Home and Farm Authority. The agency was established, "to advance the general economic welfare of the nation" by developing and fostering and increased use of electric power through the double reduction of the cost of electricity to the consumer and the cost of electric appliances.

Electric Home and Farm Authority has obtained agreements from the principal electric equipment manufacturers of the country by which standard quality appliances are now manufactured for you at very low prices.

These appliances bear the emblem carried on the cover of this booklet. They are sold as other electric merchandise is sold through existing dealers who have made contracts with EHFA. Sale of emblem appliances is restricted [fol. 3284] to communities served by electric utilities which

in co-operating with the Authority have lowered their rates for current.

They are financed on term payments through the EHFA finance plan, which permits purchase of a single appliance over a period of three years or less. The interest rate on the unpaid balance of the cash-sales price is low. The down payment and monthly payment vary, but they cannot be less than $2 down nor less than $2 a month.

On an appliance, the emblem means that the product has been manufactured to quality standards set by EHFA, that it is priced reasonably, and that it can be financed by EHFA. Emblem appliances now are electric refrigerators, ranges and water heaters. These appliances are on sale in the area of the Tennessee Valley.

Should you desire to purchase an emblem appliance you would go to your regular — or retailer and select it. You would then sign a purchase contract and make your down payment.

The unpaid balance, including the finance charges, will be divided into equal monthly installments and collected, by the electric company which served you with electricity, at the same time you pay your light bill. The payments you make will be turned over to EHFA by the electric company.

Electric Home and Farm Authority will maintain several display rooms and conduct demonstrations of the uses of electricity in the home and on the farm. But it will not sell or distribute appliances.

In order to be sure that the use of equipment such as electric ranges, refrigerators and water heaters is feasible for householders and farmers of average income, Electric Home and Farm Authority must have a rate agreement with the utility serving the area before it will finance the emblem appliances.

The Authority must approve the domestic and farm electric rates as being sufficiently low to warrant a wider use of house appliances. As the use of appliances increases and there is a much greater consumption of electricity in the home and on the farm, further rate reductions may become possible.

A wider use of electricity will mean that a great natural resource becomes a servant in your home.

COMPLAINANTS' EXHIBIT No. 655 (Excluded)

Thus there are two major objectives of Electric Home and Farm Authority:

One—standard quality appliances reasonably priced;

Two—low electric rates for home and farm.

[fol. 3285] There is a third objective for which this emblem stands. That is a wider use of electricity through use of all electric appliances—those which bear the emblem on an appliance does not mean that it is not a part of this program of electrification.

By purchase of refrigerators, ranges and water heaters which bear the emblem, families of average income may enjoy the full benefits of electricity. For other families larger sizes and different types may be more suitable.

"Electricity for All."

That slogan, appearing on the emblem sums up the aim of Electric Home and Farm Authority.

Fulfillment of this aim is possible only by:

—obtaining reductions in electric rates through agreements with utilities, publicly and privately owned, so as to make the use of efficient, low-priced electrical equipment feasible for the householder or farmer of low or average income.

—By assisting in financing the consumer in the purchase of this equipment.

—By engaging in educational work in the use of appliances, and research to further lower the manufacturing costs of electrical equipment, and to still better adapt it to the needs of the average home and farm.

—By encouraging and stimulating the production of new and better designs in appliances.

—By assisting the manufacturers in their tests for quality and performance so that both makers and purchasers always will be assured that the approved appliances represent the best values manufacturers can produce at the prices asked.

Any question you may have about this program and how it can benefit you, will be gladly answered by your electric dealer. Or you may address your inquiries to Electric Home and Farm Authority, Chattanooga, Tennessee.

Office Memorandum

To: Mr. G. D. Munger, Commercial Manager, EHFA. Chattanooga, Tenn.
From: Guy W. Thaxton, Division Engineer, Tupelo, Miss.
Date: Sept. 14, 1934.
Subject: Utilization of Traveling Kitchen as Load Builder.

This will acknowledge receipt of your letter of the 11th on this subject. In view of the many suggestions incorporated therein, and the fact that the program is already under way and making progress, I will discuss these things with you when I am in Chattanooga next week.

Guy W. Thaxton.

GWT/mi.
EHFA. Received Sept. 15, 1934. Central Files.

[fol. 3291] COMPLAINANTS' EXHIBIT No. 658 (Excluded)

Mr. Guy W. Thaxton, TVA, Tupelo.
G. D. Munger, Commercial Manager, EHFA.

September 11, 1934.

Utilization of Traveling Kitchen as Loan Builder

As a result of Miss Davison's inspection of the first traveling kitchen demonstration at Booneville, certain rec-

ommendations were made to me for the effective utilization of this project as a load builder. I have transmitted these recommendations to Mr. Sullivan who asks me, because his time is so taken up at this period, to forward the suggestions to you.

Miss Davison reported that there was a very enthusiastic turn-out at Booneville, over 300 people attending the three demonstrations—although dealers had maintained that not more than 150 or so could be expected. The visitors asked many questions and appeared to be keenly interested in the talk of Miss Frow, the demonstrator.

Each visitor to the Booneville demonstration made out a card giving name and address and what appliances the visitor was interested in. I am herewith transmitting to you the cards for the first two Booneville demonstrations. These people should be followed up at once. A rough calculation shows that if all the appliances which are noted on these [fol. 3292] cards were put into service, load in this one small area would be increased by 120,000 kwh a year.

Miss Davison believes that a home economics agent should be detached from present duties in your area so as to act as an advance agent for the visits of this kitchen in each town on the route. The duties of this agent would be to organize local groups, such as the P-T-A and the women's clubs, back of the project. If the president of the women's club and a leader of the P-T-A were to act as hostesses for the kitchen demonstration, it is felt that an even more cordial reception would be given the work. The advance agent should call on such leaders immediately in advance of the visit of the kitchen and visit the county and home demonstration agents if such persons are located in the town and endeavor to mass all such support solidly behind the project.

Many of the women who attended the Booneville demonstration reported themselves as owning electric equipment which was out of service for one reason or another. I believe it would be worth while to assign on — to check on unused equipment immediately after each demonstration. If only a small part of this unused equipment is brought back into service, there will be an appreciable effect upon load.

COMPLAINANTS' EXHIBIT No. 658 (Excluded)

EHFA. Received Sep. 11, 1934, Central Files.

[fol. 3293] I believe that this kitchen project can be made to return immediate results in load if the above suggestions are followed out. Both Mr. Rogers and Mr. Dorsey have carried out preliminary contacts in a satisfactory manner, but it is perhaps advisable now that actual demonstrations are under way to attempt to engage dealers more fully in the program. I suggest that an Electric Home Representative be on the ground at the time of each demonstration to further dealer cooperation in the program.

We are going to attach another demonstrator to the project as an assistant to Miss Frow. This will be Miss Wilson, who will be transferred from her present duties in Alabama. The plan as it stands is to visit two towns a week, with a day's interval usually falling on Wednesday of each week to allow for moving the kitchen to the next location. Two demonstrations a day will be held in each town, a typical schedule being as follows:

Morning of first day—Demonstration for High School Home Economics class.
Afternoon—General Demonstration.
Morning of second day—Demonstration for colored cooks.
Afternoon—General Demonstration.

We hope to be able to finish each week's work with a Saturday stand at a county seat where the kitchen can be [fol. 3294] visited by rural people as an exhibit, but without actual demonstrations being conducted.

I am attaching the revised itinerary for the truck up to September 22. The itinerary for the week of September 24 to 29 Mr. Dorsey promises to furnish us within the next few days. During the week of October 1 to 6 the kitchen will be on the fair ground at Tupelo. I shall be obliged if you will transmit this schedule to the home economics agent suggested above as advance worker so that she can visit the towns on the route at proper intervals before the kitchen arrives. The schedule will also enable you to follow up on service work and, in general, should permit you to tie this project in thoroughly as an effective load builder for the Mississippi territory.

COMPLAINANTS' EXHIBIT No. 658 (Excluded)

A program of this sort has consistently brought returns to utility companies. If we make aggressive use of this program, beginning at once, I am sure we can secure very satisfactory results for our efforts in terms of added load on the Mississippi system before the end of the year.

G. D. Munger.

[fol. 3295] COMPLAINANTS' EXHIBIT No. 659 (Excluded)

Mr. A. H. Sullivan, Assistant Chief Electrical Engineer.
G. D. Munger, Commercial Manager, EHFA.

September 7, 1934.

Recommendations for Effective Use of Traveling Kitchen as Load Builder in TVA Territory.

Miss Davison has reported that there was a very enthusiastic and marked response to the traveling electric kitchen project during its first showing at Booneville, Mississippi. She believes the program can be made to show immediate returns to the Mississippi area in terms of load if the project is properly tied in with local interests and with the operation as a whole.

It is recommended that a home demonstration agent be detached from present duties in Mississippi and transferred to the kitchen project as an advance organizer of local groups in each town on the schedule of the kitchen. The duties of this person would be to organize key people in towns visited behind the kitchen. Such persons would be the president of the local women's club and the president of the Parent-Teachers Association, as backers of the program and to induce such persons to act as hostesses at the demonstration. Such local backing can be made to have an immediate effect in load.

It is further recommended that a service man be assigned to follow up the program of the kitchen so as to check on [fol. 3296] unused home electric equipment. Miss Davison reports a large amount of equipment out of service in towns in area to be visited by the truck. She feels that a service

follow-up in connection with the interest aroused by the visit of the kitchen would bring much of this unused equipment back into line. This activity will assist in building load.

It is recommended that the local field representatives continue their calls on dealers in the towns to be visited, but with a more intensive effort to draw dealer customers to the demonstration.

We propose to add a second demonstrator to the project so that the demonstrations themselves may be carried through more intensively. Two-day stands will be the rule for each town visited. On the morning of the first day the high school economics class will visit the kitchen; in the afternoon the general demonstration to the public will be held. On the morning of the second day a class will be held for colored cooks; in the afternoon, the second public demonstration. The duties of the advance home demonstration agent would be organizing these showings so thoroughly behind local leaders that not one opportunity is overlooked in each town visited for drawing all possible attention to home electrification. It is proposed in addition to hold one evening meeting in each town to which men might come and, if possible, to end each week's work with a Saturday stand at a county seat.

[fol. 3297] The drawing power of the truck has proved itself and should be effectively capitalized in relation to load.

At each demonstration registration cards listing appliances in which visitors are interested are filled out. This is a detailed record. Immediately after the truck leaves the town, an aggressive canvass should be made on items noted on the cards, and to interest people further in the purchase of load building appliances.

If the program outlined above is followed through in an active way and beginning at once, I feel that this project will return results which will be definitely measurable for the territory involved before the first of the year.

G. D. Munger.

Merchandise Sales

I attach herewith copy of a letter sent today to Mr. Warner in regard to the Pontotoc County Electric Power Association. After some delay, I have been requested to consult with the division engineers in regard to plans for future activity and I am planning to be in Mississippi next week. At that time I hope that it will be possible to get your ideas on future organization and activities. In the meanwhile, I am very anxious to get the suggestions and ideas of the field staff and if it meets with your approval, I would appreciate it very much if you would ask them to express their ideas along the lines of the attached memorandum.

I am enclosing six copies and I would appreciate it very much if you could distribute them to Messrs. Warner, Halsey, Bridges and Ludeman, Mrs. Tandy and Miss Frow, and ask them to forward their suggestions to me in Chattanooga by March 12.

tribution in its territory on March 1st. Its relation with us will be similar in every way to those of the A. C. E. Power Association, with the exception that the Pontotoc Association plans to merchandise electrical appliances to its members.

We are desirous of signing up this Association on the stand- form of EHFA Utility Contract, and very much desire to have a supply of these contracts sent to us for handling this matter with them. If you will assist us in this matter by securing them and forwarding them to us it will be appreciated.

H. A. Warner.

February 28, 1935.

I have referred your memorandum of February 27 to Mr. W. I. Nichols, who has recently been appointed to the Electricity Division and who will handle some of the work in TVA territory that was formerly handled by EHFA.

Mr. Nichols is planning to be in northeastern Mississippi the early part of next week and has told me today that he is desirous of discussing the Pontotoc situation with you and others. For this reason, I am enclosing copies of the utility agreement only because, as before stated, Mr. Nichols desires to discuss the merchandising question with you.

March 1, 1935.

Pontotoc County Electric Power Association

Mr. Bright has just referred to me your letter of February 27 in regard to the Pontotoc County Electric Power Association. The proposed merchandise activity of the County Association raised certain questions of policy on which I am anxious to have your opinion and Mr. Munger has asked me to go into this matter with you. At the request of Mr. Evans, I am planning to be in the Mississippi area next week and at that time I hope we can meet and go over the situation together.

W. I. Nichols.

Mr. Guy W. Thaxton, % TVA, Tupelo, Miss.
Mr. G. D. Munger, Electric Home & Farm Authority, Knoxville, Tenn.

April 30, 1934.

Mr. Brite has informed me that you wanted me to come to Tupelo relative to the site for the new store, and to assist in putting the men to work.

There are several matters here in Knoxville which require my personal attention, such as the time payment contracts, instructions to dealers, instructions to manufacturers and etc. As soon as these plans have been worked out, and the forms have been printed, Mr. Carr and I intend to come to Tupelo in order to explain them to the salesmen and the dealers. I expect that this will be the first of next week.

COMPLAINANTS' EXHIBIT No. 664 (Excluded)

In connection with the celebration which we were discussing Mr. Lilienthal feels that he would be able to come to Tupelo perhaps on Thursday, May 24th, and thinks that probably this celebration could be postponed until that week. This would not mean that our representatives could not start work before that time.

You will be interested to know that the three directors are to speak over a national hook-up on May 22nd. I do not know yet at just what time this will be. Each one of [fol. 3303] them is to have six minutes. It is Mr. Lilienthal's id-a to make considerable mention of the Tupelo project, and I thought that it could be capatalized by having loud speakers placed in prominent locations and used as part of the program during this celebration week. If we could get the city to promote this celebration week, I believe it would react to our benefit rather than for the T. V. A. to sponsor it. I believe that these are details which we can work out at our next meeting.

Tennessee Valley Authority

Office Memorandum

To: Mr. G. D. Munger, Chattanooga.
From: Guy W. Thaxton, Tupelo.
Date: May 9, 1934.

Subject: ——.

Mr. Wank the architect, was here yesterday and I was very much disappointed in the information which he gave as to the prospects of being able to arrange this place so that the opening could be held as scheduled.

In a telephone conversation with Mr. Evans this morning, I reported this fact and he and I agreed that we would go ahead and open on the 21, regardless of everything. He told me that it would be necessary to stick to that date now, as Mr. Lillienthal had arranged to be with us on the 25th.

COMPLAINANTS' EXHIBIT No. 665 (Excluded)

Since everything which is to be done to the building will have to be done by us here on the ground, I suggest that you come here at once, prepared to stay long enough to help me arrive at definite conclusions as to what should be done.

Guy W. Thaxton, Division Engineer.

Tennessee Valley Authority

Office Memorandum

To: Mr. George D. Munger, E. H. & F, A., Knoxville.
From: Guy W. Thaxton, Tupelo.
Date: May 1, 1934.
Subject: Exhibition and Demonstration.

In connection with our program to be put on during the week beginning May 14, I have several points to bring to your attention.

In order to boost the attendance and keep up the interest throughout the entire week, I think it would be well for us to give a prize each day for the four days when demonstrations will be given, viz: Tuesday, Wednesday, Thursday and Friday.

I have asked Mrs. Tandy to prepare a four-day program containing a demonstration of one hour to one and a half hour's duration, each of these four afternoons. I think it would be well for us to award a prize each afternoon.

Another point is in connection with kitchen utensils. In order to hold this mass demonstration and to do some of [fol. 3306] the other work which our specialists will be called upon to do, it will be necessary for us to have a complete set of kitchen utensils put up in some kind of a kit, so as to be readily transportable. If you will tell me how to handle this purchase, I will have Mrs. Tandy work up a list of items needed and will enter the requisition therefor immediately so that everything will be on hand when needed.

COMPLAINANTS' EXHIBIT No. 666 (Excluded

In connection with this work, it is going to be necessary to have a maid to assist Mrs. Tandy while the demonstrations are under way. I am planning to handle this on emergency employment basis.

Guy W. Thaxton, Division Engineer.

May 24, 1934.

Mr. Roland A. Wank, Tennessee Valley Authority, Knoxville, Tenn.

DEAR MR. WANK:

I would like to tell you how much we appreciate the work of Mr. Stanley Reese in helping us last week in the preparation of the Tupelo display center.

Mr. Reese's assistance was extremely valuable, not alone in supervision of construction but in many details as well in connection with placing the contract and handling labor on the job. He secured cooperation from all of the men engaged for the work. As construction proceeded day and night the factor of cooperation became extremely important. I feel it is only justice to Mr. Reese to say that without him the job could not have been finished in so short a time nor so well.

Also we would like to extend our thanks to you and the other members of your staff at Knoxville who assisted in drawing the plans.

The display center is very attractive and I am sure will be a credit in the Northern Mississippi region to the two authorities.

Very truly yours, Electric Home and Farm Authority, by W. B. Phillips.

Tennessee Valley Authority

Office Memorandum

To: Mr. G. D. Munger, Electric Home and Farm Authority, Knoxville.
From: Guy W. Thaxton, Tupelo, Mississippi.
Date: May 3, 1934.
Subject: ——.

With reference to your letter of April 30, as I explained to you over the telephone, I regret very much to see this opening celebration of ours postponed another week. However, if you people there think best to postpone it, it will be all right with me. It really does give me a little difficulty in finding something for the Electric Home and Farm Authority specialists to do.
